

Тем, что эта книга дошла до Вас, мы обязаны в первую очередь библиотекарям, которые долгие годы бережно хранили её. Сотрудники Google оцифровали её в рамках проекта, цель которого – сделать книги со всего мира доступными через Интернет.

Эта книга находится в общественном достоянии. В общих чертах, юридически, книга передаётся в общественное достояние, когда истекает срок действия имущественных авторских прав на неё, а также если правообладатель сам передал её в общественное достояние или не заявил на неё авторских прав. Такие книги – это ключ к прошлому, к сокровищам нашей истории и культуры, и к знаниям, которые зачастую нигде больше не найдёшь.

В этой цифровой копии мы оставили без изменений все рукописные пометки, которые были в оригинальном издании. Пускай они будут напоминанием о всех тех руках, через которые прошла эта книга – автора, издателя, библиотекаря и предыдущих читателей – чтобы наконец попасть в Ваши.

Правила пользования

Мы гордимся нашим сотрудничеством с библиотеками, в рамках которого мы оцифровываем книги в общественном достоянии и делаем их доступными для всех. Эти книги принадлежат всему человечеству, а мы – лишь их хранители. Тем не менее, оцифровка книг и поддержка этого проекта стоят немало, и поэтому, чтобы и в дальнейшем предоставлять этот ресурс, мы предприняли некоторые меры, чтобы предотвратить коммерческое использование этих книг. Одна из них – это технические ограничения на автоматические запросы.

Мы также просим Вас:

- **Не использовать файлы в коммерческих целях.** Мы разработали программу Поиска по книгам Google для всех пользователей, поэтому, пожалуйста, используйте эти файлы только в личных, некоммерческих целях.
- **Не отправлять автоматические запросы.** Не отправляйте в систему Google автоматические запросы любого рода. Если Вам требуется доступ к большим объёмам текстов для исследований в области машинного перевода, оптического распознавания текста, или в других похожих целях, свяжитесь с нами. Для этих целей мы настоятельно рекомендуем использовать исключительно материалы в общественном достоянии.
- **Не удалять логотипы и другие атрибуты Google из файлов.** Изображения в каждом файле помечены логотипами Google для того, чтобы рассказать читателям о нашем проекте и помочь им найти дополнительные материалы. Не удаляйте их.
- **Соблюдать законы Вашей и других стран.** В конечном итоге, именно Вы несёте полную ответственность за Ваши действия – поэтому, пожалуйста, убедитесь, что Вы не нарушаете соответствующие законы Вашей или других стран. Имейте в виду, что даже если книга более не находится под защитой авторских прав в США, то это ещё совсем не значит, что её можно распространять в других странах. К сожалению, законодательство в сфере интеллектуальной собственности очень разнообразно, и не существует универсального способа определить, как разрешено использовать книгу в конкретной стране. Не рассчитывайте на то, что если книга появилась в поиске по книгам Google, то её можно использовать где и как угодно. Наказание за нарушение авторских прав может оказаться очень серьёзным.

О программе

Наша миссия – организовать информацию во всём мире и сделать её доступной и полезной для всех. Поиск по книгам Google помогает пользователям найти книги со всего света, а авторам и издателям – новых читателей. Чтобы произвести поиск по этой книге в полнотекстовом режиме, откройте страницу <http://books.google.com>.

This is a reproduction of a library book that was digitized by Google as part of an ongoing effort to preserve the information in books and make it universally accessible.

PRICE 8d.

*Monitors of the Affairs of Europe from the
 Press of the World.* By Lord John Russell.
 Vol. II. 4ta pp. 688. London, J. Murray.
 The first Number for 1838 opened with a
 review of the first volume of this work; so
 fast the noble author seems to have devoted
 the leisure of last year* to the production of
 that which will be commensurate our critical
 notice for 1839. It is a gratifying subject of
 remark, to observe individuals belonging to the
 ranks of society of Lord John Russell, Mr.
 Fitz, and other noble persons, joining them-
 selves to the ranks of literature, and adorning
 them with contributions in history, poetry, and
 many higher species of composition; it is a
 good sign of the times when we see the taste
 of the nobles of the higher orders thus vinced;
 as well as they contribute to distinguish them-
 selves in this manner, we may laugh at the idle
 say about Mechanics' Institutes becoming too
 common, and degrading by comparison
 — in which fortune has vouchsafed a more
 exalted place, and superior means of improve-
 ment. Alas, no; the search of mind, like all
 our sciences, must, being well-conducted and
 the rational discipline, not only impart know-
 ledge and favour to the general mass, but ad-
 vance the intelligence and cultivation of the
 few above; and there will still be all the
 same and distance between them, which
 is good of much and requires for the regulation
 of conduct and civil life.

the ground where Lord J. Russell died, to the cause tree of moderation and avoid to church has so greatly re-estimated its value (a volume not now to be obtained as a price above its original cost); and we know as his page several once and clear as a new. out of view, and liberty of choice. The first chapter was out of the way of 5 years from the death of the regent, and was to the war of the Austrian succession. The moderation of Philp V., A. A. and with a notice of Anne's voyage. cannot do better than quote the philosophical reflections with which this chapter

Thus one and double of emptiness is a metaphysical device to strike the fancy of the un-empirical labour of the historian, to answer the thoughts of the philosopher. It is a most affecting and sublime passage of human emptiness have called to them, that, on the one side, presents to all that man has performed in the most and most amazing; while, on the other, it gives a melancholy picture of the human condition. It is a passage to the ground; a descent which forms the basis of one generation to the rest of the world as a mass of stones. It is a passage to a state of reality is seen to be, which the world are moved to pass.

the importance of the importance of the Treaty

ideas which require a common effort, and are directed to the common benefit. Freedom, commerce, conquest, love of glory, dominion of the seas, planting of colonies,—such are the most usual objects of rising and prosperous states. Each has one or more of these objects peculiar to its life, which form, as it were, its principle of life. Thus the spirit of Rome was formed of love of freedom and love of conquest; the spirit of Holland, of love of freedom and of commerce. So long as this spirit continues unaltered, and has room to gratify itself, the state flourishes. It may exist in an absolute monarchy, as well as in a free state, but seldom endures; because the law of hereditary succession may change the spirit of the nation, at any moment, from activity to indolence, from conquest to pacifism. The decline of a state takes place in a similar manner when a passion leading to a common purpose, is exchanged for others aiming solely at the enjoyment of the individual, to be advanced by individual and selfish means. Then, when, owing to the corruption of their manners and institutions, the Romans grew to love their villas and their farms better than war, their luxury (ravaging the conquered world,) prepared the fall of the empire. (Other causes of decline may be found in laws or institutions which check national energy; for instance, the Inquisition of Spain. Or, lastly, a state may be overrun by its neighbours. We often see, in a plantation, that a quick-growing tree for a time overtops and shades its fellows; but when it has reached its maturity, a plant of slower nature equals, surpasses, and at length carries away from it sun and moisture. Like to this is the figure which we see made in history by countries which owe to the early maturity of their laws a superiority they can no longer preserve. Spain and Africa remained the civilized world, till Philip and his Marquisate under a corrupt and disorderly government. In modern times, the states of Italy once maintained larger regular armies, and had more copious treasures, than England or France; but when the government of these kingdoms became settled, the small Italian republics led into the decline. In the course of the seventeenth century, all the nations of Europe, except Italy and Spain, made great progress in the arts of government and civilisation; consequently new states sprung up, and the balance of power was altered by the decline of some countries and the rise of others.)

A country like England, Russia, and Prussia, were not so poor, France was corrupt in its government, and we earned money from providing concerts, Austria was stationary, Venice and Holland declining, and Rome rather poor; and they all made it clear that we did not intend to be the nation of the world, we stamped out the life of a nation, we killed the confidence of the King of Prussia, (Nov. 17, 1870) we were, after making several overtures, said: "It is not necessary, however, to work for the motive of an art so frequent in the history of manœuvre. It is the nature of man

to desire something different from what he has; those who are in a humble station form an exaggerated notion of the delights of power and rank; while those who have long enjoyed these supposed advantages make to themselves a charming vision of the pleasure of ease, leisure, and retirement. A disposition to restless might seem to be given us as the bane of our happiness, did we not reflect, that this same unwillingness to be satisfied with the goods we have, is the cause of all our progress in social art, of our calmest speculations in philosophy, and of our brightest hopes in religion."

Our next is an anecdote of two great generals of this period.

"When Marshal Berville was killed by a cannon-ball at Philipstury, Marshal Vissers, who had been sent to take the command in Italy, was dying in his bed at Turin. Informed of the fate of his colleague and rival, he said, with the spirit of a soldier, 'That man had always more luck than I!' He expired a few days afterwards."

[illegible]

"*The forty-five*" forms a very interesting episode in this historical volume; but we are not aware of any new facts disclosed in its details. This is followed by the events of the war which was terminated by the treaty of Aix-la-Chapelle, 1748: and the fourth book resumes, at p. 365; the domestic history of England, under the ministry of Sir Robert Walpole. Of the death of George the First it is related (1727): "He set out for Hanover on the 2d of June; and on the 9th was entertained by Count Twittel at a country-house near Delden. Early the next morning he departed from Delden, and soon felt indisposition: at Ippenburen he grew lethargic, his tongue hung out of his mouth, and he could only keep repeating the word Osnaburg, Osnaburg. His valet immediately got on horseback and rode on to the palace of the king's brother, the Bishop of Osnaburg; but when the carriage arrived there the king was quite dead. His death was attributed by some to a melon he ate the night before, which others affirm was an orange. Walpole said more truly, that he died of thinking he never could die. The Duchess of Kendal, who was on her way from Delden at the time, retired for three months to Brunswick: she afterwards resided at Kendal House, Isleworth, till her death, which happened in 1743. A raven, which one day flew into her room, was always cherished by her as the ghost of the departed monarch. There is another person, besides the mistress, whose fate deserves mention in this place. Sophia Dorothy, of Zell, the daughter of William, Duke of Zell, by Eleanor d'Emiers, of the French family of Olbreuse, was married at sixteen to George the First, then electoral prince. She brought him a son and a daughter, but was soon neglected for a mistress. During the absence of the prince with the army, Count Königsmark arrived at Hanover: he was a man of professed gallantry, and had avowed his admiration for the princess before her marriage. The elector was told that his daughter-in-law received him late in the evening in her own apartment: the count was watched; and one night, as he left the palace by a private way, he was assassinated by the orders, and in the presence, of the elector. The public feeling, shocked at this murder, pronounced itself in favour of the princess: it was generally believed that she was innocent, and that Königsmark had been drawn to the spot by the artifice of a favourite mistress of Ernest Augustus, who had substituted another person for the princess. The prince, however, on his return from the army, implicitly believed the guilt of his wife, and caused her to be immured in the castle of Alden, where she was confined for thirty-two years, and died only seven months before her husband. Her crime was never proved; that of her father-in-law is but too well authenticated. Her son, George the Second, who was convinced of her innocence, secretly kept in his possession a picture of his mother; and on the morning after the news of the king's decease reached London, the portrait appeared in his antechamber. The animosity which had existed between the late and present king gave rise to a curious circumstance. Archbishop Wake, who was intrusted with the will of the deceased monarch, when the time for its being opened arrived, presented it to his successor, who, to the surprise of every one, put it in his pocket, and stalked out of the room; nor was it ever heard of more. His friends said, in palliation of this act, that George the First had destroyed two wills made in favour of his son. It should likewise be mentioned, that, by the law of England, the will

would not have been valid; all property, real as well as personal, of the king, descends with the crown."

On the end of the Walpole administration, referring to the charges of corruption, Lord J. R., among other observations makes the following:—

"That some of this money was applied to the corruption of parliament, cannot, indeed, be either disproved or disbelieved. That the votes of the House of Commons are often influenced by employments and pensions held or hoped for, promised or refused, was true in the age of Charles the Second, in that of Walpole, and may be now. The form of corruption, indeed, has changed, but its spirit is unaltered. In the earliest of these periods, a small gratuity sufficed; in the next, a large pension was required; the more fastidious vice of our own days spurns at money, and accepts patronage. The quantity and kind of corruption depend, perhaps, fully as much on the corrupted as the corrupter, or, in other words, on the average virtue of the age: Walpole himself said that ministers were as often tempted as tempters. * * * He was the leader, not the master, of the House of Commons:

— rectorque senatus
Sed regnantis erat.

No doubt, many asked him for favours, many were influenced by the promises or refusals they met with; but all the adherents thus acquired would have left him but a miserable minority, had he not sustained himself by the prudence and steadiness of his measures, the large capacity of his mind, and his hearty attachment to the best interests of his country. A more just charge upon him is, that he bore the imputation of corruption with too much insensibility, and by his retorts encouraged the willing belief of the multitude that all politicians are dishonest. Whether he said 'all men have their price,' or 'all those men have their price,' pointing to his adversaries, he assuredly left it to be believed, that if his enemies consisted of ungratified solicitors, his friends were the gratified. Nay, to a gentleman, who told him that in Holland a question was left to its own merits, he remarked, that if he were to do so, half the shops in London would be shut up the next day; thus implying that corruption was necessary to the maintenance of the House of Hanover. By this manner of speaking he contributed to lower the tone of public life, and taught men of hesitating virtue not to shrink from a contamination shared by the great majority of their contemporaries. In point of fact, it may be doubted whether his government was either more or less corrupt than those of the half century which preceded or followed him."

The last portion of the volume treats of the state of religion in England during the first half of the eighteenth century, and is both luminous and important.

The view taken may be comprehended from the following summary:—

"The church of England, from the period of the reformation, has preserved a peculiar character. The leaders of the reform, falling in with the national temper, loath to destroy what may be corrected, and averse to inquire into abstract truth when practical utility has been provided for, left subsisting much of the Romish worship, and neglected some of the favourite dogmas of the chief reformers. Large possessions were left in the hands of the clergy, and a titular supremacy over the church was transferred from the pope to the king. Hence the deep erudition and dignified bearing of the

English prelacy; hence the absence of that low fanaticism which disgraced some of the reformed churches; hence that decency of public worship which rejected, on the one hand, all unintelligible ceremony, and on the other, all excess of devotional enthusiasm. But, with these qualities, the church of England, as an institution, had serious defects. The clergy, educated with the aristocracy, depending on the king and the aristocracy, had too little sympathy with the people, and too much of political connexion with the governing powers of the state. In the age of which we are treating, however, the majority of the inferior clergy, whether they still hankered after the abominations of the Stuarts, or desired only a high church administration, were opposed to the crown; a position which, as Mr. Hume has observed, was forced and unnatural. The government, unable to gain the majority, had yet the power to dispose of the chief seats of the church, and they used it to advance to those high places men of liberal opinions, attached to the Protestant succession, of extensive learning, but free from the narrowness either of pedantry or of their profession. Such men, who, at a different period, might have been left unnoticed by the crown, fell in with the spirit of the times, and, without altering or modifying the character of the church. Engaging but little in controversy with their old enemies, the Roman Catholics and the Puritans, they endeavoured not so much to prove that their faith was scriptural, as that Scripture was rational. Infidel writings, the calumny of the age, and the theological turn of Queen Caroline, contributed to this change. The truth and fitness of religion, the beauty of virtue, the advantages of a good and upright life, charity and toleration for all mankind, were the subjects on which the chosen prelate loved to dwell. The scoffers at Christianity were defeated by their mildness of tone; the leaguers were satisfied with the freedom in which they were indulged; but the people, a large, too much neglected, fell into the apathy of cold acquiescence."

Slight memoirs of the most of our eminent divines give much interest to this portion of the history; and a sketch of Wesley and Methodism concludes the whole. We believe that there are yet two volumes to be added to complete the work; and have only to repeat, that it reflects high honour on the name of Lord John Russell.

BOOKS OF TITLE; *alias*, TITLES OF BOOKS.
No publisher ever hit upon or devised such captivating titles for his books as Mr. Colburn who knows better than Juliet what there is in a name. On the contrary, from him we never get a volume that we are not tempted to read for its mere name's sake; while from other we receive works so oddly distinguished, that we hardly know, at first sight, what to think of them, whether to read them or not, or in what class of our very miscellaneous collection to place them. The present week furnishes, perhaps, not more than our usual number of examples of this sort; but a few of its products may serve to make a slight distinction in illustration of our position.

Imprimis, we see "How old are You?" and "The Young Lady's Arithmetic,"† which struck us as being rather queer and dubious titles. To be sure, "How old are you?" and "Lady," is not so ticklish as, "How old are you

* By a Lady. 18mo. pp. 47. London. Rivingtons.
† By Miss M. A. Allison. 18mo. pp. 160. London. Longman and Co.

a Lady; but even the former might per-
hance bachelors of a certain age with alarm,
especially when told of the second title, viz.
the True End of Life." [Will it be cre-
dited, that this is nevertheless a well-meant
moral treatise?] Then, again, with re-
ference to "the Young Lady's Arithmetic, being
an Easy Introduction to the Knowledge of Num-
bers," we absolutely looked for a gay essay on
the "quantity" of lovers, and the very na-
tural numerical results, with perhaps an epi-
gram on the figures of the fair damsels alluded
and the figures in their quadrilles; whereas
it is a very useful manual on the properties of
1, 2, 3, &c., addition, multiplication, division,
even the rule of three.

Secondly, we have before us "The Simplicity
of Health," "What is Luxury?"† and
well on Artificial Palates."‡ Now, we
recently classed these works together:
and we, is health, and its concomitant,
ease; and here is good living,—soup, fish,
h. few, et-ceteras; and here is some new
mode of enhancing the value of these to the
eyes of the consumers. There is no such
thing! and we must briefly state what these
merely are. "The Simplicity of Health"
is a book, containing 175 observations on
every habit and action incidental to the
human, such as the air he breathes, the
clothes he wears, the food he takes, the amuse-
ments he enjoys, the medicines he swallows,
&c. &c. From these we gather, that (in
author's opinion) strong tea is most per-
nicious, and that the drinking of coffee injured
the stomach, and absolutely caused the death
of many. But, indeed, Hortator is an alarm-
ing teller of an acquaintance, who, "After
a roasted cheese about two thousand
times supper, died on the two-thousand-and-
fourth occasion!! ergo, roasted cheese is not to
be used. To cure a red nose, "a strip
of rusk soaked in vinegar, folded, and put on
the head affected when going to bed, and
suffered to remain till morning," is recom-
mended: let any of our bottle-nosed friends
try this remedy! But we must quit this pro-
cess, of which its author expresses the most
modest expectations that it will benefit man-
kind and exalt his own fame through a long-
continued future editions. His grand principles
are—temperance, early rising, ex-
ercise, and cleanliness.

What is Luxury?" is a question still more
difficult to discuss, since we know proverbially
"one man's meat is another man's poi-
son" and thence that our luxuries must be of
the kind. Query—"What is Luxury?"
Response—the Marchioness of —! "Pin-
money 30,000L. a year;—being a lady pa-
trons at Almack's;—the marquess an un-
married husband;—a Cecisbeo, whom Lady
shall envy me;—of course, evenings at
the best opera-box, diamonds, new
gowns, the most splendid dresses, the latest
fashions, the supreme ton, and two or three such
travels during the season as are un-
derlaid in that, and even talked of next year."
Response—the Dowager Lady —: "The
able society of the friends of my late lord
myself. Pleasant evening parties of not
less than fifty. Loo. Conversation. A
most hot supper, and a few gallant re-
minders of the days that are gone."

Response—Mrs. — of P—: "What
is luxury? Why, every luxury. Mr. —
commented by Hortator. 12mo. pp. 120. London.
1828.

Artificial Palates. pp. 296. London. Maunders.
1828. 8vo. pp. 108. London. Cadogan and

looking so happy at dinner that you are sure
all is right in the city. Two livery servants
to every guest,—ten courses, if possible, and
every dish, in and out of season, which the
extravagance of the French cook can ima-
gine. The evening all jewels and lights, and
buhl and tulle, and heaven knows what. The
gay dance, with the gayer dangles, and the
supper so *recherché* that the Prince of Ignorado
shall declare to the Duke of Wellington, in
my own hearing, that he has never seen any
thing so sumptuous and elegant since the
Field of the Cloth of Gold."

Response of Mrs. —, of Bloomsbury-
square: Shopping and leaving cards all the
morning in our own carriage. Quiet dinner
party, to make room for a brilliant
evening. Above fifty carriages at the door,
at twelve for one, besides hackney coaches,
cabs, and other encumbrances. All the gauze
window-curtains drawn, and the lights illu-
minating Holborn and Hart-street. A noble
petit souper, and not fewer than eight *Sirs* and
Ladies of title, (perhaps a real Lord or two,
however poor), to grace the call of "the honour
of taking champagne with you!"

Response of Mrs. —, of Retail Street: A
genteel establishment, consisting of one (occa-
sional) man, and three maids. Children nice
and clean, and full of spirits. Breakfast at
ten; every thing nice. To go to see the
Panorama, or the Zoological, or some such
sights, before dinner; and either to have com-
pany at home, or go out, every evening; nice
and nicely dressed.

Response—Mrs. — of — Alley: To be
very smart indeed, and always fashionable (i. e.
following the fashions of the upper world by
changing nearly as often, no matter at what
distance of time the imitation is from the ori-
ginal folly). Having a beau; getting orders
now and then to the play, and perhaps to the
King's Theatre.

Response—the Widow Wadman: Having a
soft down bed, and a pug dog and a pet pussy.
Going to church in a beautiful bombasin gown
trimmed with rich lace, the dress costing six
times as much as the flaunting Mrs. Showthe-
by's. Being *carney-d* by the best people of
the neighbourhood, and knowing what it is
for; and laughing to think that next Valen-
tine's day, "I'm a-going to disappoint 'em by
marrying Tom Langstaff, my late dear's late
man."

Response—Miss Mac-O, of (old) Maiden
Lane: Elegant dresses—elegant flirtations—
elegant rubbers—in short, every thing elegant.

Response—Miss Biddy: "O la no, mamma.
Plenty of romps, plenty of sweethearts, a hus-
band soon—the sooner the better,—balls, parties,
operas, plays, holidays, watering-places,
Paris, laughing for ever, and no rest what-
ever."

Alas! "Joy never cometh with a hoop, and
seldom with a call." But we will descend
no lower in the scale, nor condescend to what men
call luxuries; assuredly "a lay observer" is
not the person to strike the highest chords.
His is truly a good sound old-fashioned book,
with a great deal of sound sense, and not a
little piquant observation and dry humour, to
recommend it. A clever manipulus of etymo-
logical and other nugæ adds much to its popular
merits.

Snell's Palates! How are we disappointed!
Quin wished for a throat a mile long, and
palate all the way—and no turnpikes, we dare
say; but Mr. Snell's Palates are absolutely the
best inventions of this mechanical and philo-
sophical age to remedy the deformity and dis-

tress of palates naturally defective, by artificial
means called *obturateurs*. The improvements
in these supplements are historically described,
and their latest perfections well explained.
Several of his instances of imperfect palates are
strikingly curious; and his work will be con-
sulted with intense interest by those unhappily
afflicted with defects of this kind.

Scenes of War, and other Poems. By John
Malcolm. 12mo. pp. 191. Edinburgh, 1828.
Oliver and Boyd.

THERE is an interest attached to this little
volume independent of its own poetic grace: to
misquote Moore, if such a deed can be for-
given—

"The hand that now languishes over the lyre
Has sent a proud shaft to the warrior's heart."

Or, in plain prose, Mr. Malcolm is soldier as
well as poet; and these pages are the remem-
brances of many a fearful combat, many a
toilsome march, and have perhaps beguiled
many a lonely hour by the watch-fire. With
all its chivalric memories, and its picturesqued
scenery, Spain was the very country for a
Troubadour's campaign. We will not extract
from the first poem, recommending it to the
reader entire, only reserving to ourselves the
following very sweetly expressed images.

"The sea,
Whose boundless waters, into shadow cast,
Repose in cold pale beauty like this past."
"Sad as the echoes of the last footfalls
That sink to sighs along the festal halls."

We like much the lines on Autumn.

"Sweet sabbath of the year!
While evening-lights decay,
Thy parting steps methinks I hear
Steal from the world away!
Amid thy silent bowers
'Tis sad but sweet to dwell;
Where falling leaves and drooping flowers
Around me breathe the farewell.
Along thy sunset skies
Their glories melt in shade;
And, like the things we fondly prize,
Seem lovelier as they fade.
A deep and crimson streak
Thy dying leaves disclose;
As on Consumption's waning cheek,
'Mid ruin, blooms the rose.
Thy scene each vision brings
Of beauty in decay;
Of fair and early faded things,
Too exquisite to stay;
Of joys that come no more;
Of flowers whose bloom is fled;
Of farewells wept upon the shore;
Of friends estranged or dead;
Of all that now may seem
To Memory's tearful eye
The vanished beauty of a dream,
O'er which we gaze and sigh."

One other little poem and we must conclude,
for our columns are very arbitrary monarchs.

"While on thy early charms I gaze,
All lovely as thou art,
E'en like a beam from brighter days,
Thy smile steals o'er my heart:
And yet that smile, I scarce know why,
To saddening thought gives birth;—
Thou seem'st too beautiful to die,
Yet, oh! too fair for earth.
'Tis not the roses of thy cheek
That of departure tell,—
As early-blighted spring-flowers speak
A sorrowful farewell:
But still I've seen the fairest things
All fleetly fade away;
Like dreams that take the morning's wings,
Or shadows at noonday.
I would not that thou e'er couldst prove
To me but what thou art—
A spell unbreak by earthly love,
An idol of the heart;—
A beauteous shrine to bend before,
A silent thought at even;—
A fern at distance to adore,
And but to love as Heaven."

We leave the leading poets of our age alone
to their glory; but we may observe how gene-
rally must the "sweet wells of poetry" have

diffused their inspiration, when a little unpretending volume like this boasts a degree of feeling, taste, and harmony, which, fifty years ago, would have made their author first-rate in his line. Whether this universality is an advantage, admits, we grant, of a question; but we shall leave such debatable ground as a good subject for keen-witted disputants.

Historical and Descriptive Sketches of the Maritime Colonies of British America. By J. M'Gregor. 8vo. and 12mo. pp. 266. London, 1829. Longman and Co.

"My only object (says the author) in submitting the following sketches to the public, is to make the maritime colonies of British America better known than they are in the United Kingdom. I have had better opportunities than many others of acquiring a more perfect knowledge of those countries, particularly as respects those parts of which scarcely any account exists. What I have written is principally from personal observation, and claim only to myself the merit of having written nothing but substantial facts. The numerous accounts of various parts of the United States, which have been written by cursory visitants, or by designing land-speculators, and which have been read with avidity in these kingdoms, have occasioned many to emigrate to the United States of America, who might have removed and settled in our North American colonies under much more favourable circumstances.

"I am (he continues) no advocate for men leaving their native country, nor for tearing asunder those attachments and connexions which are fondly cherished from infancy to old age; but if the consideration of removing a family from poverty, and bringing them up afterwards in the confidence that they will not be reduced to want the necessities of life; or, if the condition of young men who cannot find employment in their native country, be sufficient reasons to justify emigration, it will, I firmly believe, answer the views of such people better to remove to British America than to the United States. . . . Our North American possessions are not, it is true, viewed with the same interest in England as are our West India Islands; but those colonies are, notwithstanding, and especially in another view, much more important. The soil, climate, and productions, adapt them for the support of as great a population as any country on earth; and in this respect they are infinitely more valuable than any of our other possessions. New Holland and Van Diemen's Land may be considered an exception; but the distance of these countries from England will be for ever an important objection to them."

These extracts from the preface so fully explain the nature of the work, that we have little more to do than express our opinion of its merits, and point out some of its most novel features to the attention of our readers. The author, like almost every author who has taken up some favourite part of the world as his *El Dorado* for colonization, is quite an optimist in his views of our North American settlements, Prince Edward Island, Cape Breton, Nova Scotia, New Brunswick, and Newfoundland. We will not say that he distorts a single fact, but he sees things through a warm and pleasing medium—for example, a disagreeable noise becomes a musical entertainment to a spirit thus happily attuned to admire.

"When the spring opens, frogs are heard on fine evenings, singing in various notes and tones. Some strain on a rough low key, others

a pitch higher, and some pipe a treble, or thrill perpetually; the combination forming what has been termed "a frog concert."

Again, "*Pic-nic* excursions are much in vogue all over America. To shew how far these differ from any thing to which they may be compared in England, it may be sufficient to observe, that *pic-nic* parties generally consist of families of respectability, with their friends, who are on a perfectly intimate footing with each other. In summer some romantic spot is fixed upon, to which the party proceed; if by water, which is most commonly the case, in an open boat; or if by land, in gigs or in calashes, and on horseback. The ladies consider it as within their particular province to furnish the eatables. The gentlemen provide wines and spirits. At these parties there is usually less restraint and more enjoyment than at the assemblies. On some grassy glade, shaded by the luxuriant branches of forest-trees, and not far from a clear spring or rivulet, the contents of well-filled baskets are disclosed; feasting on which, forms certainly the most substantial part of the day's enjoyment; but, perhaps, the most agreeable is that which succeeds, when the party divides for the pleasure of walking, and there are, undoubtedly, 'worse occupations in the world' than wandering with a pretty woman through the skirts of a wood, or along the margin of the sea, enjoying 'sweet converse,' and the delights of the open air and surrounding scenery. As the evening approaches, they re-assemble, and the party, followed by their servants, bringing along the fragments of the *pic-nic*, return to the boat in which they embark. The evenings, at this season, are usually clear, agreeably warm, and tranquil; the sea calm and unruffled; and as neither the wine nor the wreck of fowls, hams, &c. are forgotten, a repetition of the *pic-nic* may be said to take place on the water. It sometimes happens that on returning from these parties, the tide has ebbed so far that the boat cannot approach within a hundred yards of the shore; but, as it would be extremely ungallant to allow the ladies to remain any time without landing, the gentlemen, let their rank in society be what it may, (if even members of his majesty's colonial council, judges of the supreme court, or the principal officers of his majesty's customs,) all get into the water; and, although often sinking at every step more than a foot into the mud, each carries a lady in his arms to dry *terra firma*. The *rendezvous* for winter *pic-nics* is usually a respectable farm-house, some miles distant in the country. No small part of the pleasure of these excursions is enjoyed in driving to the appointed place with a lady, in a well-furred and cushioned cabriolet, drawn over the snow or ice by one or two horses. These carriages take but two persons; the gentleman drives, as there is no seat in front for a servant. If the ice be smooth and glibly, and if the wind blows across the cabriolet, it is frequently twirled round, bringing the horse up at the same time with it, although generally going at great speed. These carriages, on turning corners, or passing over uneven roads, frequently overturn, leaving the passengers behind on the snow; but scarcely ever injured, although annoyed at the by-standers, who laugh irresistibly at their awkward condition. As servants are seldom brought to attend at these winter parties, the gentlemen, as soon as they hand their fair companions out of the carriages and usher them into the house, leave them for a short time to see their horses properly taken care of. By the time they return, the ladies have disencumbered themselves of muffs, cloaks, and pelisses; and the frosty

and bracing temperature of the season having, by this time, produced a corresponding sharpness of appetite, the *pic-nic*, to which they now all sit down, is enjoyed with all possible zest and good humour. Soon after, a country dance is announced; the music strikes up, and the party 'tripping it off' on the light fantastic toe, seldom break up before day-light the following morning. The night is thus, with eating, drinking, and dancing, spent in high delight; and when the hour of departure draws nigh, the ladies return to *hup* themselves up in their winter habiliments, while the gentlemen have their cabriolets brought to the door, and then each drives home with the lady who honoured him with her company."

Now, this very Arcadian, social, and gallant association, is very like similar exploits in England; and, with the exception of the ladies riding pick-a-pack on the shoulders of counsellors, judges, and officers of the revenue, through the tide and mud, and, perhaps, the further exception of the fun of being overturned in the snow, and left sprawling on the road, we have seen parties up the river, or into hay-fields, or woods, even in our old country, which could hardly be distinguished from these North American gambols. It must not, however, be believed that there are no unpleasant occurrences in Prince Edward Island. On the contrary, this is the mixed picture of society.

"During the administrations of Governor Patterson, and his successors, General Fanning and Governor Desbarres, the best circle of society in Charlotte Town was allowed to be elegant and respectable, and, however much the members who composed it might have differed in their views and opinions as regarded the political affairs of the colony, they did not allow either to interfere with the public amusements, or their private acts of hospitality. Indeed, the politeness and attention with which respectable strangers were received, became proverbial. During the course of Governor Smith's long administration, those social and kindly feelings which united society became unhappily weakened, in proportion as the number of its respectable members gradually diminished; some of whom left the colony in disgust, and others by their deaths left blank at that period particularly difficult to be filled up. The appointment of Colonel Ready to the administration of the government will like have on society, as well as on public affairs, an agreeable and useful influence; and an increasing population, together with a liberal encouragement given to education, will produce beneficial effects. In the different British provinces the highest circle of society is in a measure modelled after that of Dublin, composed of such as visit the governor's house, and are admitted at the assemblies; these consist of the officers of government, gentlemen of the learned professions, merchants whose manners and education entitle them distinction, and such others as have a standing in the country, and also strangers who are respectfully introduced. The amusements of Charlotte Town, although not on so extensive a scale, are much the same as in Quebec and Halifax. During winter, assemblies are common once a month, or oftener. An amateur theatre affords an agreeable opportunity of spending some pleasant hours. *Pic-nic* parties are common in summer and winter, and the friendly intercourse and intimacy between families, so agreeable in all countries, is on the same footing as in the United Kingdom. Dinner parties were, at one time usual, have not been so much so for some time past.

The principal gentlemen in Charlotte Town generally dine together at one of the hotels on the anniversaries of the tutelary saints of the three kingdoms, as well as during the sittings of the colonial legislature and of the supreme court. The ice, at different periods during winter, offers frequent opportunities for skating to those who delight in that amusement. Shooting and fishing are other sources of pleasure; and annual races, near Charlotte Town, are now likely to become permanent. A public subscription library, on a liberal and respectable footing, affords, either to those who read for amusement, or who wish to keep pace with the growing intelligence of the world, a variety of entertaining and standard works."

The following sketch of society in New Brunswick is original and curious.

"The timber trade, which, in a commercial as well as political point of view, is of more importance in employing our ships and crews than it is generally considered to be, employs also a vast number of people in the British colonies, whose manner of living, owing to the nature of the business they follow, is entirely different from that of the inhabitants of North America. Several of these people form what is termed a 'lumbering party,' composed of persons who are either hired by a master lumberer, who pays them wages, and finds them in provisions, or of individuals who enter into an understanding with each other, to have a mutual interest in the proceeds of their labour. The necessary supplies of provisions, clothing, &c. are generally obtained from the merchants' credit, in consideration of receiving the timber which the lumberers are to bring down the river the following summer. The stock used requisite for a 'lumbering party,' consists of axes, a cross-cut saw, cooking utensils, a cask of rum, tobacco and pipes, a sufficient supply of biscuit, pork, beef, and fish; pease or pearl barley for soup, with a cask of molasses to sweeten a decoction usually made of the bark of the hemlock tree, and a few shaves of tea. Two or three yokes of oxen, sufficient hay to feed them, are also required to haul the timber out of the woods. As thus prepared, these people proceed up the river with the provisions, &c., to the place where they are to establish their winter establishment, which is usually situated near a stream of water, and in the midst of as much pine timber as possible. They commence by clearing away a few of the surrounding trees, and building a camp round logs, the walls of which are seldom more than four or five feet high; the roof covered with birch bark, or boards. A pit is dug under the camp to preserve anything from injury from the frost. The fire is made in the middle or at one end; the smoke goes out through the roof; hay, straw, or fir branches are spread across, or along the whole length of this habitation, on which they all lie together at night to sleep, with their backs to the fire. When the fire gets low, the first awakes or feels cold springs up, throws on five or six billets, and in this way they manage to have a large fire all night. A person is hired as cook, whose duty is to have breakfast ready before daylight; at which all the party rise, when each takes his 'morning,' or the indispensable dram of raw rum, immediately before breakfast. This meal consists of bread, or occasionally potatoes, with beef, pork, or fish, and tea sweetened with molasses: dinner is usually the same, pease soup in place of tea, and the suppers are the same. These men are enormous eaters, and they also drink great quantities of rum, which they scarcely ever dilute. Immediately after breakfast they divide into three gangs, one of which cuts down the trees, another hews them, and the third is employed with the oxen in hauling the timber, either to one general road leading to the banks of the nearest stream, or at once to the stream itself: fallen trees and other impediments in the way of the oxen are cut away with an axe. The whole winter is thus spent in unremitting labour; the snow covers the ground from two to three feet from the setting in of winter until April; and, in the middle of fir forests, often till the middle of May. When the snow begins to dissolve in April, the rivers swell, or, according to the lumberers' phrase, the 'freshets come down.' At this time all the timber cut during winter is thrown into the water, and floated down until the river becomes sufficiently wide to make the whole into one or more rafts. The water at this period is exceedingly cold; yet for weeks the lumberers are in it from morning till night; and it is seldom less than a month and a half from the time that floating the timber down the streams commences, until the rafts are delivered to the merchants. No course of life can undermine the constitution more than that of a lumberer and raftsmen. The winter snow and frost, although severe, are nothing to endure in comparison to the extreme coldness of the snow water of the freshets, in which the lumberer is, day after day, wet up to the middle, and often immersed from head to foot. The very vitals are thus chilled and sapped; and the intense heat of the summer sun, a transition, which almost immediately follows, must further weaken and reduce the whole frame. To stimulate the organs in order to sustain the cold, these men swallow moderate quantities of ardent spirits, and habits of drunkenness are the usual consequence. Their moral character, with few exceptions, is dishonest and worthless. I believe there are few people in the world on whose promises less faith can be placed than on those of a lumberer. In Canada, where they are longer bringing down their rafts, and have more idle time, their character, if possible, is of a still more shuffling and rascally description. Premature old age, and shortness of days, form the inevitable fate of a lumberer. Should he even save a little money, which is very seldom the case, and be enabled for the last few years of life to exist without incessant labour, he becomes the victim of rheumatism, and all the miseries of a broken constitution. But notwithstanding all the toils of such a pursuit, those who once adopt the life of a lumberer seem fond of it. They are in a great measure as independent in their own way as the Indians. In New Brunswick, and particularly in Canada, the epithet 'lumberer' is considered synonymous with a character of spendthrift habits, and villainous and vagabond principles. After selling and delivering up their rafts, they pass some weeks in idle indulgence; drinking, smoking, and dashing off, in a long coat, flashy waistcoat and trowsers, Wellington or Hessian boots, a handkerchief of many colours round the neck, a watch with a long tinsel chain and numberless brass seals, and an umbrella. Before winter they return again to the woods, and resume the pursuits of the preceding year. Some exceptions, however, I have known to this generally true character of lumberers. Many young men of steady habits, who went from Prince Edward Island, and other places, to Miramichi,

for the express purpose of making money, have joined the lumbering parties for two or three years; and, after saving their earnings, returned and purchased lands, &c., on which they now live very comfortably."

We must retain the rest of this Review till next Saturday.

Letters from the Ægean. By J. Emerson, Esq. 2 vols. 12mo. London, 1829. Colburn.

WHAT advantages costume and association are to a traveller! The poet's idea,

"That a saint in crape is twice a saint in lawn,"

is true in more cases than one: turbans have made the fortunes of half our tourists. The man who in a round hat and knee-breeches would have been nobody, furnishes a page of description when arrayed in shawl and sabre, black perfumed beard, and ornamented pistols. Then for associations; what with hours and Homer, cachemeres and constitutions, liberty and lemon groves, heroes, pirates, poets, &c.—why, a few mornings and moon-lights in Greece are enough to make a book, despite of the author. Quite under the influence of such a spirit are written the volumes before us: evidently young and enthusiastic, for their writer there is

"A story on every breeze, and a picture in every wave:" they are full of descriptions perhaps rather too poetical for prose, but still very pretty; some most romantic incidents, &c.;—so that, altogether, these pages are among the most entertaining of Grecian origin, and not the less interesting because the islands and Smyrna are less known than the adjacent coasts. We give a few quotations. Speaking of the relative situation of women, from seeing them often in the cemeteries—

"It is seldom they are visited by men; and I never remember to have entered one of them without seeing some sorrowing female seated by the green mound or marble shrine which sheltered some once-loved and still dearly cherished being, to whom she fancied she had already bade an eternal farewell,—the precepts of her religion debarring her from any hope of a re-union in another world with those on whom the portals of the tomb had closed in this. Nor are the Turks by any means divested of domestic affection either; but national custom, and a fostered feeling of male superiority, have taught them that it is unmanly to make a womanish display of sentiment. With a Greek, who seems to copy all the gaudy exterior without the solid virtues of the Mussulman, this idea of male superiority surmounts every suggestion of love or lasting attachment. The Osmanlee teaches the inferiority of woman in another world, yet grants her what appears to him her due sphere in this; the Greek, on the contrary, inflicts present degradation, as if inculcating submission here as the purchase of happiness hereafter: with the one it is an error of the head, with the other a tyrannical theory of the heart. I have frequently heard even the Hydriots talk in rapture of their little sons, praise them as blooming Cupids, and boast of the promising manliness of their infant forms; whilst their equally lovely daughters or affectionate wives are never mentioned, or, if referred to by another, dwelt on for a moment, and the conversation reverted to their boys. On more than one occasion, Captain Hamilton, of the Cambrian, the well-known friend of the Greeks, has been solicited during periods of threatening danger to receive the sons of the chiefs on board his vessel for protection;

whilst the daughters and wives were left to await their fate amongst the lumber of the houses. In like manner, whilst imitating in less important matters the customs of their masters, the Greek almost invariably abandons the substance for the shadow. His embossed and richly gilded pistols are splendid only in the stock, the barrel and other important items being generally worthless; the hilt of his sabre is often set with jewels, whilst the blade is gnawed with rust; the light flowing dresses of the Mussulmen, so admirably combining grace with convenience, are rejected by the Greek, since they cannot be covered with lacing and golden braid like his tight and inelegant jacket; and the cool silken sash, which confines the garments of the Turk without adding to the oppressive heat of the climate, is laid aside for the hard leathern pistol-belt of Albania, which admits of more ornament, but at the same time keeps the wearer in a fever of heat."

We inserted last week the receipt for coffee as prepared in France, we will now quote another in the oriental style.

"The coffee is never roasted nor ground till about to be used, and is then considerably more burned, and reduced to a finer powder, than with us. In preparing it, a small tin vessel, holding exactly the quantity to be used (generally about a wine-glass full), is placed upon the fire, containing at the same time the coffee and sugar, all which are boiled together, poured into a little china cup, and, when the sediment has fallen to the bottom, drunk without any admixture of cream or milk."

How would our English sportsmen like the following method of bringing down their game?

"In some of the Cyclades, when the inhabitants are too poor to be enabled to expend much money on gunpowder, they have a practice of chasing them on foot till the birds are so wearied as to be easily taken with the hand: does not this illustrate 1 Samuel, xxvi. 20, which speaks of Saul pursuing David 'as when one doth hunt a partridge on the mountains?'"

In these islands "the principal occupation is sponge-diving; and it is said that no young man of the island is permitted to marry till he can descend with facility to a depth of twenty fathoms.† . . . The sea is at all times extremely clear, and the experienced divers are capable of distinguishing from the surface the points to which the animal has attached itself below, when an unpractised eye could but dimly discern the bottom. Each boat is furnished with a large stone attached to a rope, which the diver seizes in his hands on plunging head-foremost from the stern, in order to increase the velocity of his descent through the water, thereby saving an expenditure of breath, as well as to expedite his ascent, being hauled up quickly by his companions when exhausted at the bottom. I have seen but one man who could remain below more than about two minutes, and the process of detaching the sponge was of course very tedious; three and sometimes four divers de-

† "Directly opposite to Rhodes is a little and almost unknown island named Himla, which is worth notice, on account of the singular method which the inhabitants have to get their living. In the bottom of the sea the common sponge (*spongia officinalis*) is found in abundance, and more than in any other part of the Mediterranean. The inhabitants make it a trade to fish up this sponge, by which they get a living far from contemptible, as their goods are wanted by the Turks, who use an incredible quantity of sponges in their baths. A girl in this island is not permitted by her relations to marry before she has brought up a certain quantity of sponges, and before she can give a proof of her agility by taking them up from a certain depth."

scending successively to secure a peculiarly fine specimen."

A Grecian Surgeon.—"This portentous personage now approached the dying seaman, felt his pulse, examined his tongue, and, tearing open his jacket, inspected the orifice of the wound. The ball had penetrated the right breast, below the clavicle, and was imbedded somewhere out of his reach. Meledonius' business, however, was less with the bullet than the unseemly hole it had made; this he squeezed,—and proceeded to business. He first poured a little brown tarry balsam into the wound, then closing the sides, he made all snug with some strips of adhesive plaster, leaving the ball as carefully secured within as if the patient's life depended on its sedulous retention in his body. The poor sailor was then carried, bullet and all, to his birth, from whence it is needless to say that he never returned."

A Disconsolate Husband.—The consul's wife at Mycone "had been married upwards of six years, and yet at the time I was introduced to her she was scarcely twenty years of age. The consul appeared ardently attached to her; nor did she seem to hold that servile rank to which the Levantine ladies are devoted; she was gay, young, and lovely; her husband, good-humoured, frank, and affable; and, in short, the family was a perfect oriental picture of domestic happiness."

"Here we were visited by my former host, the consul, whom I was startled at seeing equipped in a full suit of the deepest mourning, and with a beard of six weeks growth, according to the mourning custom of the Greeks. On inquiring the cause of his distress, he informed me, with streaming eyes, that his beloved signora had expired about two months before; her death being occasioned by following the advice of an inexperienced physician who had attended her during her confinement. The sight of me seemed to tear open all the closed wounds of the poor fellow's bosom; he wept profusely, sighed long and deeply, and seemed a melancholy picture of fixed and overwhelming grief."

"On his departure, I communicated to another old acquaintance my sympathy with the sorrow of the worthy consul; but, judge of my surprise when he informed me, with a significant smile, that Signor Cordia had omitted, in his tale of misfortunes, to mention one little incident—namely, that he had consoled himself with a second partner about a month after the death of the first, and, by a strange commingling of joy and grieving, had absolutely compelled his present lady to put on, along with himself, deep mourning for her lamented predecessor!"

Most of these Letters having appeared in the New Monthly Magazine, we refrain from quoting what might be familiar to our readers, and content ourselves with mentioning, that there are some interesting histories of individuals, which most painfully set forth the miseries of domestic warfare and tyranny; and we dismiss the author with much praise for his lively and picturesque volumes.

The Ball; or, a Glance at Almack's in 1829.

H. Colburn. London.

As 1828 was still in existence when we first took up this volume, we supposed that our author intended "to attain to somewhat of prophetic vein." No such thing: under the magic name of Almack's,—which, by the by, like charity, is made to cover a multitude of (literary) sins,—there is only introduced a sorrow-

ing for the degeneracy of dancing, and a denunciation of the evils ensuing therefrom—and the rest of the book is eked out by the Empress Catherine's code of polite rules, (which are to be found in almost every tourist who treats of Russia), accounts of national dances equally original, and rules for sitting upright, turning out the toes, &c. For ourselves, we are free to confess, that to us dancing seems the remnant of a barbarous age—a vestige of those savage times when bodily exercises were the great sources of superiority and pleasure. We find that we are at issue with the writer at all points: we cannot but think that the gentleman is now as easily distinguished as in the days of minuets and embroidery;—neither can we join in his lamentation that the gentlemen at Almack's do not stand still while the ladies figure alone through the Grecian quadrille; we can conceive nothing more opposed to the delicacy and quietness which now constitute so much of fashionable and feminine excellence.

The following anecdote is the only quotation we can find:—"A lady who had been a pupil of this distinguished professor (M. Marcel), and remained subsequently his steady and zealous friend, succeeded in obtaining for him from the government a pension for life. In her great joy at having such a boon to put into his possession, she advanced to him—the certificate in her hand—with a hurried and anxious step; when M. Marcel, shocked at the style of presentation, struck the paper out of her hand, demanding if she had forgotten his instructions? The lady immediately picked it up, and presented it with due form and grace; on which the accomplished Marcel, the enthusiastic professor of his art, respectfully kissed her hand and with a profound bow exclaimed, 'Now I know my own pupil!'"

We must confess this is one of the books that do surprise us; not that it should have found a writer—we have too much anonymous verse to marvel at what people will write—but that it should have found a bookseller—one of the race that has no sympathy with human weakness—is to us very wonderful indeed.

ORIGINAL CORRESPONDENCE.

Paris, Dec. 29th.

THE year eighteen hundred and twenty-eighth would, no doubt, have elapsed without producing any important discovery to humanity had not a *soi-disant* deep thinker found, in the vacuum of his brain, the cause of man's degeneracy, *selon lui*. Vaccination has inoculated us with so large a portion of "animalism," that the moral qualities are totally absorbed, and nothing distinguishes us from the brute creation except our upright posture. We are forced to invent this term of animalism, well as some others, since the rulers of literature are cruelly deficient in supplying us with words to express our ideas. This author threatens us even with horns in the course of a few years. This additional feature would, however, be rather an improvement, as would fill up the vacancy of most forebodings. Another prophecy of this year is, that in less than half a century a plurality of wives to husbands will be permitted in all Christian countries; but as the present generation cannot hope to benefit by such a privilege, they wisely indulge themselves in all the advantages it could afford, and depreciate, with philosophical indifference, the few trifling ceremonies which distinguish it from their present customs. It appears that saints and men in regular correspondence; as, in virtue of orders of some of these holy personages,

daps are permitted to be kept open on Sundays during fifteen days before and fifteen days after the first of January.

There was a *grande soirée* and spectacle at the Duke of Orleans' on Monday last; the actors and actresses from Le Théâtre de Madame performed *l'Héritière*; and also another piece, which caused some merriment at the expense of John Bull. The Duchesse d'Angoulême and de Berri were present; but his Majesty and the Dauphin were on a hunting excursion, which possibly proved the more profitable entertainment.

The French begin to be angry with Mlle. Mars for being old, or rather for appearing so; she was severely criticised in the *salons* for performing the character of a *jeune demoiselle*.

A rare instance of sensibility occurred in the person of a cook a few days ago. He had, as he supposed, served up a dinner in the highest gastronomical perfection; his master, however, *échoi foute de bon goût*, or from caprice, criticised some of the sauces severely. To survive such dishonour was impossible; therefore Monsieur le Cuisinier stabbed himself in despair,—whether with his spit or a skewer, I have not as yet learned. I think his sense of honour and heroism raises him quite to an equality with the far-famed M. Vattel, celebrated by Mme. de Sévigné.

ARTS AND SCIENCES.

SCIENTIFIC EXPEDITIONS.

WE have this week put together several accounts, original or procured from foreign sources, relating to various interesting expeditions and travels in Africa and other parts of the world; and to render these more acceptable to our friends, we have embellished them with portraits of three of the most distinguished and lamented victims who have fallen sacrifices to British enterprise and zeal in prosecuting similar researches. Laing, Clapperton; and Den-

ham, have all fallen, in succession, within the past year; and we are not aware that the public are in possession of any likenesses of these gallant and unfortunate individuals. We present them with the three, engraved in the best style possible for a newspaper sheet. For the originals we are indebted to a miniature of Major Laing in the possession of his friend Mr. Smith, of the Colonial Office; to a picture of Captain Clapperton, painted by Mantön for Lady Seaforth, similar to that in the possession of Mr. Murray, who has kindly lent us the fine frontispiece to his forthcoming volume of Clapperton's Travels, by which to correct our impression; and, lastly, to a miniature of Major Denham, by Newton, in the possession of his brother, J. C. Denham, Esq., and also referring to Phillip's portrait of the same, which belongs to Mr. Murray. We may, therefore, speak of these as good resemblances of our regretted countrymen. They are engraved by Mr. Branston.

Laing.

Denham.

Clapperton.

SOUTH AMERICA.

Among the most remarkable exploits of English travellers, is that of Lieut. Maw, R.N., who is now in London; having crossed the Cordillera from Peru, embarked near Moyobamba on one of the smaller streams which fall into the Gualagala, and so come down the Amazon, being the first Englishman who has ever descended that river.

NEW ZEALAND.

WE have been favoured with a glance at an extremely curious manuscript journal of an English sailor, who returned from New Zealand at the latter end of 1827, after having been detained there ten years. The name of this person is John Rutherford. He was one of the crew of an American vessel which touched at the island for water in 1817, and whose captain, and the greater part of her men, were all murdered by the natives, in the same way as the crew of the Boyd were. Rutherford, and two others, by some fortunate caprice of these cannibals (for the ample and minute details of Rutherford upon this point leave no doubt of the continued existence of this horrid propensity), escaped the fate of their comrades. He became a favourite of Aia, the chief of that part of the island where he was captured, and married his two daughters, after being himself raised to the dignity of chief. Many of the anecdotes which Rutherford gives of the manners of the natives, are told with great naïveté, particu-

larly those which relate to his own domestic arrangements. The ceremony of tattooing, and the process of tattooing, which Rutherford underwent, are minutely described, as well as the war-customs of these rude islanders. Many persons in Liverpool, and amongst others the celebrated historian of Leo X., have conversed with this person, and have satisfied themselves of the general truth of his narrative. He had the misfortune to be apprehended on a charge of larceny, but was fully acquitted at the last Lancaster assizes; and, we understand, has since returned to one of the Society Islands, but not to New Zealand. The following letter, which is characteristic, was addressed to the gentleman who purchased his manuscript, which we hope will be given to the world in some popular shape:—

Liverpool, August 24th, 1828.

Honoured Sir,—You will be Pleased to Excuse the Liberty I am at Present taking But the Case of Necessity I am Now Placed in forces me to write to your honour Concerning My Manuscript which has Been Put into your hands by Mr. junr. whom I saw the other Day he is at Present at Lancaster Assizes But informed me that a Certain Sum had Been offered for it, and he Expected an answer from you By the time he Returned But as I have Shipet on bord a vessel I intend to go to the Society Islands again I Disire you to eather send me the Mony or otherwise the Manuscript By Return of Post as I Cannot wait and I think

you have had it Long Enough. I am Sir your Humble Servent, JN RUTHERFORD.

You will Be Pleased to Direct for me at Mr. Jn Gilbert, No. 42 Lime Stret, New Hay Market, Lirerpool.

If No answer Comes in time I shall Come to London Myself.

It is a singular fact, that many of the customs of the New Zealanders bear a close resemblance to those of the ancient Jews. Among other peculiarities, it is esteemed unclean to eat twice out of the same basket; and the principal occupation of the women, therefore, is the constant manufacturing of baskets, from the bark of the palm-tree, for their lordly masters, after whose meals out of them these articles are carefully consumed. In other respects there are a multitude of circumstances which render things clean or unclean in the code of the natives.

TIMBUCTOO.

Report of the Special Committee appointed to give an Account of the Travels of M. Auguste Caillé to Timbuctoo and the Interior of Africa. (Geographical Society.)

GENTLEMEN,—You have appointed a committee composed of Messrs. Eyries, Cadet de Metz, Amedée Jaubert, Larenaudière, Baron Roger, and myself, to inquire into the result of the travels of M. Augustus Caillé into the interior of Africa. This committee has met, and has appointed me to make the following report. Its first care was to assure itself of he place

whence the voyager set out, of the route which he followed, and of the countries and places which he visited. Being questioned on these several points, and all the different circumstances of his journey, he replied in the clearest and most satisfactory manner. The committee was struck with the simplicity and frankness of his account, which does not permit us to entertain any doubt of the reality and authenticity of his different excursions; namely, the crossing of the Dhioliba, his route to the east of the countries of Soulimana and of Kiassi, his navigation on the Great River, his residence at Timbuctoo, and, lastly, his journey across the Great Desert to the empire of Morocco. Baron Roger had positive knowledge of his going from St. Louis, and of his arrival the following year at Kakondy, whence he sent word to Senegal of his departure for the interior. Thus the point from which he started is certain; we may say the same of the point of his arrival, since he was received, almost immediately on leaving the Desert, by our colleague M. Delaporte, consul-general at Tangiers. With regard to Timbuctoo, besides the very circumstantial details which the voyager brings with him, and the sketches which he made during his stay there, we have a further guarantee in his account of the catastrophe of the unfortunate Major Laing, who reached that town in 1826. Notwithstanding the diversity of the reports in circulation of this melancholy event, M. Caillé's statements agree with those of a Moor, who arrived at St. Louis last March from Timbuctoo, and who saw among the *Touareicks* some books belonging to the major. Besides, our countryman lived in a house near that which had been inhabited by the English traveller, and it was there he collected circumstantial information, the authority of which seems incontestable.

The committee can add to the preceding, other grounds for confidence. During the first part of his journey, that is to say, proceeding to the east across the mountains of Fouta-D'hiallon, he passed between the towns of Timbo and Labey, and, consequently, must have crossed the route which our colleague, M. Mollien, took in 1818. Now he describes the mountains, the villages, the appearance of the country, and all the local circumstances, in such a manner, that M. Mollien perfectly recognises them in the description thus given. These two journeys, therefore, confirm each other; and this result is not unimportant to geography.

Our countryman has employed so much attention and perseverance in noting his route, his direction, and the time employed in the journey, that it has been easy for one of us to form, with his journal, a connected and complete itinerary from Kakondy to the port of Rabat, in the empire of Morocco; in which will be indicated the nature and the diversities of the ground, such as mountains, plains, ravines, forests, the villages and all the inhabited spots, the lakes and marshes, the torrents, the cataracts, the fords, the wells, and every thing respecting the running and stagnant waters. So many details completely establish our confidence in his narrative.

Lastly, we may add, that being questioned on the manner in which he had made himself understood by the inhabitants, he said that it was principally by means of the Moorish Arabic, which is spoken in Senegal, and which he had had the opportunity of learning in the country ever since 1816. And, in fact, he replied in this dialect to the questions which were put to him by the committee; and he, besides,

spoke several words in the Mandingo language known and represented in the maps by the name of Dibia, but incorrectly placed); and he gives on the whole course of the river data equally positive and novel.

We have felt it to be our duty, gentlemen, to lay before you all these arguments, and to dwell upon them. It now remains for us to acquaint you with some of the results which have been obtained, in order that the Society may be able to appreciate the acquisitions which science has just made. We are not permitted to enter into extensive details here, which would be anticipating the publication. A general view is all that the committee thinks itself authorised at present to submit to the public curiosity.

The travels of M. Caillé are connected in a manner the most advantageous for perfecting or confirming our geographical knowledge, with the excursions of Watt and Winterbottom to Timbo in 1791, of Major Laing in the countries of Kourankoo and Soulimana in 1822, of M. Mollien into the Fouta-D'hiallon in 1818, of Mungo Park to the Dhioliba in 1795 and 1805, of Dochart to Yamina and Bammakou in 1819; lastly, with the itineraries of the caravans on the route from Timbuctoo to the country of Taflet.

No doubt can now be entertained of the very elevated position of the sources of the Basing, the principal river flowing into the Senegal. Setting out on the 19th of April, 1827, from Kakondy, the tomb of Major Peddie and of Major Campbell, M. Caillé crossed that river at Bafila; he also crossed the great river Dhioliba, at a point which may be very naturally connected with the position that Major Laing assigns to its source. Thence he went and resided at Kankan, a large town in the country of the same name, which is enriched by the vicinity of the gold mines of Bourré; and he proceeded about 200 miles east beyond the Soulimans to the village of Timé, where he arrived on the 3d of August. So far he had accompanied a caravan of Mandingo merchants, travelling on foot. In this village he was detained five whole months by illness, being attacked by a scorbutic affection, attended with much danger; and which was produced by the inclemency of the climate, and the hardships which he had undergone in crossing the steep mountains of the Fouta-D'hiallon. This great chain seems, in fact, to be formed of several stages, abounding in torrents and precipices. In this interesting part of his route he took care to obtain information respecting the position of Bammakou, and of its relations with Senegambia.

At Timé begins another excursion towards the north: this is the second part of the journey. M. Caillé desired again to reach the Dhioliba: he set out on the 9th of January last; and after having seen and passed through more than a hundred villages, and made himself closely acquainted with the position of Sego, he met with the river again on the 10th of March at Galia, coming from the west, and crossed an arm of it to proceed to Jenné. All this part is entirely new, as well as the environs of the route from Timbo to Timé.

The third part of the journey is on the Great River. M. Caillé embarked upon it on the 23d of March, after staying thirteen days at Jenné. He went on board a very large bark, which was part of a mercantile flotilla. It was the season when the water is low. In some places the river is a mile in breadth, and in others much narrower. Its breadth and rapidity are variable. On the way he notes and describes the rivers that flow into it; the islands, and especially Lake Debo (the same which is

known and represented in the maps by the name of Dibia, but incorrectly placed); and he gives on the whole course of the river data equally positive and novel. At length he arrived at Kabra, the port of Timbuctoo, on the 19th of April; and the next day made his entry into the town. After having sketched a view of the habitations and the buildings of the city, noted what was worthy of observation, and made inquiries respecting the course of the rivers in the neighbourhood, he joined a caravan, which was setting out for Morocco. On the 4th of May he set out for El Arawan, with 900 camels, laden with all kinds of goods, the produce of the interior, and arrived there in six days. There 600 camels joined the caravan, and in eight days more he arrived at the well of Teligue. All the wells of sweet or brackish water, and all the stages, are carefully noted by M. Caillé in this passage over the Great Desert. The season of the burning winds from the east rendered the fatigues and the privations of this journey still more severe.

Leaving El Arawan on the 19th of May, he did not arrive till the 29th of June at El Harib, where the caravan divided into several parts; and on the 23d of July he reached Taflet. At length, on the 12th of August, he stopped at the very place which Ben Batouta visited in the fourteenth century, in the city of Fez; then he continued his journey with a guide, reached the sea, and on the 14th of Sept. arrived at Tangiers, where the consul of France received him, provided for his security, and succeeded in saving him from the dangers which he would have incurred if he had been recognised under his disguise.

M. Caillé had provided himself before his departure with two compasses, which served him during his journey, and by means of which he was able to note the directions of his route. However imperfect such a method may be, when compared with geometrical operations or astronomical observations, we must be happy to have the delineation of the routes, and the information of an eye-witness, upon countries respecting which we possessed hitherto only itineraries of the Arabs, reckoned by days' journeys, and for the most part contradictory, vague, or confused. What proves besides that he has correctly noted the length of the journeys is, that they agree with the most accurate accounts that we possess of the distances of places in the empire of Morocco.

The success of M. Caillé's enterprise is the more interesting, as he has completed it by his own resources, without the participation and assistance of any other person. He has sacrificed all he possessed to defray the expenses of his journey; he has done all that was possible, and more than could be hoped, with such resources;—and has had the good fortune to succeed completely. If such services are calculated to obtain for M. Caillé the favour of the public and of the government, how much must they excite the interest and gratitude of the Geographical Society? It was the Programme published by the Society in 1824, which fixed his determination to penetrate into the interior of an unknown continent. One of us being at that time in Senegal, and seeing that he had for many years been animated by a love of travelling, communicated to him a copy of the Programme; and from that time M. Caillé employed all his efforts for three years more, till he had discovered the means of accomplishing so bold a design: this is certified by a witness most worthy of credit—our colleague, Baron Roger, who was at that time governor

of Senegal. It was then that M. Caillé quitted St. Louis, and visited several neighbouring countries: he then chose the Rio Nunes as the point of departure. At Kakondy he had the good fortune to find a caravan setting out for the interior, and judiciously embraced the favourable opportunity.

The Programme published by the Society in 1834 is composed of two parts. The first requires principally positive information respecting Timbuctoo and the rivers in the vicinity, and some account of the countries towards the east: M. Caillé has fulfilled most of these conditions. The second part, for which the Society has allotted a special recompense, requires indeed celestial observations; but it is still a question whether it is possible for a person who penetrates for the first time into these countries, even when provided with the necessary instruments, to fulfil a condition equally difficult and dangerous. Who does not know both the ferocious jealousy which the Moors and all those who are in possession of the commerce of that part of Africa, have at all times entertained of the Europeans; and the resistance experienced by Belzoni, who endeavoured to proceed in that direction; and the tragical end of Antoine Piloti; and the deplorable issue of the enterprise of Major Laing? M. Caillé has penetrated to Timbuctoo; he went thither setting out from Senegambia, as the Society required. If he has not executed every thing which it wished might be done, he has, on the other hand, made many new and valuable observations, which were not required, on the Fouta-D'hallon, on the countries to the east, and on parts of the course of the Dhioliba: he sailed upon that river for a whole month. He has collected information respecting the mines of Bourré, and has made other researches which were not required. The discovery of these countries, and the descriptions of the regions of Baleyé, of Kankon, and of Wassoulé, are such a valuable acquisition to geography, that even if he had not reached the city of Timbuctoo, he would merit a distinguished recompense. He has likewise the merit of having collected a vocabulary of the Mandingolanguage, and another of the Kissour language, which is spoken at Timbuctoo, together with the Moorish; and also of having taken notes respecting the customs, ceremonies, productions, and commerce of these countries. On the other hand, there are in our Programme, conditions which have been partly fulfilled since its publication, by the celebrated English travellers, Oudney, Clapperton, and Denham; namely, those conditions which regard the country and the mountains to the east and east-south-east of Timbuctoo: there were, therefore, no longer the same reasons for requiring the fulfilment of them.

Thus, in awarding to M. Caillé the recompense which it has promised to him who should have reached the town of Timbuctoo, and should have given a description of it, the Society will comply with the general expectation, and it will be certain of possessing accurate information respecting countries with which we were imperfectly or not at all acquainted. It will give its honourable suffrage to a man who speaks of them, not by hearsay, but from what he has seen with his own eyes; who, in his plain and ingenuous narrative, relates without any exaggeration what he has seen, and does not endeavour to excite attention by extraordinary adventures. This is precisely the kind of interest which the Geographical Society attaches to discoveries—namely, that of truth.

It is a great deal for a man to have at length succeeded in dissolving the species of enchantment which appeared to strike every European who has reached this mysterious point of the Dhioliba. We are now certain, that four or five months are sufficient to come from Timbuctoo to Europe. Now that the possibility of the journey and of the return is proved by the event, and not by conjectures, all those zealous individuals, whom so many catastrophes, succeeding in rapid succession, might have diverted from their design, will recover their courage, and attempt the enterprise. This is another great service rendered to science by M. Caillé, for which it will give him credit, if it is not entirely consoled by his success for the deplorable loss of Major Laing.

On a subject so fruitful in geographical and scientific developments, it would have been easy to expatiate and excite interest by numerous comparisons; but the committee thinks itself bound to confine itself to the limits of the commission which it had received. It must, therefore, equally pass over in silence the narratives of J. Léon, of Ben Batouta and of El Edrissi, and the relations of the Portuguese with Timbuctoo, in the fifteenth century; the journey of Paul Imbert, in the seventeenth; and that of Robert Adams, in 1810, which is still disputed; and so many others within these forty years. To act otherwise, would be forgetting that we speak to auditors who have fathomed all the elements of the problems of the geography of Africa,—as is proved, gentlemen, by the subject of the three prizes which you have offered to men determined to brave every danger, to explore that great continent for the joint interest of science and humanity.

It is easy, gentlemen, from all that precedes, to infer the proposals which your committee has the honour to make to you, namely: First, that you would grant to M. Auguste Caillé the prize which you have offered to the first traveller who should arrive at Timbuctoo, coming from Senegambia. Secondly, that the present report be communicated to their excellencies the Ministers of the Interior, of the Marine, and of Foreign Affairs. We cannot finish this report without paying a just tribute of gratitude to M. Delaporte, acting as consul-general at Tangiers, for the generous and assiduous care which he bestowed on our countryman. The Society owes him a particular testimony of gratitude for having saved the traveller and the papers which he brought with him.

Signed and adopted, &c.

SCIENTIFIC EXPEDITION TO EGYPT.

Fourth Letter of M. Champollion.

Saïssa, Oct. 5, 1828.

WE remained at Cairo till the 30th Sept., and on the evening of the same day we slept in our march, in order to sail early the next morning for the site of Memphis. On the 1st October we passed the night before the village of Massarah, on the east bank of the Nile; and the next morning, at six o'clock, we traversed the plains to reach some great quarries which I wished to examine, because Memphis, situated on the opposite bank, must have been built of stone brought from them. The day was extremely fatiguing, but I visited almost all the caverns with which the declivity of the mountain of Thorrah is excavated. I found that these quarries of fine white stone have been worked in all ages; and I discovered first, an inscription, dated in the month of Paophi, in the fourth year of the reign of the

Emperor Augustus; secondly, another inscription, of the seventh year, the same month, of the reign of a Ptolemy, who must be Soter the first, there being no surname; thirdly, an inscription of the second year of King Acoris, one of those who revolted against the Persians; lastly, two of the largest of these quarries were opened in the 22d year of King Amosis, the father of the 18th dynasty, as is literally stated on two beautiful *stelæ*, sculptured in the rock on the side of the two entrances. These *stelæ* also indicate that the stones of this quarry were employed in building the temples of Phtha, of Apia, and of Ammon, at Memphis; and this indication gives the date of these temples, which were well known to the ancients. I have also found in another quarry, of the epoch of the Pharaohs, two monoliths, drawn with red ink upon the walls with extreme delicacy and an admirable firmness of hand. The cornice of one of these monoliths, which are only sketched, and the execution not begun, bears the *prénom* and the proper name of Psammetichus I. Thus the quarries of the Arab mountain between Thorrah and Massarah, have been worked under the Pharaohs, the Persians, the Lagides, the Romans, and in modern times. I add, that this comes from their vicinity to the successive capitals of Egypt, Memphis, Posthath, and Cairo.

Returning in the evening on board our vessels, like the Greeks after making an attack on the city of Troy, but more fortunate than they, since we brought off some booty, I sailed for Bedrechein, a village situated at a short distance on the west bank of the Nile. On the next day, early, we set out for the immense wood of date trees which covers the site of Memphis. After passing Bedrechein, which is a quarter of a league inland, we perceived that we were on the site of a great ancient city, by the blocks of granite scattered over the plain, and those still visible above the sands, which will soon cover them for ever. Between this village and that of Mit-Rahineh are two long parallel hills, which appeared to me to be the ruins of an immense enclosure, built of unburnt bricks, like that of Saïs, and formerly enclosing the sacred edifices of Memphis. It was in the interior of this enclosure that we saw the great colossus dug up by M. Caviglia. I longed to examine this monument, of which I had heard a great deal, and I confess that I was agreeably surprised to find it a magnificent piece of Egyptian sculpture; this colossus, part of the legs of which has disappeared, is not less than 34½ feet long. It has fallen with its face to the ground, so that the countenance has remained entire. Its physiognomy is sufficient to enable me to recognise in it a statue of Sesostris, for it is a most faithful portrait of the fine Sesostris at Turin: the inscriptions on the arms, the breast, and the girdle, confirm my idea; and there is now no doubt that there are at Turin and Memphis two portraits of the greatest of the Pharaohs. I have caused a drawing to be made of this head with extreme care, and copies to be taken of all the inscriptions. This colossus was not alone; and if I obtain special funds for excavations at Memphis on a great scale, I can engage, in less than three months, to people the museum in the Louvre with statues of the most valuable materials, and very interesting for history. This colossus, before which are considerable substructions of calcareous stone, was, according to all appearance, placed before a great gateway, and must have had others corresponding

with it. I have caused some excavations to be made to convince myself of this, but I shall be pressed for time. A little farther on, and upon the same line, there are still some smaller colossi of the same Pharaoh, of rose-coloured granite, but in very bad condition. This was also a gate.

To the north of the colossus there was a temple of Venus, built of white calcareous stone, and outside the great enclosure on the east side. I have continued the excavations commenced by Caviglia, the result of which has fully proved, that there existed at that place a temple ornamented with pilasters, in pairs, of red granite, and dedicated to Phtha and Hathor (Vulcan and Venus), the two great divinities of Memphis, by Rameses the Great. The principal enclosure contained also, on the east side, a vast necropolis, resembling that which I met with at Sais.

It was on the 4th of October that I encamped at Saccara, for we were under tents: seven or eight Bedouins, chosen beforehand, keep guard every night, and execute our commissions during the day: they are brave, and excellent people when they are well treated.

I visited at Saccara the plain of the mummies, the ancient cemetery of Memphis, covered with pyramids and tombs which have been broken open. This place, thanks to the barbarous rapacity of the dealers in antiquities, presents hardly any thing worth studying; the tombs ornamented with sculpture being, for the most part, laid waste, or filled up again after having been plundered. This desert is frightful; it is formed of a series of little sand-hills, produced by the excavations, and the whole strewn with human bones, the remains of former generations. Only two tombs attracted our attention, and indemnified me for the melancholy aspect of this field of desolation. I found in one of them a series of Egyptian birds admirably sculptured on the walls, and accompanied with their names in hieroglyphics; five species of gazelles, also with their names; and lastly, some domestic scenes, such as milking, two cooks exercising their art, &c.

Fifth Letter.

At the Foot of the Pyramids of Gizeh, Oct. 18, 1832.

I HAVE removed my camp and my penates, under the shade of the great pyramids, since yesterday, when quitting Saccara to visit one of the wonders of the world. Seven camels and twenty asses conveyed us and our baggage across the desert which separates the southern pyramids from those of Gizeh,—the most celebrated of all, and which it was necessary for me to see before I set out for Upper Egypt. These wonders must be studied closely, in order to be properly appreciated: they seem to diminish in height, in proportion as you approach them; and it is not till you touch the blocks of stone of which they are formed, that you have a just idea of their mass and immensity. There is little to be done here; and when we have copied the scenes of domestic life sculptured in a tomb near the second pyramid, I shall return to our boats, which will come to Gizeh for us, and we shall sail with all expedition for Upper Egypt, which is my real head-quarters. Thebes is there, where one always arrives too late.*

* We have also seen three letters from his companion, M. Lenormant. They contain details of the discoveries at Sais, and general observations on the country through which the expedition has passed; but there is nothing in them of sufficient interest to repeat, after what has been stated by M. Champollion. M. Lenormant appears to be delighted with the city of Cairo, with the climate of the country, and, above all, with the Egyptian females, of whom he writes in terms which may be considered

CELESTIAL PHENOMENA FOR JANUARY.

"All combined,
And ruled unerring by that single power,
Which draws the stone projected to the ground."

AT the commencement of the year the earth is in perihelion, or that point of its orbit in which it makes the closest approach to the sun, and 9 deg. 58 min. 4 sec. beyond the winter solstice: one of the extremities of the major axis of the earth's orbit is directed to this point, and is found by a comparison of observations, separated by considerable portions of time, to have a progressive motion of 62 sec. annually. A very remarkable calculation is connected with this slow motion—that the major axis of the earth's orbit coincided with the line of the equinoxes about the time that chronologists assign to the creation of the world.

This, and other minute motions connected with the earth and other bodies of the system, which formerly excited the apprehension of the philosopher, as supposed to indicate the gradual decay or derangement of the frame of nature, are now satisfactorily explained on, and are fully proved to be conformable to, the laws of gravitation, and probably even conducive to the stability of the whole. Thus, the mutual perturbations of Jupiter and Saturn when in conjunction, by which one is retarded, and the other accelerated, become corrected after a lapse of ages;—the eccentricity of the orbit of the earth is diminishing, but will in the course of time again resume its former ellipse;—the moon's secular motion is now $7\frac{1}{2}$ min. greater than it was 2549 years since, yet this acceleration will never amount to a quantity sufficient to excite apprehension of the approach of the moon too near the earth;—the obliquity of the ecliptic is less now by 23 min. 47 sec. than it was in the time of Eratosthenes, decreasing a small quantity every year, but which will never extend beyond a degree or two; so that there is no ground for the apprehension that the ecliptic will ever coincide with the equator, the effect of which would be to destroy the animal and vegetable kingdoms as at present constituted, and to render this earth incapable of sustaining the race of man. Amidst these changes, a provision against the least imperfection is found to exist, by which the general harmony is effectually preserved.

Lunar Phases and Conjunctions.

	D.	H.	M.
● New Moon in Sagittarius	5	3	59
○ First Quarter in Pisces	11	19	18
○ Full Moon in Cancer	19	12	17
○ Last Quarter in Libra	27	17	21

The moon will be in conjunction with

	D.	H.	M.
Jupiter in Scorpio	2	9	19
Venus in Scorpio	2	16	20
Mercury in Sagittarius	4	18	30
Mars in Pisces	10	4	0
Saturn in Cancer	19	15	0
Jupiter in Scorpio	30	4	0

13th day, 17 hrs. 15 min.—Mercury in superior conjunction.

Venus in the early part of the month will be seen near the planet Jupiter shortly before sunrise, and afford an opportunity of comparing their brilliancy and colour.—6th day, the phases of Venus will be 10 digits east illuminated, apparent diameter 12 sec.

Mars is moving amidst the small stars in the constellation Pisces.

rapturous even in a Frenchman. A Paris correspondent informs us that the application made by M. Champollion for pecuniary means to enable him to prosecute his scientific researches at Sais, is likely to be complied with, as the Academy of Sciences and the King take a warm interest in the success of the expedition.

Jupiter, as he escapes from the solar rays, is becoming a beautiful ornament on the brow of early dawn.

The following are the visible eclipses of his satellites:—

	D.	H.	M.	S.
First Satellite, Immersion	23	18	12	2
Second Satellite, do.	9	18	13	44
Third Satellite, Emission	19	17	37	8

20th day, 14 hrs. 45 min.—Saturn in opposition; its most favourable position for observation being removed as far as possible from the illumination of the atmosphere of the earth at its nearest to our planet, and its apparent situation in the heavens coinciding with its true place.

22d day, 1 hr. 15 min.—Uranus in conjunction.

The comet, concerning which so much interest was excited some time since, having reappeared, as predicted by Professor Encke, and pursued its course in the track, and at the times calculated, has now escaped from the penetrating power of the telescope, and is mingling its mysterious cloud-like form with the solar beams.

The following is a summary of the observations made during its appearance:—

When first observed, its light was considerably inferior to that in the nebula of Andromeda; when again compared with it after an interval of a few days, the inequality had considerably diminished; and as it approached the sun, before the moon interrupted the observations on its increasing light, the brilliancy of the nebula (abstracting the central part) was but very slightly inferior to that in the comet. On a former return of this body, it had been described as appearing like the nebula in the head of Aquarius: on comparing these, the concentration of light was observed to be greater in the nebula than in the comet, but the comet's brilliancy in the former much inferior in brightness to that in the latter; a condensation of the nebulous matter was constantly observed towards the north of the centre, which might be considered a nucleus or otherwise, according to the various definitions of the term as applied to these bodies.—December 9th day, 5 hrs. 5 min. it was distinctly seen in the twilight, notwithstanding the moon was at that time immediately below the comet.

Scarcely an evening passed without evidences of its pellucid nature, very small stars being seen through it, conveying the idea of a star-like nucleus. It was remarked, that these stars appeared larger when behind the comet than when escaped from its nebulosity.

Dec. 1st day, 5 hrs. 15 min.—Its course was traced by means of a double star, which at this time was enveloped by the southern part of the coma. The comet passed over it obliquely; and at 7 hrs. 35 min. the star appeared to the east, and quite clear of it.

The northern limb was better defined than the southern: in the latter direction the nebulosity seemed more diluted, with occasionally an apparent radiation, but no appearance of a tail: its figure was circular, approaching to an oval.—Dec. 11th day, 6 hrs. the diameter a little less than 6 min.

Deftford.

J. T. B.

LITERARY AND LEARNED.

KING'S COLLEGE.

THE following details respecting the plan for conducting this College have been prepared by the provisional Committee, to be submitted to a general meeting of the donors and sub-

scribers; and we have much satisfaction in embracing the first opportunity of making them publicly known.

Visitor.—The visitor will be invested with all the powers usually belonging to his office.

Governors.—All fundamental regulations concerning the course of studies, and the internal discipline of the College, which the council may frame from time to time, as well as the appointment and removal of all the officers of the College, will be subject to the approval of the governors.

Council.—The council will direct the financial concerns of the College. They will regulate the payment for attendance at the several lectures, but will not interfere with the discipline of the College, except by proposing such regulations as they may think expedient for the approbation of the governors. They will also appoint the principal and professors, subject to the confirmation of the governors.

Principal.—The internal government of the College, and the general direction and superintendence of the course of education, will rest with the principal.

He must be a clergyman, having the degree of M.A. at least, in one of the Universities of Oxford, Cambridge, or Dublin.

It will be his duty to preside over the public examinations, to preach often in the College chapel, and to report from time to time the state of the College to the council and governors.

Professors.—The professors will be appointed by the council, and must all be members of the Church of England, except in the case of the teachers of Oriental languages and modern languages.

The prescribed course of lectures, to which all students admitted will be required to conform, will comprise religion and morals, classical literature, the lower branches of mathematics, the elements of natural philosophy, English literature and composition, and modern history.

The professors in all these branches will have salaries assigned to them out of the College funds, besides such stipends as the council may think proper to make, in proportion to the number of the students who attend their lectures. They will be expected not merely to lecture their classes, but to ascertain individual proficiency by frequent examination.

Lectures also will be given in law, the higher branches of mathematics, natural and experimental philosophy, chemistry, medicine and surgery, anatomy, natural history, the principles of commerce, Oriental literature, modern languages, and such other branches of literature and science as may be hereafter directed. The attendance at these lectures will be optional on the part of the students.

The remuneration of the professors who lecture on these subjects will be regulated by the council, and all depend wholly on the number of students in their respective classes; some part of the payments made by the students being reserved for the general purposes of the College.

Tutors.—Tutors will be appointed by the principal, with the approbation of the council. One or more of the tutors, under the direction of the principal, will reside in each house, or in each portion of the College allotted to the reception of students: they will be responsible to the principal for preserving good order and discipline, and will be removable by him, with the approbation of the council.

The remuneration of the tutors will be provided for, according to the number of their pupils, out of the College fund.

Every student, whether resident or not, must be entered under one of the tutors, who will direct and superintend the course of his studies, and assist him with private instruction.

Students of the Higher Department.—Students will not be admitted under the age of sixteen, except in cases of remarkable proficiency, recommended to the principal, and approved by him. An inquiry will be made by the principal, previously to the admission of every student, both into his proficiency and his former good conduct.

The principal alone will be authorised to admit or reject students, and to determine the number of pupils to be entered under each tutor.

The resident students will be subject to such regulations as the principal may from time to time announce. They will all be required to attend the service of the Church of England in the College chapel on Sundays.

The non-resident students will be allowed to attend church on Sundays with their families: the principal to be, in all cases, satisfied that they have so attended; but, whenever required by him, they must attend the service in the College chapel.

Prayers will be read on all other mornings, at which the attendance of all students, resident and non-resident, will be required.

Public Examinations.—Public examinations of the students will take place at stated periods, when prizes and other honorary distinctions will be awarded.

At these examinations, the students' knowledge of the scriptures of natural and revealed religion, and of the doctrines and duties of Christianity, as taught by the united Church of England and Ireland, will be carefully inquired into. Every student will be expected to exhibit a certain degree of proficiency in these subjects.

Optional Attendances at Lectures.—Persons, properly recommended, will be allowed, under the sanction of the principal, to attend lectures in any particular course

of study; but never to such an extent as to interfere with the education of the students, or the discipline of the College. Persons so attending will not be recognised as students, nor will they be entitled to contend for prizes or rewards; nor will certificates of attendance at lectures be granted to any persons who have not gone through the prescribed course of religious instruction.

All persons under twenty years of age, so attending, will be required also to attend such parts of the course of religious instruction as, in the opinion of the principal, may be expedient in each particular case.

Lower Department.—The lower department, which, in its details, will be totally distinct from the higher, though intended to afford an education preparatory to it, will consist of a school for the reception of day scholars.

This department will be placed under the separate management of a head master, appointed by the council, and a competent number of under masters, appointed by him, all members of the Church of England.

The system here carried on will embrace a course of religious instruction suited to the age of the pupils, classics, arithmetic, elementary mathematics, the modern languages, &c.

The salaries of the masters will depend on the number of the pupils.

One or more public examinations will take place every year, at which prizes will be distributed.

With regard to the site of the College, we have heard that, though the Ring in the Regent's Park is yet within the occupation of the Committee, there has, nevertheless, been some talk of finishing Somerset House, by adding the eastern wing, and appropriating a portion of this noble pile to the great national object which has hitherto proceeded so auspiciously.

FINE ARTS.

NEW PUBLICATIONS.

The Tower Menagerie: comprising the Natural History of the Animals contained in that Establishment; with Anecdotes of their Characters and History. 8vo. pp. 341. London, Jennings; Dublin, Wakeman.

An elegant and interesting work, and an excellent present for young persons at this season of affectionate bounty. It contains delineations, descriptions, and anecdotes, of all the animals which were in the menagerie of the Tower in the last summer. The drawings are by Mr. William Harvey, who, as the introduction justly observes, "in seizing faithful and characteristic portraits of animals in restless and almost incessant motion, has succeeded in overcoming difficulties which can be appreciated only by those who have attempted similar delineations." The engravings, which are on wood, have been executed by Messrs. Branstons and Wright, and do them the highest credit; conveying the distinctive characters of the various animals, &c. with admirable fidelity and spirit. We were especially struck with the representations of the Lioness and her Cubs, the Jaguar, the Chetah, the Striped Hyena, the Grizzly Bear, the Zebra, the Great Sea-Eagle, the Secretary Bird, &c. By the by, an accident happened to the last-mentioned bird, at which, fatal as it proved, it is impossible to refrain from laughing. Such is the excellent management, especially as regards cleanliness (that essential security of animal health), of Mr. Copps, the present keeper of the menagerie, that during the time the work was passing through the press, not a single death occurred from disease; and one only from an accidental cause:—"the secretary bird having incautiously introduced its long neck into the den of the hyena, was deprived of it and of its head at one bite." It is said, in the particular description of the bird, that "it was for a long time one of the torments of ornithologists, who puzzled themselves in vain to assign it a definitive place in the system." We really think that, after the above-mentioned occurrence, there ought to be no farther difficulty on the subject, but that it should be

at once admitted into the class *anser*—goose. Secretary, indeed! The appellation is calumnious. When did Lord Aberdeen, Sir George Murray, or Mr. Peel, ever incautiously introduce his neck into the den of a hyena?—The literary department of this pleasing volume has been superintended by E. T. Bennet, Esq. a member of the Zoological Society, who has arranged the whole of the materials, which have been collected from various and authentic sources.

Panorama of the Rhine and the adjacent Country, from Cologne to Mayence, &c. London. S. Leigh.

THIS panoramic view has long been the companion of the vessels which plied upon the Rhine, and a very useful companion to thousands of our tourists. The public are, therefore, much obliged to Mr. Leigh for furnishing them with a better engraved and more intelligible performance than the original German by Delkeekamp; the value of which he has greatly enhanced to the traveller, by giving a map of routes from various points on the coast to the river so zealously visited. Notices of the principal places are also an additional advantage in this publication.

Her Grace, Charlotte Florentia, Duchess of Northumberland. Engraved by Deane, from a Miniature by Mrs. James Robertson. Colnaghi.

THIS print is the forty-ninth portrait of the picture gallery of the female nobility published in *La Belle Assemblée*. The expression of the features is very marked and striking; and the plate is a fine specimen of the delicacy and force of which stippled engraving is susceptible. Really, this gallery is becoming highly interesting and valuable; comprehending, as it does, the "pictures in little" of so many of the most brilliant ornaments of the British court.

ORIGINAL POETRY.

THE CHURCHYARD.

The shadow of the church falls o'er the ground,
Hallowing its place of rest; and here the dead
Slumber, where all religious impulses,
And sad and holy feelings, angel like,
Make the spot sacred with themselves, and wake
Those sorrowful emotions in the heart
Which purify it, like a temple meet
For an unearthly presence. Life, vain Life,
The bitter and the worthless, therefore here
Do thy remembrances intrude?

THE willow shade is on the ground,
A green and solitary shade;
And many a wild flower on that mound
Its pleasant summer home has made.

And every breath that waves a leaf
Flings down upon the lonely flowers
A moment's sunshine, bright and brief—
A blessing looked by passing hours.

Those sweet, vague sounds are on the air,
Half sleep, half song—half false, half true,
As if the wind that brought them there
Had touched them with its music too.

It is the very place to dream
Away a twilight's idle rest;
Where Thought floats down a starry stream,
Without a shadow on its breast.

Where Wealth, the fairy gift, 's our own,
Without its low and petty cares;
Where Pleasure some new veil has thrown
To hide the weary face she wears.

Where hopes are high, yet cares come not,
Those fellow-waves of life's dear sea,
Its froth and depth—where Love is what
Love only in a dream can be.

I cannot muse beside that mound—
I cannot dream beneath that shade—
Too solemn is the haunted ground
Where Death his resting-place has made.
I feel my heart beat but to think
Each pulse is bearing life away;
I cannot rest upon the grave,
And not feel kindred to its clay.

There is a name upon the stone—
Alas! and can it be the same—
The young, the lovely, and the loved?—
It is too soon to bear thy name.
Too soon!—oh no, 'tis best to die
Ere all of life save breath is fled:
Why live when feelings, friends, and hopes,
Have long been numbered with the dead?
But thou, thy heart and cheek were bright—
No cheek, no soil had either known;
The angel natures of yon sky
Will only be to thee thine own.

Thou knew'st no rainbow-hopes that weep
Themselves away to deeper shade;
Nor Love, whose very happiness
Should make the wakening heart afraid.

The green leaves e'en in spring they fall,
The tears the stars at midnight weep,
The dewy wild-flowers—such as these
Are fitting mourners o'er thy sleep.

For human tears are lava-drops,
That scorch and wither as they flow;
Then let them flow for those who live,
And not for those who sleep below.

Oh, weep for those whose silver chain
Has long been loosed, and yet live on—
The doomed to drink of life's dark wave,
Whose golden bowl has long been gone!

Ay, weep for those, the wearied, worn,
Dragged downward by some earthly tie,
By some vain hope, some vainer love,
Who loathe to live, yet fear to die.

L. E. L.

CHANGE.

I would not tarry, at least so much, sweet Spring,
For the departing colour of thy flowers—
The green leaves early falling from thy boughs—
Thy birds so soon forgetful of their songs—
Thy skies, whose sunshine ends in heavy showers;—
But thou dost leave thy memory, like a ghost,
To haunt the ruined heart, which still recurs
To former beauty; and the desolate
Is doubly sorrowful when it recalls
It was not always desolate.

When those eyes have forgotten the smile
they wear now, [brow]
When care shall have shadowed that beautiful
When thy hopes and thy roses together lie
dead,
And thy heart turns back pining to days that
are fled—

Then wilt thou remember what now seems to
pass
Like the moonlight on water, the breath-stain
on glass:
Oh! maiden, the lovely and youthful, to thee,
How rose-touched the page of thy future must
be!

By the past, if thou judge it, how little is there
But flowers that flourish, but hopes that are
fair; [spring]
And what is thy present? a southern sky's
With thy feelings and fancies like birds on the
wing.

As the rose by the fountain flings down on the
wave
Its blushes, forgetting its glass is its grave;
So the heart sheds its colour on life's early
hour, [flower]
But the heart has its fading as well as the

The charmed light darkens, the rose-leaves are
gone,
And life, like the fountain, floats colourless on.
Said I, when thy beauty's sweet vision was
fled,
How wouldst thou turn, pining, to days like
the dead!

Oh! long ere one shadow shall darken that
brow,
Wilt thou weep like a mourner o'er all thou
lovest now;

When thy hopes, like spent arrows, fall short
of their mark;
Or, like meteors at midnight, make darkness
more dark;

When thy feelings lie fettered like waters in
frost,
Or, scattered too freely, are wasted and lost:
For aye cometh sorrow, when youth has past
by—

What saith the Arabian? Its memory's a sigh.
L. E. L.

1828. MIDNIGHT. 1829.

New Year loquitur.
Son of dark ages! Oh, relate
Some lessons of the past!
Tell me where dire misfortunes wait;
Say how my lost is cast!

Old Year.
The past is known. The future strides
A giant in the dark;
And fate's relentless shafts he guides
Unerring to their mark.

New Year.
Shall I in future annals rank
A great and glorious year?
Or, will my months roll round a blank,
Unmarked by joy or fear?

Old Year.
Thy moons, like mine, shall wax and wane,
Thy suns will set and shine;
And thou the title shalt obtain
Of eighteen, twenty-nine.

New Year.
And is that all, my aged friend,
That thou canst tell to me?

Old Year.
Ay—all. I'm old and near my end,
And nothing more can see.

My hours alit by from night to day,
I scarce know how they went—
But, since they're gone, I'm free to say
With few was I content.

Alack! Such thoughts are grievous now,
And make my spirit sore.

New Year (aside).
By all my budding hopes I vow,
The old fellow's quite a bore!

Old Year.
Hush! Hear that deep-toned midnight bell
Say I must cease to be;
ALONE it tolls my funeral knell.
[The clock striketh, and the Old Year vanisheth
for ever: then, amid the pealing of bells.]

New Year loquitur.
Hark! They ALL ring for me!

L'Envoi.
And now old twenty-eight is dead,
May young eight twenty-nine,
Who comes to rule our hours instead,
Bring joy to thee and thine.

P. W.

DRAMA.

The Christmas Pantomimes.—We cannot go on, year after year, lamenting the decay of pantomime. We have looked back to our Jeremiad of last Christmas, and perceive that, with little or no alteration, it might be reprinted upon the present melancholy occasion. *The Queen Bee* and *Little Red-Ridings-Hood* are equally deficient in all the true qualities of a harlequinade; and the grand rivalry lies, as usual of late, between the scene-painters. Last year Covent Garden had it "all to nothing;" but turn and turn about is fair play; and Mr. Stanfield has triumphantly atoned for his failure of last season. The whole of his "Grand moving picture from Spithead to the Rock of Gibraltar," is, in our opinion, faultless. Its beauty and truth were acknowledged by the acclamations of the spectators; and the manoeuvring of the vessels completed the extraordinary illusion. We must, however, object to his presenting us with one mosque and a few vessels as "a grand View of Constantinople." Mr. Roberts's "Moving Panorama of the grand Russian Army's march to Turkey," is, we are sorry to say, very inferior to his admirable "Naumachia" of last Christmas. With the exception of the views of St. Petersburg and Constantinople (neither of which, by the way, though beautifully painted, are taken from the best points of vision), there is little to praise, and much to find fault with. The figures in the battle are ill drawn, and worse coloured; and falling stones, dancing negroes, and galloping horses, are utterly destructive of scenic illusion. Stanfield, who, we believe, set the example of introducing figures, and is, indeed, rather too fond of it for our taste, generally contrives to represent them in sitting or reclining postures, or standing in groups gazing or conversing. The man asleep on the steps, in one of the early dioramas, gave great reality to the scene; but had he been painted jumping down them, the effect would have been ludicrous, and the deception entirely destroyed. The careless drawing and the vicious colouring of the subjects are still less pardonable; and we speak our mind thus freely, as we have ever done justice to the great talent of Mr. Roberts, and are amongst his warmest admirers and well-wishers. In architectural scene-painting he is unrivalled, and in his sea-views he is, perhaps, inferior only to Stanfield; we regret, therefore, to see his pencil guilty of such a white horse as the first in the battle, or of such a gray one (a bad copy of Horace Vernet) as that which closes the group. The clouds of brickdust, intended to represent the "sulphurous canopy" of the combat, are also exceedingly objectionable; and we wish the whole of this part of the picture could be effaced, and views of Jassy, Bucharest, Silistria, Varna, Shumla, Adrianople, &c., introduced in its stead. As it is, Mr. Roberts has permitted himself to be outstripped by Mr. W. Grieve, whose "Cathedral and City of Rouen," with the bridge of boats, mill, &c., is the gem of the pantomime. It is, we think, the *chef-d'œuvre* of this rapidly rising artist, the worthy son of a worthy sire. "St. John's Gate," at Southampton, also by W. Grieve, is deserving a frame; and the "Opening of St. Catherine's Docks," in which he has been admirably seconded by the machinist, reflects great credit on his invention and knowledge of stage effect. "The Rosy Bower," by Mr. T. Grieve, is well imagined and executed; and the rest of the scenery creditable to the various artists of the establishment.

fair to command a far more extensive circulation than any which has ever appeared under the same denomination.

The second volume of Memoirs of the Affairs of Europe from the Peace of Utrecht, by Lord John Russell, will appear in a few days.

Amongst the forthcoming novelties for our juvenile friends, we notice a Game of Chemistry, a useful publication, and which seems to us to possess one very decided recommendation—namely, that the questions have constant reference to the daily, nay hourly, occupations of our lives. In every situation of life, and to all classes of the community, some acquaintance with chemistry is absolutely necessary; and every help to make young persons acquainted with its elementary principles, its terms and phrases, and its constant application in all the operations of the arts, is most desirable.

The publication of Engravings of Ancient Cathedrals, Town Halls, and other Public Buildings of celebrity, in France, Holland, Germany, and Italy, from Drawings taken on the Spot, and engraved by Mr. John Coney, illustrated with Architectural and Historical Descriptions, by C. Heathcote Tatham, Esq.—is announced in Parts, to commence early.

Nearly ready, the second volume of the *Origo*, embellished with twenty-eight engravings from original designs.

A Literary Gazette is about to be started at Manchester. It is intended, says the prospectus, that the Gazette shall combine the character of a local and of a general literary and scientific publication.

The publishers of the Boy's Own Book announce the Young Lady's Book, devoted to the favourite pursuits and recreations of young ladies.

A sacred poem, entitled the Opening of the Sixth Seal, dedicated, by permission, to Professor Milman, is about to appear.

In the Press.—The Harp of Innisfaile, a national poem, by D. S. L.—The Lady's Library, with portraits; the first part will appear early.—The Royal Book of Fate, with an "extraordinary" frontispiece.

LIST OF NEW BOOKS.

TO CORRESPONDENTS.

✂ We beg to direct attention to the first Advertisement, of a case of literary misfortune, in our columns of this date. Messrs. Hoares having humanely undertaken to receive subscriptions, we wish only to say, in consequence of our Publisher's being also ready to share in this duty, that we have made it our business to inquire into the distressing circumstances referred to, and to pledge ourselves both to their severity and to the due administration of the relief afforded by the benevolent.

¶ Owing to the space required for our papers on Expeditions, &c. we are compelled greatly to abridge our Review for this week. The Memoirs of Josephine, and Sailors and Saints, are reluctantly postponed.

* Our publisher will, besides feeling himself obliged, either give the price, or other papers in exchange, for the following Nos. of the *Gazette*, which are wanted to complete sets—6, 23, 24, 25, 31, 32, 33, 35, 39, 40, 52, 53, 54, 55, 56, 57, 58, 60, 61, 62, 63, 64, 65, 78, 259, 313, 353, 473, 512.

The sketches by X. would interfere with the arrangements which occupy all the space we can afford. The MSS. are left at our office.

The following line is a sufficient reason "why" we do not insert "the Shepherd Boy":
His dotting mother with paternal care.

ADVERTISEMENTS, Connected with Literature and the Arts.

DISTRESS. An instance of infinite Literary Distress (involving an Author of great Learning and Virtue, and a numerous Domestic Circle) having been divulged in the hope of Aid, where circumstances rendered that Aid impossible, the noble example of the benevolent Friate at the Head of the annexed List has led to a voluntary Subscription, which promises to fulfil all the good proposed by it; but which this public means is taken to promote, in consequence of the time lost, and inconvenience experienced, in seeking private Contributions.

Subscriptions will be received by Messrs. Hoares, Bankers, Fleet Street; and by Mr. Scripps, at the "Literary Gazette" Office.

BRITISH INSTITUTION, PAUL MALL.

NOTICE TO EXHIBITORS. All Pictures and Works of Art intended for Exhibition and Sale, must be sent to the Gallery on Monday the 12th, and Tuesday the 13th of January, 1829, between the Hours of Ten in the Morning and Five in the Evening, after which time no Pictures or other Works of Art will be received. Portraits and Drawings in Water Colour are inadmissible.

WILLIAM BARNARD, Keeper.

THE OBSERVER OF SUNDAY, Jan. 4,

price Seven-pence, will contain an Engraving of the King's New Palace at Piccadilly. An edition of the Observer, desirable for Country Readers, is published at Four o'clock every Monday Afternoon, containing the latest News, Clerical Intelligence, and the Mark-Lane Corn-Market of Monday.

UPWARDS OF 53,000L. ANNUALLY CONTRIBUTED TO THE REVENUE BY ONE INDIVIDUAL.

Mr. Clement, the Proprietor of the Morning Chronicle, who possesses the largest Newspaper Establishment in London, paid last year, between Jan. 1, and December 31, 1828, for Stamp and Excise Duties for that Journal and his three Weekly Papers, no less than Fifty-three Thousand and Five Hundred Pounds. The number of fourpenny stamps, which has the red mark at the corner of every paper, was Two Millions, Seven Hundred and Thirty-five Thousand, Eight Hundred and Sixty-five. * The quantity of paper used was 5,471 reams; each ream weighed 40lbs. the Excise Duty on which was 10s. the ream. The number of Advertisements inserted in Mr. Clement's papers in the year was 29,633, the Duty upon each Advertisement being 3s. 6d. Thus, the Sums paid to the Revenue by Mr. Clement's Newspaper concern, in the past year of 1828, were—

2,735,928 News Stamps	£ s. d.
Duty on 29,633 Advertisements, at 3s. 6d.	45,497 15 0
Excise on 5,471 Reams of paper, at 10s.	5,471 5 0
Total	53,510 0 0

* Mr. Clement's consumption being more than one-tenth part of the Stamps used by all the newspapers printed in England, of which there are printed in London 40 and in the country 15, together of daily and weekly Journals, 200; consuming, according to the Parliamentary Return, about Twenty-five Millions of Fourpenny Stamps.

MUSIC.

TWO PRIVATE LECTURES on a MUSICAL COMPOSITION, in Forty-five Parts, entitled "The Hero's Welcome, a Motet," composed for every Class of Voice, and every sort of Instrument generally used in Concert. By T. D. WORGAN.

The principal purpose of these Lectures is to give any one merely conversant in the rudiments of Piano-forte practice, a general and liberal view of the vocal and instrumental powers, and of the Principles of Musical Composition. The Lectures are given by the Composer of the "Motet" at the Piano-forte, to any number of Persons, from one to a numerous audience; and being illustrated by Examples in Notes, are a simultaneous appeal to the eye, ear, and understanding. To prevent disappointment, however, it is proper to add, that the gratification the Lecturer aims at affording is rather intellectual than sensuous.

Terms of Attendance.—The Two Lectures, inclusive of the Music elucidated, to each Auditor, 10s. 6d.
Letters (free of postage) addressed to T. D. Worgan, 3, Camden Terrace West, Kentish Town, will receive due attention.

BOOKS PUBLISHED THIS DAY.

In 2 vols. 8vo. price 11s. is dedicated, with permission, to the Lord Archbishop of Canterbury,
THE HISTORY OF THE RISE AND EARLY PROGRESS OF CHRISTIANITY, comprising an Inquiry into the true Character and Design.
By the Rev. SAMUEL HINDS, M.A. of Queen's College, and Vice Principal of St. Alban's Hall.
London: Printed for Baldwin and Cradock; C. and J. Rivington; J. Duncan; E. Hodgson; Suttaby, Fox, and Suttaby; B. Fellows; J. Dowling; H. T. Hodgson; Laycock and Son; G. Lawford and J. Fraser; also for J. Parker, Oxford; and J. and J. Dighton, Cambridge.

In 8vo. price 12s. boards, the 4th edition, much enlarged, of
DISCOURSES ON THE PRINCIPAL PARTS OF THE SOCINIAN CONTROVERSY.
By RALPH WARDLAW, D.D. Glasgow.

THE LITERARY SOUVENIR for 1829.
Edited by ALARIC A. WATTS.
With Twelve highly finished Line Engravings, from Paintings
by the Best Masters.
In post 8vo. with Proofs on India paper, 24s.; Proofs on Imperial
4to. 30s. in a Portfolio. A very few Proofs before Letters;
3s. 6d.

"We were called upon to say to which of all the Annuals we
should assign the first place, we should not hesitate to decide in
favour of the *Souvenir*. The beauty of its embellishments, and
the taste displayed in its poetry particularly, place it beyond all
its rivals. We are aware that it is invidious to single out one
work from the whole, as entitled to the prize of excellence; but
we do so in justice to all parties, as we thus place before them
the model which they must rival or excel, if they hope to contend
with it for the popularity it has deservedly acquired."—*Monthly*
Review, Jan. 1.

"North. But I have Mr. Alaric Watt's *Souvenir* in my pocket:
there! you may well turn up your eyes in admiration, for of the
embellishments, of all the engravings I ever beheld, these are the
most exquisitely beautiful."—*Shepherd*. Sir Walter? ma faith!
the thing's done at last. The verger himself, as if you were
looking at him through the wrong end of a telescope.—*North*.
Leslie's is the best likeness of Sir Walter ever achieved; face,
figure, air, manner,—all characteristically complete.—*Shepherd*.
And is the writing in the *Souvenir* good, sir?—*North*. Excellent!—
—*Blackwood's Magazine*, Dec.

Mr. Watts has this year succeeded in procuring a set of the
most exquisite productions we have ever seen together, and we
have no hesitation in broadly stating our opinion, that his illustrations
excel those of any other Annual, not excepting even the
much-talked-of *Keepsake*."—*Morning Journal*.
Printed for Longman, Rees, Orme, Brown, and Green.

BOOKS IN THE PRESS.

Wardell's Great Britain.
On the 1st of February will be published, the 8th Number,
containing Four Views, price 1s. of

GREAT BRITAIN ILLUSTRATED:
A Series of original Views of the principal Towns, Public
Buildings, and remarkable Antiquities in the United Kingdom,
from Drawings by WILLIAM WESTALL, A.R.A. Engraved
by E. FINDEN. With Descriptions by THOMAS MOULE,
Author of the *Bibliotheca Heraldis*.

At the same time will appear,
Part I. containing 20 Plates, price 5s.
A few Proofs are taken on India paper, price 2s. per Number,
or 10s. a Part.
Printed for Charles Tilt, 55, Fleet Street.

Early in January 1829 will be published, with large Additional
Matter, and several New Embellishments, a 3d edition of
PORTUGAL ILLUSTRATED.

By the Rev. W. M. KINSEY, B.D.
Fellow of Trinity College, Oxford, and Chaplain to
the Right Hon. Lord Auckland.

Embellished with a Map, Plates of Coins, Vignettes, and various
Engravings of Costumes, Landscape Scenery, &c.
The Author has been encouraged by the rapid sale of the first
edition of his Work to undertake the publication of a second,
which, he trusts, will come recommended to the favourable con-
sideration of the public, not only from the sedulous revision
which it has undergone, but also from embodying additional speci-
mens of the national music of Portugal, and the following new
illustrations, executed by the best Artists in the most finished
style: 1. Belem Castle, on the Tagus.—2. The Aqueduct and City
of Lisbon.—3. The Moorish Palace at Cintra.—4. The Cork Con-
tainer, near Colares.—5. The Fortifications of Alhambra on the
Tagus, which formed the extreme right of the lines of Torres
Vedras.—6. and 7. Portraits of Camoens and of Ignez de Castro;
besides several Vignettes by Messrs. Brooks and Harvey. The
additional matter, which extends to 100 pages, will comprise a
brief Historical Review of the State of Literature, Arts, and Sci-
ences in Portugal, from the earliest period to the present time.
The price of the new edition will be Two Pounds, in boards.
A few Copies will have proof impressions of the Plates, on India
paper, price 2l. 10s.; for which intending purchasers will please
to forward their names.
Published, for the Author, by Treuttel and Würtz, Treuttel,

Lodge's Portraits and Memoirs of the most Illustrious Personages
of British History.

To commence publishing, Monthly, with the Magazines, Janu-
ary 1st, 1829, No. I. of the 3d edition, with an entirely New Set
of Plates.

PORTRAITS and MEMOIRS of the
MOST ILLUSTRIOUS PERSONAGES of BRITISH
HISTORY.

By EDMUND LODGE, Esq. Norrey King of Arms, F.S.A.

This collection of Illustrious English Portraits and Biography
will comprise the History of the Country, in Memoirs of the
most illustrious English Nobility and great Officers of State
from the earliest introduction of Portrait Painting to the present
time. The subjects are selected from the highest Authorities in
the land, the original Pictures being preserved in the Galleries
of the Nobility, descendants of the distinguished Persons repre-
sented, or in the Public Collections, and are painted by Hol-
bein, Rubens, Vandock, Lely, Kneller, Reynolds, and other great
Masters.

Sir Walter Scott has observed, in writing of this Work, "It is
impossible for me to conceive a work which ought to be more in-
teresting to the present age, than that which exhibits before our
eyes our fathers as they lived, accompanied with such memo-
rials of their lives and characters as enable us to compare their
persons and countenances with their sentiments and actions.
This valuable and extended series of the portraits of the illustri-
ous dead affords to every private gentleman, at a moderate ex-
pense, the interest attached to a large gallery of British portraits,
on a plan more extensive than any collection which exists, and at
the same time the essence of a curious library of historical,
biographical, and antiquarian works."—*Extract of a Letter from*
Sir Walter Scott, printed in the Prospectus.

The Quarterly Review of October thus criticises Mr. Lodge's
Work:—"Largely as we have been tempted to speak of the
graphic part of these volumes, we do not hesitate to say, that
were the engravings absent, they would form most valuable
addition to the English library. This strong language we use
deliberately. In regard to the illustrious characters of our political
history, through its two most picturesque and eventful cen-
turies, Mr. Lodge has furnished us with epitomes, which, were
the authorities regularly quoted at the bottom of the page, would
deserve to be put into the hands of every young person, beginning
his course of English historical reading, to guide him as to the
course of his inquiries; and in which the most ripe and experi-
enced reader will find delight, as serving to refresh memory
by a systematic and arranged exhibition of the common mate-
rials of thought, and not less as containing the reflections of a
mind equally polished, sagacious, candid, long exerted on these
materials."

Plan of Publication.
A Number will be regularly published every Month, containing
three highly finished Portraits, with their corresponding Memoirs,
in Imperial 8vo. and delivered with the Magazines and Reviews,
price 7s. 6d.; or with any number of the *Picture Gallery*, in
paper, royal 4to. size, 4s.

The First Number, containing the Portraits and Memoirs of
the First Duke of Bedford, the Duke of Devonshire, the Duke of
Sir Philip Sydney, from the Duke of Bedford's Gallery, James
Anne Bullen, from the Earl of Warwick's at Warwick Castle,
and Archbishop Cranmer, from the British Museum, will be
published on the 1st of January; and persons desiring to sub-
scribe for the entire impression, are requested to forward their
names either to the Publishers or to their respective Booksellers
in any part of the Kingdom, but with directions to have them
sent to the London Publishers forthwith, because the best im-
pressions will be appropriated to the first Subscribers; and un-
less Orders are registered in the Subscription Book at the Pub-
lishers, the earliest impressions cannot be guaranteed.

London: Harding and Lepard, Pall Mall East.
Sold by every Bookseller in the Empire, by whom Specimens
will be shewn upon application, and from whom a Prospectus
and Catalogue of Two Hundred of the Engravings, forming part
of the collection, may be obtained gratis.
Country Booksellers desiring the agency of this work are re-
quested to apply to the Publishers, free of expense.

In a few days will appear, uniform with the Percy Anecdotes,
with a beautiful Portrait of the Princess Victoria, Part I. of
a work entitled

THE LADY'S LIBRARY, each Part done
up in an elegant Wrapper, forming Four Volumes of
unexampled beauty and attraction.

This work will contain what is valuable in science, elegant in
accomplishments, and useful in domestic life.—*See Prospectus.*
Part II. will appear on the 1st of February,
containing a Portrait of Mrs. Hannah More.
Printed for Knight and Lacey, 55, Paternoster Row.

Early this month will be published, the Sixth Number of
THE FOREIGN QUARTERLY
REVIEW.

Printed for Treuttel and Würtz, Treuttel, Jun. and
Richter, 30, Soho Square.
Advertisements and Bills intended for this Number, are
requested to be sent in immediately.

Dr. Lingard's History of England.
On January 10th will be published, in 4to. the 7th Volume of
A HISTORY of ENGLAND, from the
First Invasion of the Romans.

By JOHN LINGARD, D.D.
London: Printed for Baldwin and Cradock; and B. Fellows,
Successors to Mr. Mawman.

By whom also is published, the 4th edition, price 2s. 6d. of
A Vindication of certain Passages, in the
3d and 4th Volumes, with a Postscript, in answer to Dr. Allen's
Reply.

PRICE 8d.

REVIEW OF NEW BOOKS.

The Modern History of England. Part II. Reign of Edward VI., Mary, and Elizabeth. By Sharon Turner, F.R.S. and R.A.S. 4to. pp. 736. London, 1828. Longman and Co.

One opinion of Mr. Turner as a historian of the highest class, and of the first volume of the extremely important work, may be found in the *Literary Gazette* (569) of October 21, 1828. To subscribe our encomiums, and again to name his purity of feeling, his integrity, his diligence in the search after truth, and all the other excellent qualities, would be as fatiguing to his mind as they are unavailing for to draw the public, the voice of which has long stood him among the greatest ornaments of our civil literature. Neither is it necessary to us to write a dissertation upon the subject of history; nor to point out the multitude of controversial doubts and difficulties which must crop out of any view whatever of the period which these volumes treat. The lion and the lamb will probably lie down in peace together about the same distant time, when the union of opposite sects and parties cannot be again regarding the events in the *disputed reigns* from the seventh Henry to the first James. Far from us be the attempt to do this to reconcile them at the present moment; we have to witness the fight, as equalled questions, and our only duty is to watch the conduct of the combatants, as they display power or weakness, and finally to choose the victor, with such marks of honour as their behaviour has merited; not forgetting the ones the vanquished may deserve a balance to their wounds, and a morsel of pain for their ill and wrongs.

It is, in the first instance, we are unable to stand to that extent; for the work before us opens for more attention than we have had a opportunity to bestow. It must suffice us, we to take up the one general but extremely interesting question brought forward in the Preface, which puts in a striking light the opinions that have been made to Mr. Turner as an apologist for Henry VIII. and all the progress of the Reformation, and his defence. We cannot promise that he is equally the progress of Elizabeth, and that we are not required to go along with him to the full extent of his information for that great queen. The following are his sentiments:—

"The chief founder of the progressive anarchy of our national greatness, was that man who in the same subject of the present work and her reign may be marked as the seed to which is conveyed into a visible existence, the commercial enterprise; the spirit of human improvement; our colonial establishments; the consolidated and settled power of Britain; the just foreign policy; the wise naval arrangements, and its maintaining spirit, then began to arise, or to be perfected in former principles, on larger knowledge, on the same public knowledge, then her an-

cestors had known or cultivated. But the healthful fountain of all our national vigour was that Reformation, of which she became the efficacious supporter and the most successful champion. The history of her reign is the history of the perils to which it was exposed, and of the long warfare it had to endure, and of its secure establishment in these countries which have ever since preserved it. To have thus contributed to its consolidation among mankind is the greatest glory of her lengthened and momentous reign. To elucidate this grand political conflict, in its abstracted progress and agitating vicissitudes, is the intention of the present composition. This portion of our Modern History has been written on the same plan with the preceding volumes. Every document which promised to furnish new materials of unknown facts, or more correct views of those already known, or that could supply the deficiencies which they presented to the considering eye, has been resorted to and consulted, to which access could be obtained; and none but contemporary authorities have been used, with very few exceptions. The object has always been to construct the history from the living authorities of the times described; and to convey to the reader as much as possible of the feelings and ideas of the great actors and leading personages, in their own words and representations. The desire of accomplishing this purpose, has made the notes inevitably numerous and copious; but they will present this advantage to all who peruse them, that the public will never be called upon to rely implicitly on the writer's veracity or judgment. The authorities are every where laid before the reader, from which he may always form his own conclusion, and agree or differ with the opinions or statements in the text, as his own discrimination may suggest.

"That to write the present history (he continues) is to walk upon the 'suppositio cinerum'—the unsetting, ash and still inflammable matter of error, controversial, and disputed subjects, is a disadvantage and an evil which the author has much regretted. Mary of England, and Mary of Scotland—Protestants and Catholics—Popes and Jesuits—Luther—(Martin) IX.—St. Bartholomew's massacre—the burnings in Smithfield—persecution elsewhere—harsh penal laws—Elizabeth—Burgley—Leicester, and Essex—all have been the objects of history battles, of contradictory opinions, and of keen recollections. And many may still be disposed, from the natural operation of preconceived opinions or wishes, to differ with the sentiments and views in the following pages. But no historian of this agitated period can perform his duty to truth and to the public, without subjecting himself to attack or contradiction on many of its varying incidents and characters, and the penally induced will sometimes be the most severe, when he has been the most impartial. When truths unpleasant must be told, when omitted facts are brought for-

ward; when the obscuring or disfiguring veil is removed, and the real form and features displayed to the general eye, the writer must not hope to escape the hostility or displeasure of those, to whom the recollections may be unpleasant, or the conclusions inconvenient. He must be resolute and faithful at every hazard, or authentic history must be suppressed or falsified.

"The endeavour has been, throughout the whole volume, to narrate the succession of its events with the same unvarying impartiality that would have been maintained if it had treated on the history of the Pharaohs of the Nile and their Persian conquerors; or had concerned only the stately hierarchy of ancient Egypt, and the consummation and improvement of its Grecian reformers. It is the author's duty faithfully to describe the past, but not to interfere with any discussions which may now be subsisting on such subjects. He has steadily endeavoured to observe a just neutrality as to them; and having made this principle his constant guide, all other results must be patiently risked. Angry criticism is a peculiarity of evil, which, in the present activity and dispositions of human nature, no prescription can avert. The right of every one is to judge as he pleases; and each will express himself according to his own taste and choice. It is for the advantage of our individual character to judge equitably, and to write with honourable candour. But even in this respect an one can be detected to. Society grants to no author a charter of protection, but has decided that reviewers may range and skirmish as they like. Public criticism must be, therefore, confronted with reasonable firmness, and all its varieties must be tranquilly endured. It must be expected to be diversified, according to the talents and temper of its writers. The liberal cannot, from the generous impulses of their own nature, but be liberal. The irritable will be fractious; the vindictive will be severe; the self-deceived will be dogmatic; the ungentlemanly will not be courteous. We all act and behave in society according to what we have grown up to be; and our pen shows and displays our mental character, as expressively as our manners, our conversation, or our conduct. With these feelings, the author respectfully presents this volume to the public, in the hope that it will be found to contain some interesting matter, which, although by most forgotten, and to many unknown, ought not to be omitted in English history. But... great curiosity now demands new facts, careful reasoning, and enlarged views, in every department of human inquiry, and as much in history, from extended research, as in any other. It is indeed delightful to see so many ardent minds pursuing, on all subjects, the inexhaustible riches of attainable knowledge with increasing success. Improvements and discoveries now flow rapidly upon us, of a nature and with an abundance that would formerly have been deemed improbable; and we are bound to be increasing the practical regulation of planetary

embellishments, of all the engravings I ever beheld, these are the
most exquisitely beautiful."—*Shepherd*. Sir Walter? was faith!
the thing's done at last. The verger himself, as if you were
looking at him through the wrong end of a telescope.—*North*.
Leslie's is the best likeness of Sir Walter ever achieved; face,
figure, size, manner,—all characteristically complete.—*Shepherd*.
And is the writing in the Souvenir good, sir?—*North*. Excellent!
—*Blackwood's Magazine*, Dec.

"Mr. Watts has this year succeeded in procuring a set of the
most exquisite productions we have ever seen, and we have
no hesitation in broadly stating our opinion, that his illustrations
excel those of any other Annual, not excepting even the
much-talked-of Keepsake."—*Morning Journal*.

Printed for Longman, Rees, Orme, Brown, and Green.
Of whom may be had.
The New-Year's Gift, and Juvenile Sou-
venir. Edited by Mrs. Alaric Watts. With Twelve Line En-
gravings, and numerous Woodcuts. Elegantly half-bound in
Turkey Morocco, with gilt leaves, price 7s. 6d.

8vo. 12s.
A THIRD VOLUME of DEATH-BED
SCENES, and PASTORAL CONVERSATIONS.
John Murray, Albemarle Street.

BOOKS IN THE PRESS.

Westall's Great Britain.
On the 1st of February will be published, the 5th Number,
containing Four Views, price 1s.

GREAT BRITAIN ILLUSTRATED:
A Series of original Views of the principal Towns, Public
Buildings, and remarkable Aqueducts in the United Kingdom,
from Drawings by WILLIAM WESTALL, A.R.A. Engraved
by E. FENNER. With Descriptions by THOMAS MOULE,
Author of the *Illustrated History of England*.

Part I. containing 20 Plates, price 5s.
A few Papers are taken on India paper, price 2s. per Number,
or 10s. a Part.
Printed for Charles Tilt, 25, Fleet Street.

Early in January 1850 will be published, with large Additional
Plates, and several New Engravings, the 2d edition of
PORTUGAL ILLUSTRATED.

By the Rev. W. M. KINSEY, B.D.
Fellow of Trinity College, Oxford, and Chaplain to
the Right Hon. Lord Auckland.

Embellished with a Map, Plates of Coins, Vignettes, and various
Engravings of Customs, Landscape Scenery, &c.
The Author has been encouraged by the rapid sale of the first
edition of his Work to undertake the publication of a second,
which, he trusts, will come recommended to the favourable con-
sideration of the public, not only from the sedulous revision
which it has undergone, but also from embodying additional spec-
imens of the national music of Portugal, and the following cer-
tificates, extracted by the first Artists in the most finished
style: 1. Belem Castle, on the Tagus.—2. The Aqueduct and City
of Lisbon.—3. The Moorish Palace at Cintra.—4. The Cork Oaks
on the Tagus, which formed the extreme right of the lines of Torres
Vedras.—5. and 6. Pictures of the Castle and of Igues de Castro.
The additional matter, which extends to 100 pages, will comprise a
brief Historical Review of the State of Literature, Arts, and Sci-
ences in Portugal, from the earliest period to the present time.
The price of the new edition will be Two Pounds, in boards.
A few Copies will be printed on Imperial paper, on India
paper, price 2l. 10s.; for which intending purchasers will please
to forward their names.

Published, for the Author, by Trevelick and Wirtz, Trevelick,
Jen. and Richter, Foreign Booksellers, to the King, 25, Soho
Square.

Works printing for Edward Bell, New Public Subscription
Library, 25, Holles Street, Cavendish Square.

MEMOIRS of the AFFAIRS of EUROPE
from the PEACE of UTRECHT.
By LORD JOHN RUSSELL, M.P.
John Murray, Albemarle Street.

Lodge's Portraits and Memoirs of the most illustrious Personages
of British History.

To commence publishing, Monthly, with the Magazine, Janu-
ary 1st, 1850, No. 1. of the 2d edition, with an entirely New Set
of Plates.

PORTRAITS and MEMOIRS of the
MOST ILLUSTRIOUS PERSONAGES of BRITISH
HISTORY.

By EDMUND LODGE, Esq. Surveyor King of Arms, F.R.S.
This collection of illustrious English Portraits and Biography
will comprise the History of the Country, in Memoirs of some
of the most illustrious English Nobility and great Officers of State
from the earliest introduction of Portrait Painting to the present
time. The subjects are selected from the highest Ancestors in the
land, the original Pictures being preserved in the Galleries of
the Nobility, descendants of the distinguished Persons repre-
sented, or in the Public Collections, and are painted by Hol-
bein, Rubens, Vandike, Lely, Kneller, Reynolds, and other great
Masters.

Sir Walter Scott has observed, in writing of this Work, "It is
tempting to me to conceive a work which ought to be more in-
teresting to the present age, than that which exhibits before our
eyes our Fathers as they lived, accompanied with such mem-
oirs of their lives and characters as enable us to compare their
persons and countenances with their sentiments and actions.
This valuable and extended series of the portraits of the illustri-
ous dead affords to every private gentleman, at a moderate ex-
pense, the interest attached to a large gallery of British por-
traits, on a plan more comprehensive than any collection which exists, and
at the same time the essence of a curious history of historical,
biographical, and antiquarian works."—*Extract of a Letter from*
Sir Walter Scott, printed in the Prospectus.

The *Quarterly Review* of October last criticises Mr. Lodge's
Work. "Largely as we have been tempted to speak of the
graphic part of these volumes, we do not hesitate to say, that
the engravings absent, they would form a most valuable
addition to the English library. This strong language we use
deliberately. In regard to the illustrious characters of our por-
traits, through its two most picturesque and most extensive col-
lections, Mr. Lodge has furnished us with epitomes, which, were
the authorities regularly quoted at the bottom of the page, would
deserve to be put into the hands of every young person, beginning
his course of English historical reading, to guide him as to the
course of his inquiries; and in which the most ripe and experi-
enced reader will find delight, as serving to refresh memory
by a systematic and arranged exhibition of the common mate-
rials of thought, and not less as containing the refutations of a
mind equally polished, sagacious, candid, long stored on these
materials."

Plan of Publication.
A Number will be regularly published every Month, containing
three highly finished Portraits, with their corresponding Memoirs,
in Imperial 8vo. and delivered with the Magazine and the
Quarterly Review.

The First Number, containing the Portraits and Memoirs of
Sir Philip Sidney, from the Duke of Devon's Gallery—Queen
Anne Bullen, from the Earl of Warwick's at Warwick Castle—
and Archbishop Cromwell, from the British Museum, will be
published on the 1st of January; and persons desiring to sub-
scribe for the earliest impressions, are requested to forward their
names either to the Publishers or to their respective Booksellers
in any part of the Kingdom, but with directions to have them
sent to the London Publishers forthwith, because the best im-
pressions will be appropriated to the first Subscribers; and unless
Orders are registered in the Subscription Book at the Pub-
lishers, the earliest impressions cannot be ensured.

London: Harding and Lepage, Pall Mall East.
Sold by every Bookseller in the Empire, by whom the Publishers
will be supplied upon application, and from whom the Terms and
Catalogue of Two Hundred of the Engravings, forming part
of the Collection, may be obtained gratis.

Country Booksellers desiring the Agency of this work are re-
quested to apply to the Publishers, free of expense.

In a few days will appear, uniform with the Percy Anecdotes,
with a beautiful Portrait of the Princess Victoria, Part I. of
a work entitled,

THE LADY'S LIBRARY, each Part done
up in an elegant Wrapper, forming Four Volumes of
unexampled beauty and attraction.

This work will contain what is valuable in science, elegant in
accomplishments, and useful in domestic life.—*Our Prospectus.*
Part II. will appear on the 1st of February,
containing a Portrait of Mrs. Hannah More.

Printed for Knight and Lacey, 55, Finsbury Square.

Early this month will be published, the 5th Number of
THE FOREIGN QUARTERLY
REVIEW.

Printed for Trevelick and Wirtz, Trevelick, Jen. and
Richter, 25, Soho Square.

Advertisements and Bills intended for this Number, are
requested to be sent in immediately.

Dr. Lingard's History of England.
On January 10th will be published, in 4to. the 7th Volume of
A HISTORY of ENGLAND, from the
First Invasion of the Romans to the Death of Henry II.

By JOHN LINGARD, D.D.
London: Printed for Baldwin and Cradock; and S. P. Brown,
Successor to Mr. Newman.

By whom also is published, the 4th edition, 2 vols. 8vo. of
A Vindication of certain Passages, in the
2d and 4th Volumes, with a Postscript, in answer to Dr. Allen's
Reply.

LONDON: Published every Saturday, by W. A. SCRIPPS, at
the LITERARY GAZETTE OFFICE, 7, Wellington Street,
Waterloo Bridge, Strand, and 7, South Molton Street, Oxford
Street: also sold by J. Chapman, 25, Regent Street; E.
Marborough, 25, North London Wall; J. G. Allen,
Edinburgh; Smith and Son, and Robertson and Ashdown,
Glasgow; and J. Cunningham, Dublin.

J. MOYER, Task's Court, Chancery Lane.

THE LONDON LITERARY GAZETTE;

AND

Journal of Belles Lettres, Arts, Sciences, &c.

The Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire an immediate transmission, by post, we recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 625.

SATURDAY, JANUARY 10, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

The Modern History of England. Part II. Reign of Edward VI., Mary, and Elizabeth. By Sharon Turner, F.R.S. and R.A.S. 4to. pp. 736. London, 1828. Longman and Co.

As a specimen of Mr. Turner as a historian of the highest class, and of the first volume of the eminently important work, may be found in the *Literary Gazette* (569) of October 21, 1828. To rehearse our encomiums, and again to state his purity of feeling, his integrity, his diligence in the search after truth, and all the other excellent qualities, would be as superfluous to his mind as they are needless for, to those the public, the voice of which has long stood high among the greatest ornaments of our old literature. Neither is it necessary to us to enter a digression upon the subject of many, nor to point out the multitude of unexamined doubts and difficulties which must arise from any view whatever of the period which these volumes treat. The pen and the ink will probably be down in peace before that the same distant time, when the action of opposite sects and parties ceased to open up the events in the history of England from the seventh Henry to the first James. Far from us be the attempt to do this; to remember them at the present moment; we have to witness the fight, as it were, of the combatants, as they daily grow or wane, and finally to leave the contest, with such marks of honour as the historian has merited; not forgetting to turn the compasses may deserve a labour to their wounds, and a mood of pain for their different wounds.

It is, in the first instance, we are unable to avoid to that extent; for the work before us opens for more attention than we have had a opportunity to bestow. It must suffice us, as to take up the one general but extremely interesting question brought forward in the Preface, which puts in a striking light the various opinions that have been made to Mr. Turner as to the reign of Henry VIII. and all the various of the Reformation, and his defence. We must promise that he is equally the champion of Elizabeth, and that we are not going to go along with him to the full extent of his information for that great question. The following are his sentiments:—

"The chief founder of the progressive movement of our national greatness, was that man who in the main subject of the present work, and his reign may be marked as the point to which is ascribed into a visible existence. Our commercial enterprise; the end of domestic arrangements; our colonial establishments; the consolidated and settled power of the State; the just foreign policy; the wise internal arrangements, and its enlightening spirit, then began to arise, or to be perfected on former principles, on larger knowledge, and with more public benefits, than had as-

yet been known or cultivated. But the healthful fountain of all our national vigour was that Reformation, of which she became the efficacious supporter and the most successful champion. The history of her reign is the history of the perils to which it was exposed, and of the long warfare it had to endure, and of its secure establishment in those countries which have ever since preserved it. To have then contributed to its continuation among mankind is the greatest glory of her lengthened and momentous reign. To elucidate this grand political conflict, in its abstracted progress and agitating vicissitudes, is the intention of the present composition. This portion of our Modern History has been written on the same plan with the preceding volumes. Every document which promised to furnish new materials of unknown facts, or more correct views of those already known, or that could supply the deficiencies which they presented to the considering eye, has been resorted to and consulted, to which access could be obtained; and none but contemporary authorities have been used, with very few exceptions. The object has always been to construct the history from the living authorities of the times described; and to convey to the reader as much as possible of the feelings and ideas of the great actors and leading personages, in their own words and representations. The desire of accomplishing this purpose, has made the notes inevitably numerous and copious; but they will present the advantage to all who peruse them, that the public will never be called upon to rely implicitly on the writer's veracity or judgment. The authorities are every where laid before the reader, from which he may always form his own conclusion, and agree or differ with the opinions or statements in the text, as his own discrimination may suggest.

"That to write the present history (he continues) is to walk upon the 'suppositum cinere'—the unextinguished embers and still inflammable matter of angry, controversial, and disputed subjects, is a disadvantage and an evil which the author has much regretted. Mary of England, and Mary of Scotland—Protestants and Catholics—Pope and Jesuits—Luther—Charles IX.—St. Bartholomew's massacre—the burnings in Smithfield—persecution elsewhere—harsh penal laws—Blanchard—Burglary—Lancaster, and Essex—all have been the objects of history battles, of contradictory opinions, and of keen recollections. And many may still be disposed, from the natural operation of preconceived opinions or wishes, to differ with the sentiments and views in the following pages. But no historian of this agitated period can perform his duty to truth and to the public, without subjecting himself to attack or contradiction on many of its varying incidents and characters, and the penalty indicated will sometimes be the most severe, when he has been the most impartial. When truths unpleasant must be told, when omitted facts are brought for-

ward; when the obscuring or disfiguring veil is removed, and the real form and features displayed to the general eye, the writer must not hope to escape the hostility or displeasure of those, to whom the recollections may be unpleasant, or the conclusions inconvenient. He must be resolute and faithful at every hazard, or authentic history must be suppressed or falsified.

"The endeavour has been, throughout the whole volume, to narrate the succession of its events with the same unvarying impartiality that would have been maintained if it had treated on the history of the Pharaohs of the Nile and their Persian conquerors; or had concerned only the stately hierarchy of ancient Egypt, and the consummation and improvements of its Grecian reformers. It is the author's duty faithfully to describe the past, but not to interfere with any discussions which may now be subsisting on such subjects. He has steadily endeavoured to observe a just neutrality as to these; and having made this principle his continual guide, all other results must be patiently ruled. Angry criticism is a possibility of evil, which, in the present activity and dispositions of human nature, no prescription can avert. The right of every one is to judge as he pleases; and each will express himself according to his own taste and choice. It is for the advantage of our individual character to judge equitably, and to write with honourable candour. But even in this respect no one can be detached to. Society grants to no author a charter of protection, but has decided that reviewers may range and skirmish as they like. Public criticism must be, therefore, confronted with reasonable firmness, and all its variations must be tranquilly endured. It must be expected to be diversified, according to the talents and temper of its writers. The liberal cannot, from the generous impulses of their own nature, but be liberal. The irritable will be fractious; the vindictive will be severe; the self-pleased will be dogmatic; the ungovernably will not be courteous. We all act and behave in society according to what we have grown up to be; and our pen says and displays our mental character, as expressively as our manners, our conversation, or our conduct. With these feelings, the author respectfully presents this volume to the public, in the hope that it will be found to contain some interesting matter, which, although by most forgotten, and to many unknown, ought not to be omitted in English history. In our great curiosity now demands new facts, careful reasoning, and enlarged views, in every department of human inquiry, and as much in history, from extended research, as in any other. It is indeed delightful to see so many ardent minds pursuing, on all subjects, the inexhaustible riches of attainable knowledge with increasing ardour. Improvements and discoveries now flow rapidly upon us, of a nature and with an abundance that would formerly have been deemed improbable; events are found to be assuming the periodical complexion of phantoms

orbits—gigantic and other animals of a perished world, are becoming more fully known to our geological researches—hieroglyphical inscriptions are deciphered, and are disclosing new monuments to illustrate the darkness of Egyptian antiquity;—and although human ingenuity has been baffled in its favourite toil, of making the golden metal, it has within these last few weeks apparently succeeded in actually producing, by patient and skilful chemistry, the genuine diamond.* In such an age, it is pleasing to live, and think, and write, and to endeavour to be one of the contributors to its information or amusement. The attempt may often fail, but it is gratifying to make the individual effort, and never can be wholly useless, whatever may be the imperfections with which it is accompanied."

The delightfully calm, amiable, and philosophical spirit displayed in these observations greatly recommends the author to our regard, and we begin his History with a strong prepossession in his favour. Of it as a whole, we have only room to say that it embraces a mass of research and information which is altogether wonderful. This volume alone seems to be enough for the labour of ten years; and both those who differ from the author's inferences, and those who agree with him, must concede that his premises are openly, broadly, and honestly laid down; and that if mistaken, he is not a vicious perverter or suppresser of facts, but only mistaken in an anxious desire to elicit the truth. After all, *FACTS* are the best histories; and we have here a vast multitude of them collected from contemporary authorities.

Sailors and Saints; or, Matrimonial Manœuvres. By the Author of the "Naval Sketch-Book." 3 Vols. 12mo. London, 1829. Colburn.

WE do not pretend to speak of this work in a critical capacity; universal as is the omnipotent "we" of reviewers, it must yield, like the ambassador;—to commence at once with a quotation.

"An anecdote is told of a captain in the service, since dead, that whilst carrying out a British ambassador to his station abroad, a quarrel arose on the subject of precedence. High words were exchanged between them on the quarter-deck, when, at length, the ambassador thinking to silence the captain, exclaimed, 'Recollect, sir, I am the representative of his majesty!' 'Then, sir,' retorted the captain, 'recollect that *here I am more than majesty itself*. Can the king *seize a fellow up and give him three dozen*?' Further argument was useless—the diplomatist struck."

Living on another element, our be-built, ploughed, dug, Macadamised earth has nothing in common with the free ocean; the hopes, fears (we only mean superstitious ones), habits, &c. of the seaman, are in complete contradistinction to ours. Is it that love of variety, inherent above all in our literary tastes? or is it that universal sympathy which even the most indolent and timid feel in the narratives of the toils and dangers which they know but by name? what is it that, from Smollett to the Man of War's Man, at which Blackwood falls open of itself, makes all maritime annals so popular? We certainly do not repay back to sailors the contempt they are somewhat inclined to bestow on us unfortunate land-lubbers. These volumes are a complete nautical history, containing facts, observations, and events, that might be matters of

serious reference, though here used but as vehicles for amusement and interest: perhaps if less of naval phraseology had been employed, the scenes, even at the hazard of losing something of their now most characteristic tone, would have been more acceptable to the general reader.* However, learning languages is now much in fashion, and there is a glossary to assist any student in his pursuit after universal knowledge; and further, for the benefit of the young ladies, we beg leave to inform them that there is as pretty a love story as ever caused the favourite novel of the circulating library to be in constant requisition. The hero, Burton, is a great favourite of ours—brave, generous, frank, he is quite the *beau idéal* of a sailor. Crank, and his servant Tiller, are excellent specimens of the old school; and some of the scenes where their prejudices run counter to modern improvements are very good,—indeed our author is especially happy in his humour. But through the whole three volumes we have found nothing so powerfully written as the account of the ship on fire: through nearly the third of one of them the most intense interest is excited—the reader's attention is kept up by a reality, a vividness, which could only have been given to the description by an eye-witness and a very able observer. We regret it is so much beyond our limits; and to spoil it by the omission of parts would do its writer scant justice. We must choose shorter specimens, and give as much idea as we can of the variety in pages worthy of their changeable element.

A Man overboard.—"There was enough of light on the water, despite of the gloom of the evening, to render the hopeless features of the man ~~discernible~~ to Brace, the boatswain; his partner in many a youthful freak, both having entered the service together. Roused from stupefying horror by an imploring glance from his messmate, the latter shouted in anguish—'By heavens, Tom! I can't bear that look, I'll save you, or go with you.' Nor was it long ere this awful pledge of friendship was redeemed; for in an instant, throwing off his looser attire, he plunged amid the waves, through which he cut his way to the sinking man. Aware of the danger of thrusting himself within that grasp, which is known never to relax but with life, he, cautiously, though firmly, seized him by the collar with his left hand, turning the gunner thus on his back, as the most favourable position for floating; whilst, 'treading the water,' as it is termed, Brace supported his exhausted companion's head above the unfriendly element, and kindly cheered him with assurances of his safety. Nor was the sympathy of the crew suffered to waste itself in unavailing regrets, or in mere admiration of their brave shipmate: the cutter had been 'hoist out,' and manned by eager hands, who pulled with inconceivable alacrity to their rescue; and in a few minutes this scene of painful excitement on board was happily exchanged for that of heartfelt and general congratulation."

Deck cleared for battle.—"The British were already at their quarters, where their anxiety

* But here we feel we are on sensitive ground: for the author exposes in a very able manner the want of seamanship, and the blunder in naval phraseology, of Mr. Cooper, the justly celebrated American novelist; and finds much of his own value on accuracy with regard to both these points. Now, though it is true that this is a great merit, it is also true that it is a merit which cannot be universally appreciated; for more than nine-tenths of readers will understand a sea story ill told by a landsman better than the same story well told by a sailor.

to pour out their fire on the foe, whilst approaching, was betrayed by the dumb show, significant gestures, and imploring glances of the captains of the guns, whilst catching the eye of their commander, as they looked alternately through the port-holes at the closing enemy, or along the sights of their guns. Nor could their cool gallantry fail to inspire him with a double confidence, when he observed some actually chalking the initials of their names on their tell-tale shot, whose effect they appeared extremely impatient to try on the enemy whilst barely within cannonade range. To this impatience the only answer given consisted in a short roll of the drum, to obtain attention, accompanied by a wave of the commander's hand as he stood on the poop. Aware of the purport of this invitation, the men deserted their guns for a moment, and eagerly crowded aft. Nothing could be more imposing than the fearless eye, the high bearing, and efficient state of preparation of each, as he repaired to the quarter-deck, exhibiting, in their weapons and light dress, from which every thing cambered had been discarded, a specimen of active force, which might well be contrasted with the heavily armed and hampered soldier in action. They had all been selected, as already mentioned, with that attention to height, muscular vigour and activity, which constitutes what in the service is termed 'picked men.' And though there were minute points of attire, wherein some differed from the rest, they were all bare-necked, bare-armed, having tucked up their shirt-sleeves to their shoulders, to prevent being incommoded on duty, and without either jacket or waistcoat. Instead of the latter article of dress, each had substituted as a support, during possibly long-protracted exertion, a handkerchief tied extremely tight round the waist. Above this a black leathern belt was buckled, sustaining the cutlass or sword peculiar to the sailor; for, contrary to the general practice, Staunton had trained all his men to the broad-sword, so as to enable them to act as boarders. Superadded to this belt, the captains of the guns wore another, to which was affixed a small tube box, containing about twenty or thirty little fannels formed of paper, charged with powder, and terminating in a quill, to be inserted as priming in the touch-holes of the guns—thus preventing those serious accidents, too common from the explosion of powder-horns, by the flashes of each other's guns. The black silk kerchief was transferred from the neck, and now bound round the head, restrained within its folds every straggling hair, not excepting even those *love-locks*, or long curls depending from the temples, which most youthful sailors cherish with no little vanity, as ornaments the most becoming in the eyes of the fair."

Nautical Nicknames.—"On board most ships of war, the 'Gally Politicians'—the 'King's Benchers,' and the 'Birds,' who gather round the grate at night to argufy, as it is termed, are sure to be designated by a name of notoriety applicable, as the *Jacks* think, to the peculiar pretensions of these would-be warriors and statesmen. The leaders formerly were generally nick-named '*Babson*,' or '*Billy Pitt*.' A 'Captain of the Sweepers,' or a 'Captain of the Head,' alias the warden of the worshipful company of nightmen on board, whose pretensions to such distinctions happened to be sustained by his talents for harangue, was invariably dubbed '*Charley Pea*.' In latter days, these worthies have given place to more modern titles of eminence.

Jack is a bizarre animal, and delights on all occasions to unite the lofty and the ludicrous; and a stranger will often be startled, if at all a believer in ghosts, at hearing a sailor sing out to another on the 'tween decks—'Pass the word for'ard there for *Bongparty*.' We have never been on board any ship in which there was not one of these emperors."

But it would be injustice to this unique performance, not to detach from it, as a specimen, some one more connected scene; and we will select as much as we can of a colloquy between Captain Crank and his man Tiller, after the latter has discovered Burton on his knees making love to Emily.

"According to the 'articles of war,' established at Camperdown college for fifteen years past, all intrusion on the *sicsta* of our old friend was considered, if not absolutely high treason, at least the *crimen lassa majestatis*, and punishable in the next degree. But the apparent urgency of the case outweighed every other consideration in Tiller's opinion, and warranted a departure from the strict line of discipline; and animated of the rectitude of his motive, which originated in his anxiety for the honour of the family, he entered with a little of that impetuousness peculiar to a man who feels his own importance, the room where his veteran master is, courted, by every delicate assiduity, that upon which, like a coy nymph, is so difficult to be won by the blandishments of age. 'Who the devil's that?' cried Crank, upon Tiller's stooping to stoop as he entered the room.

'It's me, sir.' 'Me, sir!—d—n it, I thought 'twas a top-mast coming down by the lump. What the deuce brings you here at all, making such a noise?' 'Noise, sir?—I never was the man to make a noise about nothing.' 'Nothing, indeed!—when a man's napping!' 'Ah—Lord bless you, sir—it's when a man's napping, the mischief's done.' 'You may call it mischief, if you like, Mister Thomas; but to me, I can tell you, it's second nature.' 'So my misses say, when she's skinning the eels.' 'Well, well—d—n your eels—there, there—'tisn't quite enough. Make sail, and leave me to myself.' 'If I doesn't, sir, I knows there's some one else soon will.' 'Why, what tack's the fellow on now?' 'On what tack, sir?—On that tack, that a man may keep his wind, and needn't bear up for no one; as long as he coves he's doing his duty.' 'Holloa! Holloa!—it seems to me as if you'd hauled your jaw-racks aboard.' 'I axes your pardon, sir; I've nothing aboard more nor I ought; nor no one can say as I ever was the man to make a rixy below, or alarm aloft, for nothing.' 'Well, no one said you were—there now—on the door—top your boom—and let's have a little rest.' 'Rest?—there's no rest in the water, sir,—things 'ave gone too far already,' said Tiller, with an unusual degree of warmth, addressing his master. 'Things gone too far already, indeed?—open mutiny, by the Lord.' '—the fellow, what does he mean?' said the veteran, rising on his elbow, and the blood rushing into his face. 'I tell you what it is, Mister Tiller, if you think to come over me, rid any o' your independent pot-house slang, or your long-shore-law, you're d—bly mistaken.' 'Law, sir?—I'm no lawyer, sir—I never served me time to the trade o' lying, nor you can't say I ever deceived you yet,' continued Thomas, sitting at his master's wardrobe, and folding and refolding the veteran's sword as he carried on the colloquy. 'No, nor you can't say that Thomas was ever the man when riding on a lee-shore, expecting every moment to part, to be the first to report

a strand gone, when perhaps 'twas no more nor a little o' the rounding chafed in the hawse.' 'Well—what of all that?—What the devil has that to say to disturbing a man from his rest, and when you *know* too it's contrary to orders.' 'Was't contrary to orders, sir?' said Tiller, who was not to be diverted from his purpose; 'was't contrary to orders 'board the *Boynes*, sir, to rouse the captain when there were breakers a-head, or an enemy in sight?' 'I never said it was; and you know right well, that had the officer o' the watch so far neglected his duty, I'd 'a broke him, ay, though he were son to the first lord of the Admiralty.' 'Very well, sir,' said Thomas, banging the door of the wardrobe, as if conscious he had now overcome some of the difficulty of broaching this ticklish subject—'very well, sir; by the same rule o' thumb, if I sees a squall brewing to windward, it's my business to report it to my master, napping or not. Isn't it better to clew-up in time than lose your sticks?' 'Lose your sticks?—Why, d—n it, are there smugglers on the coast? Expect the garden to be robbed, eh?' 'No, no, sir; there's no fear o' that as long as *Ram's* unmuzzled; but I doesn't know how it is,' said Thomas, unwillingly drawing out his words, 'I doesn't altogether like the look o' things, since this here—this here a—' 'This here what?' cried Crank, who, thinking there was something in the wind, betrayed as much impatience to solve his factotum's meaning as he before did to get rid of his company. 'Why, sir, this here capering craft—matters seem to be all going the wrong way since she put into the port—that there *ball* business, and a—' 'Ay, that was all your curs'd lubberly look-out,' interrupted Crank, alluding for the hundredth and second time to the accident of upsetting the boat. 'Well, sir,' said Tiller, not a little piqued at this eternal rebuke—'well, if they got the blind side o' me then, you shan't, howsomever, have to say so now. So if you takes my advice, sir, you'll clap on a double look-out to-night.' Here a mutual pause of some moments ensued. Crank seemed impressed with a confused perception of some imminent danger about to befall him: its indistinctness embarrassed him the more: his agitation kept pace with his awakening curiosity. From a prone position he rolled himself over on the sofa, and raised himself upon his hands, assuming the attitude of a half-roused lion. Then surveying with a scrutinising glance his poor minion from head to foot, he caught that solitary eye of his, and fixed it, like a basilisk, gazing at him for an explanation, with an apprehensive yet incredulous stare. It was in vain Tiller availed himself of the exclusive power he thus enjoyed over others in the condensation of mental intelligence through an exclusive optic. Even aided by the man's weather-beaten features, no distinct picture was conveyed to Crank's sensorium of the description, or the extent of the danger which his servant seemed fully persuaded awaited him. Tom shook his head, looked pitiful, twisted his tail, squirted his 'bacco-juice, despite of another of the articles of war, on the floor, and drew forth a long-winded sigh. At length, finding he had reckoned without his host, in calculating on the expressiveness of his features, he, as if in pity to his master, thus broke silence: 'The gemman's a nice gemman enough, and moreover bears a very good karector abroad; but still, you know, sir—there's never no harm in keeping—keeping—a—' 'Keep-

ing me in suspense, you mean, you blind old blockhead. What the plague are you at? Why don't you say what you've to say, like a man?' 'I'm coming to it, if you'll let me—all in good time, sir; no man likes to be a-head of his reck'ning; but it looks to me—(mind, you know, sir, it's only a *notion* of my own—)' 'D—n your notions. Here you have been for ten minutes annoying me with an infernal *notion*—working a traverse about a trifle, and a—' 'Well, sir, if you think light o' the business there's no kashun to overhaul more o' the matter; but I know,' said Tom, carelessly throwing his tail over his shoulder, 'I shou'n't call a cutting-out job a joke—nor think it a trifle to find some on 'em had tricked us; and slip't their cables in the night.' 'Who? what?—d—n'tion, what d'ye mean? Surely there's nothing,—nothing happened I hope, eh?' 'I doesn't *know*, sir, said Tiller, with emphasis—'all I know is, when I went my last rounds to pick up the shakings in the drawin'-room—what should I see but him, down on both marrow-bones, shoving Miss Emily's fist in his mouth, and slobbering it all over like a sucking calf.' 'Who?' 'Why this—Mister Burton, to be sure, sir.' 'The devil?—D—n the fellow, I thought he was more ashore than he ought. The sly jade!' At the first intimation of real danger, Crank had started on his legs, and, aided by the helping hand of Tiller, regained his perpendicularity. As it was his custom, on occasions of importance, he was observed hitching up the waistband of his small-clothes alternately with one hand or the other; and having hemmed twice, he prepared to sally forth. Tiller, as usual, fell a few paces in the rear, as the veteran proceeded hobbling along the hall."

The following chapter, entitled the *Rumpus*, is equally good; and the *Friend in Need*, which succeeds the *Burning of a Ship*, is admirable in another way. In *Nolens Volens*, a rogue of an apothecary persuades the captain, in a very comic conversation, that he is ill, and must go to Cheltenham; and the conduct of Tiller at this fashionable watering-place is extremely humorous.

"'I fancy myself better already (said Crank)—it must be the change of air.' 'Change of wind, sir?—Bless you, that can't be; she hasn't veer'd a point since we started.' On this subject Tom would have cavilled with the College of Physicians, and despised the dictum of the Meteorological Society. 'It was rank nonsense,' he would say, 'to distinguish them,—air was wind, and wind was air, all the world over.' 'Well, never mind the wind,' replied his master, 'we must now take to the water; and do you have a sharp look-out in the morning, and sound the well.' 'What well, sir?' 'The well, man! where the company drink the waters; you must take Boots to pilot you—mind what you're about, and make me a full report of every thing on your return—I shou'dn't like to lose any time—so I'll commence my course to-morrow.'"

The soundings are oddly taken; for Tiller, after much manœuvring at the green bottle for gin, swallows a triple saline draught. "The first gulp went down perforce—the next was in his mouth but a second, ere it was expelled through his teeth, nose, and, it might be said, eye-lids (for they, too, glistened with soft moisture), with a force and fury that overwhelmed all present with dismay, and damaged many a dress of costly fabric and beauteous dye. 'What!' said the enraged

tar, his inside smarting with the triple saline draft, and his fury roused by the insult he imagined was now offered: 'what, ye *she-sanctificator*, d'ye think I haven't had salt-water enough in my day; but I must now swallow it here inland amongst a parcel o' lubbers? See, here, you straight-haired jade—don't come that rig over the captain, or I'm dowsed, if you do, but he'll clear the decks, and make a clean sweep with his stick of every glass in the tap.' Having thus vented his wrath on his fair enemy, the irritable valet made his exit, and repaired to his master's bedside to report progress."

But one of our most favourite descriptions is that of the crew of the *Flora* treated to see *Othello*, at Portsmouth theatre. It is rich and capital: we can only give a few traits. When "the Moor arrived at the passage—

"And this, and this, the greatest diacords be,
[Kissing the fair Desdemona.
That e'er our hearts shall make!"]

'I'll bet a week's grog,' said a clamorous top-man, 'the young un'll be a creole.' 'Ay, sink 'em,' said another, 'there's the luck of your black fellows—Why, 'twas only 'tother day, I twigs the captain's steward in tow with one o' the freshest, rosy-cheek'd craft you'd see from North-corner to Castle-rag.' * * *

"Cassio's silly speech proved an exquisite relish to the audience, where he apostrophises Heaven, 'Forgive us our sins,' and endeavours to persuade his companion that he is sober. 'Do not think, gentlemen, I am drunk; this is my Ancient: this is my right hand, and this is my left hand:—I am not drunk now.' 'No, not *you*,' roared a *Jack*, who no doubt would have been a willing witness in Cassio's defence, had he been brought to the gangway for inebriety. 'I can stand well enough,' continued the representative of Cassio. 'Then—*d-n it!* why don't you walk the plank at once, and prove yourself sober,' vociferated a long-tailed wag, determined not to slip this opportunity of having a shot on the sly at his first lieutenant, who had only a night or two before put his perpendicularly to a similar test. In this sort of *saturnalia* of the lower order, those whose lives are spent in dutiful obsequiousness, and obedient awe of their superiors, delight to avenge themselves for the privations and taciturnity inflicted on board in this respect, by telling their officers sometimes a little of their minds from some snug corner of the house, or masked battery in the gallery. * * * But whatever excitation these honest susceptible souls had previously suffered, was merely as dust in the balance compared with the tumult of grief, and paroxysm of rage, which filled every beating bosom, when the jealous Moor, now more savage by the remaining effects of liquor, unfolded, in the deep, impressive language of the poet, the deadly purpose with which he approached his sleeping bride. The shouts became alarming; volleys of imprecations were hurled at his head—his limbs—his life. 'What!' said one of the rudest of the crew, 'can the black brute cut her life-lines?—She's a reg'lar-built angel, and as like my Bet as two peas.' 'Ay,' said a messmate, 'it all comes of being jealous, and that's all as one as shad; but you know, if he's as good as his word, he's sure to be hanged,—that's one comfort!' When the Moor seized her in bed by the throat, Desdemona shrieking for permission to repeat but one short prayer—and he rancorously exclaims, in attempting to strangle her, 'It is too late!'—the house, as it is said a French audience had done ere now, could

endure no more; and the sailors rose in their places, giving the most alarming indications of angry excitement, and of a determination to mingle in the murderous scene below. 'I'm d—d, Dick, if I can stand it any longer,' said the spokesman of the gallery. 'You're no man, if you can sit and look on quietly,—hands off, you blood-thirsty nigger,' he vociferated, and threw himself over the side of the gallery in a twinkling; clambering down by a pillar into the boxes, and scrambled across the pit, over every person in his way, till he reached the noisy boatswain's mate. Him he 'challenged to the rescue,' and exclaimed, 'Now's your time, Ned,—Pipe the boarders away— all hands, damme! if you're a man as *loves* a woman. Now, go it,' said he, and dashed furiously over all obstacles,—fiddles, flutes, and fiddlers. Smash went the foot-lights—Cesar had passed the Rubicon. The contagion of feeling became general; and his trusty legions, fired with the ambition that inspired their leader, followed, sweeping all before them, till the whole male population of the theatre crowded the stage *en masse*, amid shouts of encouragement, or shrieks of terror:—outraging, by their mistaken humanity, all the propriety of this touching drama; and, for once, rescuing the gentle Desdemona from the deadly grasp of the murderous Moor, who fled in full costume, dagger in hand, from the house, and through the dark streets of Dock, until he reached his home in a state of inconceivable affright. The scene of confusion which followed, it would be fruitless to attempt to describe. All was riot and uproar. * * * And the captain in the end remarked, 'This affray should be a lesson to him hereafter,' adding, with a laugh, 'that the *Flora's* were too much of amateurs to be trusted in a theatre, lest they should abandon the service, and take to the stage.'

Having indulged in many a good laugh at the excellent nautical wit and humour in these volumes, we would not be critics had we not something to put in our log against all this fair reckoning. We have accordingly reserved for the last our allusion to what we must say we think the chief fault of the book; it is expressed in the title, "Saints," in addition to "Sailors." We abhor, as much as ever our gallant seaman can do, the detestable cant, the hypocritical affectation, of would-be religionists; but we appeal to his own sense of justice, whether to draw a most disagreeable character, give it follies and vices too general to be made particular, and then set it forth as the representative of any especial body, be altogether just? Much as we dislike "Mrs. Crank," (and the author contrives to make us do that) we dislike still more the supposition that she is the embodied resemblance of a whole class.

The Annual Biography and Obituary for the Year 1829. Vol. XIII. 8vo. pp. 474. London. Longman and Co.

ANOTHER volume of this work calls upon us for a repetition of our oft-expressed general opinion of the great difficulties which beset contemporary and recent biography; and of our well-earned praise of the diligence, skill, impartiality, and ability, with which this particular publication is edited. In the present instance it preserves the memories of the learned and the brave, the fair and the high, the studious and the adventurous—and among the twenty-nine records (besides the shorter biographical list) we observe the names of seamen and soldiers, churchmen and statesmen, authors and

men of science, poets and artists,—a melancholy harvest gathered to the indiscriminate sickle of Death within one short year. But though the gaunt conqueror of our race makes no distinctions, we must select; and, from these various memoirs, extract what is likely to be most new and interesting as illustrations of the volume. We therefore pass the lives of Sir R. Strachan, the Margravine of Anspach, Dr. Mason Good, Lady Caroline Lamb, and Sir H. Torrens, to notice that there is an original and affectionate sketch of the late loyal and esteemed Dean Hook, from which we gather that a collection of his works is likely to be published.* The next in succession is William Lowndes, esq. which we mention for the sake of introducing a sufficiently *naïve* paragraph, which appears in a note respecting an ancestor of his, called "Ways and Means Lowndes," in the parliaments of Anne and George I. Of this gentleman it is stated, that he "was an extraordinary instance of industry and application," which will hardly be questioned when, after reading the details of his public duties, we find it told that "he was four times married, and left three families of children behind him. He married his fourth wife in the sixtieth year of his age, and had sixteen children by her: four times she had twins!"

A brief account of Captain Clapperton is followed by a more detailed and striking one by the Hon. Anne Seymour Damer, and this by Archbishop Sutton, Admiral Nowell, the Rev. E. Forster, General Burrell, Bishop Tomline, Mr. Bonington, Archdeacon Cox, Sir P. C. Silvester, Rev. Leigh Richmond, Dugald Stewart, Mr. Van Dyk, Sir J. E. Smith, Mr. Henry Neele, Sir Neil Campbell, Lord Liverpool, the Queen of Wurtemberg, &c. &c. From among all these we shall merely copy an unpublished Highland tradition by Mr. Van Dyk; and, if possible, in some future Number, when not so much pressed for room, a portion of the memoir of Dugald Stewart, which is extremely well written. The annexed is the tradition.

"Young Lamond, the pride of Argyleshire,
Was hunting the red red deer,
And he saw a hart in his own Glenfine,
And pierced him with his spear.
The hart flew on with the lightning's speed,
Though the shaft was in his side,
Till he came to a river's sloping bank,
And plunged in the restless tide.

The hunter follow'd, with might and main,
To the midst of the wild Glenstree,
Where the young Macgregor had thrown a lance,
And wounded a hart that day.
The deer o'er each other's path had crou'd,
As they kept on their blood-track'd flight,
Until one sank down on the heather bed,
And died in the hunter's sight.

They met in a proud and angry mood,
Who had never met before;
And a strife arose o'er the fallen prey,
And each drew his broad claymore.
In vain, in vain, did the Gregor's son
On his rival hunter dart,
For Lamond his shining weapon raised
And buried it in his heart.

He fled, pursued by his foeman's clan,
But he soon outstrip them all;
And when he had wander'd long and far,
He came to an ancient hall.
And he look'd on the face of an aged man,
And he told him of the fray;
And the old man shelter'd and fed the youth
Till the close of that fatal day.

But soon he heard from a hundred lips
That his only child was slain,
That the last last hope of a mighty clan
Would never breathe again.
He had foes around him—his strength was gone,
And his race was nearly run;
And he wept with a lone and desolate heart
O'er the fate of his noble son.

* Appendix. A fourth edition of his *Friendly and Seasonable Advice to the Roman Catholics of England*, (1820. Rivington), is among the books laid upon our table this week.

But his word was pass'd to the stranger youth,
And he led him forth at night,
While the clan of Macgregor dream'd revenge,
And guard'd their weapons bright.
He led him forth to the broad Lochline,
Where a barque was seen to ride,
And he soon was borne o'er the darkling waves,
Once more to his own burn-side.

Meanwhile, 'at parting, Macgregor said,
'Thou must know me for thy foe:
'Oh! he will may fear a sire's revenge,
Who has led his hopes so low.'
The barque shot off, and the old man turn'd,
With a feeble step, to roam
Through the lovely glens and the misty braes,
To his sad and childless home.

But evil days o'er the old laird came,
And he lost that home for aye:
And he left—and he left with a broken heart
The scenes of his loved Glenstrae.
Young Lamont then sought the wandering man,
And open'd his hall-door wide,
And he tended his wants with filial care
Till the good chieftain died."

Three Years' Military Adventures in Three Quarters of the Globe; or, Memoirs of an Officer who served in the Armies of His Majesty and of the East India Company between 1802 and 1814: in which are the Campaigns of the Duke of Wellington in India, and his last in Spain and the South of France. 2 vols. 8vo. London, 1829. (Oxburn.

The best of this work, for the present age of letter-reading, is, that it is very miscellaneous, and no less amusing. The author scampers over the scenes of his twelve years' span of military life, as Captain Head did over the Prairies; and in his rapid transitions we have a medley of campaigning, battles, anecdotes, dinner parties, sentimental reflections, stories some old and some new, sketches of society, and (as one of Mathews's characters says) of "every thing that is in the world." This, it must be owned, is dainty and pleasant enough, though it is hardly what we expected from two goodly octavo volumes. But the author, a captain of engineers on half-pay, is decidedly a story-teller and anecdote-monger; and his whole style is sportive, or, rather, facetious, which is perhaps better suited to the non-table, or social intercourse in any other place, than to the pages of books read straight without interruption, and especially works pressing sight of a grave or historical nature. Here, the jest alternates badly with the scenes of a desolated district; and humour is specially ill to the horrors of a massacre.

Thus, with a great deal to interest and entertain the general reader, and with some things to offend good taste, we have no question but that these *Adventures* will be very popular; and, indeed, we have seen few works of the kind better calculated to divert the leisure hour of almost every class. We shall, as it does not demand digested criticism, run cursorily along with the gallant captain; and, to leave a phraseology not inconsistent with his own, show-up his contents in a proper manner. In his advertisement he craves the indulgence of the learned, and he disclaims the title of bookmaker; but his opening pages must challenge the former body, and induce some slight knowledge of the latter one, which we rejoiced to find less obvious in its sequel, though a tedious dinner-party is therein avowed of the same blemish.

"Of a family of six boys," he begins, "it is proper that one should be devoted to the eternal gods; and, as my shoulders protest to be of the requisite breadth, and my head of a suitable thickness, I was chosen as a soldier; or, in other words, I was selected for the military profession, as being the best done for the family.

With the view of getting me a good start in my profession, a commission was purchased for me in a newly-raised regiment, it being intended, through the means of my maternal uncle, who commanded the corps, to have me kept on the strength until I had completed the usual quantum of education to capacitate me for joining a marching regiment. I never shall forget the feelings with which, at nine years old, I learned that I had the honour of bearing his majesty's commission. I am convinced to this day, that I grew some inches taller in the course of the first twenty-four hours; and to this early event in my life I have no doubt I owe a certain stiffness of carriage and military strut, for which I have always been remarkable; and to the tenor communicated by it to my ideas may be attributed much of my present character, the predominant features of which are, pride, and a too exquisite, if not a morbid, sense of honour—qualities which I have found to stand in my way in my progress through life. Indeed, it was not long before I began to find the feelings resulting from them rather inconvenient; for if, in my juvenile days, I had to resent plebeian insolence, (to which my disposition rendered me peculiarly sensitive,) I used to think it beneath me to employ any other than the lowest member of my frame; so that frequently, while I was engaged in kicking the insensible breech of some base-born varlet, he was perhaps exercising his horny knuckles in a more effectual way on my patrician scone, which, although I was no bad bruiser among my equals in rank, my military pride would hardly allow me to protect with my hands, for fear of being caught in a boxing-match with a snob."

The puerility and absurdity of this inauspicious commencement startled us much; and we were truly glad to find, that when the captain arrived nearer to years of discretion, his narrative became far more palatable and entertaining. Thither, therefore, we shall pass, without dwelling on the four apple-twigs tied at the end of a stick, which, it appears, are used instead of a birch-rod, to stimulate the fags* at Winchester School, and of which our witty friend tells us he received so many mementos, that he "could easily distinguish, by the touch of the wood alone, all the gradations from a golden pipkin to a codling." Such important matters, we repeat, we shall pass, and simply mention, that, after some other tuition at Woolwich, our hero embarked for India as a cadet, maintaining that jocular style which it is so difficult to maintain without wearying readers.

"I began (he says) to recover my spirits about the same time that my stomach began to recover its tone; that is, as soon as we had crossed that capacious receptacle for Atlantic

* Upon this subject of fagging Mr. E. Wilson has published a pamphlet entitled "A Letter to Sir Alexander Malet, Bart. in reference to his Pamphlet touching the late Expulsions from Winchester School: with a Word, in passing, to the Editor of the Literary Gazette. By an Old Etonian." This performance is evidently the *chef-d'œuvre* of a person who must have been confoundingly fagged in his younger years—for it is remarkably stupid and abusive. Out of twenty-three pages, the exordium occupies above three, the subject ten, and all the rest of the writer's tediousness, more than nine pages, is bestowed on his "Passing Word" to us. To say that he has utterly mistaken our principles and sentiments, is only to repeat that he must have been what he still seems to be,—a perfect and contented Fag; and, with regard to his arguments, it may be sufficient to notice, that in the course of them he calls us puerile, mawkish, foolish, scribbling, drivelling, canting, sentimental, liberal (in its illiberal sense), partial, imbecile, ignorant, incapable, calumniating, false, mean, twaddling, oracular, &c. &c.; and yet at page 10 he is obliged to confess that the *Literary Gazette* is an excellent and useful periodical, enjoying extensive circulation. Its Editor never was fagged!

waves and contents of landsmen's stomachs, the Bay of Biscay;" [and on landing at Madras,] "the place in which I had taken up my quarters proved to be really a *hot hell*, which admirable pun, notwithstanding Mr. Mathews has introduced it in his Trip to America, I have a right to call my own, being able to prove, by two credible witnesses, now luckily alive, that the same was uttered by me on this very occasion, full twenty years before the said Mr. Mathews ever crossed the Atlantic. Happily, Indian hospitality prevented the place being frequented by respectable persons; for it was just such a hole as you would suppose a cannibal *gourmand* would select for preparing the livers of such human geese as he intended should supply him with the *matériel* of a *pâté de foie gras*. Here I passed the night in a bed which might be called a chop-house for mosquitoes, where fresh tender European flesh was regularly served up to them on the arrival of a fleet, just as aldermen are regaled at the City of London Tavern on the landing of a fresh batch of turtle from the West Indies. To be sure, there was some pretence of excluding these voracious animals by what are termed mosquito-curtains; but they only served, like the walls of the tavern aforesaid, to exclude the vulgar herd, while a set party of old hands, aware of the repast which awaited them, had taken care to secure a birth within. This tormenting insect, happily known by report only in England, is justly an object of dread to all new comers. A young lady from the Highlands of Scotland, having had her imagination worked upon during the voyage by the terrible description given of it by the officers of the ship, who feel a pleasure in hoaxing the *griffins*; and having heard, by some means, that it had a proboscis or trunk, on seeing an elephant near the beach where they landed, exclaimed, as she caught the arm of one of the passengers for protection, 'Is that the animal ye caw a muaketeer?'"

We have remarked that this fashion of writing, if too long continued, falls upon the quietude of the study or library; and that we may get rid of the subject at once, and justify our objection, we shall here quote two or three other passages in which it has offended us. In India "some, who are too indolent for sporting, and too idle to read, will saunter forth with their pellet-bow, and make war upon that poor innocent reptile, the blood-sucker, an animal of the lizard species, somewhat like the chameleon in shape, but of most disgusting appearance, having a frightful-looking head with red pendent gills. These poor animals, instead of running off when assailed, will stand bobbing their heads up and down, as if they thought to frighten their enemies away. Indeed, the first time I saw one, it effectually succeeded with me. The pellet-bow used on these occasions is constructed like a common bow, except that it has two strings, kept a short distance apart by a piece of stick, and connected in the centre by a piece of tape. In this tape the ball, generally composed of dried clay and oil, is deposited, and being seized between the finger and thumb, is drawn back and fired just like an arrow. With the young practitioner there is the danger of hitting the thumb of the hand which holds the bow; and many a hard blow is sustained in this way, till practice has made perfect. Some persons are so expert in the use of this missile, that they will easily hit a crow flying at a moderate distance; and with such force is the pellet projected, that I knew a challenge given to encounter any person with a gun, provided the gunner was not to begin to

load before the signal for combat; and I have no doubt the bowman would have gained the day. I had once thoughts of engaging in the glass trade, and then making the tour of England, to instruct schoolboys in the use of this ingenious contrivance for breaking windows, and extinguishing lights, natural and artificial." (Here the witicism at the end injures a very neat sketch of a custom.)—Alluding to the sanguinary and distressing mutiny at Vellore, where between one and two thousand men were murdered, he thus jokes upon it: "The circumstances of which, I may say, in the words of the pious *Aeneas* (thanks to Dr. Gabell's apple-twigs, and to rather sensitive, if not very shrewd parts, I am enabled to quote them), '*Quaque ipse miserrima cidi*,' it falls within the scope of my memoirs to relate. Most providentially, I may add, it is in my power to relate them; for nothing but accident prevented me from being one of the sufferers on that melancholy occasion.

"During the pursuit of the sepoys, I was passing by the grand magazine of the fort, when I observed the door to be open; fearing that some accident might happen if it remained in that state (for there were already some buildings on fire at no great distance), I dismounted for the purpose of securing the entrance by some means or other. What was my surprise to see issuing from it a party of dismounted dragoons, headed by an officer, with iron scabbards to their swords, and nails in their boots, rattling and trampling over heaps of loose powder, with pistols cocked in their hands, ready to be discharged at any of the mutineers they might have found concealed therein! A single spark would have blown us all to —, I cannot say heaven, for I believe few of us were just then fit to enter that state of bliss. But for the sake of the millions of our profession who have preceded us in the path of glory or of honour, we may be allowed to hope that fate would not have consigned us to the eternal torments of that region which a respect for tender ears will not permit me to name."

At pages 176 and 327, Vol. I. (the latter a very ancient joke), are allusions which we could scarcely have looked for from the pen of an officer and gentleman: the following, though not so indelicate, may indicate their character.

"In England the first words that are exchanged on meeting, after the usual salutations, have generally reference to the weather: and very properly so, for in such a climate what subject can furnish more variety, or be more interesting to all! But, in India, except by giving vent to an occasional ejaculation, such as that with which the midshipman, in the warmth of his body, indulged his titled partner during a dance in the Madras dog-days, 'Bloody hot, my lady!' suiting, at the same time, the action to the word, by passing the salt-water calico across his dewy forehead, — no one but a new-comer ever thinks of introducing a subject which, nine times out of ten, must lead to the reiterated remark of 'fine sunny morning!'"

Having now discharged the most disagreeable part of our public duty, we turn with satisfaction to pleasanter topics and illustrations; commencing with a batch of extracts and anecdotes.

Story on a March.—"An officer, whose stock of table-linen had been completely exhausted during the campaign, — whether by wear and tear or accident I cannot say, — had a few friends to dine with him. The dinner being announced to the party, seated in the *al fresco*

drawing-room of a camp, the table appeared spread with eatables, but without the usual covering of a cloth. The master, who perhaps gave himself but little trouble about these matters, or who probably relied upon his servant's capacity in the art of borrowing, or, at all events, on his ingenuity on framing an excuse, inquired, with an angry voice, why there was no table-cloth. The answer was, 'Master not got;' with which reply, after apologising to his guests, he was compelled, for the present, to put up. The next morning he called his servant, and rated him soundly, and perhaps beat him, (for I lament to say that this was too much the practice with European masters in India,) for exposing his poverty to the company; desiring him, another time, if similarly circumstanced, to say that all the table-cloths were gone to the wash. Another day, although the table appeared clothed in the proper manner, the spoons, which had probably found their way to the bazar, perhaps to provide the very articles of which the feast was composed, were absent, whether with or without leave is immaterial. 'Where are all the spoons?' cried the apparently enraged master. 'Gone washerman, sar!' was the answer. Roars of laughter succeeded, and a teacup did duty for the soup-ladle. The probable consequence of this unlucky exposure of the domestic economy of the host, namely, a sound drubbing to the poor maty-boy, brings to my mind an anecdote which, being in a story-telling vein, I cannot resist the temptation of introducing. It was related to me, with great humour, by one of the principals in the transaction, whose candour exceeded his fear of shame. He had been in the habit of beating his servants, till one in particular complained that he would have him before Sir Henry Gwillam, then chief justice at Madras, who had done all in his power to suppress the disgraceful practice. Having a considerable balance to settle with his maty-boy on the score of punishment, but fearing the presence of witnesses, the master called him one day into a bungalow at the bottom of his garden, at some distance from the house. 'Now,' said he, as he shut the door and put the key into his pocket, 'you'll complain to Sir Henry Gwillam, will you? There is nobody near to bear witness to what you may say, and, with the blessing of God, I'll give it you well.' 'Master sure nobody near?' asked the Indian. 'Yes, yes, I've taken good care of that.' 'Then I give master one good beating.' And forthwith the maty-boy proceeded to put his threat into execution, till the master, being the weaker of the two, was compelled to cry mercy; which being at length granted, and the door opened with at least as much alacrity as it was closed, Maotoo decamped without beat of drum, never to appear again."

At Assaye. "a surgeon, whose bandages had been exhausted by the number of patients, espying one of the enemy's horsemen lying, as he supposed, dead on the ground, with a fine long girdle of cotton cloth round his waist, seized the end of it, and rolling over the body, began to loose the folds. Just as he had nearly accomplished his purpose, up sprang the dead man, and away ran the doctor, both taking to their heels on opposite tacks, to the infinite amusement of the bystanders. This extraordinary instance of a doctor bringing a man to life, so opposite to the usual practice of the faculty, became the subject of a caricature; while the story, as may be supposed, long clung to this unfortunate son of Galen, who

afterwards went by the name of the resurrection doctor."

Perhaps the following, though good travellers' or story-tellers' anecdotes, are not literally so credible.

Bheels.—"A remarkable instance of their ingenuity and dexterity in their art was related to me by an officer who witnessed the circumstance. A bet was laid by a gentleman that he would procure a bheel who should steal the sheet from under a person without waking him. The thing was effected in the following manner: the bheel approaching the person, who lay on his side, from behind, carefully folded up the sheet in small compact plaits till it reached his back; then, taking a feather, he tickled the nose of the sleeper, who immediately scratched his face and rolled over on the other side, when with a slight effort he completely released the sheet, and bore it off in triumph."

Scarcity of Fodder!—"Here I cannot omit mentioning a curious circumstance which I witnessed about this time—a consequence of the privation undergone by our unfortunate beasts. Lolling one day in my tent, ruminating on the hardships of a soldier's life, and on the shifts to which he is often reduced, my eyes and my thoughts were naturally attracted to my poor cattle, who stood picketed at a short distance, with nothing to chew but the cud of disappointment, having waited since morning in eager expectation of the return of a foraging party. I observed one of these, whose well defined ribs bore testimony to the scantiness of his fare, gradually stretching out his head; a turban, belonging to one of my servants which happened to lie within the length of his tether. After giving it a turn or two with his nose, I suppose to ascertain the possibility of its being masticated, he seized the loose end in his mouth, and actually began to swallow it. He swallowed, and swallowed; and, as the voluminous folds of the turban unrolled, so fast did they disappear down the throat of the bullock, until, of at least ten yards of stuff, there remained only a small bit pendent from his jaws. I was so amused with the whole process, that I could not find it in my heart to stop him; but lay on my couch observing his operations for at least an hour. Another minute, and the turban, which had nearly reached its latter end, would have been safely deposited in the stomach of the bullock, to be brought up for rumination at a favourable opportunity. Just at this critical moment owner returned, when, looking about for his turban, he beheld the end dangling from the mouth of the animal. With an oath he flew at the bullock; and seizing the only visible portion of his garment, pulled and pulled, his over hand, and oath upon oath, while the tattered, but still connected, cloth came forth like a measuring tape out of its case. The man's rage and gestures at the destruction of his turban, the beast's astonishment at the novel kind of emetic he was undergoing, the attitudes of both, formed a scene absolutely irresistible." We wonder the bullock did not swallow the man instead, and thus restore to him his turban! But, *adieu*.

Elephants.—"One example of their anger was related to me by an officer of artillery, who witnessed the transaction. The battering-ram going to the siege of Seringapatam had to cross the sandy bed of a river, that resembled the rivers of the Peninsula, which have during dry season but a small stream of water running through them, though their beds are most considerable breadth, very heavy for draught

and abounding in quicksands. It happened that an artillery-man, who was seated on the Ember of one of the guns, by some accident fell off, in such a situation that, in a second or two, the hind wheel must have gone over him. The elephant, which was stationed behind the gun, perceiving the predicament in which the man was, instantly, without any warning from its keeper, lifted up the wheel with its trunk, and kept it suspended till the carriage had passed clear of him. The attachment or dislike of elephants to their keepers, according to the treatment they receive, is too well known to need illustration. I have myself seen the wife of a mohaut (for the followers often take their families with them to camp) give a baby in charge to the elephant, while she went on some business, and have been highly amused in observing the sagacity and care of the unwieldy nurse. The child, which, like most children, did not like to lie still in one position, would, as soon as left to itself, begin crawling about, in which exercise it would probably get among the legs of the animal, or entangled in the branches of the trees on which he was feeding; when the elephant would, in the most tender manner, disengage his charge, either by lifting it out of the way with his trunk, or by removing the impediments to its free progress. If the child had crawled so such a distance as to verge upon the limits of his range, (for the animal was chained by the leg to a peg driven into the ground,) he would stretch out his trunk, and lift it back as gently as possible to the spot whence it had started, and this without causing any alarm to the child, which appeared accustomed to the society and treatment of its Brogdignian guardian." As we have great complaints of the carelessness of *slavery-men* about London, might it not be a good way to import elephants to supersede these *giddy* creatures?

Facts.—After the battle of Assaye, at a *fat*, "I recollect, on one of these occasions, a rather illiterate character, who used to say that 'Father and he fit, cause he sold the *bustumes* for too little money; so he commended *at a cadet*,' sat as vice-president; the toast of 'General Wellesley, and the heroes of Assaye,' was, as usual, given from the chair; when Mr. Vice, rising majestically, and holding aloft his brimming glass, with a sonorous voice, and north-country accent, echoed the toast, in the words, 'General Wellesley, and here he is I say!'"

Here we must pause, though our notes have just brought us to the *début* of the immortal Wellington.

Mr. Gregor's Historical and Descriptive Sketches of the Maritime Colonies of British America.

[Conclusion of our Review.]

In one page Mr. M'Gregor tells us, "There are no game laws, nor any restrictions as regards shooting; nor does it appear that one can hinder persons from doing so, even on lands under cultivation, unless he proceeds against them as trespassers;" yet, in the same page, he says, "Partridges are larger, and considered *fair*, than in England. A provincial law prohibits the shooting of them between the 1st of April and the 1st of September;"—which seems to imply a contradiction.

Of Nova Scotia, we are informed, "that its computed superficies, exclusive of Cape Breton, is 11,500 square miles; from which nearly one-third may be deducted for lakes, arms of the sea, and rivers, leaving about 7,000,000 acres of land; 5,000,000 of which may be considered capable of cultivation. A great propor-

tion of these lands is still vacant, and in the hands of the crown. . . . The position of this colony, in respect to its trade with Europe, the West Indies, and other parts of the world, with its excellent harbours, and its abundant fisheries, will ever secure to it a decided advantage over the Canadas. Its climate, although more humid, is also much milder than that of Canada, and the winter two months shorter. Mines of coal, iron, copper, and other minerals, abound in Nova Scotia, which will very probably be soon brought into profitable operation by the 'Albion Mining Company,' who have now skilful engineers, artificers, and miners, actively engaged in working them. This colony produces, also, especially in the interior, great plenty of wood for ship-building, joiner-work, &c., and the soil is capable of yielding more than a sufficient quantity of green and white crops for the support of the inhabitants. The country is admirably adapted for the breeding of sheep; and although the climate in winter is colder than in England, yet when the weather is cold it is usually dry; many tracts of land, also, that are too stony for cultivation, afford tolerable pasturage. The horses of Nova Scotia are seldom large, but hardy and full of spirit: the breed, however, is improving fast. Black cattle thrive well, and the beef and mutton are usually very good. Pigs and poultry may be raised in abundant numbers. Wheat, barley, oats, potatoes, turnips, and vegetables, yield bountiful returns. Apples, equal to any produced in the United States, grow in many parts of the province; and wild vines covering several acres have lately been discovered near Digby."

But here, as elsewhere, the curse of lawyers is felt. "The bankrupt laws do not extend to the colonies, nor is there in Nova Scotia any law which affords an unfortunate debtor the release which is so easily obtained in England. A provincial law, however, called the 'Insolvent debtor's Act,' generally relieves a debtor, if no fraud be discovered. A law, which enables a creditor to attack property before he obtains a judgment of court, has been severely complained of. It has certainly enabled merchants and others to obtain payment of debts justly due to them, and which they otherwise might never have recovered; but such a law gives often to a bad character too much power over the property of an honest man. All over America there is too frequent recurrence to law; the people fly to litigation on the most trivial occasion; they are inveigled into law-suits by low attorneys; and there is nothing that tends more to destroy the dignity of the courts than admitting, without much scruple, as an attorney and barrister, any one who has been five years an articulated clerk to an attorney practising in the province. By this system a mere *amanuensis* is placed on a par with gentlemen of extensive legal learning and experience. Next to the cheapness and abundance of ardent spirits, what is called '*law*' is the bane of all North America, both as respects the British colonies and the United States."

The following is curious:

"The descendants of the French who settled in the colonies now possessed by Great Britain, are distinguished by the appellations of Acadians and Canadians. The former were principally settled during the French government in Nova Scotia, then called Acadia; the latter in Canada. The Acadians are now to be found in Nova Scotia, New Brunswick, Prince Edward Island, and Cape Breton, always by themselves, in distinct settle-

ments. They are averse from settling among other people; and I have not been able to discover more than four instances of their intermarrying with strangers. They profess the Roman Catholic faith, and observe the most rigid adherence to all the forms of their church. Their general character is honest and inoffensive. Religiously tenacious of their dress and all the habits of their forefathers, they have no ambition to rise in the world above the condition in which they have lived since their first settling in America. The dread of being exposed to the derision of the rest, for attempting to imitate the English inhabitants, is one, if not the principal cause that prevents individuals among them, who would willingly alter their dress and habits, from doing so. In Prince Edward Island the Acadian women dress nearly in the same way as the Bavarian broom-girls. On Sundays their clothes and linen look extremely clean and neat; and they wear over their shoulders a small blue cloth cloak, reaching only half way down the body, and generally fastened at the breast with a brass brooch. On week days they are more carelessly dressed, and they usually wear sabots (wood shoes). The men dress in round blue cloth jackets, with strait collars, and metal buttons set close together; blue or scarlet waistcoats, and blue trowsers. Among all the Acadians in Prince Edward Island, I never knew but one person who had the hardihood to dress differently from what they call '*notre façon*.' On one occasion he ventured to put on an English coat, and he has never since, even among his relations, been called by his proper name, Joseph Gallant, which has been supplanted by that of 'Joe Peacock.' At Arichat, the Acadians, both men and women, sometimes depart in their dress from the fashions of the Acadians, and wear coats and gowns. At Caraquette, I observed also a partial deviation from their usual dress; some of the men wearing coats, and a few of the women wearing gowns. The head-dress of the women on the south side of the Bay de Chaleur, is, I believe, peculiar to themselves: instead of the Bavarian-like small caps worn by all the other Acadians, they delight in immense muslin caps, in shape like a balloon. The women in all the fishing settlements are perfect drudges. The men, after splitting the fish, leave the whole labour of curing to the women, who have also to cook, nurse their children, plant their gardens, gather what little corn they raise, and spin and weave coarse cloth. The old worn clothes they either cut into small stripes, and weave as waft into coarse bed-covers, or they untwist the threads into wool, which they again spin and make into cloth. The Acadians are nearly destitute of education: scarcely any of the women, and few of the men, can read or write, and, like all ignorant people, it matters not of what religion, are exceedingly bigotted and superstitious.* They labour under the

* "I was told by different persons in Prince Edward Island, the following anecdote:—At St. Eleanor's, Col. Compton, to whom the township of St. Eleanor's belongs, lived about thirty years ago. Near his house is a small river, the entrance of which opens early in the spring, at which time it is usually frequented by flocks of wild geese. St. Eleanor's was then populously settled with Acadian French; and during the residence of Colonel Compton, one of the inhabitants (Louis Arseneux) died without the usual consolatory attendance of a clergyman, there being at the time on the island, who lived about seventy miles distant, and who could not, it appears, come in time to hear the confession of the dying man. Louis, it seems, was one of those Acadians who did not surrender when the island was taken; and while lurking about in the woods, he found two Englishmen sleeping, during the summer heat, under the shade of a tree. Louis considering them his natural enemies, so

impression that justice is not, under the British government, administered impartially to them in the courts of law; and this has arisen perhaps entirely from the conduct of the justices of the peace, many of whom, appointed in the settlements, are stupid, ignorant men; and I regret to say, that I have often known them to make iniquitous and unjust decisions against the Acadians. The descendants of the French settled on the north side of the Bay de Chaleur, are mostly Acadians, but from their intimate intercourse with Quebec and the Canadians, are a more intelligent and respectable people than the other Acadians, whom they, as well as the Canadians, denominate 'les Sauvages.'

With these sketches, with which we have been much pleased, we shall take our leave of this very unpretending, but both useful and amusing volume. The author states, that the valuable fisheries on the coast of Newfoundland have been much injured since the last peace by the encroachments of both French and American speculators. This is a subject which particularly merits the notice of government: and the rest of the book is equally well worthy of the attention of the public, and especially of persons disposed to emigrate to a congenial climate, not very distant from their native ties, and protected by the British constitution.

SIGHTS OF BOOKS.

Franklin's Journey to the Shores of the Polar Sea in 1819, 20, 21, 22. With a brief Account of the Second Journey in 1825, 26, 27. 4 vols. 18mo. With Plates. London, 1829. J. Murray.

Huge quartos compressed, like essences, into these cheap and tiny tomes, must greatly delight all those classes to whom the necessarily high prices of the original works rendered them objects of desire rather than of attainment. Perhaps none of our voyagers' narratives possess such powerful interest as those which are here presented to the public, in a popular and convenient style; and we consider Mr. Murray to be doing an essential service to the literature of his country, by thus spiritedly following up his plan of giving such works in this manner. The plates are as interesting as in the largest editions; and portraits of Franklin, Dr. Richardson, Lieut. Beck, and Augustus the guide, are pleasing frontispieces to these four volumes.

well as the conquerors of his country, felt no scruple in killing them with his hatchet. The murder, however, made Louis miserable, and his conscience was a most troublesome one to him as long as he lived, although his dying hour only developed the mysterious cause of his misery. A little after his death, a solitary wild goose made its appearance, in the opening of the ice, at the mouth of the river, near the village of St. Eleanor's. The young men, who were all considered such good shots as to be able to hit a goose at 100 yards distance with a musket ball, fired frequently, but ineffectually, at this one, which they at last began to think invulnerable. At this time there was on a visit at Colonel Compton's an Irish officer, belonging to the troops stationed at Charlotte Town. He had with him an excellent double-barrelled gun, and the Acadians beseeched him to try his virtues, by shooting the wonderful goose. He accompanied them, crept within shot of the object, and, being (although a Catholic himself) amused at their superstitious fears, he at the moment he was apparently going to fire, started up, as if in great terror, and told the Acadians that no one must attempt firing again at what they took for a wild goose; that his gun possessed the peculiar and wonderful property, when he aimed with it at a supernatural object, of exhibiting it to him in its proper form; and that what they had vainly attempted to shoot, was the ghost of Louis Arseneux, who would doubtless haunt St. Eleanor's until a clergyman was sent for to deliver his soul from the pains of purgatory. A deputation of young men were immediately despatched for the priest: the goose disappeared, and the good Acadians rejoiced in having performed a religious duty, which the felicity of their lost friend rendered necessary."

Elements of Geography, for the Use of Young Children. By the Author of "Stories from the History of England." pp. 94. London, 1829. J. Murray.

A MELANCHOLY interest is imparted to this eminently useful work of instruction by the circumstance of the child for whom it was intended by its affectionate parent, Mr. J. Wilson Croker, not living to reap the benefit of his very judicious method of teaching. After time has somewhat alleviated his affliction, he has kindly given it to the world; and we believe there are few parents who will not, when they have examined it, at once thank him for the gift, and sympathise with him on the event so touchingly alluded to in his Introduction. Of the work itself it is only needful for us to say, that, as far as it goes, it is one of the plainest and best we ever saw. We entirely agree with Mr. Croker, that the science of geography has always been taught by beginning at the wrong end; and that children ought to learn by memory the names and situations of things and places, before they are confused with the abstruse points of the earth's revolutions, imaginary circles, latitudes and longitudes, &c. &c. In pursuance of this plan, we have here, as a first part, a clear account of the great divisions of the globe, its next divisions into countries, the chief cities of each, and the great rivers, mountains, lakes, &c. which distinguish one portion from another. These are laid down in a way not to be surprised for ease and clearness, and for the facility with which any child may be led to understand and remember them.

The History of Bullanabee and Clinkataboo, two recently discovered Islands in the Pacific. 18mo. pp. 215. London, 1829. Longman and Co.

BULLANABEE and Clinkataboo are England and Ireland; and this little work an allegorical and anti-catholic discussion of the Roman Catholic question. There are also some touches at our national manners; but the gist of the author's satire runs against the religion and practices of the church of Rome.

Affection's Offering; a Book for all Seasons. pp. 176. London, 1829. S. Lawson.

A PRETTY volume: a medley of original pieces, tales, extracts from books, poems, &c. adorned with wood-cuts, and calculated to promote the moral improvement of the rising generation.

The Christian's Present for the Year 1829. pp. 256. London. W. R. Goodluck, jun.

ANOTHER of those productions which this season of the year calls forth. It consists entirely of original pieces in prose and verse, and is dedicated to Mrs. Fry. It is, in our opinion, of too sombre and gloomy a character: the world has many shadows, sorrows, and crimes; but there are also sunshine, happiness, and good actions, as there is day as well as night: and the beneficent Creator of man has furnished too many sources of enjoyment, to permit us to think it can be agreeable to the dispensations of Providence to look at life, and all that belongs to it, with a morbid eye.

L'Economie de la Vie Humaine, etc. pp. 105. London. Maunder, and Dulau and Co.

A TRANSLATION of Doddsley's popular "Economy of Human Life" into French, by Mrs. Davidson. It is very literal, and a capital book for the young student of the French tongue.

Winter Evenings at College: a familiar Description of the Manners, Customs, Sports, and Religious Observances of the Ancient Greeks. With a short Account of the State of Modern Greece, &c. By a Clergyman. 2 vols. 18mo. London, 1829. J. Harris.

WE cannot confer a greater obligation on our youthful readers than by warmly recommending this work to their attention. In the most familiar form and unpretending size, these small volumes convey very accurate and ample information upon the various topics of which they treat, and bring forcibly before us the condition and appearance of ancient Greece, drawn from a multitude of classic stores. The Evenings are passed by a college tutor and his pupils; but the design is so admirably executed, that we know of no age, from ten years to the largest span, that may not be pleasantly instructed by the author's labours.

The Forest Sanctuary; with other Poems. By F. Hemans. The Second Edition, with Additions. 12mo. pp. 324. Edinburgh, Blackwood; London, Cadell.

WE rejoice to see the grace, the taste, the talent, and the beauty of Mrs. Hemans rewarded thus speedily by the call for a second edition. It shows that the good feeling and judgment of the public are not so insensible to poetical merit as many scribblers (probably themselves unsuccessful candidates for notice and favour) are continually endeavouring to insinuate. When sparrows chirp, it is true, nobody thinks of listening; but, till nature is perverted and changed, the notes of the lark and the nightingale will always attract the attention and charm the ear.

Conversations on the Life of Jesus Christ; for the Use of Children. By a Mother. London, 1829. J. Harris.

A WELL-INTENDED child's book, and, generally speaking, worthy of its office. But there are many grand errors in most works of this class; and the present is not free from them. Making children exclaim with doubt and wonder at the description of Christ's miracles, for instance, only shows that they had not been previously impressed with the more important knowledge of his character.

Poems, Lyric, Moral, and Humorous. By Thomas Crossley. 12mo. pp. 138. London, 1829. Hurst, Chance, and Co.

JUVENILE trifles, written to pass the idle hours, these compositions can hardly hope to excite notice beyond the author's own circle of friends.

A Chart of the Diseases of the Skin. By Jonathan Green, Surgeon, &c.

THIS Chart is evidently arranged so as to render more clear the obscurity that prevails with respect to these diseases; it shows research, and defines the characteristics by which each of them may be readily distinguished. It promises to be a useful synoptical table for professional men; but what is of more consequence, it points out those amongst these diseases which may be cured by means of the fumigating baths, even without medicine internally. We some time since directed public attention to this remedy, having ourselves experimented on its good effects; and are surprised that more medical men do not adopt the method as a decided branch of their practice. Indeed, since our former notice, we find it has extended almost to an incredible degree on the continent, where it has been proved to be of the greatest utility in those

numerous and obstinate diseases which are not readily influenced by medicine when used internally. These baths are pleasant in their operation, and may be taken either as preservative of health or as curative of disease, by persons of all ages, and at any season of the year, as there is little chance of catching cold after them: but it is principally for chronic, or what are technically called *chronic* diseases, that we advocate this remedy.

ORIGINAL CORRESPONDENCE.

PURITY OF THE ENGLISH LANGUAGE.

[The following letter from a distinguished foreigner anticipates us on a subject which we have long marked for the exercise of our pen; and we hail the accession of so impartial and powerful an ally. We need hardly state to any English gentleman, or family that has visited Carlruhe, who the noble writer is; but to our countrymen who have not had the pleasure of seeing him there, we ought to say, that he is not only an excellent scholar and linguist, but one of the most polite, kind, and hospitable friends with whom an English traveller can meet.—Ed. L. G.]

General Post-office, Carlruhe, 1838.

Sir,*—In a review of a work by the Rev. W. Walter (No. 580) you say: "We laugh, and with reason, at the havoc which our continental neighbours make with our language, when they attempt to introduce it in their works." You are quite right: I agree with you, this is indeed very laughable. But allow me to say, it is also laughable, or rather it is melancholy, for a lover of your nation, when he remarks the havoc (to use your expression) which modern English writers make with their own language, in spoiling and disgracing it so much by the introduction of French words and phrases. Not only the publishers of newspapers, but even authors of more scientific works, yourself not excepted,† seem to be seized with this strange mania. I am convinced when an Englishman of the good old time reads, for example, *Strawberry Hill*, or some other tales of the day, he will exclaim with a feeling of grief and disgust—

"The language I have learned these forty years,
My native English, now I must forego!"

But their making so much use of French words and phrases surprises me the more, as the French acknowledge the superiority of the English language in the most frank and candid manner. The following article, copied from a French paper (*La Foudre*, No. 1128, June 24, 1826), will make, I flatter myself, a deep impression upon you, at the same time that it will give you, as I hope, great satisfaction.

"Or la poésie a des sentimens, une langue, des mouvemens, qui lui sont propres, et nul, à notre connaissance, n'a autant que Lord Byron fait usage de ses ressources fécondes. Aussi les prosateurs seront-ils toujours à une incommensurable distance d'un pareil modèle. A cette importante différence entre les franchises de la poésie et les serviles allures de la prose, ajoutez l'incontestable supériorité des matériaux employés par l'Anglais, et le mécanisme varié de la prosodie. Comparez l'audace, l'énergie, la richesse de sa langue, avec la timidité, la mollesse, la pénurie de la nôtre; voyez ses vers élastiques, de rythmes inconstans, de mesures décroissans, où la rime elle-même est un agrément plutôt qu'une nécessité; puis rejetez les yeux sur notre versification sèche, guindée, meurtrie, plus à la gêne mille fois entre les règles de Richelieu, que la taille d'une femme entre des os de balaine et les lames d'acier."

But, allow me to remark, this abuse takes

a more serious turn, as history proves that a nation which begins to neglect and to corrupt its own idiom, exposes itself to lose likewise its original stamp—the national character,—till now England's pride and moral support. More than one hundred years ago, Swift censured this bad habit. You will allow me to quote his own words. "I have often wished," he says, "that as in our constitution there are several persons whose business is to watch over our laws, our liberties, and commerce, certain men might be set apart as superintendents of our language, to hinder any word of a foreign coin from passing among us; and in particular to prohibit any French phrases from becoming current in this kingdom, when those of our own stamp are altogether as valuable." I wish the dean's idea may be at last fulfilled. Nothing would be more worthy of so great a nation as yours, nothing would, in particular, contribute more to illustrate the reign of your most gracious Sovereign, than to put in execution such a plan.

But it was rather an odd idea of the dean, when he wished at the same time, "that some method should be thought on for ascertaining and fixing the language for ever." Every idiom must enjoy full life and liberty, and cannot be kept down under any restraint whatever, as long as it does not transgress its natural limits. But it is not the place here to enlarge more upon this matter.

Now I have expressed my sentiments upon this subject without any restraint. I feel it looks rather assuming when a foreigner interferes in a matter of such importance. But who can deny the fact, that most of the publications of the day are interlarded with French words and phrases? And will not the lively interest I take in the purity and genuineness of your language be my best apology in the eyes of every equitable reader? Besides, the great similarity between the English language and my own gives me, I think, some right to utter my opinion upon this matter. This resemblance may be, perhaps, the reason why it is so shocking to me to see your language so much spoiled and adulterated by French words and phrases.

I leave it now to your impartiality to insert these lines in your valuable paper. As its circulation and influence on public opinion is so very great, you could contribute most essentially to putting a stop to this disgrace of your noble and genuine language.

But before I leave the critic's chair, which you know by experience is such a sweet and comfortable one,* allow me to add one remark more on the same subject. In the Biography of Lady C. Lamb, No. 578, it is said that she died of the *dropsy*. I confess to you, this word shocks me as often as I meet with it; it sounds so very vulgar. Do you not think that *hydropsy* would be more correct, and the more so as you still say *hydropical* and *hydropics*? Nothing but

"That monster, Custom, who all sense doth eat," can have introduced this corrupted word into your language.

Allow me now to enclose some other communications; and in case they should meet with your approbation, I should feel happy in becoming a regular correspondent.

I have the honour to be, with great regard, sir, your humble, obedient servant,

BARON VON FAHNENBERG,

Post-Master General of the Grand Duchy of Baden.

* The — It is! — Ed. L. G.

ARTS AND SCIENCES.

RUSSIAN VOYAGE OF DISCOVERY.

THE last account received at St. Petersburg of the voyage of discovery under the command of Captain Litke, holds out the prospect of great additions to our geographical and nautical knowledge. The expedition had instructions to sail to the harbour of St. Peter and St. Paul, Kamtschatka, and thence to visit, in the winter, the Carolines, and in the summer to examine the regions in, and at the other side of, Behring's Straits. The first part of this expedition has been happily accomplished, during a cruise of seven months near the equator, between the first and tenth degrees of north latitude. A letter from Dr. Martens, botanist to the expedition, contains the following particulars:—

"Our ship, the *Siniavin*, sailed from the harbour of St. Peter and St. Paul on the 19th of October, last year, and arrived on the 22d November off the island of Oolan, which was re-discovered by Captain Duperey, in the *Cochille*, in 1824; where we had the pleasure of becoming acquainted with a people, in the purest state of nature, who had remained hitherto unknown, and were wholly unacquainted with Europeans;—who differed even in language from all the other inhabitants of the Carolines;—who to all appearance never had any intercourse with the other islands, and have hitherto lived in such patriarchal simplicity, that not a single weapon, nor any thing resembling a weapon, was met with in the whole island. This was the more surprising, as it soon appeared that the government of the place was aristocratic, and several chiefs considered themselves as masters of the island; and who, therefore, must constantly live in peace and harmony. Their complexion is of a bright brown, the arms and thighs tattooed, their hair in a bunch braided together upon the head, and adorned with flowers; their features resemble those of the Malaya. Every thing proved that they did not know what hostility was. Our naturalists found them the most faithful guides on their excursions, and the most careful keepers of the insects and plants which they collected. One of their chiefs, named Sipa, offered them his dwelling for their residence; and here also they had an opportunity of making themselves acquainted with the domestic arrangements of the inhabitants. The Oolanese are particularly distinguished from the inhabitants of the other Carolines, by being entirely free from the propensity to stealing. They treat their women with great kindness and affection. We could not obtain any clear notions of the religion of these people. Their diet consists of bread, fruit, bananas, sugar-cane, cocoa-nuts, fish, snipes, pigeons, and some wild fowl. As far as we could learn, the island is divided into between forty and fifty districts, each of which contains several villages, and belongs to a chief. Several of these chiefs live on a small island, separated from the rest of the inhabitants. One of them was treated with particular reverence: he might be considered, in some measure, as the king of the whole. We could not discover how he came to enjoy this honour: it certainly was not for his wealth; for his majesty possessed only two villages, while another chief had eight."

After remaining three weeks among these people, whose natural innocence is so amiable, the *Siniavin* continued its voyage on the 20th of December. On the 2d of January, 1828, they discovered a new group of islands, the highest and also the largest of all the Carolines, except the

* We have suppressed a few introductory observations. † We deny the imputation: we never express a thought in any language but the most intelligible of our own. We must, however, always help our correspondents running into a country practice, however much we dislike it; and especially our continental correspondents.—Ed. L. G.

Pellew Islands. The ship cruised eight days among these islands; but no attempt to land was made, because the inhabitants appeared very hostile. When the *Siniavin* put out a boat, to look for an anchorage or landing-place, it was immediately surrounded by other boats, the crews of which used very menacing gestures. They carried short spears, headed with teeth of the saw-fish, and a sling made of plaited rushes. When pistols charged only with powder were fired at them, they made no impression on them, and yet every thing indicated that these natives had never before seen Europeans. Their hair was rather short, and beautifully curled: they wore about their waist a girdle, with very deep, dark-red fringe; this girdle covered a part of the breast, and was fastened on one shoulder.

Notwithstanding the beautiful appearance of these fine lofty islands, the humane Capt. Lütke would not attempt to land; because it was evident that it could not be done without bloodshed. The naturalists were, therefore, disappointed of their expected harvest, and the *Siniavin* proceeded on her voyage. A dog was all that they carried away. The letter continues:

"On the 13th January we descried *Los Vahentes*—low, miserable islands; the wretched inhabitants of which did not appear even to possess boats. On the 18th we arrived off the *Namuricks*; and on the 23d, off *Mortlock* islands (discovered in 1796), the natives of which appeared very amiable and civilised, which is probably to be attributed to their intercourse with the other Carolines and with Manila. Their ships are calculated for long voyages, and are provided with compasses. An unexpected sight here was an English three-masted ship, the *Partridge* whaler, which, like many others of that class, has since 1823 visited the coast of Japan, in pursuit of the sperm whale. As this ship had been almost as long absent from Europe as the *Siniavin*, the crew could not give us any news; however, mutual visits were paid, which could not be otherwise than agreeable in this distant part of the world.

"On the 2d of February we discovered the island of *Rug*; and on the 8th, *Union* Island. On the 17th, the *Siniavin* arrived in the harbour of *Caldera de Apra*, where she remained till the 7th of March, during which time the Spanish governor shewed us every kind of attention and politeness. On the 30th of March we cast anchor off the island of *Ooropick*, and this was the termination of our voyage, after five months cruise, in the tropical regions. On the 18th we discovered the bleak and barren rocks of the island of *Rosario*, or *Disappointment*; and on the following day we were fortunate enough to see the beautiful islands of *Bonin*, which had been previously discovered, but whose existence was afterwards doubted, as *Krusenstern* could not find them. The *Siniavin* had been anticipated in this re-discovery by the English sloop the *Blossom*, which had been sent to meet Captain Franklin in *Behring's Straits*: a board which it had left, shewed that Captain Beechey, the commander, had taken possession of the islands the preceding year, in the name of his Britannic Majesty. In one of these islands, which was otherwise wholly uninhabited, Captain Lütke found two Europeans, living in great distress; a Prussian, *Charles Wettrin*, of *Königsburg*; and *John Peterson*, a Norwegian, who had served on board an English ship which was wrecked on this island in 1826, but the crew of which happily got on shore. Another English ship, which arrived six weeks afterwards, took the crew on board; but left

Wettrin and *Peterson* behind, who wished to save as much from the wreck as possible, but received a promise that they should be taken off by the last ship in its return from the coast of Japan. This promise, however, was not fulfilled; and Captain Lütke took them with him.

"These islands may become very useful and important to *Kamtschatka*. The climate is extremely fine, and the plants and fruits of the torrid and temperate zone flourish equally well. A few hogs, which had been left by the stranded ship, have increased to the amount of several hundreds. The turtles were so numerous and close together in the bays, that the strand looked as if it were paved with them. There was also an abundance of the finest fish. Fourteen days that we spent here afforded the naturalists an ample harvest. On the 28th of May, the *Siniavin* arrived again in the harbour of *St. Peter* and *St. Paul*, where the trees were still without leaves, and a few spring flowers were but just beginning to appear. The collection of natural curiosities of every kind is very considerable; we have specimens and drawings of 140 new species of fish. The whole excursion was highly fortunate. Not a single individual of the crew was attacked by sickness during the seven months voyage. In June the expedition sailed for *Behring's Straits*."

FRENCH SCIENTIFIC EXPEDITION TO GREECE.

THIS expedition, which we announced some time ago, will in a few days take its departure. It consists of seventeen persons, who have been appointed by the government, upon the recommendation of the Academy of Sciences, and other scientific institutions in Paris. A correspondent in that capital informs us, that in fitting out this expedition no expense has been spared; it is supplied with instruments and necessary apparatus by the first makers; and most of the persons composing it have liberal salaries. Two of these gentlemen are first-rate botanists, and another has had great experience in agriculture. It would seem, from some circumstances which have transpired, that great attention is to be paid to the soil and climate of Greece, with a view to the cultivation of many articles of necessity and luxury, under the superintendence of French colonists. On its arrival in Greece, the expedition will be divided into three parties, each of which will prosecute its researches on separate points, but under such arrangements as will render it easy for them to unite when it shall be necessary to do so. Colonel *Favler*, the French commandant in Greece, has received instructions to provide military escorts; and letters have been sent by the French minister to the Greek president, requesting him to afford every facility in his power. The King of France has taken great interest in the promotion of this enterprise, and has signified his readiness to contribute from his own purse any sum that may be considered necessary.

LITERARY AND LEARNED.

CAMBRIDGE, January 2.—The Hulsean prize for the last year has been adjudged to Mr. Andrew Watson, of Catharine Hall, for his dissertation on the following subject:—*How far have the Laws of the Jews been abrogated by the Christian Dispensation?*
The following is the subject of the Hulsean prize dissertation for the present year:—*What was the extent of the knowledge which the Jews had of a Future State at the time of our Saviour's appearance?*

SOCIETY OF ANTIQUARIES.

JANUARY 8.—Mr. Hamilton in the chair.

Mr. Secretary Ellis laid before the Society an impression of the seal of the town of Bruges. Mr. Ellis then communicated a paper respecting the liberties and privileges of the houses of Black and White Friars, in London, in the time of Elizabeth, which he prefaced with some interesting remarks, as illustrative of the *Alsatia*, popularly described by Sir Walter Scott.

Mr. Decimus Burton, Sir Alexander Dickson, K.C.B., Mr. J. H. S. Pigott, Rev. S. H. Cassell, and Mr. W. Lynch, of Dublin, were balloted for, and duly elected fellows of the Society.

ROYAL SOCIETY OF LITERATURE.

JANUARY 7.—Mr. Archdeacon Nares presided at the meeting of this day. After the usual routine of business was gone through, the secretary proceeded to read the conclusion of a Memoir on the Mercury of the Gauls, by the Rev. W. H. Payne, Canon of St. David's.*

That great sovereign and benefactor of mankind, by the invention of several of the useful and liberal arts, who was worshipped in Egypt and Phœnicia under the name of *Photh*, in Greece as *Hermes*, and by the Latins as *Mercury*, and of whom the prototype was probably the Egyptian *Trismegistus*, appears also to have been a favourite deity of the Gauls, and by them to have been called *Toutates*. The author of the paper accounts for the introduction of this personage into Gaul, from the mythologic history of the son of Jupiter and Maia, which states, that upon the death of his father he inherited Spain and Gaul, as well as Italy; and among various proofs of the identity which he attempts to establish, he adduces the fact of the similarity between the temples and monuments erected in honour of Mercury by the classical pagan nations, and the cairns and cromlechs of Gaul and Britain.

The principal evidence, however, which Mr. Payne adduces in support of his theory is derived from an investigation of the British Historic Triads. Of the personages celebrated in these Celtic records—such as *Gwyddon-Genhebon*, or the Philosopher; *Idris*, or the Man of Science; *Gwyddon*, the Son of Don, or the Sage, the Son of Genius, &c.—a sufficient number are certainly shown by him to be impressed with the character of *Photh* or *Mercury*, to render the analogy remarkable, if not completely to establish the theory of identity.

We hope to see the meetings of this important Society more fully attended as the season advances.

ROYAL ASIATIC SOCIETY.

At the adjourned special general meeting, on Saturday the 3d, the following additions to the articles of the regulations were agreed to.

1. The Literary Society of Bombay is from henceforward to be considered an integral part of the Royal Asiatic Society, under the appellation of the Bombay Branch of the Royal Asiatic Society.
2. The Bombay Branch shall be considered quite independent of the Royal Asiatic Society, as far as regards its local administration and the control of its funds.
3. The members of the Bombay Branch, while residing in Asia, shall be non-resident members of the Royal Asiatic Society; and when in Europe, shall be elected resident members in the same manner that honorary members are elected.

4. The members of the Royal Asiatic Society, while residing in Europe, shall be non-resident members of the Bombay Branch; and when within the presidency of Bombay, shall be elected resident members in the manner prescribed by the regulations of the Bombay Literary Society.

Addition to the IXth Article.—"But the members of the Branch Society at Bombay are to be elected in the same manner as honorary members are elected."

* The same subject has lately occupied the pen of another learned member of the Society—the Rev. W. L. Bowler, in his *Parochial History of Bremhill, and its Neighbourhood*; to the letter of which we owe a Review.

Illustration of the LVIIIth Article.—"Every original communication presented to the Society becomes its property; but the author or contributor may re-publish it twelve months after its publication by the Society. The Council may publish any original communication presented to the Society, in any way, and at any time judged proper; but, if printed in the Society's Transactions, twenty-five copies of it shall be presented to the author or contributor when the volume or part in which it is inserted is published. Such as the Council may not see fit to publish on behalf of the Society, may, with its permission, be returned to the author, upon the condition, that if it is printed, a printed copy of it shall be presented to the Society."

FINE ARTS.

NEW PUBLICATIONS.

Great Britain Illustrated. From Drawings by W. Westall, A.R.A. Engraved by E. Finden. Nos. III. and IV. Tilt.

THE views which adorn these two Numbers of this cheap but pretty publication are, "Barnborough Castle;" "Town-Hall and Mansion-House, Liverpool;" "Howden, Yorkshire;" "Kendal, Westmoreland;" "Brunswick Terrace, Brighton;" "Manchester;" "Aston Hall, Warwickshire;" and "Lancaster Sessions-House and Market." They are executed in the same pleasing style as those in the preceding Numbers.

The Select Gallery of Etchings, after Chefs-d'œuvre of the Old Masters. Nos. I. and II. Moon, Boys, and Graves.

WE confess that we are at a loss to understand the real object of such a publication as this. Is it intended as an illustrated catalogue of a collection of pictures to be sold? The price, and the limited number of copies printed, forbid that supposition. The preface says, "In the rapid progress of modern art, it must be very gratifying to all those who feel interested in its further advance towards excellence, that such representations from *chefs-d'œuvre* [*chefs-d'œuvre*] of the old masters should be published as subjects of reference or emulation to young artists, and of admiration or criticism to those more proficient in the exercise of their pencil." As if such slight and mediocre plates as these could conduce to either of those purposes!

It would be well that the literary portion of any work, however brief, should be written by some one sufficiently conversant with English grammar and composition to avoid such a hodge-podge as the following sentence, which is meant to be explanatory of a picture, by Mosa, of an old woman pining turnips:

"This pupil of the admired Rembrandt certainly falls little short of the talent of his great master, from the depth of colouring and effect of light so ably treated in the present specimen."

Portraits of Illustrious Personages of Great Britain; with Biographical and Historical Memoirs. By Edmund Lodge, Esq., Norroy King of Arms, F.S.A. &c. Folio Edition, Part XXXI.; Octavo Two-Monthly Edition, Part XXXV.; and New Octavo Monthly Edition, No. I. Harding and Lepard.

THE simultaneous appearance of Parts of three different editions of the same work, with three distinct sets of plates, is, we rather think, unparalleled in the history of publications. The work itself is too well known to the world, and we have too frequently expressed our high opinion of the ability and taste with which it

is conducted, to render it necessary for us now to dwell upon its merits. The thirty-first Part of the folio edition contains portraits and memoirs of John Manners, Marquess of Granby; the Honourable Robert Boyle; Sir Isaac Newton; Admiral Lord Rodney; and Charles Mordaunt, Earl of Peterborough; as well as a memoir, alone, of John, Duke of Montagu, the portrait by which it ought to be accompanied having been unavoidably delayed until the appearance of the next Part. The thirty-fifth Part of the octavo two-monthly edition contains portraits and memoirs of Oliver Cromwell; Lodowick Stewart, Duke of Richmond; Edward Sackville, Earl of Dorset; Philip Howard, Earl of Arundel; and John Graham, Viscount of Dundee. Of both these Parts we can justly say that they are well worthy of their predecessors. It gives us great pleasure also to observe, that there is not the slightest degeneracy in the first Number of the new edition, which contains portraits and memoirs of Sir Philip Sydney, Queen Anne Bullen, and Archbishop Cranmer. It is, indeed, one of those beautiful and great works which deserves the utmost public encouragement; and we are glad to find that it is estimated as it deserves. Yet we trust that thousands of new subscribers will be added.

The Spirit of the Plays of Shakspeare. Drawn and engraved by Frank Howard. No. XI. Cadell.

THIS Number is very creditable to Mr. Howard. It contains illustrations, in twenty-two plates, of *Measure for Measure*, and the *Merry Wives of Windsor*. The character of Isabella is well preserved. Her earnest entreaties to Angelo to spare her brother; her surprise and disgust to find the judge transformed into the seducer; her indignation at Claudio's disposition to purchase his life by the sacrifice of her honour; the tranquil satisfaction with which she listens to the scheme of rendering Mariana her substitute; her alarm at hearing that Angelo, in violation of his promise, has ordered her brother's execution; her supplication for justice to the Duke on his supposed return; and her modest though grateful reception of his declaration of attachment to her,—are all very skillfully delineated. The other personages of the drama, especially the Duke (both in his masquerade and in his natural character), are likewise marked with great ability. We were also much pleased with the plates illustrative of the *Merry Wives of Windsor*; although we do not perfectly concur with Mr. Howard in his remarks on the character of Slender. The fourth plate in the series of which we are speaking, "Ford, unable to find Falstaff, who, he has reason to suspect, is concealed in the house," seems to us to be one of Mr. Howard's most successful efforts. The expression of baffled but still existing suspicion in the countenance and figure of Ford, and that of sarcastic ridicule and taunting expostulation in those of his wife, are strikingly portrayed.

Picturesque Antiquities of the English Castles. By John Britton, F.S.A., M.R.S.L., &c. No. II.

WE are concerned to state that the delay which has occurred in the publication of this No. has been principally owing to the long and severe illness of the intelligent and indefatigable editor of the work. It appears also, that Mr. Le Keux has had a more laborious and tedious task than he calculated upon in completing the engravings to which his name is

attached; and "which," it is justly observed, "are more elaborate in execution than those of the former Number." The illustrations of the present Number consist of nine engravings and eight woodcuts. The engravings are, "The Ouse-Bridge, York;" "The West-Gate and Bridge, Gloucester;" "Ruins of Ely Palace and Chapel, Holborn, London;" "Ruins of Winchester Palace, Southwark;" "Tower Gate-House, Winchester;" "Gateway to St. Augustine's Monastery, Canterbury;" "The West-Gate at Canterbury;" "Wells Palace; Ruins of the Old Hall and Chapel;" (substituted for a view of the Cathedral and Castle of Lincoln, which could not be prepared in time for the present Number); and "Peterborough Cathedral, and part of the Palace." These plates are all good; the views of Wells Palace and Peterborough Cathedral (both engraved by J. Le Keux), superlatively beautiful, and of themselves well worth the price of the Number. The woodcuts, which represent five views in York, and three in Lincoln, are also executed with great accuracy and spirit. The letter-press consists of two sheets of descriptive accounts of the antiquities of York and of Lincoln.

Massa out, Sambo werry dry. Painted and engraved by Henry Pidding.

WE liked Mr. Pidding's painting in the Suffolk-street Gallery so much that we wish the more he had placed the engraving in other hands. He has preserved the exquisite humour and expression of Sambo, indulging in his wine, during Massa's absence, it is true; but the style of the execution in other parts is "werry" woolly. Still the print is whimsical and striking, and likely to be a favourite in the various portfolios.

ORIGINAL POETRY.

SONNET: REFLECTIONS.

WHEN through the grove the gentle summer breeze

Steals with such sighs as absent lover heaves,
Be mine, outstretched beneath the shady trees,
Lull'd by the soothing murmurs of the leaves,
To lie; and dream of scenes of former years,
Ere dark Suspicion in the heart found place—
And Sorrow fled the breast while yet the tears
The pang awoke bedew'd the mourner's face!
Recall the friends of youth, those faithful few
Who shared alike our pleasure and our pain;
Or forward trace, with melancholy view,
The closing scene of life; and think how vain,
How profitless, how puerile, how tame,
The world's best gifts—wealth, honour, glory,
fame!

Nov. 8, 1838.

THE BILLET-DOUX.

MAY I not see thee, Genevieve, to night? —
'Tis sweet to wander when the summer moon
O'er vale and river throws her clear, soft light,
And star with star seems almost to commune;
'Tis joy to gaze upon that splendid sphere,
When thou, my own dear Genevieve, art near.
Thou know'st thou art the sunlight of my
thought,
Fount of my memory—the hope, the pride,
The essence of my being; earth holds nought
Of hope or bliss but is to thee allied!
Around thee floats an atmosphere of love,
Wherein alone I speak, and think, and move!
Mountain and plain, the mild blue sky, the
sea, [flowers,
The beautiful green leaves, the gorgeous
Give double interest when beheld with thee,
Give thrice the pleasure in those happy hours

* Walter Skidmore, who was Bishop of Durham in the reign of Richard II., died in 1408, at Howden, where the following traditional story is still repeated, in commemoration of his munificence:

"Bishop Skidmore was good to his people:
He built a new school-house, and heightened the steeple."

We are together: feel'st thou this, my sweet?
Then once again, to-night, oh! let us meet.

There are a host of melancholy fears,
Which press, like clouds, upon my heart and brain;

And oft my aching eyes are filled with tears,
Struck with forebodings I may not explain.
My soul is lonely! — I implore — entreat —
To-night — if but a moment! — let us meet!
Arduwick, Manchester. CHARLES SWAIN.

TO BARTHOLOMEW THOMKINSON,
Second Mate to the East India Ship "Peggy."
From Betsey —

No! no! no joy will I be at!
No balls for me, without my Bat —
My heart I think will burst one!
And must you, Bat, submit to fate,
And be the Peggy's second mate,
Instead of Betsey's first one?

And you must leave your home again,
For seas that rage "with might and main,"
And gales all wild and windy;
You must give up your Margate trip,
And go in that tremendous ship, —
And all the way to Indy!

And this for money! — dirty dross!
A rolling stone collects no moss,
As Sisyphus can tell you: —
Well, well, good bye! my little man,
Write me as often as you can
Of every thing befall you.

You first must to Madeira go —
O! *apropos!* do let me know,
In case the compass varies,
And takes you to Canary Isles,
(The map don't make it many miles: —)
Are all the birds Canaries?

Be careful how you pass "the line" —
Though now it must be quite a twine,
So many vessels trouble it! —
And mind you clear "the Cape" — (what
stuff!

As if the Cape weren't large enough,
That you must go — and double it!)

If you should stop there, where the wine,
You must be sure, is genu-ine,
Of course you'll buy a dozen;
Next parcel that you're sending home,
Please let one nice pint-bottle come
For Mrs. Smith — my cousin.

Dear Bat! take care, when you embark
At Indy, of that nasty shark
That steals, so sly and stealthy;
For Dr. Shaw, the traveller, writes,
A full-grown shark's enormous bite's
Peculiarly unhealthy!

Do crocodiles there squeal and squall?
And those great elephants — are all
Cut up for Indy-rubber?
And do the whales, big babies! cry
Fountains of tears from either eye
When you produce their blubber?

Alas! I fear when you arrive
At Indy (if you do alive),
Your love will soon grow duller;
Ah! you yourself, I'm certain, you,
Chameleon-like, will change your hue,
And catch the copper-colour!

Oh! Bat! for your poor Betsy's sake,
Keep clear of tiger, jungle, snake,
Heat, cholera, and river!
"Live and let live" — is sage advice,
My dearest boy, you'll not live nice
When you've destroy'd your liver!

Soon may you bring, across the seas,
Peru's whole treasure in *rupees*,
And come back fresh and fat, love;
But should you die (perhaps you will),
Better lie quiet there, and still —
Don't be a Vampire, Bat, love.

SKETCHES OF SOCIETY.

A SCHOOLMASTER "BOARDING ROUND."

*Extract from the Journal of a Vermont Schoolmaster,
published in a Vermont Paper.*

Monday. — Went to board at Mr. B — s, had a baked goose for dinner; supposed from its size, the thickness of its skin, and other venerable appearances, to have been one of the first settlers of Vermont — made a slight impression on the patriarch's breast. *Supper.* — Cold goose and potatoes; family consisting of the man, good wife, daughter Peggy, four boys, Pompey the dog, and a brace of cats — fire built in the square room about nine o'clock, and a pile of wood lay by the fire-place; saw Peggy scratch her fingers, and couldn't take the hint — felt squeamish about the stomach, and talked about going to bed; Peggy looked sullen, and put out the fire in the square room; went to bed, and dreamed of having eaten a quantity of stone wall.

Tuesday. — Cold gander for breakfast, swamp tea, and some nut-cakes; the latter some consolation. *Dinner.* — The legs, &c., of the gander done up warm — one neatly despatched. *Supper.* — The other leg, &c., cold; went to bed as Peggy was carrying the fire to the square room — dreamed I was a mud turtle, had got on my back, and could not get over again.

Wednesday. — Cold gander for breakfast; complained of sickness, and could eat nothing. *Dinner.* — Wings, &c., of the gander warmed up; did my best to destroy them, for fear they should be left for supper; did not succeed; dreaded supper all the afternoon. *Supper.* — Hot Indian Jonny cakes, and no goose; felt greatly relieved, thought I had got clear of the gander, and went to bed for a good night's rest; disappointed; very cold night, and couldn't keep warm in bed; got up, and stopped the broken window with my coat and vest; no use; froze the tip of my nose before morning.

Thursday. — Breakfast; cold gander again; felt very much discouraged to see the cold gander but half gone; went a visiting for dinner and supper; slept abroad, and had pleasant dreams.

Friday. — Breakfast abroad. *Dinner* at Mr. B — s; cold gander and hot potatoes; last very good, ate three, and went to school quite contented. *Supper.* — Cold gander, no potatoes; bread heavy and dry; had the head-ach, and couldn't eat; Peggy much concerned; had a fire built in the square room, and thought she and I had better sit there out of the noise; went to bed early; Peggy thought too much sleep bad for the head-ach.

Saturday. — Breakfast; cold gander and hot Indian Jonny cake; did very well; glad to come off so. *Dinner.* — Cold gander again; didn't keep school this afternoon; weighed, and found I had lost six pounds the past week; grew alarmed; had a talk with Mr. B. and concluded I had boarded out his share.

DRAMA.

KING'S THEATRE.

The great alterations in the King's Theatre are proceeding with rapidity, and will, we trust, be finished in time to allow of the new walls, &c. being perfectly dried before the

theatre opens. Good stoves and large fires ought to be kept up; for, not to mention the public health, we all know how fatal the damps of our climate, and all other kinds of damps, are apt to be to the throats of foreign vocalists.

THERE has been nothing new at the great houses since our last. A new tragedy is, however, announced for Monday at Drury Lane; and a new farce by Mr. Peake has been read in the green-room of that theatre. At Covent Garden, the sprightly comedy of the *Beaux Stratagem* has been wisely substituted for the insufferably dull play of *Woman's Love*; and the new opera by Laverati and Lee, which has been announced from the commencement of the season, is to be "produced on Thursday." We are surprised that so old a manager as Mr. Fawcett should not see the impolicy of letting "coming events cast" such very long "shadows before." People get sick of reading the same advertisements over and over again, and the piece is an old one before it is produced. But our play-bills generally stand in woful need of reformation. His Majesty's servants are merciless murderers of his Majesty's English; and some of the late proclamations of Covent Garden have deserved to be framed and glazed for their exquisite absurdity. In every other country the mere title of the next night's performance is considered sufficient; and "Demain, la seconde représentation de" is the only official notice of the success of a new production in Paris, where there are double the number of theatres, and the attractions of course more divided. So patriotic are our dramatic *douaniers*, that the duties upon imported follies are almost equivalent to prohibition; while they wink most graciously at the circulation of such as are of British manufacture, and the "London puff-trade" flourishes accordingly. Talk of the march of intellect! — Pho! — Look at the gallop of humbug!

At the Adelphi, we have had a trifle called *He's no Conjuror*, which is a mere vehicle for Mathews's imitations, and one of his best songs.

MR. KENNY has, it is said, two new pieces accepted at Drury Lane, the first of which, in two acts, with a good character for Jones (who, by the by, has hardly ever had a good original character written for him on the stage, though he has made much of very indifferent parts), is immediately forthcoming; and the other, a five-act comedy, to be produced in the spring. Poole has also, we hear, been busy.

FRENCH PLAYS.

THE English Opera House opened on Monday evening, re-decorated for the French performances; and, as we anticipated, the beautiful Jenny Colon enchanted all hearts by her exquisite portraits of *Fanchon* and *Ketty*. She was enthusiastically applauded. Madame Tousez, Mdle. Laurence, Madame Mazurier (the widow of poor Jocko), M. Lafont, and several other *artistes*, have made favourable *débuts* during the week; and the season promises to be most successful. Our good wishes to this speculation have been too frequently recorded to need repetition; but as it is a pleasure to ourselves to express them, we say again, "*Vivent les soirées Françaises!*"

St. Thomas's Hospital.

THE SPRING COURSE OF LECTURES will commence on Tuesday, the 20th instant.

Theory and Practice of Medicine—1st Course, Dr. Williams; 2d Course, Dr. Elliott.
Materia Medica—Dr. Roots.
Chemistry—Dr. Burton.
Anatomy—Mr. Green and Mr. John F. South.
Surgery—Mr. Green.
Midwifery—Dr. Loeck and Dr. Ferguson.
Comparative Anatomy—Mr. John F. South.
Botany—Mr. Frost.

Clinical Lectures will be given. Pupils entering to the Surgical Practice of this Hospital are allowed to attend that of Guy's. For Particulars apply to Mr. Whitfield, Apothecary to St. Thomas's Hospital.

PUPIL WANTED. A Surgeon-Dentist, in Practice at the West End of Town, desires to have a Young Gentleman of Education as Pupil and Assistant. He will have an Opportunity of acquiring a complete Knowledge of both the Surgical and Mechanical Branches of the Profession, and may or may not reside in the House, as his Guardians shall choose.

The Premium, &c. may be known by application to A. B., care of Messrs. Underwoods, Medical Booksellers, 32, Fleet Street.

CAUTION to the NOBILITY and GENTRY.

Those that wish to obtain the genuine Black Lead for S. Mordan and Co.'s patent Ever-pointed Pencil, will please to observe, that their Boxes have a yellow Belt round each, signed—Warranted S. Mordan and Co.

To detect the spurious ones, please to observe the word for S. Mordan and Co.'s Ever-pointed Pencil, is clandestinely inserted to deceive the Public. In all other respects, it is a Fac-simile of S. Mordan and Co.'s Label. By observing the word for, the deception will be detected.

THE SUNDAY TIMES. The Proprietors of the above-named Paper beg leave to announce that the "Sunday Times" of To-morrow will contain Twenty-four Columns instead of Twenty.

The vast additional space thus obtained will enable them to offer a still greater mass of useful and entertaining matter to the reader than heretofore, though the price will be still only Sevenpence.

In Politics they will continue to discuss all questions in the true spirit of independence. Those who wish, in a seventh day's Paper, to acquire a competent knowledge of all the most important and interesting events of the week, will find in the "Sunday Times" an agreeable record, enriched by Original Communications from distinguished writers. Specimens of the literature of the day will also be given from the newest and most costly Publications.

They have only to request their Subscribers, Correspondents, and Advertisers, to be particular in addressing their favours to "Mr. Gibson for the Editor," Sunday Times Office, 73, Fleet Street, London. It is necessary to attend to this, as there are several imitations of their paper.

JOSHUA COMMANDING the SUN to STAND STILL, and the DELUGE. Mr. MARTIN begs to inform the Public that the Prices of the above Engravings will be raised on the 1st Feb. next. The Joshua, unlettered Proof, to 14 Guineas; lettered ditto, to 7 Guineas; Prints, to 3s. 13s. 6d. seluge, unlettered Proof, to 12 Guineas; lettered ditto, to 6 Guineas; Prints, to 5 Guineas.
30, Allport Terrace, New Road.

BOOKS PUBLISHED THIS DAY.

THE KEEPSAKE for 1829. Edited by F. MANSEL REYNOLDS.

List of Contributors.
Sir Walter Scott—Sir James Mackintosh—Lord Normanby—Lord Morpeth—Lord Ellenborough—Lord F. J. Gower—Lord Nugent—W. Wordsworth—R. Southey—S. T. Coleridge—William Roscoe—Percy Bysshe Shelley—Henry Luttrel—Theodore Hook—J. G. Lockhart—T. Crofton Croker—H. Bernal, M.P.—Thomas Haynes Bayly—W. Jerdan—Mrs. Hemans—London—M. L. James—Wooden—W. H. Harrison—P. Mansel Reynolds—and the Authors of "Frankenstein"—"Gilbert Earle"—the "Rout"—and the "O'Hara Tales."
A few Copies are printed in royal 8vo. with India Proofs of the Plates, price 2s. 12s. 6d. and for these early application is necessary.
London: Published for the Proprietor, by Hurst, Chance, and Co. 65, St. Paul's Churchyard; and B. Jennings, 2, Poultry.

Where may be had, The few remaining Copies of the Keepsake for 1829.

THE LONDON MAGAZINE. Third Series.

The Conductors of the London Magazine propose, with the commencement of the New Year, to devote a portion of each Number to a brief but comprehensive and digested notice of every leading novelty and discovery in Science, Natural Philosophy and History, Statistics, Legislation, Jurisprudence, &c. &c.; so that a Conversational Record may be preserved, of any reference, of all valuable additions to the knowledge of the age. This department will be collected from all the foreign Periodical Works, and from our own various records of inventions and improvements. The important reports of parliament will be systematically consulted; scattered paragraphs of modern Voyages and Travels, which add any new materials to our stock of existing information, will be diligently culled; and in all cases the authorities for these Abstracts will be carefully given. The paging of this part of the London Magazine will be distinct, so that the original and the compiled portions of the publication may be separately bound at the end of the year; the one forming two volumes, the other one. This new department will be entitled the "Journal of Facts."

London: Printed for the Proprietors, and published by their Agent, Henry Hooper, at the Office of the London Magazine, 13, Pall Mall East.

Hodgson; Hurst, Chance, and Co.; and Nuttance and Mureth.
London, Sept. 1828.

ADVERTISEMENTS,

Connected with Literature and the Arts.

DISTRESS. An instance of infinite Literary Distress (involving an Author of great Learning and Virtue, and a numerous Domestic Circle), having been divulged in the hope of Aid, where circumstances rendered that Aid impossible, the noble example of the benevolent Prelate at the Head of the annexed List has led to a voluntary Subscription, which promises to fulfil all the good proposed by it; but which this public means is taken to promote, in consequence of the time lost, and inconvenience experienced, in seeking private Contributions.

The Work will be complete in V. Parts, published every two Months, each containing Four Plates, with Five Subjects on each, price 4s. &c. &c.

The object of this publication is to present to Herald Painters, Engravers, Chasers, Modellers, and Artists in general, the finest Specimens of Heraldic Designs ever published.

Davy's Architectural Antiquities of Suffolk, illustrated by a Series of 50 highly finished Enchings, representing the most celebrated Remains of Antiquity. Folio, 2s. 6s.; large paper, 11s. 11s.

Twenty Views of Gentlemen's and Noblemen's Seats in Suffolk, Imperial 8vo. 11s. 10s.

View of Gun Hill, Suffolk, 3s. 6d.;

proofs, 7s.

View of Southwold in Suffolk, from a Drawing by Davy, and engraved by G. Cooke, 3s. 6d.;

Knight and Rumley's Crests of the Nobility and Gentry of the United Kingdom of Great Britain and Ireland, designed principally for the Use of Artists, dedicated, by permission, to Edmund Lodge, Esq. Norrey King of Arms, F.S.A. 4to. 11s. 10s.

Howitt's British Preserve, now complete, in Nine Numbers, 4s. each.

Treatise of Deak Diseases, containing the best Method of treating the various Disorders attendant upon ordinary and studious Habits, with a variety of Prescriptions adapted to each particular Affection. By W. M. Wallace, M.R.C.S. Price 3s. 6d.

Popular Premises Examined; a Philosophical Inquiry into some of the Opinions of Philosophers and Theologians, on the subject of the Immortality of the Soul, by W. M. Wallace, M.R.C.S. Price 3s. 6d.

Prove all things—These cheap, v. verse 31. 2d edition, enlarged, price 6d.

Poems upon several Occasions, for the late Mr. Thomas Moore, by the late Mr. Thomas Moore, &c. &c. 7s. only 500 printed.

Portrait of the Right Rev. Father in God, H. Bathurst, Lord Bishop of Norwich, from a Painting by Hayter, and engraved by Edwards. 2s. 6d.;

Speech of his Royal Highness the late Duke of York, in the House of Lords, April 25, 1835, on the Roman Catholic Question. Engraved in a superior style, by Mr. Alfred Aylard. Twelve inches and a half, by nine and a half. Price 2s. 6d.;

The above Speech may be had in Letters of Gold, price 10s. 6d.

Portrait of the Rev. Mr. Wilkinson, Lecturer at St. Bartholomew, near the Bank of England. 12s.

Knight's Modern and Antique Gems, 85 Plates, crown 8vo. 11s. 6d.;

This collection of Modern and Antique Gems; may be justly entitled to "Pearl and Ruby Book." It contains Designs for Engravers; Antiques from the Elgin Marbles; the Sportsman will also be entertained with Sporting Subjects. Indeed, the little volume deserves itself the motto of "Mullum in Parvo."

The few remaining Copies of

Wathen's Voyage to Madras and China, is in the Possession of T. G., which he offers to the Public at 11s. 6d. published at 3 Guinea. Illustrated with 35 highly coloured Views, and a private Portrait of the Author.

See an account of him in *Gentle's Mag.* August 1835.

Sold by appointment of the Patentes,

Hawkins's Instant Binder, consisting of a Portfolio, 8vo. 2s. each, and may be had of any size.

The Invention is calculated to preserve and place in a convenient form of reference, every Weekly Review, Literary Gazette, and such Tracts or Pamphlets as are dispersed in Libraries, without order or arrangement.

No public library should be without this preserver.

Political Economy.

A Catalogue of New and Second-Hand Books may be had on application, gratis, in which will be found Pickering's Shakespeare, 11 vols. 2s. 10s.;

ditto, Minstrel edition, 11. 10s. published at 3s. 17s. Oxford Classics, 6s. 6d. per volume, published at 8s. 2s. 6d.;

Hakewill's Italy, 4d. published at 7s. 10s. Encyclopaedia Metropolitana, 14s. per Part, published at a Guinea. Prayer Books, very large print, from 14s. to 11s. 6d.;

Sir Walter Scott's Novels, complete in boards, 2s. 6d.;

Hume and Smollett's History of England, 18 vols. 2s. 6d.;

Kerr's Collection of Voyages, 18 vols. half-bound calf extra. Buckingham's Travels, 6s. 6d.;

Cotman's Antiquities of Normandy, 3 vols. folio, 6s. 10s. 6d. published at 12 Guinea. Works on Botany, Natural History, Architecture, Novels, Painting, &c. &c. Collections of Works, on Currency, Bullion, Coin, and Catholic Questions, will find some scarce Pamphlets. The Catalogue will contain Portraits and Prints from the Portfolio of the late Mr. Ward; some Drawings by Westall and Southard; and Two Paintings by Westall.

A large Collection of Autograph Letters on

Handsome printed in 2 large vols. 8vo. with a Portrait, beautifully engraved by Dean, price 11s. 6s. boards.

THE LIFE AND TIMES OF WILLIAM LAUD, D.D. Lord Archbishop of Canterbury.

By JOHN PARKER LAWSON, M.A.
Printed for C. J. G. and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

18mo. 7s. 6d.

THE COOK'S ORACLE.

By WILLIAM KITCHNER, M.D.
A new edition, being the 8th, containing a complete System of Cookery for Catholic Families.

"The 'Cook's Oracle' we consider as the ne plus ultra of the science of eating, and the very same of excellence in culinary literature."—*Monthly Review*.

SATURDAY, JANUARY 17, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

Memoirs of the Extraordinary Military Career of John Shipp, late a Lieutenant in His Majesty's 87th Regiment. Written by Himself. 3 vols. 12mo. London, 1829. Hurst, Chance, and Co.

We fear we cannot conscientiously, as critics, give very high praise to these pages. They contain the history of a man who by his bravery twice raised himself from the ranks, but was at last broken by a court martial for ungentlemanlike conduct relative to the purchase of a horse, and a kind of partnership with another officer at the races; which sentence, in consideration of his former character, was commuted to being placed on half pay. We must own we see nothing in this to call for an appeal to the public: a memorial to the proper authorities would have been better than a book, whose success is, to say the least, somewhat dubious: even by his own statement, the sole complaint seems to be, that he is on half pay, when he would prefer being on full pay: but we will leave this to our military readers. The great fault as a literary production is, the want of sufficient incident; there is scarce material enough for one volume, and it has been run into three; Irish anecdotes, somewhat numerous in their jocularity, moonlight meditations, sentiment, patriotism, &c. &c., clutter out the rest. The language is bombastic, and filled with figures of speech; the cups of happiness, misery, content, dissipation, which our author quaffs, are many in number:—but we will abstain from farther remark, and only say that, though we do not pretend to enter into the merits of the case, no one can read the account given of his feelings—with his military career ended, his young wife dead, two helpless children at his side—and not experience the deepest commiseration. There are also several interesting passages, which bring the vicissitudes of a soldier's life very forcibly before us; of some of which the following are specimens:—

Sagacity of Animals.—“Having cut a good deal of the most prominent part of the hill away, and laid trees on the ascent, as a footing for elephants, these animals were made to approach it, which the first did with some reluctance and fear. He looked up, shook his head, and, when forced by his driver, he roared furiously. There can be no question, in my opinion, that this sagacious animal was compelled instinctively to judge of the practicality of the artificial flight of steps thus constructed; for the moment some little alteration had been made, he seemed willing to approach. He then commenced his examination of scrutiny, by pressing with his trunk the trees that had been thrown across; and after that he put his fore-leg on, with great caution, on the fore part of his body so as to throw his weight on the tree. This done, he seemed satisfied as to its stability. The next step for him to ascend by was a projecting rock, which he could not remove. Here the same sagacious

examination took place, the elephant keeping his flat side close to the side of the bank, and leaning against it. The next step was against a tree; but this, on the first pressure of his trunk, he did not like. Here his driver made use of the most endearing epithets, such as, ‘Wonderful, my life,’—‘Well done, my dear,’—‘My dove,’—‘My son,’—‘My wife:’—but all these endearing appellations, of which elephants are so fond, would not induce him to try again. Force was at length resorted to, and the elephant roared terrifically, but would not move. Something was then removed; he seemed satisfied, as before; and he in time ascended that stupendous ghaat. On his reaching the top his delight was visible in a most eminent degree; he caressed his keeper, and threw the dirt about in a most playful manner. Another elephant, a much younger animal, was now to follow. He had watched the ascent of the other with the most intense interest, making motions all the while, as though he was assisting him, by shouldering him up the acclivity;—such gestures as I have seen some men make when spectators of gymnastic exercises. When he saw his comrade up, he evinced his pleasure by giving a salute, something like the sound of a trumpet. When called upon to take his turn, however, he seemed much alarmed, and would not act at all without force. When he was two steps up he slipped, but recovered himself by digging his toes in the earth. With the exception of this little accident, he ascended exceedingly well. When this elephant was near the top, the other, who had already performed his task, extended his trunk to the assistance of his brother in distress, round which the younger animal entwined his, and thus reached the summit of the ghaat in safety. Having both accomplished their task, their greeting was as cordial as if they had been long separated from each other, and had just escaped from some perilous achievement. They mutually embraced each other, and stood face to face for a considerable time, as if whispering congratulations. Their drivers then made them salam to the general, who ordered them five rupees each for sweetmeats.

“There was in our encampment a very large elephant, used for the purpose of carrying tents for some of the European corps. It was the season in which they become most unmanageable, and his legs were consequently loaded with huge chains, and he was constantly watched by his keepers. By day he was pretty passive, save when he saw one of his species, when he roared and became violent; and during those moments of ungovernable frenzy, it was dangerous for his keepers to approach him, or to irritate his feelings by any epithets that might prove repugnant to him. On the contrary, every endearing expression was used to soothe and appease him, which, with promises of sweetmeats, sometimes succeeded with the most turbulent to gain them to obedience, when coercive measures would have roused them to the most

desperate acts of violence. By night their extreme cunning told them that their keepers were not so watchful or vigilant. The elephant here alluded to, one dark night broke from his chains and ran wild through the encampment, driving men, women, children, camels, horses, cows, and indeed every thing that could move, before him, and roaring and trumpeting with his trunk,—which is with elephants a sure sign of displeasure, and that their usual docility has deserted them. Of course no reasonable beings disputed the road he chose to take. Those that did soon found themselves flooded. To record the mischief done by this infuriated animal in his nocturnal ramble, would fill a greater space than I can afford for such matter. Suffice it that, in his flight, followed by swordsmen and spearmen shouting and screaming, he pulled down tents, upset every thing that impeded his progress, wounded and injured many, and ultimately killed his keeper by a blow from his trunk. He was speared in some twenty places, which only infuriated him the more, and he struck away with his trunk at every thing before him. His roaring was terrific, and he frequently struck the ground in indication of his rage. The instant he had struck his keeper and found he did not rise, he suddenly stopped, seemed concerned, looked at him with the eye of pity, and stood rivetted to the spot. He paused for some seconds, then ran towards the place from whence he had broken loose, and went quietly to his picket, in front of which lay an infant, about two years old, the daughter of the keeper whom he had killed. The elephant seized the child round the waist as gently as its mother would, lifted it from the ground, and caressed and fondled it for some time, every beholder trembling for its safety, and expecting every moment it would share the fate of its unfortunate father; but the sagacious animal, having turned the child round three times, quietly laid it down again, and drew some clothing over it that had fallen off. After this it stood over the child, with its eyes fixed on it; and if I did not see the penitential tear steal from its eye, I have never seen it in my life. He then submitted to be retrained by some other keepers, stood motionless and dejected, and seemed sensible that he had done a wrong he could not repair. His dejection became more and more visible, as he stood and gazed on the fatherless babe, who, from constant familiarities with this elephant, seemed un-intimidated, and played with its trunk. From this moment the animal became passive and quiet, and always seemed most delighted when the little orphan was within its sight. Often have I gone with others of the camp to see him fondling his little adopted; but there was a visible alteration in his health after his keeper's death, and he fell away, and died at Cawnpore, six months afterwards.”

A Dog.—“I learnt that this sagacious and faithful creature would regularly, when his master was on watch, stand his hour and walk

his round; that, in very dark nights, he would even put his ear to the ground and listen; and that, during the period assigned to him as his task to watch, he would never venture to lie down, but would steadily and slowly walk his round, which nothing could induce him to leave,—such was his opinion of the nature and responsibility of his post. The man added, that he once gave him to an officer of the company's service, who took him from the station where he was (Meerut), to Loodianna, a distance of four hundred miles, and that, the moment the officer let him loose, he returned to his old master, having performed that great distance in two days and a half. That he was on the main-guard the night he returned, and he was awake by the dog licking his face. It appeared that he had been through the barrack, and visited every sleeping soldier on their separate cots, until he found his master. The man related several anecdotes of this animal: among the rest, he said he was one day out drinking toddy, some miles from camp, and from the intoxicating effect, and the extreme heat of the liquor, he went to sleep. On awaking, he found his clothes torn in several places, and that he had been dragged more than three yards from the bush under which he had lain down; but what was his astonishment, on getting up, to find a large snake almost torn to pieces, no doubt by his faithful guard! He was a powerful dog,—a kind of Persian-hill greyhound, that would kill a wolf single-handed."

Single combat with the Subah.—"Their commander, or one of their principal officers, attempted to rally them. Having succeeded in this attempt for the moment, the said officer had the impudence to attack and put his majesty's Mege subject, John Shipp, ensign on full pay, and in the full vigour of his life and manhood, in bodily fear, on the king's high hill of Muckwanpore, on the afternoon of—I now forget the date, he so frightened me. He was a strong, powerful man, protected by two shields, one tied round his waist, and hanging over his thighs as low as his knees, and the other on the left arm, much larger than the one round his waist. From this gentleman there was no escape; and, fortunately for me, I had my old twenty-fourth with me, which I had two or three days before put in good shavering order. With this I was obliged to act on the defensive, till I could catch my formidable opponent off his guard. He cut, I guarded; he thrust, I parried; until he became aggravated, and set to work with that impetuosity and determination, pretty generally understood by the phrase 'hammer and tongs,' in the course of which he nearly cut my poor twenty-fourth in pieces. At last I found he was winded; but I could see nothing of the fellow, but his black face peeping above one shield, and his feet under the other; so I thought I would give him a cut five across his lower extremities; but he would not stand still a moment; he cut as many capers as a French dancing-master, till I was quite out of patience with his folly. I did not like to quit my man, so I tried his other extremities, but he would not stand still, all I could do. At length, I made a feint at his toes, to cut them; down went his shield from his face to save his legs; up went the edge of my sword smack under his chin,—in endeavouring to get away from which, he threw his head back, which nearly tumbled off, and down he fell; and I assure you, reader, I was not sorry for it, for he was a most unsoberable neighbour. I don't know

whether I had a right or not, but I took the liberty of taking his sword, gold crescent, turban-chain, and large shield. The latter I sported on my left arm during the action, and it was fortunate for me that I did, for I found that the shield was ball-proof, and I should have been severely wounded, had I been deprived of this trophy."

Aoidity of the Natives.—"A reward was given for all descriptions of balls brought into camp, varying in amount according to size. Such is the avarice of the natives who hover about camps, that they will risk any thing for money. Near the right of the line, balls used frequently to be thrown, and some of them rolled as far as the picket. I was riding in that direction one morning when balls were flying pretty thick. A native saw one lob, and ran to stop it. In this attempt one of his legs was so badly broken, that I believe it was afterwards amputated. If he had carried the ball to camp, he would have got about fourpence for it!"

The following dreadful fact is but one out of many.

"A female was lying on a bed of green silk; under her head was a pillow of the same material; her right arm had, no doubt, cradled her babe; and her left was extended as though for the purpose of keeping her child close to her. A large shell had perforated the tiled roof, and having made its way through three floors, had gone through the foot of the bed, and penetrated some depth into the fourth floor. A piece of this shell had gone through the woman's forehead, carrying away a great part of the head, so that her death, according to the opinion of a medical man who saw her, must have been instantaneous. The lower part of the child's body, from the hips downward, was entirely gone; but, strange to say, its mother's nipple still hung in the left corner of its mouth, and its little right hand still held by its mother's clothes, which, probably, it had grasped at the first noise of the shell."

After all, we need hardly repeat that this is one of those books which rather excite our sympathy than command our praise: but we do pity Mr. Shipp, and cordially wish him again beside the colours he once bore with so much gallantry.

Ariosto's Orlando Furioso. Translated by W. S. Rose. Vol. VI. pp. 259. London, 1829. Murray.

We think that Ariosto must be to Mr. Stewart Rose what ale was to Boniface,—what he eats, drinks, and sleeps upon; or he never could so completely have imbibed the spirit of his author. We have only now to repeat commendations: there is the same animated versification—the same careful research into all that can illustrate an obscure meaning, or throw the light of history on the inventions of fiction; and this volume is also fortunate in abounding with entertaining episodes. We shall quote a few stanzas from Astolpho's journey to the moon:

"A place wherein is wonderfully stored
Whatever on our earth below we lose.
Collected there are all things whatsoever,
Lost through time, chance, or our own folly, here.

Nor here alone of realm and wealthy dower,
O'er which aye turns the restless wheel, I say:
I speak of what it is not in the power
Of Fortune to bestow or take away.
Much fame is here, whereon Time and the Hour,
Like wasting moth, in this our planet prey.
Here countless vows, here prayers unnumbered lie,
Made by us sinful men to God on high:

The lover's tears and sighs: what time in pleasure
And play we haste unprofitably spend;

To this, of ignorant men the eternal leisure,
And vain designs, aye frustrate of their end.
Empty desires so far exceed all measure,
They o'er that valley's better part extend.
There wilt thou find, if thou wilt thither post,
Whatever thou on earth beneath hast lost.

He, passing by those heaps, on either hand,
Of this and now of that the meaning sought;
Formed of swollen bladders here a hill did stand,
Whence he heard cries and tumults, as he thought.
These were old crows of the Assyrian land
And Lydian—as that paladin was taught—
Grecian and Persian, all of ancient fame;
And now, alas! well-nigh without a name.

Golden and silver hooks to sight succeed,
Heaped in a mass, the gifts which courtiers bear,
—Hoping thereby to purchase future need—
To greedy prince and patron: many a snare,
Concealed in garlands, did the warrior heed,
Who heard, these signs of adulation were;
And in cicadas, which their lungs had burst,
Saw fulsome lays by venal poets versed.

Loves of unhappy end in imagery
Of gold or jewelled hands he saw express;
Then eagles' talons, the authority
With which great lords their delegates invest:
Bellows filled every nook, the fume and fee
Wherein the favourites of kings are blest:
Given to those Ganymedes that have their hour,
And left, when faded is their vernal flower.

O'erturned, here ruined town and castle lies,
With all their wealth: 'The symbols (said his guide)
Of treaties and of those conspiracies,
Which their conductors seemed so ill to hide.'
Serpents with female faces, felonies
Of coiners and of robbers, he descried;
Next broken bottles saw of many sorts,
The types of servitude in sorry courts.

He marks a mighty pool of porridge spilled,
And asks what in that symbol should be read,
And hears 'twas charity, by sick men willed
For distribution, after they were dead.
He passed a heap of flowers, that erst distilled
Sweet savours, and now noisome odours shed;
The gift (if it may lawfully be said)
Which Constantine to good Sylvester made.

A large provision, next, of twigs and lime
—Your witcheries, O women!—he explored.
The things he witnessed, to recount in rhyme
Too tedious were: were myriads on record,
To sum the remnant ill should I have time.
'Tis here that all infirmities are stored,
Save only Madness, seen not here at all,
Which dwells below, nor leaves this earthly ball.

He turns him back; upon some days and deeds
To look again, which he had lost of yore;
But, save the interpreter the lesson reads,
Would know them not, such different form they wore.

He next saw that which man so little needs,
—As it appears—none pray to Heaven for more;
I speak of sense; whereof a lofty mount
Alone surpast all else which I recount."

The adventures of Bradamant, "the fair and martial maid," occupy a principal share of the other cantos; and there is enow of poetry and romance to make the reader forget, if any thing can, this weary and working-day world.

One word at parting:—when an author makes a quotation, and refers particularly to his authority, it would certainly be well that he took the trouble to turn to it himself in the first instance. We make this remark, from meeting with a sentence in Mr. Rose's Notes on Canto 32, in justification of his using *to shun* as a neuter verb: he says it occurs in "the translation of the New Testament," and cites, in proof, Acts, xx. 27, as follows: "I have not shunned to proclaim the glory of God." In what version Mr. Rose found this reading, we are at a loss to divine; certainly not in "the authorised." And, further, not only is the verb to be seen marked *neuter* in Johnson, which he says it is not, but the authority for it is this identical verse in the Acts. Mr. R. should look a little into his Bible.

The Last of the Plantagenets: an Historical Romance. 8vo. pp. 464. London, 1829. Smith, Elder, and Co.

This is one of the productions peculiar to our present literature—a kind of matrimonial con-

* We are at a loss for the meaning of this "To this."—
Mt. L. G.

tract between History and Fiction, where the tastes of those readers (the great proportion, by the by, of readers at all) whose aim is amusement, is endeavoured to be gratified by throwing curious information into a shape more popular than the dry essay of the antiquary. Much may be said in favour of this system: historical knowledge, come in what shape it will, is desirable; history, like experience, owes its value to truth; and the more we know of the past, the better are we qualified to judge of the present; the contrast of our manners with those of our ancestors meet occasion many a favourable comparison; and if but one prejudice be destroyed, but one just perception gained, the time of the writer has not been bestowed in vain: no one can deny that works of this class have diffused much information, and have excited a desire for more. *The Last of the Plantagenets* is written by one evidently master of his subject, who must have turned over many a ponderous volume for the sake of the lighter, but much more readable, one before us. Neither do we like these pages the worse for their being modelled on the quaint but expressive, the staid but stately, style of the olden chronicles; it seems to us the very language in which royal and knightly deeds should be recorded; and the tone of religious melancholy throughout suits well with an age where the quiet of the cloister must have had inducement to the war-worn and weary man, with which in our tranquil times we can have little sympathy. The following extract will illustrate very fairly the general style of this volume: it is the eve of the battle of Bosworth.

"It appeared to me upon that most memorable night, and on the morrow, when I might still more duly note that which I shall now depict, as a spacious tract of open, uneven, and uncultivated country, somewhat of a round or oval shape; being perchance of about two miles long and one broad. From the red colour of the earth thereof,—too soon, alas! to be dyed with a deeper stain of sanguine by the blood of a sovereign,—the field was called Redenore Plain; and on the south-western side it was bounded by a rivulet called Tweed, which glided through a valley between the camps of the opposing armies, and supplied them both with water; thus recalling unto my mind our Lord's words, that 'God doth send his rain alike upon the just and on the unjust.' Unto this streamlet flowed the narrow marshy channel of a fair spring, which rose upon a mound named Aymon Hill on the east, and formed a little square and obscure tract, surrounded by dank mosses and mould; but yet I truly pretest unto them that shall hereafter read my story, that to me that small well is venerable as the fountain of Jacob was to the men of Israel; since it was there that King Richard drank his last earthly draught, and gave unto its friendly waters some sparkles of his own immortality. The rustic who now points out in that desolate field the spot of the last battle between the contending houses of York and Lancaster, still calls it 'King Richard's Well;' and many of the country birds yet love to drink thereof, whilst they turn them away from the Tweed, which they declare hath unto this day a stain of the blood of the fallen running in its streams. When we arrived at this place, the last dim rays of the setting moon were cast upon the camps and mounds of the two armies; those of Harry Tudor being erected close to the Tweed, which he had lately crossed, and somewhat south-west of King Richard's well, at the foot

of Aymon Hill. His tents of striped green and white; his broad banner, pitched beside his own pavilion, bearing a red fiery dragon, fairly wrought upon green and white saracenet, to commemorate his vain boast of descent from Cadwallader, the last of the British kings; and his soldiers, clad in white coats and hoods, were all faintly visible through the pale moonlight, until they were at last obscured by the mist which came on so thickly on the morning of the day of battle." As I have since learned, his bulwark encompassed some seven acres of the field; and his whole power, together with that led over to him by the treacherous Stanleys, who as yet seemed to adhere unto the king, hath been truly computed at full 15,000 men; albeit the unfaithful chroniclers of the victor would fain have it believed that his triumph was wrought almost without an army. The camp and fortifications of King Richard, to which I was conducted, were fixed at Stapleton, some eleven miles from Leicester, and nearly two from the enemy, on certain rising grounds, called the Bradshaws; whence we might well behold the plain of Bosworth, and to which no adversary could approach unseen. The royal defences and camp spread over eighteen acres; and were formed of two lines, having a wondrous mound of earth, 300 yards long, cast up behind them. Whilst I gazed on these things, and marvelled greatly as to why I was brought thither with such haste and contrivance, we entered the camp, and passed through the long lines of tents striped with the York liveries of crimson and blue, until we came to the royal pavilion, which stood in the centre, having upreared beside it the king's standard of azure and red saracenet in quarters; bearing the fleurs-de-lys of France and the lions of England, richly wrought thereon in goldsmiths' work of beaten metal. The tent itself was of a large square form, with a sloping roof, all being made of crimson and blue canvass, and surmounted by divers little gilded pennils and the king's badges: such as the golden cross and crown, for the blessed St. Edward the Confessor; the red and ermine chapeau, with the golden lion of England; the lily of France; the golden greyhound of Wales; the Irish harp; and the oak-branch for the dukedoms of Gascoyne and Guyon. On the top, in the midst, were a stately imperial crown, and the king's peculiar badge of a silver boar, with tusks and bristles of gold. The liveries of the soldiers in this camp were also chiefly white, having the holy cross in red upon their breasts; though others were dressed in the colours belonging to their leaders, or in habits of coarse cloth strengthened with iron plates, or arming-deublets of iron and leather, with sleeves of chain-mail, and stout helmets and leathern hose also strengthened with iron. Their weapons were divers kinds of swords and bows, spears and lances, bills and sharp blades set upon staves; with iron and leaden maces, quarter-staves, and heavy flails, not less destructive, and of still greater power. But all this, I say, I beheld more perfectly upon the morrow. As we approached the king's pavilion, the sentinels, upon receiving the word from my conductor, lowered their gisarnes and stood aside, that we might straightway pass into it; the knight having been commanded of his highness to attend him at that hour. On entering the tent, we found the king already risen from his couch, and seated by a table on which were scattered divers papers and parchments, a brazen penner and ink-horn, and letters of which the silk strings were uncut, and the

seals were yet unbroken. A massive silver crucifix stood in the midst, and before it was a fair illuminated missal open at the office of St. George, which the king had, unquestionably, been reciting for success in the coming conflict. The volume was richly bound in blue velvet, having the edges thereof guarded with bosses and clasps of gold graven with curious devices. A large silver cresset, hung from the roof of the tent, gave light to the remainder of the apartment, and glanced upon a pile of bright steel armour, which lay beside a couch and a thickly quilted surcoat of blue and red velvet, richly purfled with the arms of the sovereign in most rare embroidery; but the sword belonging to this stately harness lay naked upon the table."

Among other curious customs mentioned here, is that fashion of padding adopted by Henry's courtiers, who wore vests and trunk hose stuffed to the utmost, to imitate their monarch's corpulency.

We must also mention with much praise the very neat printing of these pages, which issue from the press of the unfortunate Maurice, principal proprietor of the Brunswick Theatre, and killed in its fall; or rather from that of his widow, by whom his business is still continued.

Rank and Talent. By the Author of "True-bleborough Hall." 3 vols. 12mo. London, 1829. Colburn.

"His remarks, though shrewd, were bitterly sarcastic, and partook of all the ill-nature for which a very scanty *connaissance du monde* gives a sour and malevolent mind so ready an excuse;" so says the admirable author of *the Disowned*; and completely in this spirit are the volumes before us written! the production of an acute observer, but one who, perhaps for the sake of that very acuteness, has employed his sight on the darkest side. Alas! for the poor present; we treat it as we do government or our wives—things it is our legitimate privilege to abuse, without perhaps bearing it or them ill-will,—only we fancy we have a right to treat them with a little of our humour. At all events, these pages cannot be accused of the fault often urged against compositions of the same class—making their *dramatis personæ* too perfect. The characters introduced are as unfavourable specimens of human nature as could well be selected: the hero is only a respectable, good sort of young man, of whom we have no very definite idea; and the heroine rather pretty, rather silly, and with a mother whose strong mind is evinced by marrying a fool! As to the narrative, the author might say, like the knife-grinder, "Story! Lord bless you! I have none to tell, sir!"—a motto which, by the by, we recommend to many modern novelists for their title-pages. It is only in the present day that the writer now before us would have written a novel: it is not, we think, the species of composition calculated for his talents. Evidently a clever man, shrewd, sarcastic in his remarks, severe but often just, and always amusing in his sketches of character,—in a former age he might have written a few papers for the Spectator, carried on an extensive correspondence, some of his letters would have been published, and he would have left a reputation for sense and humour, as one who might have done a great deal more if he had chosen.

But though no first-rate novel, still there is enough in these volumes to distinguish them from the common run: a few extracts will best set forth their peculiar style and merits. The

following are portraits, and the vein which runs throughout will illustrate our meaning.

"The Rev. Cornelius Denver, perpetual curate of Brigland, was one of the best-tempered creatures in the world. He would not injure any one; he had almost every one's good word; he was full of smiles and courtesy; he had nothing of the pomp or pride of priestly manners; he did not keep his parishioners at an awful distance, or affect to exercise any spiritual dominion over them by virtue of his calling; he was familiar with all, and good-humoured to all; he had not the slightest tincture of bigotry or party-spirit; in politics and religion he was most truly liberal; he had, of course, his own opinions on these subjects, but he called them into use so seldom, that he and his neighbours scarcely knew what they were; he was equally obliging to all parties, and there were many differing sects of religion in his parish; every possible variety of sectarianism flourished at Brigland, and they all united in praising the curate's liberality. There were also many members of the established church in the parish; but though they all praised their curate, they did not all very frequently attend his ministrations. Old Mr. Martindale used facetiously to say, that he should go to church much oftener if Mr. Denver would make longer sermons, but that it was so tantalising to be woken before his nap was half finished.

"Mrs. Denver was said to be a very intelligent woman, and had enjoyed that reputation for many years. Her maiden name was Smith—no relation to old Richard Smith; and she had borne that name so long, that she was tired of it, regarding it as Archbishop Tillotson did the Athanasian Creed, wishing that she 'was well rid of it.' Many people thought that Mr. Denver married her from a motive of pure good nature, because nobody else was likely to marry her. She was of high family 'originally,' as she used to say; being descended from the Simsons of Devonshire, one of whom was knighted by Richard the Third; and she was very particular in stating that her ancestors did not spell the name with *p*, for that was an innovation, and it was a very inferior family that was called Simpson. All the gossip of the town and neighbourhood flowed to the parsonage as a centre, and again flowed from it as from a perennial and exhaustless fountain. In justice to the worthy curate it must be stated, that so far as he was concerned there was nothing of censoriousness blended with his collecting and communicating disposition: he was happy to hear intelligence, and pleased to spread it; but he never pronounced an opinion as to the propriety or impropriety of the matters of which he heard and of which he spoke. It was not exactly so with Mrs. Denver; her candour was not equal to that of her husband: not that she was at all censorious—very far from it; but she could not help, as she said, feeling indignant at the vices and wickednesses which abounded in the world; and she was certainly not to be blamed for what she could not help. Sometimes she would even be angry with her husband on account of the placidity of his temper; and she would even acknowledge that she could have no patience with the abominations of the age. It must be also added, that Mrs. Denver was not quite equal to her husband in the virtue of liberality towards sectaries. She had been brought up as a member of the church established by law, and she could not see how it was possible that any other religion should be true; and for her part, she was fully deter-

mined not to countenance any false religion. It was rather unfortunate for the poor woman, that, with the exception of the Martindales, the principal people at Brigland were dissenters; and so there were two or three drawing-rooms from which her orthodoxy would have excluded her, but to which her love of the good things of life attracted her. Mrs. Denver was decidedly loyal: her reverence for majesty was unbounded. She was so grateful to Richard the Third for having knighted one of the Simsons, that she thought she could never say enough in favour of royalty.

"Mr. Tippetson, the Henry Augustus, was destined for the church. For the purpose of preparing the young gentleman, he was sent to Cambridge; but unfortunately he came away from thence without taking a degree. Every body knows what immense labour and incessant toil are required to take the degree of Bachelor of Arts. It has been said by very good judges, that a man of the greatest powers of mind, supposing him previously ignorant of the subjects of examination, would not be able to prepare himself for a bachelor's degree in less than a week, and that ordinary geniuses require a fortnight or three weeks. To study three weeks in three years was too much for Mr. Tippetson's nerves, so he left Cambridge without his degree; and as his uncle died in good circumstances, and left Henry Augustus a handsome legacy, and as the young gentleman's father also was deceased, having left a good fortune to this his only son, the young gentleman thought that his wisest step would be to become a gentleman at once, and relinquish all idea of professional pursuits. As to taking orders, he could not bear the thoughts of those impertinent questions which examining chaplains propose to candidates for holy orders, and he never would give up fancy waistcoats. Thus situated, the young gentleman lounged about and dawdled away his time with considerable ingenuity. There are two unfortunate sets of beings among mankind: those who cannot do any thing, and those who cannot do nothing. The former class counted among its numbers Mr. Henry Augustus Tippetson. He had not the slightest capacity for application to any object of pursuit; but he was by no means unable to do nothing. There are, as our readers may know, certain persons who have acquired such a habit of constant action and incessant employment, that they cannot exist without activity: they cannot be idle: they are absolutely proud of it, and fancy that it redounds much to their honour; but it is in fact a misfortune where the assertion is true, and a villainous affectation where it is false. It requires mind to be able to manage either business or leisure: it is the absence of mind that renders man a slave to habit."

"The Misses Woodstock.—"The worst of the matter was, there were four of them; and they were so nearly alike in moral and mental qualities, and so much together, and in such perfect confidence with each other, that there was not opportunity and distinctness enough for any one of the four to make an impression, and preserve or strengthen it. For if, by chance, any susceptible youth, who might be desirous of choosing a wife for her moral and mental qualities, should be seated next to, or opposite to, Miss Woodstock, and should, by hearing very sensible and unaffected language fall from her lips, or by observing in her smiles, or more serious looks, an indication of excellent moral feeling, find that his heart was almost captivated; probably on the fol-

lowing morning chance might place him near another sister with whose taste he might be fascinated, and whose most agreeable manners would make him almost regret that he had already lost so much of his heart; and while he might be balancing in his mind on which of the two his affection should rest, a farther acquaintance with the family would still farther unsettle and embarrass his judgment; and he would at length conclude that, as it was impossible to be in love with four, he could not really be in love with any; and the result would be general commendation and respect; and the four young ladies would be left to enjoy their reputation of being the most agreeable, unaffected young women living."

"An Archery-meeting.—"The usual order was quite reversed at Hovenden Lodge; for while Lady Featherstone and her two daughters, Lucy and Isabella, were drawing plans, or marching about the park, and pointing out to the architect the improvements which they thought desirable, Sir Andrew was standing by the kitchen fire and lecturing the cook, or translating, aloud, recipes from his favourite French cookery-book, which was the only book that he had ever purchased; and very highly did he value it, fancying that few persons in this kingdom were aware of its existence. He often, however, had, or we should more properly say, might have had, the mortification of finding that he had been translating from French into English that which had been previously translated from English into French; for whenever his knowing lady reminded him that any recipe was already in the English cookery-books, he would always contend for, or discover, some delicate variation which gave the French the advantage. He thought, too, that ~~what~~ ^{what} was a peculiar piquancy in the French terms, and that there was a particular relish in foreign names, which he always took care to utter, but which his obstinately English organs of speech rendered mightily amusing in their utterance. The greatest evil of the archery-meeting in Sir Andrew's opinion was, that it must be attended only with a cold collation, and that must be in a marquee. It had been discussed repeatedly, but as frequently decided against him, that it was absolutely impossible to have a hot dinner. He did not like it, but he bore it very good-temperedly; and was brimful of jokes, ready to let fly with every arrow. Lady Featherstone, who was never so happy as when she was patronising, was delighted with the thought of the long table under the marquee, and her own self smiling, nodding, and bowing most gracefully to every body: she could undergo a cold dinner every day of her life, for the happiness of thinking that every body said, 'What a charming woman is Lady Featherstone!' The young ladies were in proud and confident expectation of winning the prize; but in still more proud and more confident expectation of exhibiting their elegant selves to an admiring multitude. This, indeed, is the great beauty of archery; it is an *elegant* exercise; or, in other words, it gives an opportunity to young ladies to exhibit themselves in elegant or attractive attitudes; and many a young woman who would have scarcely any chance of a display, hereby acquires a right to be stared at most perseveringly and inveterately. She may be as long as she pleases taking her aim; and if she fears that she shall not hit the target, she may take an aim elsewhere. And it is a very pretty thing, too, for young gentlemen in the last year of being at school, or in the first of their undergraduateship.

Dressed in the archery uniform, they look so very much like Robin Hood: they go back to old times in almost more than imagination; but more especially, they have an opportunity of playing off the *polites*. At all events, it is a very innocent amusement; and, if properly managed by the lady-patroness, it may rise into something of a matter of importance. If any of the party be in possession of the powers of eloquence, they may draw up a very pretty report of the meeting; and the editors of country papers will feel much honoured by inserting the said report; and there will be a very pretty sprinkling of very pretty compliments to the very pretty young ladies, who may be compared to, Diana's nymphs; and there may be quotations from the old songs about Robin Hood and Maid Marian; and very pretty talk about the greenwood shade and the merry horn. Then the editor of the newspaper sells an extra number of papers, which are sent in different directions to distant friends. The display of beauty and fashion which was exhibited in Hovenden Park on the above-named occasion, bids defiance by its brilliancy to our powers of description. Sir Andrew himself, though his occupation was gone for that day at least, endured with a very good grace his absence from the kitchen, and was prepared to hear and say all that was polite, together with a little that was satirical. Before the business of the day began, he said, in the hearing of the exhibitors,—"Where shall I stand to be most out of the way? I think I had better take my station in front of the target."

A few chance observations, and we finish our quotations.

"It is by no means the best method to keep a secret to endeavour to find out how many others are in possession of the same. Many a secret has been thus revealed, which might otherwise have been inviolably and safely kept. On the subject of keeping secrets a great deal may be said; and the matter is surrounded with more difficulties than superficial observers are apt to imagine. For what is the use or benefit of knowing any thing, if we cannot let that knowledge be known? If a secret be confided to us, an honour is thereby conferred; but if that secret be not by us again talked about, directly or indirectly, how can the world know how much we are honoured? Who would give a fig to receive the honour of knight-hood, if he were under an obligation to let no one know it? or who would give fifteen pounds (pounds, some say it costs) for a doctor's degree, if he could never blazon the honour to the world?"

"When a man calls himself a fool in the hearing of another, that other is in duty bound to contradict him; for it is not in the nature of things that any man really thinking himself a fool should avow that conviction. To speak paradoxically, if a man sincerely avows himself a fool, he thinks himself a wise man in having found out that he is a fool, and requires a compliment as a matter of course. It is the expected duty of every one, therefore, hearing another call himself a fool, to contradict him. To do that well is difficult, and requires great address. It must not be contradicted point-blank and flatly, but it must be circuitously done. Every man who calls himself a fool is offended if he fancies that he is believed, is offended if he be not contradicted, and is also offended if he be contradicted, so as to give proof that he is suspected of expecting contradiction."

"They had their own peculiar views of ob-

jects; and in these they differed from their contemporaries, and therefore they were called old-fashioned. They would have been quite as old-fashioned a thousand years ago; for the past is the repository in which imagination finds its stock of virtues."

"If it were not for an occasional example of individuals rising above the ordinary level, the influence of the multitude beneath it would gradually but surely sink the standard, and lead to serious deterioration."

The great fault of these volumes is their total want of imagination; we are often amused, but never interested; we have no sympathy but that of entertainment with any of the actors. The title of the book is singularly inappropriate and meaningless: *Rank and Talent* is a good high-sounding phrase; but we protest against a young profligate nobleman being a fitting representative of the one, or a young man of worldly success and industry of the other. The rather fashionable slang use of the English language, in contradistinction to grammatical or classical refinement, must be obvious from our extracts.

The Annual Obituary.

PURSUANT to the intimation in our last, we annex, as a further illustration of this volume, the admirably written biography of the late Dugald Stewart. It will afford a more correct idea of the value of the work than the meagre extracts with which want of room compelled us to be satisfied in our first notice, and which, to say the truth, were not well calculated to convey a just impression of its ability and excellence.

"Dugald Stewart was the only son who survived the age of infancy, of Dr. Matthew Stewart, professor of mathematics in the University of Edinburgh, and of Marjory Stewart, daughter of Archibald Stewart, Esq. one of the writers to the Signet of Scotland. The object of this brief notice was born in the College of Edinburgh, on the 22d of November, 1753, and his health, during the first period of his life, was so feeble and precarious, that it was with more than the ordinary anxiety and solicitude of parents that his infancy was reared. His early years were spent partly in the house at that time attached to the mathematical chair of the University, and partly at Catrine, his father's property in Ayrshire, to which the family regularly removed every summer, when the academical session was concluded. At the age of seven he was sent to the High School, where he distinguished himself by the quickness and accuracy of his apprehension; and where the singular felicity and spirit with which he caught and transfused into his own language the ideas of the classical writers, attracted the particular remarks of his instructors. Having completed the customary course of education at this seminary, he was entered as a student at the College of Edinburgh. Under the immediate instruction of such a mathematician and teacher as his father, it may readily be supposed that he made an early proficiency in the exact sciences; but the distinguishing bent of his philosophical genius recommended him in a still more particular manner to the notice of Dr. Stevenson, then professor of logic, and of Dr. Adam Ferguson, who filled the moral philosophy chair. In October 1771 he was deprived of his mother, and he, almost immediately after her death, removed to Glasgow, where Dr. Reid was then teaching those principles of metaphysics which it was the great object of his pupil's life to inculcate and to expand. After attending one course of lectures

at this seat of learning, the prosecution of his favourite studies was interrupted by the declining state of his father's health, which compelled him, in the autumn of the following year, before he had reached the age of nineteen, to undertake the task of teaching the mathematical classes. With what success he was able to fulfil this duty, was sufficiently evinced by the event; for, with all Dr. Matthew Stewart's well-merited celebrity, the number of students considerably increased under his son. As soon as he had completed his twenty-first year, he was appointed assistant and successor to his father, and in this capacity he continued to conduct the mathematical studies in the University, till his father's death, in the year 1785, when he was nominated to the vacant chair. Although this continued, however, to be his ostensible situation in the University, his avocations were more varied. In the year 1778, during which Dr. Adam Ferguson accompanied the commissioners to America, he undertook to supply his place in the moral philosophy class; a labour that was the more overwhelming, as he had for the first time given notice, a short time before his assistance was requested, of his intention to add a course of lectures on astronomy to the two classes which he taught as professor of mathematics. Such was the extraordinary fertility of his mind, and the facility with which it adapted its powers to such inquiries, that although the proposal was made to him and accepted on Thursday, he commenced the course of metaphysics the following Monday, and continued during the whole of the season to think out and arrange in his head in the morning (while walking backwards and forwards in a small garden attached to his father's house in the college,) the matter of the lecture of the day. The ideas with which he had thus stored his mind, he poured forth extempore in the course of the forenoon, with an eloquence and a felicity of illustration surpassing in energy and vivacity (as those who have heard him have remarked) the more logical and better-digested expositions of his philosophical views, which he used to deliver in his maturer years. The difficulty of speaking for an hour extempore, every day on a new subject, for five or six months, is not small: but when super-added to the mental exertion of teaching also, daily, two classes of mathematics, and of delivering, for the first time, a course of lectures on astronomy, it may justly be considered as a very singular instance of intellectual vigour. To this season he always referred as the most laborious of his life; and such was the exhaustion of the body, from the intense and continued stretch of the mind, that, on his departure for London, at the close of the academical session, it was necessary to lift him into the carriage. In the year 1780 he began to receive some young noblemen and gentlemen into his house as pupils, under his immediate superintendence, among whom were to be numbered the late Lord Belhaven, the late Marquess of Lothian, Basil Lord Daer, the late Lord Powerscourt, Mr. Muir Mackenzie of Delvin, and the late Mr. Henry Glassford. In the summer of 1783, he visited the continent for the first time, having accompanied the late Marquess of Lothian to Paris; on his return from whence, in the autumn of the same year, he married Helen Bannatine, a daughter of Neil Bannatine, Esq., a merchant in Glasgow. In the year 1785, during which Dr. Matthew Stewart's death occurred, the health of Dr. Ferguson rendered it expedient for him to discontinue his official labours in the Univer-

sity, and he accordingly effected an exchange of offices with Mr. Stewart, who was transferred to the class of moral philosophy, while Dr. Ferguson retired on the salary of mathematical professor. In the year 1787, Mr. Stewart was deprived of his wife by death; and, the following summer, he again visited the continent, in company with the late Mr. Ramsay of Barnton. These slight indications of the progress of the ordinary occurrences of human life, must suffice to convey to the reader an idea of the connexion of events up to the period when Mr. Stewart entered on that sphere of action in which he laid the foundation of the great reputation which he acquired as a moralist and a metaphysician. His writings are before the world, and from them posterity may be safely left to form an estimate of the excellence of his style of composition—of the extent and variety of his learning and scientific attainments—of the singular cultivation and refinement of his mind—of the purity and elegance of his taste—of his warm relish for moral and for natural beauty—of his enlightened benevolence to all mankind, and of the generous ardour with which he devoted himself to the improvement of the human species—of all of which, while the English language endures, his works will continue to preserve the indelible evidence. But of one part of his fame no memorial will remain but in the recollection of those who have witnessed his exertions. As a public speaker, he was justly entitled to rank among the very first of his day; and, had an adequate sphere been afforded for the display of his oratorical powers, his merit in this line alone would have sufficed to secure him an eternal reputation. Among those who have attracted the highest admiration in the senate and at the bar, there are still many living who will bear testimony to his extraordinary eloquence. The ease, the grace, and the dignity of his action; the compass and harmony of his voice, its flexibility and variety of intonation, the truth with which its modulation responded to the impulses of his feelings, and the sympathetic emotions of his audience; the clear and perspicuous arrangement of his matter; the swelling and uninterrupted flow of his periods; and the rich stores of ornament which he used to borrow from the literature of Greece and of Rome, of France and of England, and to interweave with his spoken thoughts, with the most apposite application,—were perfections not any of them possessed in a superior degree by any of the most celebrated orators of the age; nor do I believe that in any of the great speakers of the time (and I have heard them all), they were to an equal extent united. His own opinions were maintained without any overweening partiality; his eloquence came so warm from the heart, was rendered so impressive by the evidence which it bore of the love of truth, and was so free from all controversial acrimony, that what has been remarked of the purity of purpose which inspired the speeches of Brutus, might justly be applied to all that he spoke and wrote; for he seemed only to wish, without farther reference to others than a candid disavowal of their errors rendered necessary, simply and ingenuously to disclose to the world the conclusions to which his reason had led him: ‘Non malignitate aut invidia, sed simplicitate et ingenuè, judicium animi sui detexisse.’ In 1790, after being three years a widower, he married Helen d’Arcy Cranstoun, a daughter of the Honourable George Cranstoun,—a union to which he owed much of the subsequent happiness of his life. About this time it would appear to have been that he first began to

arrange some of his metaphysical papers with a view to publication. At what period he deliberately set himself to think systematically on these subjects is uncertain. That his mind had been habituated to such reflections from a very early period is sufficiently known. He frequently alluded to the speculations that occupied his boyish and even his infant thoughts; and the success of his logical and metaphysical studies at Edinburgh, and the Essay on Dreaming, which forms the fifth section of the first part of the fifth chapter of the first volume of the Philosophy of the Human Mind, composed while a student at the College of Glasgow in 1772, at the age of eighteen, are proofs of the strong natural bias which he possessed for such pursuits. It is probable, however, that he did not follow out the inquiry as a train of thought, or commit many of his ideas to writing, before his appointment in 1785 to the professorship of moral philosophy gave a necessary and steady direction to his investigation of metaphysical truth. In the year 1792 he first appeared before the public as an author, at which time the first volume of the Philosophy of the Human Mind was given to the world. While engaged in this work he had contracted the obligation of writing the Life of Adam Smith, the author of the Wealth of Nations; and very soon after he had disembarrassed himself of his own labours, he fulfilled the task which he had undertaken—the biographical memoir of this eminent man having been read at two several meetings of the Royal Society of Edinburgh, in the months of January and March 1793. In the course of this year also, he published the Outlines of Moral Philosophy,—a work which he used as a text-book, and which contained brief notices for the use of his students of the subjects which formed the matter of his academical preparations. In March 1796 he read before the Royal Society his account of the Life and Writings of Dr. Robertson, and in 1802 that of the Life and Writings of Dr. Reid. By these publications alone he continued to be known as an author, till the appearance of his volume of Philosophical Essays in 1810;—a work to which a melancholy interest attaches in the estimation of his friends, from the knowledge that it was in the devotion of his mind to this occupation that he sought a diversion to his thoughts from the affliction he experienced in the death of his second and youngest son. Although, however, the fruits of his studies were not given to the world, the process of intellectual exertion was unremitted. The leading branches of metaphysics had become so familiar to his mind, that the lectures which he delivered very generally extempore, and which varied more or less in the language and matter every year, seemed to cost him little effort; and he was thus left in a great degree at liberty to apply the larger part of his day to the prosecution of his farther speculations. Although he had read more than most of those who are considered learned, his life, as he has himself somewhere remarked, was spent much more in reflecting than in reading; and so unceasing was the activity of his mind, and so strong his disposition to trace all subjects of speculation that were worthy to attract his interest up to their first principles, that all important objects and occurrences furnished fresh matter to his thoughts. The political events of the time suggested many of his inquiries into the principles of political economy;—his reflections on his occasional tours through the country, many of his speculations on the picturesque, the beautiful, and

the sublime;—and the study of the characters of his friends and acquaintances, and of remarkable individuals with whom he happened to be thrown into contact, many of his most profound observations on the sources of the varieties and anomalies of human nature. In the period which intervened between the publication of his first volume of the Philosophy of the Human Mind, and the appearance of his Philosophical Essays, he produced and prepared the matter of all his other writings, with the exception of his Dissertation on the Progress of Metaphysical and Ethical Philosophy, prefixed to the Supplement of the Encyclopædia Britannica. Independent of the prosecution of those metaphysical inquiries which constitute the substance of his second and third volumes of the Philosophy of the Human Mind, to this epoch of his life is to be referred the speculations in which he engaged with respect to the science of political economy, the principles of which he first embodied in a course of lectures, which in the year 1800 he added as a second course to the lectures which formed the immediate subject of the instruction previously delivered in the university from the moral philosophy chair. So general and extensive was his acquaintance with almost every department of literature, and so readily did he arrange his ideas on any subject with a view to their communication to others, that his colleagues frequently, in the event of illness or absence, availed themselves of his assistance in the instruction of their classes. In addition to his own academical duties, he repeatedly supplied the place of Dr. John Robison, professor of natural philosophy. He taught for several months during one winter the Greek classes for the late Mr. Dalziel: he more than one season taught the mathematical classes for the late Mr. Playfair: he delivered some lectures on logic during the illness of Dr. Finlayson; and, if I mistake not, he one winter lectured for some time on belles lettres for the successor of Dr. Blair. In 1799 he was induced once more to open his house for the reception of pupils; and in this capacity, the late Lord Ashburton, the son of the celebrated Mr. Dunning, the present Earl of Warwick, the present Earl of Dudley, Lord Palmerston, his brother the Hon. Mr. Temple, and Mr. Sullivan, the present under-secretary at war, were placed under his care. The Marquess of Lansdowne, though not an inmate in his family, was resident at this time in Edinburgh and a frequent guest in his house, and for him he contracted the highest esteem; and he lived to see him, along with two of his own pupils, cabinet ministers at the same time. Justly conceiving that the formation of manners, and of taste in conversation, constituted a no less important part in the education of men destined to mix so largely in the world, than their graver pursuits, he rendered his house at this time the resort of all who were most distinguished for genius, acquirement, or elegance, in Edinburgh, and of all the foreigners who were led to visit the capital of Scotland. So happily did he succeed in assorting his guests, so well did he combine the grave and the gay, the cheerfulness of youth with the wisdom of age, and amusement with the weightier topics that formed the subject of conversation to his more learned visitors, that his evening parties possessed a charm which many who frequented them have since confessed they have sought in vain in more splendid and insipid entertainments. In the year 1806 he accompanied his friend the Earl of Lauderdale on his mission

Paris; and he had thus an opportunity not only of renewing many of the literary intimacies which he had formed in France before the commencement of the Revolution, but of extending his acquaintance with the eminent men of that country, with many of whom he continued to maintain a correspondence during his life. The year after the death of his son, he relinquished his chair in the university, and removed to Kinneil House, a seat belonging to his grace the Duke of Hamilton, on the banks of the Firth of Forth, about twenty miles from Edinburgh, where he spent the remainder of his days in philosophical retirement. From this place were dated, in succession, the *Philosophical Essays* in 1810; the second volume of the *Philosophy of the Human Mind* in 1813; the *Preliminary Dissertation to the Encyclopedia*; the continuation of the second part of the *Philosophy* in 1827; and finally, in 1828, the third volume, containing the *Philosophy of the Active and Moral Powers of Man*,—a work which he completed only a few short weeks before his career was to close for ever. Here he continued to be visited by his friends, and by most foreigners who could procure an introduction to his acquaintance, till the month of January 1822, when a stroke of palsy, which nearly deprived him of the power of utterance, in a great measure incapacitated him for the enjoyment of any other society than that of a few intimate friends, in whose company he felt no constraint. This great calamity, which benumbed him of the faculty of speech, of the power of exercise, of the use of his right hand,—which reduced him to a state of almost insupportable dependence on those around him, and subjected him ever after to a most abominous ague,—he bore with the most dignified fortitude and tranquillity. The malady which broke his health and constitution for the rest of his existence, happily impaired neither any of the faculties of his mind, nor the characteristic vigour and activity of his understanding, which enabled him to rise superior to the misfortune. As soon as his strength was sufficiently re-established, he continued to pursue his studies with his wonted assiduity, to prepare his works for the press with the assistance of his daughter as an amanuensis, and to avail himself with cheerful and unabated relish of all the sources of gratification which it was still within his power to enjoy, exhibiting, among some of the heaviest infirmities incident to age, an admirable example of the serene sunset of a well-spent life of classical elegance and refinement, so beautifully imagined by Cicero: ‘*Quies, et purè, et electè acta stas, placida ac lenis senectus.*’ In general company his manner bordered on reserve; but it was the *comitate condita gravitas*, and belonged more to the general weight and authority of his character, than to any reluctance to take his share in the cheerful intercourse of social life. He was ever ready to acknowledge with a smile the happy sallies of wit; and no man had a keener sense of the ludicrous, or laughed more heartily at genuine humor. His deportment and expression were easy and unembarrassed, dignified, elegant, and graceful. His politeness was equally free from all affectation and from all premeditation; it was the spontaneous result of the purity of his own taste, and of a heart warm with all the benevolent affections, and was characterized by a truth and readiness of tact that accommodated his conduct with undeviating propriety to the circumstances of the present moment, and to the relative situation of those

to whom he addressed himself. From an early period of life he had frequented the best society both in France and in this country, and he had in a peculiar degree the air of good company. In the society of ladies he appeared to great advantage; and to women of cultivated understanding his conversation was particularly acceptable and pleasing. The immense range of his erudition, the attention he had bestowed on almost every branch of philosophy, his extensive acquaintance with every department of elegant literature, ancient or modern, and the fund of anecdote and information which he had collected in the course of his intercourse with the world, with respect to almost all the eminent men of the day, either in this country or in France, enabled him to find suitable subjects for the entertainment of the great variety of visitors of all descriptions who at one period frequented his house. In his domestic circle his character appeared in its most amiable light, and by his family he was beloved and venerated almost to adoration. So uniform and sustained was the tone of his manners, and so completely was it the result of the habitual influence of the natural elegance and elevation of his mind on his external demeanour, that when alone with his wife and children, it hardly differed by a shade from that which he maintained in the company of strangers; for although his fondness, and familiarity, and playfulness, were alike engaging and unrestrained, he never lost any thing either of his grace or his dignity: ‘*Nec verò ille in luce modo, atque in oculis civium magnus, sed intus domique præstantior.*’ As a writer of the English language,—as a public speaker,—as an original, a profound, and a cautious thinker,—as an expounder of truth,—as an instructor of youth,—as an elegant scholar,—as an accomplished gentleman;—in the exemplary discharge of the social duties,—in uncompromising consistency and rectitude of principle,—in upholding independence,—in the warmth and tenderness of his domestic affections,—in sincere and unostentatious piety,—in the purity and innocence of his life,—few have excelled him; and, take him for all in all, it will be difficult to find a man who to so many of the perfections has added so few of the imperfections of human nature.”

SIGHTS OF BOOKS.

Diversions of Holycot; or, a Mother's Art of Thinking. By the Author of “*Clan Albin*” and “*Elizabeth de Bruce*.” Edinburgh, 1828. Oliver and Boyd.

THIS is a very delightful production in that most difficult branch of writing—juvenile literature;—whether it be that our artificial feelings are so much easier to excite than our natural ones, and that, in proportion as we advance in life, we are so much made up of habits instead of impulses, so much more accustomed to think than to feel, and to act without doing either, that the mingled simplicity and acuteness of childhood is scarcely dreamed of “in our philosophy:” and truly to write a good child’s book not only requires great talents, but talents of a peculiar kind. These this lady possesses in no ordinary degree. The story is interesting, but made subservient to instruction;—little anecdotes of natural history are admirably introduced, and the children are drawn as so few can draw them—clever, well-disposed, but still children. The history of the nutting, the acorn-gathering, and the goldfinch, are most excellently told; and the moral lessons conveyed are not less simple than striking.

But there is one fault, and the worse as it might easily have been avoided; we allude to frequent inelegant and even ungrammatical forms of speech. For example: “Charles had got lessons with Mr. Doddsley”—“Fanny was stuck between dapple’s panniers, for she was but short-legged yet”—“as many thistles as he could set his long face to”—“Nelson, nor no great man”—“kind and considerate of her.” Such instances are great defects in a work that insists too on grammatical correctness. However, we wish it well through a first edition, and hope to see all these inaccuracies amended in its second. We observe, from the conclusion, the authoress purposes “raising the table round again:” we look with much pleasure at the announcement: a more careful and correct style is the only improvement to which we would point her attention.

The Life and Adventures of Alexander Selkirk; containing the real Incidents on which the Romance of Robinson Crusoe is founded. 12mo. pp. 196. Edinburgh, 1829, Oliver and Boyd; London, G. B. Whittaker.

THIS is a very pleasant little volume, and interesting from its associations with the most delightful narrative ever written.

ORIGINAL CORRESPONDENCE.

January 5, 1829.

WISHING to be *au fait* in the art of giving and receiving, I paid a visit to the Comtesse de — on New Year’s Day, judging that her youth, beauty, and rank, would command numerous offerings. At one o’clock the countess prepared to conquer admiration by calling up smiles, dimples, and all the artillery of her charms. The first arrival was Monsieur le Marquis de —. On his name being announced, curiosity prompted me to look towards the door; but for some moments I perceived nothing but a powdered head, which almost touched the ground,—for the remainder of the noble personage was still in the ante-chamber; by degrees, however, he advanced, and again performed so low an obeisance, that, in point of form, one might have mistaken him for a pair of sugar-tongs or a triangle; the third salutation happily brought him *vis-à-vis* the lady of the mansion, whose hand he embraced with an ardour rather suited to nineteen than ninety. Madame playfully repelled his raptures, and performed the coquette so naturally, that the poor marquess, at fourscore and ten, imagined himself to be a very dangerous fellow; for a French woman possesses, to a superior degree, the talent of flattering the *amour propre* of the other sex, without, however, departing from the laws of modesty, or losing her own dignity. After a few minutes converse, or rather display of compliments, which, from their exaggeration, savoured entirely of the old school—M. le Marquis requested permission to ring the bell: this being accorded, he called for his servants. A *chasseur*, covered with gold lace, and having the air of a prince, entered the room, leading a monkey,—*tel maître, tel singe*. This animal was a fac-simile of his master, at least with regard to *tournure*, *hows*, and *graces*. “*Oh, le joli singe! qu’il est gentil! qu’il est charmant!*” cried the countess, with a gravity of countenance an English woman could hardly have commanded. The monkey was then ordered to kneel at madame’s feet, and avow itself her slave, by presenting to her the golden chain which was around its neck and clasped together by one large diamond. This token of friendship, or of admiration, was received with easy gracefulness on

the part of the countess, who requested the marquis to render it valuable by placing it round her throat, which ceremony entitled him to an embrace on each cheek. After recommending to Monsieur le Singe to be *sage*, docile, and attentive to madame, the antiquated lover took his leave with rather a triumphant step, though none of his bows or manœuvres were forgotten. As soon as he had made his exit, the countess gave way to a burst of laughter. "*Ce pauvre marquis*," she said, "*faut-il être imbécile à un tel point ? que veut-il que je fasse avec ce vilain singe ?*" "But the diamond?" I observed. "*A la bonne heure*," she replied; "*voilà de bon sens*." The next personage worthy of notice was a young diplomat, in person and manners *tout à fait l'opposé de Monsieur le Marquis*. Not for a moment even would he have had the cruelty to deprive society of the sight of his *beaux traits*; his salutation was a demi-bow and demi-courtesy; and this sinking and rising would no doubt have continued for some minutes, had not the hat of *cet élégant par excellence* fallen from his delicate fingers: indeed, as he stooped to raise it, I felt seriously alarmed for so fragile a being—for nothing but a miracle could have saved him from breaking in two. His attention was divided between the countess and the reflection of his own person in an opposite mirror; he talked of kings, princes, and ambassadors; sighed, looked pompous and sentimental by turns, and seemed to think that every lady in the room would have died even to obtain a look from him. His offering to *la belle comtesse* was a musical box, which he termed a *bagatelle*. It being, however, set round with brilliants, the amiable hostess designed to accept it.

These two extremes of old and new *bon ton* amused me much; but neither of them gave me any idea of what I suppose to be real politeness: indeed, I believe, to produce a gentleman, *il faut* (as a French lady said) *la noblesse de la simplicité d'un Anglais, avec la grâce et l'élégance d'un Français*.

To the Editor, &c.

SIR,—In your *Gazette* of Dec. 27, under the head "The Ellis Correspondence," you write thus: "The subjoined is quoted as a verse of a song sung much about London (1686): we wish we had it all.

"Then pray for the soul of Gabriel John;
Or if you please you may let it alone—
'Tis all one."

Now, as I can furnish you with the whole production, I here subjoin the remaining verses.

"For Gabriel John was a weary wight;
He pray'd all day, and he drank all night,
Och one!

He married one woman and lived with another;
He poisoned his father and cheated his brother—
Cruel John!

He swore like a toper and read like a priest;
He called himself gentleman, yet was a beast—
When alone.

He died in his bed—had he died at his door,
'Twas much too good for
Gabriel John.

He laugh'd and he cried, he cursed and sung,
He tore his own hair, and he bit his own tongue—
Poor John!

He died like a dog, with a grin and a growl,
And the Devil flew off with Gabriel's soul
Anon.

And his body was buried in Blackfriars' church,
On the left-hand side as you enter the porch,
Under a stone."

Liverpool.

SIGMA.*

* We thank our friend Sigma, who will see that, for the sake of propriety, we have softened one word, and omitted the termination of one verse.—Ed. L. G.

ARTS AND SCIENCES.

PROPOSED VISIT TO TIMBUCTOO.

NOTHING seems yet to have been determined upon by the French government as to the return of M. Caillé to Timbuctoo. That enterprising man is ready, and indeed anxious, to set out; but there are obstacles in his way which cannot easily be surmounted. It would be necessary for him to retrace a part of his former route, in which he was indebted for safety to a well-devised fiction, about his being a native of the country, who had been carried away in his youth before he could undergo the essential rites of Mahomedanism, which he would take the earliest opportunity of having performed. This story cannot be repeated with effect; and his re-appearance among tribes upon whom it imposed might be productive of great danger.

M. Caillé's forthcoming account of his travels is expected to excite great interest among the Parisians, who take much pride in the circumstance of a Frenchman having seen, and safely returned from, Timbuctoo. Passages of this work are already in circulation, from which we learn some interesting details of former travellers. In private conversation with a friend on the subject of Major Laing's assassination, M. Caillé stated that the only chance of escaping death was by conforming to the Mahomedan religion; and that his scruples on that head being unconquerable, his murder was resolved on. When it was observed to M. Caillé that Major Laing had not acted with ordinary prudence in not conforming, outwardly at least, to this religion, until he could have an opportunity of again openly declaring himself a Christian, M. Caillé said that the unfortunate traveller would have profited nothing by such an act of duplicity, as he would have been narrowly watched by the tribe amongst whom it would be necessary to reside after his pretended conversion, and his escape would have been almost impossible, as, if he succeeded even in reaching a neighbouring sect, he would be no better off. The fate of Major Laing was, says M. Caillé, a familiar topic of conversation at Timbuctoo, where his refusal to abjure his religion created some interest, as it led to his destruction. But of another traveller, Mungo Park, he was not able to obtain the slightest account, from the number of years that have elapsed since he died. M. Caillé's description of Timbuctoo has already been made public; but in his work there will, we understand, appear several plates, representing the two mosques, and other buildings, of that long fabled capital, sketches of which he ventured to take at the imminent risk of discovery and punishment.

LA PÉROUSE.

Extract of a Report of M. Dumont d'Urville on the Operations of the Astrolabe Corvette, from its departure from Hobart Town (Jan. 6, 1828) to its arrival at Batavia (August 29, 1828).

THE corvette *Astrolabe* left Hobart Town on the 5th of January, to explore the islands in which Captain Dillon found traces of the shipwreck of *La Pérouse*. After a fortnight's dangerous voyage, it came in sight of Norfolk Island, whence it steered towards Matthew's Rock, which the *Coquille* was not able to find and which is only an islet, about two miles in circumference; the sides of which, rent by a volcano, still burning, do not exhibit any signs of vegetation. It was on the 28th of January that the *Astrolabe* passed this rock; and M.

d'Urville left it immediately after, to proceed to Tikopia, which he reached on the 10th of February, and had some communication with the natives. After vain attempts to induce the Prussian Buchert and the *Lascar*, mentioned by Captain Dillon, to accompany him to Vanikoro (and not Mallicolo), he sailed for that island, taking with him two Englishmen who had deserted from a whaler and resided at Tikopia, and five natives of Vanikoro, where he arrived on the morning of the 14th. This day was employed in examining the reefs which surround the island, and the passages by which it may be approached. On the next day, the west winds hindering them from entering the bay in which the two vessels commanded by *La Pérouse* had perished, M. d'Urville endeavoured, but without success, to find the island of Taumako, celebrated by the voyage of Quixos, and which it has since been impossible to discover.

On the 19th he again came off Vanikoro; and after having again explored the eastern bay, which he named Tevai, the name of a village near it, he determined to bring the corvette thither on the 21st. On the 25th of February, he despatched the boat, commanded by M. Gressier, towards the reefs of Vanou and Païou. That officer returned the following day, after having gone round the island, bringing back some trifling articles proceeding from the wreck, but without any information respecting the place where the Frenchmen had perished; which induced M. d'Urville to send on the 26th M. Jacquinot and four officers belonging to the staff. The sight of a piece of scarlet cloth which they offered to the natives, induced the latter to point out to them the place of which they were in search, and where they saw, scattered at the bottom of the water, at the depth of three or four fathoms, anchors, cannon, balls, pigs of lead, and an immense quantity of *shot*, *lead*. The boat not being large enough to take away any of these articles, the long boat was sent to the spot, after the *Astrolabe* had been brought to an anchor in the inner bay, or bay of Manneval (as Captain d'Urville called it); the only entrance to which is through a channel which is very narrow and choked up with coral rocks. This operation required two days, and exposed the corvette to great danger. It was on the 2d of March that the *Astrolabe* was moored behind the village of Manneval. On the 3d, the long boat was sent to the reefs of Païou and Vanou, both for the purpose of examining the reefs, and also to take out of the sea some things belonging to the shipwrecked vessels:—it brought back an anchor weighing 1,800 pounds, a short brass eight-pounder, a pig of lead, and two swivels.

Being now certain that this was the place where the vessels of *La Pérouse* were wrecked, M. d'Urville thought of executing the project which he had formed,—of raising a monument in the island Vanikoro to the memory of our unfortunate countrymen. This monument was completed in a week; and a detachment of ten men marched three times round it and fired three volleys, while a salute of twenty-one guns made the mountains of Vanikoro re-echo. The inhabitants, alarmed, and not knowing what this meant, sent two of their chiefs on board the corvette, where they were received with friendship; and being convinced by numerous presents that we had no intention to injure them, they promised to respect the mausoleum; which, besides, being built of wood and stone, had nothing about it that could tempt their cupidity. On one of the faces is

a plate of lead, on which is engraven the following inscription :

LA MEMOIRE DE LA PEROUSE ET DE SES
COMPAGNONS. L'ASTROLABE, XIV. MARS
M.DCCC.XXVIII.

A fever and bad weather prevented other inquiries; and on the 15th the corvette quitted the haven of Mangadey, and succeeded in reaching the open sea by the northern passage, without accident.

The information which M. d'Urville was able to procure at Vanikoro respecting the shipwreck of *La Pérouse* is very incomplete, on account of the difficulty which the inhabitants made in answering his questions. The following are the particulars which he has been able to collect from some of them :—

After a very dark night, during which the south-east wind had blown with great violence, the islanders suddenly perceived in the morning, on the south coast, opposite the district of Tamema, an immense canoe aground between the reefs, where it was soon dashed to pieces, and entirely disappeared, so that no part of it could be afterwards saved. Of those on board no more than about thirty were able to escape in a boat, and land upon the island. On the following day the savages perceived another canoe, like the first, stranded before Païou; but, being to leeward of the island, less exposed to the wind and sea, and also fixed on a regular bottom, with only fifteen or eighteen feet water, it remained a long time without going to pieces. All those who were on board landed at Païou, where they established themselves with their belongings to the other ship, and immediately set about building a small vessel with the materials of that which had not sunk. The French, whom they called Mara, were, they say, always respected by the natives, who never approached them without kissing their hands (a ceremony which they often practised towards the officers of the *Astrolabe*). However, there were frequent quarrels, and in one of them the natives lost five men, three of whom were chiefs, and the French two. At length, after six or seven months labour, the little vessel was finished, and all the strangers left the island, according to the generally received opinion. Some affirm that two of them staid behind, but that they lived only a short time. In this respect no doubt can remain; and their unanimous statements prove that there cannot be any Frenchmen either at Vanikoro or in the islands of Oury and Edgiameba (Toupoua, in their language), nor even at Saint Croix (Intendi), or the neighbouring islands. At St. Croix there is only one white man, who belonged to a whaler.

As for the route which the Frenchmen probably took on leaving Vanikoro, (if the accounts of the natives are to be believed;—if they were not all massacred,) Captain d'Urville thinks that they steered towards New Ireland, to reach the Moluccas or the Philippines by the north of New Guinea, and that it is on the west coast of the Solomon Isles that some traces of their passage might perhaps one day be found, because the condition in which they were would not allow them to venture to pass through Torres Strait. Captain d'Urville was directed by his instructions to steer towards that strait; but the deplorable condition to which the crew of the *Astrolabe* was reduced, compelled him to proceed to Guam, where he hoped to find means to give them some repose, and to recover the sick, whose number daily increased. After another attempt to find the island of Tacumako, which was as unsuccessful

as the preceding, the *Astrolabe* sailed on the 26th of March for the Marian islands. This voyage was not exempt from difficulties, nor without advantage to science; for that part of the Carolines which M. Duperrey had not been able to visit, was explored by the officers of the *Astrolabe*. One of the Englishmen, *Hamilton* (Hamilton?) who had been taken on board at Tikopia, and had been of much use to Captain d'Urville in his intercourse with the natives of Vanikoro, died at Umata. Others of her sick perished, which is ascribed to their intemperance, and to the too great facility with which they were able to indulge in it.

After leaving the Marian islands, May 13, the corvette successively visited several islands, and on the 10th July arrived at Amboyna.

On the 18th of July, Captain d'U. quitted the road of Amboyna, and on the 27th the corvette cast anchor in the road Marado, before Fort Amsterdam. Here the time was employed in making excursions into the interior; and various additions were made to the collections of natural history. At length, on the 29th of August, in the evening, the *Astrolabe* arrived at Batavia, where Captain d'Urville received the most flattering reception.

On the 29th of September it arrived at the Isle de France, whence it will return to Toulon, as soon as the crew have had the repose they require after so fatiguing an expedition.

INSTITUTION OF CIVIL ENGINEERS.

OUR attention has of late been directed to the proceedings of the literary and learned Societies of the metropolis, and we therefore cannot in justice omit some account of the above-mentioned institution. A royal charter was granted only last year, and consequently we shall have excellent opportunities to watch the growth, and to report the progress, of this young and very promising offspring of civilisation. Here is a profession formed and entirely supported by the artificial though useful wants of our favoured country; and as this profession becomes identified by assuming the form of a learned society, the knowledge elicited, in the discussion of facts and practical observations contributed by the several members, will be of the highest authority and importance. Nor will the civil engineer be alone interested in this knowledge, since it deeply concerns all those wealthy speculators who require trustworthy information, as well as all who promote national improvements and works of art, and it will be of especial advantage to those other learned societies who found their philosophical deductions on the sure ground of experience.

This Society proposes to discuss all those difficult and abstruse subjects on which the collected intelligence of our best civil engineers may throw some light; and as these questions may be proposed by any member, here is an open road to the best source of information. Original papers, drawings, and estimates, are annually presented by the ordinary members who form the first class: these most important and valuable acquisitions are open to the researches of all the members.

Upon the whole, as a school of the highest order, and as one where perhaps an F.R.S. or F.S.A. would find himself a learner, we recommend it to all who would possess useful knowledge by the easy and pleasant method of social conversation.

MEDICO-BOTANICAL SOCIETY.

A GREAT schism has occurred in this Society, which—it may have been surmised from our manner of mentioning it, when its proceedings came under our notice—was never an especial

favourite with us. We are far from denying that an institution of the kind may be rendered important and useful to science; but it always struck us that there was more puffing about the Medico-Botanical Society than was consistent with the dignity of such an association. Some of our best institutions, it is true, had long ceased to produce any marked effects on the arts, sciences, or literature of the age, in consequence of their want of publicity; but this new body rushed into the opposite extreme, and its everlasting newspaper-paragraphs were only worthy of pretension and quackery.

With regard to recent transactions, we have for some weeks been in possession of the conflicting statements; but, as is our practice, we declined being a partisan on either one side or the other. The main facts, we believe, were briefly these:—Mr. Frost, who has been so active in promoting the interests of the Society as to have identified himself (under the anomalous title of "Director,") conspicuously with its progress, seems to have become obnoxious to a number of its supporters. They considered him guilty of egotism, presumption, and vanity,—and there has existed for some time a strong feeling on this point. On the other hand, Mr. Frost was countenanced and supported so far; and certainly, for we inquire not into motives, shewed himself a zealous (if a vain and indiscreet) officer of the Institution. But, to use a common saying, things were at odds and evens, when some collection of plants, presented by a member, was, in the course of affairs, sent to Mr. Brown, with a request that he would class them, &c. for the museum. It is unnecessary to enter into the little details of what ensued; suffice it to say, that in a correspondence on the subject, Mr. Brown treated Mr. Frost with great contumely, as an impertinent pretender; and either that Mr. Brown was deemed to be in error, or that Mr. Frost had influence enough to induce a meeting, at which Lord Seignhope presided, to expel that gentleman,—unquestionably one of the ablest botanists in Europe. The result has been a complete rupture in the Society—some of its most distinguished members have withdrawn; and the whole is so shaken in public opinion that it is pretty clear a new organisation must take place, or the Medico-Botanical Society is in danger of falling, even in its spring, into the sear and yellow leaf.

LITERARY AND LEARNED.

SOCIETY OF ANTIQUARIES.

THURSDAY, 15 Jan. 1829, Henry Hallam, Esq. in the chair. A highly interesting paper was read, communicated by Mr. Ellis, relative to the massacre at Paris in 1672, generally denominated the Massacre of St. Bartholomew. It has been a subject of controversy among historians, whether this unparalleled and dreadful tragedy originated in a sudden ebullition of hatred to the Protestant religion, or was the subject of a preconcerted and deep-laid plot. It was clearly proved, by an original document of instructions transmitted to the Regent Morton of Scotland, by order of Queen Elizabeth, that the massacre was a measure calmly and coolly determined on before it was carried into execution. The instructions give full warning to the regent to be on his guard against the secret introduction of French emissaries to undermine the reformed religion, or by a bolder attempt in the descent of a French fleet on the coast of Scotland.

Thomas Stapleton, Esq., of Lincoln's Inn, was balloted for, and duly elected; and the ballot for James Hoffman, Esq. was announced

for next Thursday. Mr. Sharon Turner's History was presented to the Society by the author; and also the XVth Part of Dr. Meyrick's beautiful work on Ancient Arms and Armour, by his son.

THE LITERARY FUND.

At the monthly meeting of the committee, on Wednesday, the distress of several applicants was relieved; but we rejoice to say that in this instance no cases of great calamity occurred. The club, which is a private meeting growing out of the Institution, supported at the individual expense of its friends, afterwards dined, as usual, at the Freemasons' Tavern. It is gratifying to state, that the general public interest in this truly excellent charity has increased so much, that the donations and subscriptions of the last seven years exceed those of the preceding seven by no less than 2,232. By so much more, consequently, have literary sorrows been alleviated.

FINE ARTS.

THE COLOSSEUM.

On Wednesday last that extraordinary and magnificent building, the Colosseum, was opened to the public. To the painful circumstances which induced its enterprising projector to take this sudden, and indeed somewhat premature, step, we will no further advert, than by expressing our earnest hope, or rather our conviction, that those circumstances will not be permitted to prevent, or even to delay, the completion of an undertaking which it must have required a most powerful imagination to conceive, and rare talents and ingenuity, as well as irrepressible energy and indefatigable perseverance, to bring into its present advanced state. It would be disgraceful to a country like England, should any difficulty be found in procuring the few thousands of pounds which may be necessary for the purpose.

It happens very fortunately that the part of Mr. Hornor's plan which is beyond all doubt the most valuable and important, is the part in which the greatest progress has been made. We allude to the panoramic view of London. Tasteful as all the accessories will, we are persuaded, be, and manifold and curious as are the resources and expedients by which their great and beautiful variety will be ultimately accomplished, we cannot but consider them to be as subordinate, when put in competition with this, the principal object, as the attendants of a court are to the monarch whom they serve, or the satellites of Jupiter to the orb round which they are revolving. To the panorama, therefore, our attention shall in the present instance be chiefly devoted.

In the first place, it is by far the largest picture that ever was painted. The diameter of the circle of canvass is a hundred and thirty-four feet, and it is sixty feet from the floor to the springing of the dome—making about twenty-four thousand square feet: at the bottom there are nearly four thousand more square feet of canvass, curving inwards; and at the top there are fifteen thousand square feet of plaster, on which the sky is represented—forming, in all, a painted superficies of above forty thousand square feet! Great, however, as is the size of this leviathan of art, its size is its least recommendation. The effect which it produces upon the spectator, when, after he has ascended the first flight of the spiral staircase which is constructed in the middle of the building, and entered the principal gallery,—it bursts upon his astonished eye, it is impossible adequately to describe. His first impression is

that it is nature—that it is the stupendous scene itself—at which he is looking; and some moments of recollection and reflection are necessary to convince him that he is only “mocked with art.” In one respect, the imitation actually transcends the reality. Even on the finest day, there is almost always some portion of the immense horizon that ought to be visible from the top of St. Paul's—an horizon of above a hundred and twenty miles in circumference—obscured by mist. Now, in the picture, although there is quite enough of atmosphere and of vapour, not any thing is permitted to be entirely hidden by them; and it would be necessary to make a number of visits to the top of St. Paul's to obtain as clear and complete a notion of the surrounding objects and country, as that which is here to be acquired at once. There is scarcely a field, or a tree, or a hovel, from which St. Paul's can be seen, which is not introduced; and not merely introduced, but introduced with a scrupulous attention to accuracy; and yet, so admirably has the general effect been consulted, that these minute features, instead of injuring, appear to be essentially beneficial to it. When it is stated that “the circle bounding earth and skies,” starting from Windsor Castle and taking to the right, comprehends Harrow, Hampstead, Highgate, Islington, Hackney, Epping Forest, Bow, Plaistow, the Nore, Shooters' Hill, the Beeches on Madam's Court Hill, Sydenham, Norwood, Wimbledon, Richmond, and a thousand intermediate places (which are all distinctly visible, if not with the naked eye, with glasses which are kept in the gallery for the purpose), before it returns to the royal residence,—it will be obvious to every one that it would require a folio volume even to enumerate the myriads of parts of which this immense distance is composed. Of course we shall not venture upon the slightest attempt to do so.

Amidst so much excellence it is difficult to make any selection; or we should say that one of the passages of this great work with which we were most fascinated was the view of the majestic Thames, winding its graceful course through the various bridges by which it is spanned, from Putney to London. It is impossible to conceive any thing more beautiful than that portion of the river, and of the adjacent buildings, including Lambeth Palace, Westminster Abbey and Hall, the Adelphi, Somerset House, the Temple, &c., which extends from Vauxhall to a little below Blackfriars. Sunny gleams and reflections on the water, painted with great care and happiness, constitute this the principal focus of the light of the picture.

“England's mighty heart,” with its numerous veins and arteries—her vast and magnificent metropolis, with all its venerable churches, noble palaces, ancient halls, public hospitals, spacious squares, populous streets, splendid theatres, extensive docks, commodious markets, pleasant parks, and flowery gardens, occupies the lower portion of the canvass, and may be examined for hour after hour, and day after day, with a delight and wonder perpetually increasing. For our own parts, we have dwelt upon it until we forgot that what we were gazing at was only “a plane, variously coloured;” and ardently longed to have our old and sagacious friend Asmodeus at our elbow, that we might know a little of what was going on under some of the countless roofs which were spread out beneath us. What an inexhaustible subject of contemplation! Dull, indeed, must be that imagination which it would not excite.

The nearer buildings are remarkably fine.

Of these the new Post-Office is one of the principal; and is a most elaborate and masterly representation of that beautiful edifice. And this leads us to express our admiration of the knowledge and skill with which, on a concave surface, the various lines intended to represent straight forms, have been drawn, so as completely to fulfil the desired purpose. To do this, it is evident that the simple processes of the scene-painter or the architectural draftsman would be quite inadequate. The closest objects are the lofty campanile towers of St. Paul's. On the canvass they are actually forty feet high; and they are painted with a force, and a truth, and an attention to details, which render them perfectly deceptive. All that surprises us while we are looking at them is, that so long a time elapses without the sonorous striking of the great clock.

We must not omit to mention the sky. Without being monotonous, the gradations in it are managed with so much art and delicacy, that they do not force themselves upon the eye, or attract it injuriously from the grand scene below. A friend of ours, who accompanied us in our visit to the Colosseum, exclaimed, after we had quitted the building, “God bless me! I forgot to look at the sky.” It was the greatest compliment which he could pay the painter. It proved that, like a skilful back-ground to a portrait, the sky did its duty, without becoming obtrusive.

More than half the picture is completed; the remainder is so considerably advanced, that all the difficulties are surmounted; and a few weeks of vigorous application would suffice to finish the whole.

We must now say a few words with respect to the manner in which, and the individuals by whom, this great work, as far as it has hitherto gone, has been accomplished. To Mr. Hornor belongs exclusively the honour of the original conception. The singular ability and fearlessness which he manifested in making his drawings from his little fragile hut, raised upon alight and tottering poles above the elevation of the cross of St. Paul's; his determined perseverance, his “hair-breadth escapes,” and the ultimate completion of his task, are fresh in the recollection of every reader of the *Literary Gazette*. Having rendered those drawings as correct as repeated efforts and the best instruments could render them, Mr. Hornor proceeded still further to rectify them, by visiting and examining all those features of the extensive scene, respecting the exact form and situation of which he entertained any doubt. Having thus amassed a collection of drawings of unprecedented fidelity and minuteness, the next object was to erect the building of which the picture to be painted from them was to constitute the chief ornament. Of that branch of the subject we will speak in a future Number. The building having been erected by Mr. Benjamin Burton, the canvass for the picture was prepared by Mr. Baber, who had prepared the canvass for the first of Mr. Barker's panoramas; the subject of which was also a view of London, but from the Albion Mills then standing at the Surrey foot of Blackfriars' Bridge. The dimensions of the canvass we have already mentioned. It was suspended at the distance, towards the base of the building, of three feet from the wall, all round. The transfer of the outlines from the drawings to the canvass was then undertaken by Mr. E. T. Parris; a gentleman possessed, not only of great talent as an artist, but also of extraordinary ingenuity as a mechanic; and in the selection of

when it would seem as if Mr. Horner had been guided by observing his congenial energy, enthusiasm, and diligence. By means of squares, Mr. Parris, in December 1825, began to draw in the outlines with chalk, on a scale sixteen times larger each way, or, in other words, two hundred and fifty-six times the size of the original. This was a work of much labour, and demanding close attention; but it was, nevertheless, completed in the following April. The painting (which is in oil) was then commenced. It was evident that Mr. Parris's single hand, or rather his two-hands (for he is ambidextrous) must be unequal to so extensive an undertaking. Mr. Horner therefore engaged several artists to assist him. But, although most of them were men of high and acknowledged powers, yet, owing in a great measure to their being entirely unaccustomed to their new occupation, their progress was slow, and, which was worse, by no means satisfactory. In fact, it was a kind of Dutch concert, in which every performer was playing a distinct and separate tune. Each also was anxious that his allotment, whatever it might be, should be conspicuous; like some Rosencranz or Guildenstern, seeking to render his character as prominent and effective as that of Hamlet. One individual, a lover of independence, and resolved not to be classed with the imitators, *servum pecus*, made the smoke from his chimneys proceed in a direction directly opposite to that of his neighbour; another, an equal admirer of originality, lighted up the building on which he was employed by a sun-beam from the north. The great change, almost amounting to that of enamel when they undergo the process of vitrification, which occurred in the apparent hue of the various pigments, according to the situation in which they were placed, was likewise a fruitful source of perplexity. Bricks, that were intended to be red, looked blue; and slates, that were intended to be blue, looked red. By degrees the picture began to assume the appearance of one of those patch-work quilts which shew that the industry of our great-grandmothers predominated over their taste. The consequence of all this was, that in several cases it was necessary to re-paint what had been done, and in every instance materially to modify it; and that, eventually, Mr. Parris, having trained up several house-painters for the purpose, determined, with their assistance in the more laborious parts of the task, to execute the whole himself. The beautifully harmonious result proves the wisdom of his decision.

In addition to the numerous previous studies of aerial perspective and general effect which Mr. Parris made from St. Paul's itself, to the prodigious extent of surface to be covered, and to the multiplicity and complexity of the objects to be introduced, there was the great difficulty of getting at the canvass, in order to be able to paint upon it at all. Here Mr. Parris's mechanical ingenuity became exceedingly serviceable to him. He devised all kinds of ladders, scaffoldings, bridges, and platforms. Sometimes he was supported from the floor by two or three long and slender spars, which rested with every motion of his arm; sometimes he was suspended by cords from the roof, swinging like Shakespeare's celebrated sambo-patcher. It must require strong nerves to remain passively in such situations;—how much more to be able freely to exercise all the faculties both of mind and of body in them! No was the danger imaginary. On two occasions Mr. Parris fell from a considerable

height; but, fortunately, in neither did he suffer any serious injury. Of the perils to which we have alluded, the cut which accompanies this brief description will convey some, though a very inadequate, notion to our readers.*

Of the numerous apartments, the conservatories, the Swiss cottage, the cascades, &c. we shall at present say but little; for they are all in an unfinished state, and some of them are scarcely begun. It may, however, gratify the curiosity of our readers to give a slight sketch of what they are, and of what they are intended to be.

The promenade-room, which comprehends the whole area of the building, when hung with draperies, fitted with glasses, and filled with suitable furniture, will be much the most superb saloon in London. In order to increase its attractions, and to benefit the fine and the useful arts, Mr. Horner means to appropriate a portion of it to the exhibition of valuable productions of modern art and ingenuity.

A suite of rooms, attached to the principal structure, on the north side, is in progress, for the accommodation of subscribers alone. To these rooms one access will be by a flight of marble steps from the garden. This conducts to a spacious apartment, which is to assume the appearance of a Turkish kiosk, and from which will run a sequence of galleries, leading to the grand library, which is of peculiarly beautiful proportions. Various refectories, &c. will be attached.

Mr. Horner has assembled a number of the most rare and exquisite plants, both exotic and indigenous, and these are arranged in conservatories in a manner calculated to shew them to the greatest possible advantage. Among them is the most magnificent specimen of the *Camellia Japonica* in this country, and which produces at least thirty varieties of flowers. In the centre of one of the conservatories is a circular tank filled with water, and surrounded by small jets, which are to raise their streams so as to form a case of water, within which aquatic plants are to be supplied from the shell of a sleeping *Undine*, an elegant marble figure, sculptured by Mr. Sievier. Several aviaries are also in preparation.

In the grounds is a Swiss cottage, in itself a singularly fanciful and pleasing object. The view from this cottage, if completed according to Mr. Horner's plan, will be enchanting. It will present three cascades, the highest of which will precipitate itself from an elevation of sixty feet; and these will be relieved by shrubs, trees, rocks, caverns, and, in short, a most picturesque assemblage of objects. All, however, that yet appears is the large arch, composed of massy and irregular stones, under which the water from the falls is ultimately to flow.

We have already stated that the staircase to the panorama ascends from the middle of the Colosseum. Within the column by which that staircase is supported, is a small circular chamber, which, by means of machinery, is to be made to ascend with an imperceptible motion, for the purpose of elevating those visitors who are too indolent, or who may be unable, to mount by the usual way. There are three galleries, at different heights, from all of which the picture may be viewed. Nearly at the summit are the identical cross and ball which were removed from the top of St. Paul's a few years ago, to be replaced by those at present there.

* Preparing for our next, or the ensuing No., and which will (we trust) convey a perfect idea of the Colosseum, and the means by which it was produced.—Ed. L. G.

Another short staircase then leads to a door which opens upon the leads of the Colosseum, from which there is an extensive view of the Regent's Park, and its beautiful neighbourhood.

In conclusion, we have only to repeat our best wishes for the success of an establishment, of a nature wholly unprecedented in this or any other country, and which, when in a perfect state, will realise the descriptions of some of the most magical scenes in the Arabian Nights.

QUEEN OF PORTUGAL.

M. TURNERELLI is now engaged in taking a bust of this very interesting young princess, at Laleham. She gives her sittings regularly every morning; but the natural antipathy of youth to long-continued restraint, must cause the sculptor to take both time and pains to produce a faithful likeness. This, however, we have no doubt the artist's talents will achieve.

ORIGINAL POETRY.

A FATHER'S REPROOF TO HIS PROFLIGATE SON.

COME not to me!—thy words are vain,
False as thy treacherous heart within;
Come not to me!—'tis grief, 'tis pain,
To listen to thy voice of sin!
My pardon would'st thou hope to win,
Blot from my mind thy later years;
I'm weak—despair hath worn me thin!
I'm blind—my sight is lost with tears!
What would'st thou say? An angel's tongue
Could not excuse that guilty deed;
Is not thy life one scene of wrong!
Crime after crime, like waves, succeed!
My heart, my aged heart, doth bleed,
To name such infamy as thine:
Begone! my spirit would be freed;
Away! thou art no son of mine.
Alas! that I must bless the day
On which thy virtuous mother died;
She said her loss thou should'st repay,
Should'st be my help, my joy, my pride!
My help!—it made me poor to hide
Thine earliest character from blame!
My joy!—look! *blindness* hath replied;
My pride!—what, thou!—oh shame! oh shame!
Bend thy proud knees, and from the dust
Call on thine injured God to hear;
Forsoke thy wretched haunts; be just,
Ere shameful death end shame's career;
Wring from those eyes of stone a tear,
And may it be a star to save;
But never more approach me near,
Till I am dead, in my calm grave!

CHARLES SWAIN.

THE LAMENT OF ONE WHO "CAN GET NO EMPLOY."

So wobegone a gentleman
I'm sure you never knew,
I am a wretch that has not got
A single thing to do!
I never drink,—for I have not
A grain of sense to spare;
I never smoke: poor earthy joy!
It all dissolves in air!
I never swear—I reckon that
The stupidest of sins;
I will not game—I've nought to lose,
And no one ever wins!
I cannot swim,—my system has
A tendency to cramp!
I never sail,—that getting drown'd
Does always strike so damp!

I will not skate—besides, in June
I could not if I chose;
I take no snuff—for truly mine
Is not a hungry nose.
I cannot study—for my head's
The worst of thoroughfares;
I never hunt—I hold my life
Worth thirty thousand hares.
I never shoot—my poultterer's boy
Does all that dirty work;
I hate all politics—the Greek,
The Russian, and the Turk.
I cannot talk from morn till night—
What have I got to tell?
Nor hear another! better lodge
Next door to old Bow Bell!
I never dance;—what! bob my legs,
And bounce about the floor!
I never sing—a singing man's
A nuisance and a bore.
I play no fiddle—squalls and squeals
Will not repay one's labours;
Nor whining flute—what right have I
To tantalise my neighbours?
I can't compose—I cannot see
Where lies an author's bliss;
Compose! why, bless my foolish pen!
Why, only look at this!

SKETCHES OF SOCIETY.

ANECDOTES OF DIGNITARIES.

WITHOUT meaning to disparage the very amiable and accomplished class of persons who preside over some of our seminaries for young ladies, anciently called boarding-schools, we may observe that there are others in that line who are neither overburdened with great kindness of disposition nor great acquirements. One of these lately requested a sub-governess to purchase a bottle of oil for her hair; which was done accordingly—the price half-a-crown. Madam was enraged; half-a-crown! she never gave more than a shilling, not she! Wondered how Miss could have been so imposed upon, or — Miss explained—it was the best oil, &c.—it was millefleur! “Don't talk to me,” replied her enraged principal, “of meal and flour, I don't care for them—it is the oil I object to.” This same lady was a great martinet. One Sunday the school was marshalling for church, when a girl could not find her gloves, and a sad bustle ensued;—but the governess, with great promptitude, thrust her into a closet, and looked her up till the party returned, well knowing that the mistress would certainly notice the deficiency of gloves, but was not at all likely to miss a pupil. The *ruse* succeeded, and no censure was incurred.

DRAMA.

KING'S THEATRE.

THE arrangements which M. Laporte has made for the ensuing season lead us to anticipate one of unusual brilliance. The *annonce* which has been issued to the subscribers is full of attraction. We find amongst the first, Madame Pisaroni, a singer who, if not in herself miraculously handsome, possesses a voice at least of infinite beauty. This lady has long been celebrated in Italy as a contralto, and has gathered some recent laurels in Paris. We have heard much said in her disparagement on the score of personal appearance. For our own parts, we think little of such matters; but we are sure the public are too generous to neglect extraordinary talent on a pretext so frivolous. Nobody in Paris seems to care about the mat-

ter, and why should we? Again, people are prepared to expect nothing beautiful, and, consequently, no disappointment can occur. Of this defect no one can be more sensible than the lady herself, as the instance of her spirited and ingenuous conduct to Barbaja sufficiently evinces. Barbaja wrote to engage her; Madame Pisaroni replied with a minute description of her figure, which she conceived might operate to his disadvantage, and concluded by leaving it to his option to fulfil the engagement or not, as he pleased.—To Pisaroni succeeds Madame Monticelli, from the Scala at Milan, of whom nothing is known to us. She is reputed clever, beautiful, and young. Next in succession is the dazzling daughter of Garcia, Madame Malibran, the dark Spanish beauty, whose charms reigned supreme over captive Parisian hearts during the whole of last season. She is expected to eclipse even the star-like Sontag, to whom we may again repeat our idolatry in May. To the above list may be added, Signora Specchi, nothing wonderful we suspect, and Madame Castelli.

To proceed to the men;—rejoice we greatly that our favourite, honey-voiced, and ever pleasing Zucchelli is re-engaged; and Curioni, who is respectable, if not first-rate. Vincenzi Galli, basso cantante, and brother to the celebrated Galli who was here under Mr. Ebers's management, is one of the new comers; as is Bordogni, the tenor and buffo from Paris. This Bordogni, by the way, is an excellent musician; but his voice is to the full as feeble as Pellergrini's. Among the most marked* (as Ude would say) is the great Donzelli. This splendid person has come directly from the Théâtre Italien at Paris, but gained his high reputation under Barbaja in Italy. His great characters are *Otello*, *Adriano in Il Crociato*, and *Roderick Dhu in Il Donna del Lago*, in the last of which he makes his *début* with Pisaroni.

Graziani, Deville, De Angeli, and Specchi, appear amongst the minors.

For the ballet the attractions are by no means equal. We have Coufon (whose name reminds us of Pelham's mamma), Frederic, Gosselin the gigantic, and, above all, Pauline the fascinating and fairy-like. We are delighted with the return of this *jolie petite danseuse*, and praise Lord Fife for his discernment, as we understand it is to his lordship we are indebted for the gratification. She is to appear in the *Somnambule*,—a very pretty ballet. We have, moreover, Péan, Rinaldi, Vague Moulin, Olivier, and a hundred others; but amongst all these there is no *première*; and we hardly think the corps can be called complete. However, *nous verrons*.

Pasta is not engaged, nor Canadadi.

In the policy of one measure adopted, we regret that we cannot concur. We allude to the alterations which have been made in the pit, by converting several of the front rows into private stalls; for which the very high price of one guinea is to be demanded. These stalls are divided from the pit, and have a separate entrance. What, therefore, with the orchestra and the *allée*, the first bench in the pit is now as nearly as possible in the centre of the house. We know that there is a very strong feeling against this alteration, which, to say the least, is injudicious, and we are sure will prove injurious, in the highest degree, to the interests of the concern. The enormous price at present required for these stalls is out of all reason. We wish well in every way to the establishment; but we have heard such an outcry raised against this aggression of public

* See his definition of that word in the French Cook.

rights, as it is termed, that we should be doing little justice to the public opinion, did we not express what we believe to be universal public sentiment, and one that it is not unlikely may be evinced in a very turbulent, *mobbish*, and injurious manner.

DRURY LANE.

A TRAGEDY, by Mr. Walker, the author of *Wallace*, and the *Fall of Algiers*, has been produced here, and met with a most favourable reception. It is entitled *Caswallon, or the Briton Chief*. The scene is laid in Wales, during the reign of our second Edward; and the interest hinges upon the preservation of Eva, the daughter of Llewellyn, the last independent Prince of Wales, by the Welch chieftain Caswallon,—their capture by the infamous Sir Roger Mortimer, then supposed governor of Conway Castle,—and their death—the princess by poison; to escape the violence of Mortimer—her loyal preserver of a broken heart. The excellent acting of Young, as Caswallon, and the dramatic, we ought in justice to say melo-dramatic, bustle of the business, carried the piece gallantly through. The language every where appeared to fall short of the dignity of tragedy; and had we made our bow, like the musical critic in the story, to every phrase “familiar in our mouths as household words,” by which it is interlarded, our neck would have ached for a month to come. Considering Mr. Walker's *Wallace* as the production of a very young writer, we anticipated better things from his pen by this time than *Caswallon*. He has disappointed us, and we have a right to be angry; the public, however, seemed exceedingly well pleased, and we have no doubt he will consider that an ample consolation. The scenery was throughout beautiful; but the dresses were as little classical as the piece itself. Only one of the knights wore spurs (Mr. Vining); and their shields, though bearing, as well as we could discern, their proper heraldic distinctions, were of a fantastic shape unknown to our Norman ancestry.

COVENT GARDEN.

MR. DIMOND's opera of the *Nymph of the Grotto*, or a *Daughter's Vow*, has at length made its appearance. Its reception on Thursday evening was equally favourable with that of the tragedy at Drury Lane on Monday, and its claims on public approbation are much upon a par with those of *Caswallon*. We have neither time nor space to enter into a detail of the plot, which, being founded on fact, is of course highly improbable. The music, by Signor Laverati and Mr. A. Lee, is below mediocrity. The most effective, if not the best thing in the opera, is an air admirably sung by Wood in the third act; and it is creditable to the taste of the composer, Mr. Lee, that he has made his hit upon the only readable words with which the author furnished him. Madame Vestris has nothing either to sing or to say that is worthy of her. The most prominent part in the piece is that which, we understand, was originally written for her, but has been since allotted to Miss Jarman, who played with considerable spirit and feeling. Mr. Stansbury, of the Haymarket Theatre, made his first appearance on these boards as *Leonce de Montgomerie*, the lover of Vestris! We are tolerably certain the tasteful little lady had no hand in casting the parts. Mr. Stansbury would make a respectable Mat of the Mint—but a gallant young French knight, all feathers and embroidery!—Poor man! he looked as if he would have given all the world to be quietly

seated again on his high stool in the Haymarket orchestra, from which we think it was a pity to lure him. Mrs. Chatterley dressed and walked the French queen admirably. It was all she had to do. The dresses, indeed, were uniformly beautiful—those of Mad. Vestris especially so: and the scenery, that panacea for all dramatic disorders now-a-days, truly exquisite. The aviary in the first act, and the last scene of the opera, we never saw surpassed, either in elegance of design or truth of execution. In getting up pieces, it is certainly old Covent Garden still.

On Tuesday a great disappointment ensued in consequence of Mr. Kean's sudden indisposition (the *Times* states, complete intoxication), which prevented him from appearing in *Richard III.*, a character to which we always thought he gave more beautiful touches than to any other. There was a grand uproar—very properly succeeded by *The Beggar's Opera*, at eight o'clock. The *Beaux Stratagem* brings crowded houses every night it is performed—a proof that good plays, well acted, are sure of full audiences.

ADELPHI.

This house continues its prosperous career. Mathews is a conjuror, and evokes matchless spirits in his own proper person. The pantomime is full of humour; and Barnett the most agile of columbines, as Paulo is the best of clowns.

VARIETIES.

Lectures.—Mr. Combe is giving lectures, to full and fashionable audiences, at Edinburgh, in favour of phrenology: Mr. Buckinghams, we observe from the *Liverpool Chronicle*, is attended by the principal mercantile men of the port, where he is lecturing against the East India Company's monopoly and the renewal of the charter.

Sigisbecology.—Under this musical and elegant title a work has been published at Paris, the object of which is to teach the art of learning to read in twenty or thirty lessons of an hour each, by analysing the sounds of words.

Tea.—Tea has become one of the most important articles of Russian commerce, and its introduction has had a very salutary effect on the lower classes of that vast empire, having much diminished the use of spirituous liquors. It is transported by land and river carriage from Kiakhta, on the frontiers of China; and is said to be greatly superior in flavour to that drunk in this country, which suffers materially from the saline exhalations of the ocean during its voyage. The Russians have a treaty of commerce with the Chinese. It was originally entered into in 1689, and received an extension in 1712, when an ambassador was sent to China by Peter the Great. In succeeding reigns this branch of trade has been consolidated and regulated.

Arab Women.—The Arab women on the banks of the Nile add to delicacy of form and natural elegance, a striking simplicity of dress. The poorest wear nothing but a long blue chemise, with a veil of the same colour, one corner of which veil they hold in their mouths when they meet any men, especially Europeans. A large mask of black taffeta covers the faces of the richer females, leaving nothing to be seen but the eyes and the forehead. Earrings, several necklaces of shells or paste, intermingled with amulets of silver or of polished copper, bracelets various and multiplied; the chin, the hands, and a part of the arms, smeared with blue, the eye-lashes tinged with

black,—such are the particulars which complete the dress of an Arab female, and which, notwithstanding their apparent fantasticalness, produce an original and graceful ensemble.

Hackneying.—It appears, by a curious calculation which has lately been published in Paris, that although the omnibus coaches in that capital average a daily receipt of nearly eighty francs each, the profits are not so large as might be imagined. To draw the eighty-nine coaches now in activity, 822 horses are required; of which number there have died more than one thirtieth part; whilst the injury to the remainder, from excessive work, is estimated at a loss of one-fourth of the capital employed in the purchase.

Antiquities.—The last remains of the archiepiscopal palace at Croydon were sold by auction on Wednesday, and brought 6700*l.* The ancient hall, the chapel, the judges' chambers, &c. &c., will thus shortly leave not a wreck behind.

The Medical Profession in France.—We stated some short time ago, that a meeting of the physicians and surgeons of Paris had been convened, for the purpose of taking into consideration the proposed alterations by the French government in the laws which affect the faculty of medicine in France. Since that announcement several meetings have been held, at which the discussions were animated and almost violent. One of the proposals of the government for dividing the physicians into two classes, according to age and other presumed qualifications, appears to have met with great opposition.

They speak in private circles of a machine, invented by an Italian, for the purpose of banishing the fog from this city. This machine is to move on wheels, and to emit sulphureous flames through tubes: it is to be called *le diable ambulant*; but I see no point in this title, for I never heard that his Satanic majesty was stationary.—*Paris Correspondent.*

Denmark.—It appears from the last census of the population of Denmark, at the close of 1828, that the number in the old Danish provinces was 1,521,278; in Holstein, 374,745; in Launberg, 35,640; in Iceland, 49,826; in the Faroe Islands and Greenland, 11,240; in the West India Colonies, 40,290—making a total of 2,049,359. If to this be added the population of Danish Guinea and the East India settlements, it will amount to 2,100,000. Copenhagen contains a population of 104,674. The number of priests in Denmark Proper is 1,600, and about 300 more are scattered in the Faroe Islands, Iceland, Greenland, and the Colonies.

A Secret.—A person, *Scottish* an auld wife, having heard an advertisement read from a newspaper, which ended with this intimation, "Not to be repeated;" exclaimed, "heh, sirs, that maun (must) be a great secret!"—*Edinburgh Evening Post.*

Shaving gratis.—During the late war, a barber, who kept a little shop on the Hard, at Portsmouth, exhibited the following notice in his window:—"Broken-down sailors shaved gratis." A poor tar, whose beard was of a week's growth, and who had not a single shot in his locker, seeing this benevolent invitation, entered the shop, described his state, and claimed the performance of the promise. The barber immediately complied; and having lathered his unproductive customer, proceeded to shave him with a razor which he had selected for the purpose, and the edge of which was in no danger of being easily turned. At every rasp the tears were ready to rush into

poor Jack's eyes, and the blood to start upon his chin. In the midst of the operation a dog began to howl most piteously in the street. "What the devil's the matter with the dog?" exclaimed Strap. "Oh!" observed his tortured patient, "I dare say some rascally flinty-hearted barber is shaving him gratis!"

LITERARY NOVELTIES.

A complete edition of the works of Professor Reid has appeared in Paris, with some fragments of Royer-Collard. The History of the Rise and Progress of the Mahomedan Power in India, from its commencement in the year 1000 till 1690, translated by Lieutenant-Colonel John Briggs, late resident at Satara, from the Original Persian of Mahomed Kasim Astrabady, entitled *Ferishtah*,—is about to be published.

A new, we believe the fourth, edition, enlarged, of Jarrin's excellent Italian Confectioner, is preparing for immediate publication. Besides being much reduced in price (the highness of which has been its only bar to the most extensive sale hitherto), which will enable various classes, who have been prevented from obtaining it, to become purchasers, it will command an additional claim to success, as containing, amongst other novelties, several fashionable bills of fare for desserts, &c.—a desideratum, we are told, in culinary books. This work will thus form an excellent accompaniment to the Domestic Cookery, to Kitchiner, and others, as well as to its twin-brother, Ude.

LIST OF NEW BOOKS.

Longitude.... 0 3 51 W. of Greenwich.

TO CORRESPONDENTS.

The length of the paper which we have devoted to that extraordinary production the Colosseum, and the interest of our articles on Scientific Expeditions, have cramped us somewhat in our Reviews; which is of the less consequence, as no new work of importance has appeared during the week. We are still in arrears with the *Empress Josephine* and *Military Adventures*.

J. F. has hardly sufficient originality of thought to command a place. P.—A.—C., H. L., and C. A., are declined. We cannot immediately find the verses required by our correspondent in *Carthusian Street*.

Due attention will be paid to "a Constant Reader."

A Letter from S. Simons, of Cromer, is received.

ERATA.—In our last, in the notice of the Royal Society of Literature, *Photh* occurs twice instead of *Thoth*.

ADVERTISEMENT,

Connected with Literature and the Arts.

EGYPTIAN HALL, PICCADILLY.

LES TROIS TROUBADOURS.

In consequence of the extraordinary success which Les Trois Troubadours met with on their first appearance, they will repeat their performance every day, at Half-past Two.
Doors open at Two.—Admittance, Three Shillings.
Places may be secured by application at the Rooms, between the Hours of Twelve and Two.
The Music is in the course of publication.

Just published, Part the Second, containing Six Plates, of

THE SELECT GALLERY of ETCHINGS, after Chefs-d'œuvre of the Old Masters, finished so as best to represent the Manner of the original Paintings, and beautifully executed by the most eminent Artist.

SKETCHES of PERSIA, from the Journals of a Traveller in the East.

Printed for John Murray, Albemarle Street.

In 8 large vols. 8vo. price 61. 2s. in boards.

RECENSIO SYNOPTICA ANNOTATIONIS SACRÆ; being a Critical Digest and Synoptical Arrangement of the most important Annotations on the New Testament.

By the Rev. S. T. BLOOMFIELD, M.A.

Vicar of Blabrooke, in Rutland.

Extract from the Rev. T. H. Horne's Introduction to the Study of the Holy Scriptures, 6th edit. 8vo.: "Those only who have been engaged in similar studies can appreciate the labour of Mr. Bloomfield's undertaking, to which he has devoted many years of patient research, amid the conflicting opinions of critics and theologians. There is scarcely a single difficult passage which is not elucidated; while the genuineness of some important texts, which had been impugned, is ably vindicated and established. Avoiding minor topics, on which real Christians may agree to differ in opinion, Mr. B. has laudably applied his learning to the defence of these cardinal doctrines of the New Testament, the Deity and vicarious atonement of Jesus Christ, and the Deity and Personality of the Holy Spirit. To those who have not the means of procuring the costly and voluminous publications of foreign commentators, these volumes will be most acceptable; while such as may possess them will here find a convenient manual of reference for their opinions on various topics. The value of Mr. Bloomfield's work is enhanced by the numerous glossarial notes which he has interspersed on difficult words of rare and unfrequent occurrence. The first part, which consists of three volumes, is appropriated to the elucidation of the four Gospels; the second, which is in five volumes, treats on the Acts and Epistles. Altogether, this is one of the most important works in sacred literature which has been offered to the attention of Bible students for many years."

Printed for C. and J. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

The Second Part (containing the Acts and Epistles, and an Appendix to Part I.) in 5 vols. may be had to complete Sets, price 41. in boards.

Elegantly printed in 8 vols. with a Portrait by Burnet, after Sir Thomas Lawrence, 12s.

THE POETICAL WORKS of THOMAS CAMPBELL, Esq. Now first collected.

"This handsome though small volume of Mr. Campbell's Poetical Works must be received with universal favour. Never did poet produce a work more deserving of female acceptance."—*Literary Gazette*.

Printed for Henry Colburn, 5, New Burlington Street.

In 3 vols. price 8vo. price 11. 7s.

GOMEZ ARIAS; or, the Moors of the

Alpujarras. A Spanish Historical Romance.

By DON TELESFORD DE TRUEBA Y COSIO,

Author of the "Castilian."

Dedicated, by permission, to the Right Hon. Lord Holland.

London: Published for the Executor of the late W. Bent, by Simpkin and Marshall, Stationers' Hall Court; and may be had, postage free, of every Bookseller and Newsmen in the Kingdom.

ROLLIN'S ANCIENT HISTORY, with Life and Notes.

By JAMES BELL.
Revised and corrected by J. Bell. 8 vols. 8vo. price 82s. boards.
2. Rollin's Arts and Sciences of the Ancients, with Notes, containing whatever is most valuable in the Works on the Arts and Sciences, published since the time of Rollin. By James Bell. With Plates. 1 vol. 8vo. price 12s. boards.

"These volumes contain the whole 12 volumes 8vo. of the original, and new matter equal to other 4; being a saving of two-thirds."

"A work so well known and so generally esteemed as the present, requires from us no commendation. The edition now before us will be found peculiarly valuable, as it embraces, in the form of notes, much essential information. And we have no hesitation in declaring our opinion, that in consequence of the introduction of this new feature, this edition will be not only the cheapest, but what is of much more importance, the best that has yet issued from the press."—*Oriental Herald*.

"Upon the whole, we think this edition of Rollin, which is more convenient from the diminution of bulk, well deserves to supersede its predecessor."—*Edinburgh Review*.

The 3d vol. 4to.
MEMOIRS of the AFFAIRS of EUROPE from the PEACE of UTRECHT.
By LORD JOHN RUSSELL, M.P.
John Murray, Albemarle Street.

The Latin Poets complete in one Volume.
In 1 large vol. 8vo. price 62s. boards;
CORPUS POETARUM.
Edited by W. S. WALKER, Esq.
Fellow of Trinity College, Cambridge.

The Authors comprised in this volume constitute the whole of the Classical Latin Poets, chronologically arranged, with brief Notices of their Lives.

The Texts of the Corpus Poetarum have not only been selected by the Editor from the best editions; but the Orthography and Punctuation have been by him reduced to a uniform standard. The greatest care has been taken to ensure correctness in the printing.

London: Printed for James Duncanson, 27, Paternoster Row; J. and J. D. Deighton, Cambridge; and J. Parker, Oxford.

In 12mo. price 7s. 6d. bound,
GERMAN and ENGLISH DIALOGUES;
or, Easy Introduction to the German Language: adapted to Beginners, to facilitate the Acquisition of the German Language, as well in Speaking as in Writing; together with an Alphabetical Collection of Idioms, containing literal and correct Translations of the two Languages, calculated to illustrate the peculiarities of German Grammar, accompanied by two Lithographic Tables, exhibiting the Alphabet and Ferry Copies of German current Hand-writing.

By J. F. REYMANN,
Professor of the German Language, and Master at the Western Literary Institution.

Printed for the Author, and sold by Treat and Wirtz, Treutzel, Jun., and Richter, Sothe Square; and all other Booksellers.

Just published, by John Harris, at the Corner of St. Paul's Churchyard.

WINTER EVENINGS at COLLEGE;
A Familiar Description of the Manners, Customs, Sports, and Religious Observances of the Ancient Greeks; with a short Account of the State of Modern Greece, and Reflections on the Revolutions of Empires.
By a CLERGYMAN.

In 2 vols. 18mo. half-bound, price 2s.

2. The County Album; containing Four Hundred Topographical Hieroglyphics, descriptive of the Products, Staple Commodities, Manufactures, and Objects of Interest in England and Wales; for the Amusement and Information of Fire-side Travellers. 12mo. half-bound.

3. Father Alfred; or, Elements of Knowledge. By the Rev. W. Fletcher, St. John's College, Cambridge, Author of "Lessons of Wisdom." With a Frontispiece, 18mo. half-bound, price 2s.

4. English History made Easy, on a popular Plan, in Prose and Verse; with the Addition of Six Hundred Questions, relating to the principal Events in the History of England, upon the approved Method of the Abbe Gaultier. Illustrated by 50 Plates. 18mo. half-bound, price 2s. 6d.

5. Conversations on the Life of Christ; for the Use of Children. By a Mother. With a Frontispiece, 18mo. half-bound, price 2s. 6d.

Price Six Shillings,
THE FOREIGN REVIEW, No. V.

"This is decidedly the best number the Editor of this work has put forth. The writers have been judiciously chosen, and appear to be men intimately acquainted with the subjects individually allotted them. We recognise the pen of Mr. Southey in the article on the late Emperor of Spain; the pen of Mr. Hume, in style is more historical than that of any other living author. A paper on German Playwrights, written, we believe, by Mr. Carlyle, is a pleasant and just commentary upon the mechanical drama of Germany."—*Atlas*.

London: Black, Veatch, and Young, 3, Tavistock Street; Boscage, Bartholomew, and Lowell, Great Marlborough Street.

No. VI. will be published in March.

Bent's Latin Testament.—In 12mo. price 2s. 6d. bound,

Bohn; Ebers and Co.; G. B. Whitaker and Co.; J. Birtchell; Whitmore and Pann; H. Hanbury; G. Cowie and Co.; Saunders and Hodgson; T. and J. Allman; T. Boone; J. Hurmy; Hamilton, Adams, and Co.; W. Mason; J. Duncan; Wilson and Sons, York; and Stirling and Kenney, Edinburgh.

Of whom may be had, separately,
Sir Charles Grandison, 7 vols. 11s. 6d.
Cecilia, by Miss Burney, 3 vols. 15s.

2d edition, in 3 vols. post 8vo. 32s. 6d.
THE RED ROVER.
By the Author of the "Spy," the "Pilot," the "Prairie," &c.

"This is another tale of the sea, a companion worthy of the 'Pilot,' and superior to any description of nautical scenes hitherto laid before the public, not even excepting those of our own Smollett. Cooper, the American novelist, has no living superior."—*Scotsman*.

Printed for Henry Colburn, 5, New Burlington Street.

BOOKS IN THE PRESS.

In the press, and shortly will be published, a new and revised edition (completed to the present period) of

BURKE'S DICTIONARY of the PEERAGE and BARONAGE of the BRITISH EMPIRE.
The extraordinary success of this work has imposed a duty upon the Editor, of which he trusts the forthcoming edition will prove that he has satisfactorily acquitted himself. Each respective article will be found corrected with the most minute attention, from the most authentic communications, and where the slightest obscurity appeared in the language of any particular house, the whole has been remodelled. The Editor's attention having been directed to collaterals, he has introduced all those who come within the most remote remembrance of family honours; and he has used more than ordinary care in tracing presumptive heirs.

To render the Heraldic Department more complete, the Armorial Bearings are described in the body of the work, independently of the Engravings.

To the Baronetage of Scotland and Ireland, &c. &c. more than 500 ancient families have been traced to the source, and the names of the present holders have been given. The Editor begs to thank the heads of those houses for the polite assistance they have afforded him.

Printed for Henry Colburn, 5, New Burlington Street.

On Saturday next will be published,
THE ADVENTURES of the KING'S PAGE. In 3 vols.

"If you would know whether virtues or vices keep a man farthest from a court, go to court and learn."—*Walter's Tale*.

2. Conversations on Intellectual Philosophy,
in 2 vols. price 16s.

3. The Manual for Invalids, by a Physician.
price 9s.

On the 1st of February,
4. The Life of Francis the First, King of France. In 2 vols. 8vo. with Portrait, price 36s.

Also, just published,

5. The Trials of Life. By the Author of "De Laide." 3 vols. price 31s. 6d.

"Two tales, both full of thought, and in the highest degree pathetic. They are these romances of real life of which Lord Byron says, most truly, we see and hear more than we shall ever read."—*Times*.

Printed for Edward Ball, New Public Subscription Library, 35, Holles Street, Cavendish Square.

In a few days will be published, in 2 vols. post 8vo. price 12s. 10s. embellished with a full-length Portrait of the Author, engraved by Holi, after a drawing by Wagnman.

MEMOIRS of the EXTRAORDINARY MILITARY CAREER of JOHN SHIFF, late a Lieut. in H. M. 7th Regiment, Foot, &c. &c.
London: Hurst, Chance, and Co. 55, St. Paul's Churchyard.

Next week will be published,
THE EDINBURGH REVIEW,
No. XCVI.

Contents: Burns—India; Bishop Heber's Journal, Freedom of Trade and of Settlement in India—Recovery of Lost Writings; Egypt, Ancient Topography, Palimpsests—Ancient Tariff—Folk-lore of Metropolis; Causes and Prevention of Crime—North-west Passage; Expeditions to the Polar Sea—Importation of Foreign Wool; State of the Woollen Manufacture—Bentham's Rationale of Evidence—Dr. Shuttleworth's Sermon; Religious and Temperal Knowledge, &c. &c.
Printing for Longman, Rees, Orme, Brown, and Green, London; and Adam Black, Edinburgh.

SATURDAY, JANUARY 24, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

Journal of a Second Expedition into the Interior of Africa, from the Bight of Benin to Socotroo. By the late Commander Clapperton, R.N. To which is added, the *Journal of Richard Lander, from Kano to the Sea Coast, partly by a more Eastern Route*, &c. &c. 4to. pp. 355. London, 1829. J. Murray.

At length we are gratified with the publication of this deeply interesting volume, containing the account of those travels and events of which so many of the circumstances, as they transpired from time to time, have appeared in the columns of the *Literary Gazette*. The whole is now before us; and a narrative more likely to chain the public attention, whether we regard the melancholy sacrifice of its characters or the strangeness of its adventure, could hardly have issued from the press. Science, it is but too true, has gained little by this attempt; for, except some further guesses at, rather than approximations to, a certain knowledge of African geography,—except the names of a few towns visited by poor Clapperton in his way to Socotroo from Badagry, and some others, hitherto still less known, which Lander saw on his devious returning route,—and except a strengthened surmise that the Quorra or Kowara, which discharges itself into the sea by Benin (as the River Benin or Forcados), is the Niger, and some curious details on native authorities respecting nations in the interior (given in the Appendix)—there is nothing of importance in this point of view to be gathered from the Journals. Their interest rather consists in the description of the perils which attended our brave countrymen, of the difficulties which they surmounted, of the usages of the people amongst whom they sojourned,—and of the fatal termination of their toils. Of these it is our duty to give as full an illustration as we can, and we proceed to the task.

Our readers of last year are aware that in December 1826, Captain Clapperton left Badagry for Socotroo, the residence of Bello, Sultan of the Fellatahs, or, more properly, the Fellans, whose good-will he had apparently obtained in his former expedition with the lamented Denham, and who had invited a return of the British, in order that he might establish a trade with them on the southern coast. Of his companions, Mr. Dickson had been loaded at Whidah,* and Captain Pearce and Mr. Morrison, surgeon R.N. went with him, but only withstood the climate a few weeks. We do not dwell on the disappointments at not finding any of the promised messengers of Bello at the ports he had specified, or indeed such places as Funda or Raka; nor shall we occupy ourselves at present with the journey to Kano,

and thence to where the sultan was encamped, at a short distance from his capital. At Kano, Clapperton left Lander, his servant, with some of his baggage and the presents intended for the Sheik of Bornou; and it is clear that the desire of Bello to become possessor of these treasures was the proximate cause of the failure of the mission. These barbarians being now at war, all the pledges of good faith were forgotten; and after enduring much vexation and distress, the result was the death of our unfortunate countryman: of this, the faithful sharer of his troubles gives a natural and most affecting picture.

"On the 12th of March, 1827, (he says) I was greatly alarmed on finding my dear master attacked with dysentery. He had been complaining a day or two previously of a burning heat in his stomach, unaccompanied, however, by any other kind of pain. From the moment he was taken ill he perspired freely, and big drops of sweat were continually rolling over every part of his body, which weakened him exceedingly. It being the fast of Rhamadan, I could get no one, not even our own servants, to render me the least assistance. I washed the clothes, which was an arduous employment, and obliged to be done eight or nine times each day, lit and kept in the fire, and prepared the victuals myself; and the intermediate time was occupied in fanning my poor master, which was also a tedious employment. Finding myself unable to pay proper attention to his wants in these various avocations, I sent to Mallam Mudey, on the 13th, entreating him to send me a female slave to perform the operation of fanning. On her arrival I gave her a few beads, and she immediately began her work with spirit; but she soon relaxed in her exertions, and becoming tired, ran away, on pretence of going out for a minute, and never returned. Alla Sellakee, a young man my master had purchased on the road from Kano to take care of the camels, and whom he had invariably treated with his usual kindness, and given him his freedom, no sooner was made acquainted with his master's illness than he became careless and idle, and instead of leading the camels to the rich pasturage in the vicinity of Socotroo, let them stray wherever they pleased, whilst he himself either loitered about the city, or mixed with the most degraded people in it: by this means the camels became quite lean; and being informed of the reason, I told my master, who instantly discharged him from his service. My master grew weaker daily, and the weather was insufferably hot, the thermometer being, in the coolest place, 107 at twelve in the morning, and 109 at three in the afternoon. At his own suggestion, I made a couch for him outside the hut, in the shade, and placed a mat for myself by its side. For five successive days I took him in my arms from his bed in the hut to the couch outside, and back again at sunset, after which time he was too much debilitated to be lifted from the bed on which he lay. He attempted to write once, and but once, during his illness; but be-

fore paper and ink could be brought him, he had sunk back on his pillow, completely exhausted by his ineffectual attempt to sit up in his bed."

Lander fancied from the symptoms that he had been poisoned; but Captain C. assured him his illness proceeded from a cold caught in shooting, when he had incautiously slept on the wet ground. "For twenty days," he continues, "my poor master remained in a low and distressed state. He told me he felt no pain; but this was spoken only to comfort me, for he saw I was despirited. His sufferings must have been acute. During this time he was gradually, but perceptibly, declining; his body, from being robust and vigorous, became weak and emaciated; and, indeed, was little better than a skeleton. I was the only person, with one exception, he saw in his sickness. Abderachman, an Arab from Fezzan, came to him one day, and wished to pray with him after the manner of his countrymen, but was desired to leave the apartment instantly. His sleep was uniformly short and disturbed, and troubled with frightful dreams. In them he frequently reproached the Arabs aloud with much bitterness; but being an utter stranger to the language, I did not understand the tenor of his remarks. I read to him daily some portions of the New Testament, and the ninety-fifth Psalm, which he was never weary of listening to; and on Sundays added the church service, to which he invariably paid the profoundest attention. The constant agitation of mind and exertions of body I had myself undergone for so long a time, never having in a single instance slept out of my clothes, weakened me exceedingly, and a fever came on not long before my master's death, which hung upon me for fifteen days, and ultimately brought me to the very verge of the grave."

The taking of some native medicaments, which produced no good effects—and a singularly pathetic conversation, in which he gave his last directions and advice to his affectionate comrade, are related in a simple and touching manner; and Lander proceeds: "This conversation occupied nearly two hours, in the course of which my master fainted several times, and was distressed beyond measure. The same evening he fell into a slumber, from which he awoke in much perturbation, and said he had heard with much distinctness the tolling of an English funeral bell: I entreated him to be composed, and observed that sick people frequently fancy they hear and see things which can possibly have no existence. He made no reply." "After this, the patient rallied a little; but the sad story goes on: "On the 13th, however, being awake, I was much alarmed by a peculiar rattling noise, proceeding from my master's throat, and his breathing was loud and difficult; at the same instant he called out 'Richard!' in a low and hurried tone. I was immediately at his side, and was astonished at seeing him sitting upright in his bed, and staring wildly around. I held him in my arms,

* He reached Dahomey, and set out for Shar and Yed, and has not been heard of since his arrival at the same place; so that, as we have frequently stated, it is hardly possible to hope that any of the party are alive. Mr. Pearce and Morrison soon died on their way up the country to Socotroo.

and placing his head gently on my left shoulder. gazed a moment on his pale and altered features: some indistinct expressions quivered on his lips; he strove, but ineffectually, to give them utterance, and expired without a struggle or a sigh. When I found my poor master so very ill, I called out with all my strength. 'O God, my master is dying!' which brought Pascoe and Mudéy into the apartment. Shortly after the breath had left his body, I desired Pascoe to fetch some water, with which I washed the corpse. I then got Pascoe and Mudéy to assist me in taking it outside of the hut, laid it on a clean mat, and wrapped it in a sheet and blanket. Leaving it in this state two hours, I put a large clean mat over the whole, and sent a messenger to Sultan Bello, to acquaint him of the mournful event, and ask his permission to bury the body after the manner of my own country, and also to know in what particular place his remains were to be interred. The messenger soon returned with the sultan's consent to the former part of my request; and about 12 o'clock at noon of the same day a person came into my hut, accompanied by four slaves, sent by Bello to dig the grave. I was desired to follow them with the corpse. Accordingly I saddled my camel, and putting the body on its back, and throwing a union-jack over it, I bade them proceed. Travelling at a slow pace, we halted at Jungavie, a small village, built on a rising ground, about five miles to the south-east of Soccatoo. The body was then taken from the camel's back and placed in a shed, whilst the slaves were digging the grave; which being quickly done, it was conveyed close to it. I then opened a prayer-book, and, amid showers of tears, read the funeral service over the remains of my valued master. Not a single person listened to this peculiarly distressing ceremony, the slaves being at some distance quarrelling, and making a most indecent noise the whole of the time it lasted. This being done, the union-jack was taken off, and the body was slowly lowered into the earth, and I wept bitterly. As I gazed for the last time upon all that remained of my generous and intrepid master."

It is scarcely possible to contemplate this lone and natural picture without great emotion, and feeling an interest in the fate of the devoted individual left to paint it, which we trust will not be disappointed in his after-life. Poor fellow! he was now desolate, friendless, surrounded by dangers, and four months' journey even from the savage coast whence he could look for an escape to his native land: a condition more pitiable could not be imagined. But he had a stout heart; and as his return is not only immediately connected with our preceding quotations, but also, to us, the most attractive portion of the volume, we shall conclude this paper from its materials.

Having obtained Bello's leave to depart, and surrendered much of Clapperton's property, such as guns, &c., Lander quitted Soccatoo on the 4th of May, with two attendants, three camels, two horses, &c., and soon joined a party of 4000 persons, "consisting of Tuarick salt-merchants returning to Kilgria, pilgrims on their way to Mecca, Gwara merchants returning to Kano and Nyffé, &c. &c., all travelling in company for mutual protection, with an immense number of camels, horses, and bullocks. The merchants invariably meet at Kushna, where they disperse for their different destinations. In the same train was the King of Jacoba, with fifty slaves, which he had driven to Soccatoo as a present to the sultan, who, having

learnt the dreadful losses he had sustained in men and cattle in his wars with the Sheik of Bornou, and the number of his villages which had been plundered and burnt by the soldiers of the sheik, would not accept of them, and desired the King of Jacoba to re-conduct them to his own dominions."

Jacoba is to the south-east; and, by all accounts, the natives are cannibals, as well as the Yamyams, their mountain neighbours: but of this hereafter. On the 5th, Lander almost perished on the road from thirst. "Finding (he tells us) I was unable to proceed, I ordered Pascoe to overtake the camels, his horse being fresh and vigorous, and bring me some water. I then dismounted, and sat under a tree by the road-side, whose branches afforded but an indifferent shelter against the scorching rays of an African sun, and holding the bridle of my poor horse in my hand, I implored the hundreds of Fellatas and Tuaricks who were passing to sell me a drop of water; but the cold-hearted wretches refused my earnest request, observing one to another, 'He is a Kafir; let him die.' At length a young Fellata, from Footatoora, accidentally seeing me, came to the spot, exclaiming, 'Nasarah, Nasarah, triffi manora!' (Christian, Christian, go on!) I answered, 'I am faint and sick for want of water; no one will give me any; and I am so weary that I cannot proceed.' On hearing which the young man kindly gave me a small calabash full; part of which I drank, and with the remainder washed the nostrils of Bonasa Jack, and sprinkled a little into his mouth. The people, who observed the Fellata performing this generous action, upbraided him in strong language for giving water to the Christian; but he, shewing them a double-barrelled gun, remarked that he had obtained it of my countrymen, who were all good men, and would do no harm. This somewhat appeased them. On examining the gun shortly afterwards, I found it to be of English manufacture, with 'Arnold, maker, London,' on its lock. I, as well as the horse, was greatly refreshed with the small quantity of water I had taken, but soon becoming again weak and dispirited, I was almost in as bad a state as on the former occasion; my legs were swollen prodigiously, and I felt the most acute pains in every part of my body. At length I perceived Pascoe, whom I had sent for water three or four hours previously, comfortably seated under a tree, and seeming to be enjoying himself much with Mudéy—the camels feeding at a short distance. I had half an inclination to shoot the heartless old scoundrel, knowing as he did how keen my sufferings must have been. Reflecting, however, that the safety of my papers, and even my own life, was placed in some measure in his hands, I restrained myself, and merely asked why he did not return with the water; on which he answered, very composedly, 'I was tired.' * * * On our road to Kano, the King of Jacoba became very sociable with me, and was my constant companion. He pressed me very much to visit his country, where he would do all in his power to make my stay agreeable. He told me that his neighbours, the Yamyam people, who had assisted him in his war against the Sheik of Bornou, were surrounded, with some of his own people, on a plain near Jacoba, by the sheik's soldiers, who made a dreadful slaughter of them. The fight lasted a whole day, when the Yamyams and people of Jacoba were entirely routed; he himself narrowly escaping being taken prisoner. The morning after, the surviving Yamyams repaired to the field of action, and hearing off a

great number of the dead bodies of their enemies, made a fire, roasted, and ate them!"

At Damoy, a few days from Kano, Lander says: "The inhabitants of Gatas, discovering by some means my being a Christian, came in crowds to see me, but behaved in a quiet and orderly manner. I invited some of the most respectable of the females into my tent, which they greatly admired, and shortly afterwards presented me with milk and foorah. The natives of this, as well as every other town I have seen in this direction, are of Houssa, but tributary to the Fellatas. 5th.—At five in the morning were again on the road, and halted at the south side of Damoy, a small walled town, at 2 p.m. The inhabitants of this town informed me that the range of hills I have mentioned extended to the salt water, and are inhabited by the ferocious Yamyams, whom they all declare, as did every one I had questioned on the road, to be cannibals. The Yamyams formerly carried on an extensive traffic with the Houssa men, in red cloth, beads, &c., which they took in exchange for elephants' teeth; but five years before, they assassinated a gaffle of merchants, and had afterwards eaten them; since which time the Houssa people have been shy in dealing with them."

The route to Kano was finally accomplished on the 25th of May, and after staying to the 29th, Lander again set out, and passed onwards, with some curious accidents, till June 1. He passed Behajie, a walled town, and states:

"Half an hour after, came to a spot where are two roads, one leading to Nyffé, and the other to Funda. My master had said, before his death, at Soccatoo, that if I returned through Nyffé and Yonriha, the inhabitants, who must have heard of our having taken presents to Sultan Bello, with whom they were at war, would certainly assassinate me; and feeling an earnest and irrepugnable desire to visit Funda, on the banks of the Niger, and trace, in a canoe, that river to Benin, without hesitation I chose the Funda road."

It seems that but for a mere chance he would have achieved this great exploit;—we return, however, to his career.

"June 4th. At eight this morning, after drying the tent, proceeded; and at eleven reached the foot of a high and craggy mountain, called Almema, consisting of gigantic blocks of granite, fearfully piled on each other, and seeming ready to fall to the ground below. They much resemble the rocks near the Lagan Stone in Cornwall, but infinitely larger. Mahomet, my servant, who is acquainted with the traditions of the natives of every part of this country, and had travelled far and near, gave me the following story: 'About 500 years ago, a queen of the Fantee nation having quarrelled with her husband about a golden stool, fled from her dominions with a great number of her subjects, and built a large town at the foot of this mountain, which she called Almema, from which it took its name.' The town was surrounded with a stone wall, as the ruins which now remain plainly attest. * * *

"7th. Left at six in the morning, and proceeding in a south-west course, arrived at a walled town called Nammaleek at twelve at noon; the north-east part of which is defended by a mountain, and the remaining parts by a high mud wall. The mountain is nearly perpendicular, and thickly covered with wood. Thousands of hyenas, tiger-cats, jackals, monkeys, &c. inhabit it; and the terrific noise they made during the night prevented me from closing my eyes. These animals are so rapacious, that the poor inhabitants cannot keep a single

hloek, sheep, or goat; in consequence of which no animal food could be obtained in the place. The chief put us into a hut, and gave us tnah, with a sauce made from the monkey's bread-fruit tree, which is most unpalatable stuff. I intended to stop a short time here, and take medicine; but the people coming in scores to see me, I had no opportunity of opening my box but in their presence, which I did not choose to do. This day, two Fellatas, messengers of the Sultan of Zegzeg, unfortunately saw me, and asked where I was going. On my acquainting them, they immediately rode off, and, as I subsequently learnt, returned to Zegzeg, and informed the king that I was on my way to Funda, with two asses loaded with riches, and a beautiful horse, as presents to the king of that place."

It was upon this report that he was soon after stopped, and carried back to gratify the curiosity of the majesty and court of Zegzeg. In the meantime, he relates, on the 8th: "On our journey to-day, we met, on their way to Zegzeg, as a tax to Sultan Bello from a neighbouring country, thirty slaves—men, women, and children, all apparently ill with the small-pox. The men were tied to each other by the neck, with twisted bullock's hide; but the women and children were at liberty. The inhabitants of Fullindushie were the first people I had seen in Africa who disdained to make use of any kind of dress. They laughed immoderately on seeing me; whilst I, on my part, made myself quite merry at their expense. They were soon on the most familiar footing with me, and seem an artless and good-humoured people; but disgusting in their manners, and filthy in their persons: their sheep, goats, and poultry, eat and sleep in the same hut with them, and a most intolerable stench is exhaled from all their dwellings. They do not appear to have the least affection for their offspring: a parent will sell his child for the merest trifle in the world, with no more remorse or repugnance than he would a chicken. They invariably wear a large piece of blue glass, in the shape of a semicircle, in their upper and lower lip; and a piece of red wood, about the size of a man's thumb, dangles from their ears. They rub red clay, softened with oil extracted from the guinea-nut, over their heads and bodies, which by no means improves their appearance. Their features do not resemble in any way those of the negro, but are fair and handsome, and bear great similitude to the European. The inhabitants make fetiches, like the natives of Yariba."

On the 12th, "crossed the river at nine o'clock this morning, the water reaching to our chins; and immediately proceeded towards Cuttup, where we arrived after three hours' travelling. Having heard, on my route, so many different reports of Cuttup, its wealth, population, and celebrated market, I was rather surprised on finding it to consist of nearly five hundred small villages, almost adjoining each other; nearly the whole of which occupy a vast and beautiful plain, adorned with the finest trees. Here, for the first time since leaving the coast, I saw plantain, palm, and cocoa-nut trees, in great abundance, and in a flourishing condition; the country resembling, in a striking manner, some parts of Yariba. A considerable traffic is carried on here in slaves and bullocks; the latter are bred by Fellatas, a great number of whom reside here for no other purpose. Slaves, as well as bullocks and sheep, are exposed in the market, which is held daily; and also red cloth, gum, salt, goora-nuts, trowsers, tobacco, country cloth, rings, needles,

cutlery articles, and honey, rice, milk, &c. People from the most distant parts of the country resort here in vast numbers to purchase these various articles. The sultan being a very great man, I thought it necessary to make him a present worthy the representative (however humble) of the King of England. I accordingly gave him four yards of blue damask, the same quantity of scarlet ditto, a print of my own gracious sovereign, and one of his royal highness the Duke of York, with several more trifling articles. In return, I received from him a sheep, the humps of two bullocks, and stewed rice sufficient for fifty men. Ten of the king's wives, on paying me a visit a day or two after my arrival, took a fancy to the gilt buttons on my jacket, which I cut off and presented to their sable majesties. Thinking them to be gold, they immediately stuck them in their ears. In this belief I took care not to deceive them. During my stay at Cuttup I was never in want of a bullock's hump (by far the best part of the animal, weighing from twelve to fifteen pounds) for the king invariably receives, as a tax from the butchers, the hump of every bullock they slaughter; and one or two were sent me by his wives each day. Being in want of money, I sent to the market and informed the people I had needles and beads to sell; on which several buyers came into my hut and purchased freely, giving me fifteen or twenty cowries each for the needles, whilst the Arabs could only get ten at most for theirs; but whether they conceived my needles to be superior, or whether it was the desire of obtaining something of a white man, I did not learn. Unlike the princes of Houssa, Borgoo, Nyffé, Cuttumkora, and of other places in the interior, the Sultan of Cuttup gives his wives unrestricted liberty. An old woman came to me one afternoon, full of grief, informing me of her having frequently been robbed of the little money she had saved from her earnings, from holes in her hut, where she had hid it, by some of her neighbours and acquaintances. She entreated me to let her have a charm to prevent such dishonest acts in future. Being ever willing to oblige the simple-hearted Africans, I gave her a teaspoonful of common sweet oil, in a small phial, telling her that she must on her return to her hut pour it into the hole in which she intended concealing her money; and that if any one but herself touched the money while there, without her permission, he would not long survive. I advised her by all means to give the virtues of this charm as extensive a circulation as possible, and I had no doubt she would not be robbed again. The poor old woman could not express the gratitude she felt for my kindness; she dropped on her knees before me, thanked me in the warmest terms, and pressed me to accept of forty cowries, the only money she had then in the world. Of course I refused to deprive the old woman of her substance, and sent her away highly pleased with the treatment she had received."

On the 19th Lander had reached Dunrora, a town of 4000 inhabitants, and was within twelve or thirteen days of the promised Funda, whence four days would carry him to the salt water, when, as he was loading his beasts and preparing to depart, four armed men rode up at full gallop and obliged him to retrace his steps to Zegzeg.

Tales of Passion. By the Author of "Gilbert Earle." 3 vols. 12mo. London, 1829. Colburn.

This work before us is one belonging to an

advanced period of literature; when the incidents of invention, somewhat exhausted, make the author turn to sentiment rather than adventure, and feelings are more dwelt upon than facts. The tales of knightly deeds, of haunted towers, of handitti, have had their day, as well as those of beauty in distress, unknown orphans turning out dukes at least, elopements, &c. But the novelist has changed only to enlarge his field; from the earliest page given to the delineation of character, whether as matter of ridicule or sentiment, his store of *matériel* became inexhaustible. The human heart, like the human countenance, is endless in its variety;—the tree, the flower, the bird, the beast, resemble each other, till the likeness is that of identity: the oaks at Dodona were but like those in any English park; the steed of the Macedonian might be but as the race-horse of Newmarket. Not so with the face of man;—the statue, the picture, come down to us, and we trace similarity, but no sameness; for where can be found two human beings whose individuality could be mistaken?—and the varieties of mind are still more infinite: the routine of circumstances may and will be the same—the battle may be fought, the orator and statesman contend for the high places, the festival assemble the young, and the thousand great and little events of life be alike,—but the spirit which vivifies them will be different: even as our present age bears no resemblance to its predecessors, so those in futurity are equally likely to differ from our own. While hope and fear, sorrow and happiness, remain in the world, no fear for our libraries—but their size. The pages before us are devoted to the development of the passions—those masters and mysteries of our nature.

It is a very difficult thing to put the language of strong passion on paper: spoken in the turbulent excess of the moment, while the ear that listens is agitated as the lip that speaks, forgotten from the very exhaustion which follows,—the most intense periods of our life are those which leave the least record of their expression. Repeat the words which at the time seem so cold and meaningless, and even we ourselves will exclaim against their exaggeration; and yet, to the latest hour of our lives, an impression, rather than a memory of them, lingers in the heart, yielding a strange, intuitive sympathy with the picture, which relies on association for its truth, where our feelings are sufficiently alive to look with scorn upon the weak outline, or faint colour, and yet enough deadened to make ridicule a dangerous test of criticism. It is no small praise to say that Mr. St. Leger has steered well the dead sea of coldness on the one hand, and the stormy cape of exaggeration on the other. The second tale in these volumes is a master-piece of its kind; a more powerful delineation of character worked upon till its very nature is changed, of the fearful links which bind one evil passion to another, was never, we think, drawn: it is impossible to give an idea of the interest; all we can do is to detach enough to create a desire for the rest.

"The dancer was a young girl apparently about sixteen; she was slender and finely formed, like most of her race, but she was already of a height beyond their ordinary low stature, and had the appearance of not being yet arrived at her full growth. A petticoat of bright scarlet displayed an ankle, combining, like the fetlock of an Arabian horse, delicacy, activity, and grace, in a singular degree. The fine voluptuous outline of her limbs, at her early age, gave token, to a practised eye like

that of Oberfeldt, of the perfection which it would attain in the maturity of womanly beauty. Her scarf was disposed around her bosom in a manner somewhat fantastic indeed, but highly picturesque and graceful,—while her abundant tresses of coal-black hair were, for their only covering and ornament, intertwined with a few ears of wheat and corn-flowers, apparently just plucked from the fields. Her skin was dark in complexion—but of that exquisite clearness, and extreme delicacy of texture, which almost render it doubtful whether it be surpassed by the most perfect fairness. It might be called

—that clear obscure,
So softly dark, and darkly pure,

which we may suppose to have existed upon Cleopatra's cheek. Of her eyes—those gems which form the crown and completion to the golden circle of beauty—the description has already been given in the motto at the head of this chapter.* The air to which she danced was wild and irregular, and the dance was accommodated to its varying expression. Now, it was spirited, animated, and even triumphant—and in such parts, the young Bohemian's step became more rapid and decided—her eye flashed, and she swung her tambourine into the air, with a free and even fierce gesture, bespeaking exultation and pride. Then would come a sudden pause, and the music would recommence with a slow and soft measure; the bright eye then became languid and beseeching—the movements and the whole bearing insinuating and subdued. Next, the tone was of sorrow and dejection—and this versatile creature sank her head upon her breast, drooped her instrument by her side, and trailed her steps slowly and sadly on the ground. Then again the music burst forth into liveliness and joy—and again she sprang into the air, like the wild deer starting from the covert, and the dance ended as it had begun, with the display of mingled activity, brilliancy, and grace. The count gazed in wonder upon a creature so beautiful and so striking. The graceful agility with which she danced—the picturesque movements and attitudes which were displayed in the performance on her instrument—and, above all, the face of youthful loveliness which beamed and sparkled with the exercise—all these were calculated to impress with surprise and delight one who loved, and could appreciate, beauty as much as Oberfeldt. A man who has studied it as he had done, is necessarily something of a physiognomist; and, as he contemplated fixedly the countenance of this fascinating being, he thought he could perceive in it something superior to the lot which seemed to be her's, together with a consciousness of that superiority. The expression of her eye was not always in accordance with the smile upon her lip;—a glance, now of weariness, now of disdain, was very perceptible to one who looked with scrutiny:—and the smile itself was frequently 'in such a sort' as though 'her spirit scorned itself that it could be moved to smile' for such purposes, and upon such people. These indications were not, indeed, open and plain. To the great majority of the spectators she appeared as mirthful, as well as active, as Terpsichore; it was only to him who possessed the talisman of refined observation and acute deduction, that they were visible. At least, he

read them thus:—though, perhaps, he might be so quicksighted as to see that which did not exist—he might invest her with the feelings he thought most suited to her position, and then imagine that he traced them in her aspect. As the dance ended, she held the tambourine horizontally—though without any more direct supplication. The spectators showered money upon it, and the count threw in a golden dollar. The largeness of the sum caused the eyes of the Bohemian, which were cast down during the whole of this proceeding, to be raised to the person who bestowed it. She looked into the face of Oberfeldt, as though to read the motive of his lavishness; and it seemed that the expression which she found there was peculiar and apparent—for her eyes were on the instant again lowered, and a suffusion of blushes spread over her face and brow. As the crowd began to move from the spot, the count drew near to the side of the young Bohemian. 'You dance enchantingly,' he said to her in a low tone; 'I never beheld such exquisite expression. By whom were you taught?' 'By the women of our tribe,' she answered. 'Had you no other instructors?' 'None.' 'Strange!' muttered the count. He was silent for a short time, but still continued by the Bohemian's side, with his eyes rivetted upon her. She seemed conscious of his gaze; for she kept her eyes fixed upon the ground, and the 'eloquent blood' spoke in her cheek. 'There can be no deception in this,' thought Oberfeldt; 'this is either nature or the perfection of art; and a creature so young cannot have attained such power of simulation: the soul which now burns in blushes upon that cheek was surely not meant to inform the frame of a wandering Bohemian.' 'May I ask your name?' he added aloud. 'They call me Mabel,' answered the Bohemian. 'Have you no second name?' 'Our tribe are all sprung from the same stock—we are distinguished among each other but by one name.' 'Are your parents among your companions?' asked Oberfeldt, glancing his eyes as he spoke over the rest of the party. 'My parents died while I was yet an infant,' said Mabel; and the count felt pleasure at the answer;—for in the wild features of the Bohemians he traced expression too suited to their lot, to make him feel willing that any of them should have given birth to a being so interesting as that by his side. He was again silent for a few moments, and then added—'Do you stay till the end of the fair?' 'We do.' 'We shall meet again, then,' said the count; 'farewell!' As he turned from her, Mabel raised her large eyes upon him, and for the first time fixedly surveyed him, as he walked away. She looked after him till he disappeared in the crowd; and a heavy sigh struggled from her bosom, as she followed her party to exhibit in another quarter of the fair."

A few insulated passages, and we have done. "I do not wonder that such a character should create a strong effect. In these our days, strong passion is so rare—every thing is so cold and so conventional,—that it is quite natural that the exhibition of intense and headlong feelings should possess powerful interest. Where do we now find love like that of Pyrrhus, of Hermione, of Oreste? Alas!—and a spark of her own ardent feelings overcame, for the moment, the strict caution with which she usually regulated every action and word—'Alas! if such love as this were reciprocal, it would need far beyond the powers even of Racine to paint it. But when, in truth, did any such ever exist?—Where do we

find a woman like Hermione, of whose love a man might indeed be proud—whose love, in a word, deserves the name, a name so often abused, so basely prostituted—where do we find a woman like this whom man is able to appreciate? It is his nature to dread strength of mind, lest it should prove superiority,—to shrink from strength of passion, for he feels nothing within him to answer such as that. For a moment, indeed, he may feel or fancy admiration, even affection, for her; but, in the end, he has always, like Pyrrhus, 'a Troyenne'—a cold, feeble, passionless being, whose strongest love would be pale and poor in the comparison, and which, such as it is, he often does not possess. And yet, it is for such as these that the Hermiones of the real world are abandoned and slighted. * * *

"Light streamed throughout the vast and gilded rooms—rich perfumes loaded the air—music rose in measures of gaiety—and beauty added its crowning influence to this scene of brilliancy and fascination. But where these things do not dazzle and intoxicate, they are apt to breed coldness and disgust;—it is seldom that there is a medium;—on the one hand, it is either a young spirit that is lapped in this false elysium, or it is one which shrinks from itself, and wilfully seeks excitement and forgetfulness; on the other, it is a mind that has tasted of the sparkling draught, and is conscious of its concealed bitterness—that has mingled in such scenes till it knows their falsity and heartlessness, and turns revolted from them to seek the purer and more real feelings of uncorrupted nature. * * *

"But it is always thus: they who commit great crimes, springing from violent passions, ever look with scorn upon lesser sins, rising from more ordinary motives. In addition to that self-deception which exists in all as to their own faults—the moving temptations being almost wholly dwelt on, and the consequent guilt being nearly overlooked,—in addition to this prevailing principle, the very intensity of the crime gives it, in the eyes of its unhappy committer, an adventitious dignity—nay, I incline to believe that the same sentiment exists, though in a minor degree, in even uninterested and unprejudiced persons."

"Those who have never been out of England, where no scene is reckoned passible unless the sun shines directly upon it, to render its temperature endurable, can form no idea of the effect, in a southern climate, of a cool deep valley, winding between hills covered to their tops with the greenest of all possible trees, and admitting, from its narrowness, only sunlight sufficient to throw a gorgeous gleam of gold upon the summit of the tufted woods on one of the hills which bound it. It was through one of these beautiful glens that we now passed. Our road lay along the side of a small brook, which wound down the valley towards the Tagus; and which, coming from the more distant hills, gave the most beautiful freshness to the verdure as it flowed along. The scent of the orange-flowers in bloom added the most delicious fragrance to the air; and though I have been often content to think, with Morris, that 'the shady side of Pall Mall' was as cool and rural a summer residence as the heart of man could desire, yet I confess that the whole scene, its actual beauty, its foreign aspect (which is always in itself romantic), and the reflection of the strange and stirring circumstances which placed me where I was, did, to a certain extent, act upon my senses and my feelings; and, altogether, I undoubtedly arrived at the convent a very different sort of person from what

* "She had the Asiatic eye,
Dark as above us is the sky;
But through it stole a tender light,
Like the first moonrise at midnight;
Large, dark, and swimming in the stream
Which seem'd to melt to its own beam:
All love, half languor, and half fire,
Like saints that at the stake expire."—Byron.

I am when I mount guard at St. James's. The convent itself stands in the most lovely part of this lovely valley. It is a large, white, gable-ended building, with small pinnacles, and a tower to contain the chime of bells. It has not the ancient, stern, and somewhat gloomy appearance of the remains of our old abbeys in England; but yet it does not look in the slightest degree garish or worldly. Standing, as it did when we approached it, and as it must do by far the greater part of the day, in the deep shadow of the hill, and relieved against the fine rich green of the full woods,—it appeared calm and secluded, yet not otherwise than cheerful—solitary in its sense of peacefulness, but not in that of desolation.”

Of the two other tales, the first is very exquisitely touched in many parts, but as a whole, too long for its materials: the other, *Second Love*, a romantic and interesting story, but wanting the originality of its predecessor.

We have a strong objection to make, however, to the painfully frequent introduction of the name of GOD in exclamations on every occasion; and, as a piece of general criticism, we would add, that Mr. St. Leger draws his male characters far too closely after the pattern of mere town profligates. We do not believe that the man of experience in dissipation and vice is the being to fascinate the other sex; on the contrary, one spark of real nature and sincere passion will produce a greater effect than all the knowledge of the world in the world.

Travels in Arabia, comprehending an Account of those Territories in the Hedjaz which the Mohammedans regard as Sacred. By the late J. L. Burckhardt. 4to. pp. 500. London, 1829. Colburn.

It has been said, that a great book is a great evil; if it be so, we have had a visitation of great evils since our last, No. . . . But, like good Christians, we are disposed to receive our afflictions with resignation, and even cheerfulness, and turn them to as beneficial an end as we can. Thus we have already made a praiseworthy use of Clapperton and Lander's quarto;—we have re-considered Mr. Sharon Turner's History, quarto;—we have turned again to Buckingham's quarto, somewhat purified in consequence of our remarks, which were made on a copy previous to publication;—and we now (thinking nothing, as it were, of octavos, duodecimos, and the smaller shoals of 18mos, 24mos, 32mos, and pamphlets) address ourselves with pleasure to a third volume of the valuable *Travels* of Burckhardt, published by authority of the Association for Promoting the Discovery of the Interior of Africa.

This quarto treats of a part of the globe which is possessed of great interest, and which, though amply described by elder historians and travellers, is very imperfectly known in its more modern relations. Burckhardt visited the holy land of Mohammed and his followers about fourteen years ago, when the Pasha of Egypt had defeated and driven out the Wahabys, and superseded the authority of the Sherif of Mekka. An able preface, from the pen of the editor, Sir William Ouseley, prepares us for as perfect a detail of the traveller's residence in the Hedjaz as could be produced from his posthumous papers; and for the fourth and last volume is promised an account of the Arabs of the desert, and particularly the sect of Wahabys. It is unnecessary for us to enter upon any definition of the boundaries, divisions, or names of Arabia; and we therefore commence with our author at Djidda, the port of Mekka, where he ap-

peared, as in his former peregrinations in Syria, Egypt, &c. in the character of a Mussulman.* Now, though Djidda is a town which furnishes much matter of curious observation (and to which we shall probably return), yet as Mekka presents still more striking particulars, we hope we shall be excused if in the first instance we direct our readers' notice to that celebrated city.

At Tayf,† Burckhardt (whose sagacity and acquaintance with the suspicious, mercenary, cunning, and intriguing character of the natives amongst whom he roamed, taught him well how to conduct himself) found that he was rather a prisoner at large than a guest; and disguising his anxious wish to visit Mekka, he procured the means of proceeding thither. Speaking of the pasha, he says—

“To remain for any length of time at Tayf, in a sort of polite imprisonment, was little to my taste; yet I could not press my departure without increasing his suspicions. This was manifest after my first interview with the pasha and the kadhys; and I knew that the reports of Bosari might considerably influence the mind of Mohammed. Under these circumstances, I thought the best course was to make Bosari tired of me, and thus induce him involuntarily to forward my views. I therefore began to act at his house with all the petulance of an Osmanly. It being the Ramadhan, I fasted during the day, and at night demanded a supper apart; early on the following morning I called for an abundant breakfast, before the fast re-commenced. I appropriated to myself the best room which his small house afforded; and his servants were kept in constant attendance upon me. Eastern hospitality forbids all resentment for such behaviour; I was, besides, a great man, and on a visit to the pasha. In my conversations with Bosari, I assured him that I felt myself most comfortably situated at Tayf, and that its climate agreed perfectly with my health; and I betrayed no desire of quitting the place for the present. To maintain a person in my character for any length of time at Tayf, where provisions of all kinds were much dearer than in London, was a matter of no small moment; and a petulant guest is every where disagreeable. The design, I believe, succeeded perfectly; and Bosari endeavoured to persuade the pasha that I was a harmless being, in order that I might be the sooner dismissed. I had been six days at Tayf, but seldom went out, except to the castle in the evening, when

* After residing awhile at Djidda, he went to Tayf, the head quarters of the Egyptian army, and thence returned to Mekka as a pilgrim, and performed the usual rites, which enabled him to witness and describe the Mohammedan ceremonies, see the mosque and famous Kaaba, &c. &c. From Mekka he went to Medina, which also, together with places in the vicinity, he describes: from Medina he travelled to Yembo, and from Yembo to Cairo; and accounts of the route, &c. of Yembo close this volume.

† The following curious anecdote may here be referred to: “During my stay at Tayf (says the author), letters arrived from Constantinople, across the desert, by way of Damascus, bringing to the pasha a Turkish translation of the treaty of peace concluded at Paris. After having read it several times, he ordered his Turkish writer to explain it to me in Arabic, word for word. This occupied us in a private apartment several hours. I then returned to the audience, and was desired by the pasha to tell him my opinion of the treaty. Referring to a Turkish atlas, copied from European maps, and printed at Constantinople, he made me point out to him the new limits of Belgium, the Islands Mauritius and Tobago, the position of Genoa, &c. &c. With respect to the latter place, a curious mistake occurred. It had been stated to me that Genoa was ceded to the Swedes, which I could not credit. Upon inquiry, I found that Genoa and Switzerland were meant; a town and country which, I am sorry to say, were not comprised in the geographical knowledge of a Turkish viceroy. The mistake, however, was easily made; for in Turkish, Genoa is written like Genoa, and Sweden is pronounced Shwit.”

Bosari asked whether my business with the pasha was likely to prevent me much longer from pursuing my travels, and visiting Mekka. I replied that I had no business with the pasha, though I had come to Tayf at his desire; but that my situation was very agreeable to me, possessing so warm and generous a friend as he, my host. The next day he renewed the subject, and remarked that it must be tiresome to live entirely among soldiers, without any comforts or amusements, unacquainted, besides, as I was, with the Turkish language. I assented to this; but added, that being ignorant of the pasha's wishes, I could determine on nothing. This brought him to the point I wished. “This being the case,” said he, “I will, if you like, speak to his highness on the subject.” He did so in the evening, before I went to the castle; and the pasha told me, in the course of conversation, that as he understood I wished to pass the last days of Ramadhan at Mekka (a suggestion originating with Bosari), I had better join the party of the kady, who was going there to the feast, and who would be very glad of my company. This was precisely such a circumstance as I wished for. The departure of the kady was fixed for the 7th of September, and I hired two asses, the usual mode of conveyance in this country, in order to follow him.”

This was an excellent *ruse*, and for an excellent purpose: we have met with many persons in this country who made themselves very troublesome inmates in the houses of their entertainers, without having so plausible a pretext for it, or going off when their disagreeable behaviour had induced their hosts to smooth the way for that event. Burckhardt, on the contrary, took leave, and set out for Mekka; and he relates as follows:

“In passing by Wady Mohram, I assumed the *ihram*, as being now for the first time about to visit Mekka and its temple. The *ihram* consists of two pieces of linen, or woollen, or cotton cloth, one of which is wrapped round the loins, and the other thrown over the neck and shoulders, so as to leave part of the right arm uncovered. Every garment must be laid aside before this is put on. Any piece of stuff will answer the purpose; but the law ordains that there shall be no seams in it, nor any silk or ornaments; and white is considered preferable to any other colour. White Indian cambric is usually employed for the purpose; but rich hadjys use, instead of it, white Cashmere shawls which have not flowered borders. The head remains totally uncovered. It is not permitted to have the head shaved, in conformity with the oriental habits, until it is permitted also to lay aside the *ihram*. The instep must likewise be uncovered: those, accordingly, who wear shoes, either cut a piece out of the upper-leather, or have shoes made on purpose, such as the Turkish hadjys usually bring with them from Constantinople. Like most of the natives, I wore sandals while dressed in the *ihram*. Old age and disease are excuses for keeping the head covered; but this indulgence must be purchased by giving alms to the poor. The sun's rays become extremely troublesome to persons bare-headed; but although the law forbids that the head should be protected by anything in immediate contact with it, there is no prohibition against the use of umbrellas, and with these most of the northern hadjys are provided; while the natives either brave the sun's rays, or merely tie a rag to a stick, and make a little shade, by turning it towards the sun. Whether assumed in summer or in winter, the *ihram* is equally inconvenient and prejudicial to health.

particularly among the northern Mohammedans, who, accustomed to thick woollen clothes, are at this period obliged to leave them off for many days; yet the religious zeal of some who visit the Hedjaz is so ardent, that if they arrive even several months previous to the Hadj, they vow on taking the ihram, in approaching Mekka, not to throw it off till after the completion of their pilgrimage to Arafat; and thus they remain for months covered, night and day, only with this thin cloak; for the law forbids any other covering even at night; but with this few hadjys strictly comply. When the ancient Arabs performed their pilgrimage to the idols at Mekka, they also took the ihram; but that pilgrimage was fixed to a certain period of the year—probably autumn; for although the Arabs computed by lunar months they inserted one month every three years; and thus the month of the pilgrimage did not vary in its season, as at present. The intercalation of a month, established two hundred years before Islam, was prohibited by the Koran, which ordained that the same pilgrimage should be continued, in honour of the living God, which had before been performed in honour of idols, but that it should be fixed to a lunar month; thus its period became irregular. And in the space of thirty-three years was gradually changed from the depth of winter to the height of summer. The person covered by the ihram, or, as he is called, El Mohrem, is not obliged to abstain from particular kinds of food as ancient Arabians, who, during the time of wearing it, did not taste butter, among other things; but he is enjoined to behave decently, not to curse, or quarrel, not to kill any animal not even a flea on his body, nor to communicate with the other sex. The ihram of the women consists of a cloak, which they wrap completely about them, with a veil so close that not even their eyes can be seen: according to the law, their hands and ankles must be covered; but this rule they generally disregard.

The pilgrim reached Mekka about mid-day and says—"Whoever enters Mekka, whether pilgrim or not, is enjoined by the law to visit the Temple immediately, and not to attend to any worldly concern whatever, before he has done so. We crossed the line of shops and houses, up to the gates of the mosque, where my ass-driver took his fare and set me down. Here I was accosted by half-a-dozen metowaf, or guides to the holy places, who knew, from my being dressed in the ihram, that I intended to visit the Kaaba. I chose one of them as my guide, and, after having deposited my baggage in a neighbouring shop, entered the mosque at the gate called Bab-es'-Salam, by which the new-comer is recommended to enter. The ceremonies to be performed in visiting the mosque are the following: 1. certain religious rites to be practised in the interior of the temple; 2. the walk between Szafa and Meroua; 3. the visit to the Omra. These ceremonies ought to be repeated by every Moslem whenever he enters Mekka from a journey further than two days' distance, and they must again be more particularly performed at the time of the pilgrimage to Arafat."

These ceremonies are particularly described, but at too great length for the limits of any review; and we pass to the remarkable account of the rites which preceded them, and on which they seem to have been founded, as many of the Roman Catholic rites were upon those of Paganism.

Prior to the age of Mohammed, when idolatry prevailed in Arabia, the Kaaba was regarded as a sacred object, and visited with

religious veneration by persons who performed the towaf nearly in the same manner as their descendants do at present. The building, however, was, in those times, ornamented with three hundred and sixty idols, and there was a very important difference in the ceremony; for men and women were then obliged to appear in a state of perfect nudity, that their sins might be thrown off with their garments. The Mohammedan Hadj or pilgrimage, and the visit to the Kaaba, are, therefore, nothing more than a continuation and confirmation of the ancient custom. In like manner, Szafa and Meroua were esteemed by the old Arabians as holy places, which contained images of the gods Motam and Nehyk; and here the idolaters used to walk from the one place to the other, after their return from the pilgrimage to Arafat. Here, if we may believe Mohammedan tradition, Hadjer, the mother of Ismayl, wandered about in the Desert, after she had been driven from Abraham's house, that she might not witness the death of her infant son, whom she had laid down almost expiring from thirst; when the angel Gabriel appearing, struck the ground with his foot, which caused the well of Zemzem immediately to spring forth. In commemoration of the wanderings of Hadjer, who in her affliction had gone seven times between Szafa and Meroua, the walk from one place to the other is said to have been instituted. El Azrak relates that, when the idolatrous Arabs had concluded the ceremonies of the Hadj at Arafat, all the different tribes that had been present, assembled, on their return to Mekka, at the holy place called Szafa, there to extol, in loud and impassioned strains, the glory of their ancestors, their battles, and the fame of their nation. From each tribe, in its turn, arose a poet who addressed the multitude. "To our tribe," exclaimed he, "belonged such and such eminent warriors and generous Arabs; and now," he added, "we boast of others." He then recited their names, and sang their praises; concluding with a strain of heroic poetry, and an appeal to the other tribes, in words like the following:—

Let him who denies the truth of what I have said, or who lays claim to as much glory, honour, and virtue, as we do, prove it here! Some rival poet then arose, and celebrated in similar language the equal or superior glory attached to his own tribe, endeavouring, at the same time, to undervalue or ridicule his rival's pretensions. To allay the animosity and jealousies produced by this custom, or, perhaps, to break the independent spirit of his fierce Bedouins, Mohammed abolished it by a passage in the Koran, which says:—"When you have completed the rites of the pilgrimage, remember God, as you formerly were wont to commemorate your forefathers, and with still greater fervency." Thus, probably, was removed the cause of many quarrels; but, at the same time, this stern lawgiver destroyed the influence which the songs of those rival national bards exercised over the martial virtues and literary genius of their countrymen. The visit of the Omra was likewise an ancient custom. Mohammed retained the practice; and it is said that he frequently recited his evening prayers on that spot. Having completed the fatiguing ceremonies of the Towaf and Say, I had a part of my head shaved, and remained sitting in the barber's shop, not knowing any other place of repose. I inquired after lodgings, but learned that the town was already full of pilgrims, and that many others, who were expected, had engaged apartments. After some time, however, I found a man who offered me

a ready-furnished room: of this I took possession, and having no servant, boarded with the owner. He and his family, consisting of a wife and two children, retired into a small, open court-yard, on the side of my room. The landlord was a poor man from Medina, and by profession a metowaf, or *cicerone*. Although his mode of living was much below that of even the second class of Mekkawys, yet it cost me fifteen piastres a day; and I found, after we parted, that several articles of dress had been pilfered from my travelling sack; but this was not all: on the feast-day he invited me to a splendid supper, in company with half a dozen of his friends, in my room, and on the following morning he presented me with a bill for the whole expense of this entertainment. The thousands of lamps lighted during Ramadhan in the great mosque, rendered it the nightly resort of all foreigners at Mekka; here they took their walk, or sat conversing till after midnight. The scene presented altogether a spectacle which (excepting the absence of women) resembled rather an European midnight assemblage, than what I should have expected in the sanctuary of the Mohammedan religion. The night which closes Ramadhan, did not present those brilliant displays of rejoicing that are seen in other parts of the East; and the three subsequent days of the festival are equally devoid of public amusements. A few swinging machines were placed in the streets to amuse children, and some Egyptian jugglers exhibited their feats to multitudes assembled in the streets; but little else occurred to mark the feast, except a display of gaudy dresses, in which the Arabians surpass both Syrians and Egyptians. I paid the visit, customary on occasion of this feast, to the kadhy; and at the expiration of the third day, (on the 15th of September,) set out for Djidda, to complete my travelling equipments, which are more easily procured there than at Mekka. On my way to the coast, I was nearly made prisoner at Bahra by a flying corps of Wahabys. My stay at Djidda was prolonged to three weeks, chiefly in consequence of sore legs; a disease very prevalent on this unhealthy coast, where every bite of a gnat, if neglected, becomes a serious wound. About the middle of October I returned to Mekka."

Here the author enters upon a minute description of the place and its celebrated buildings; but our space forbids our discussing these copious topics at present.

Twelve Years' Military Adventures.

In continuing our notice of this work we are compelled, this week, to brevity: but we purpose further illustration. The following is a smart picture of European manners in the East:—

"I know there were many, particularly among the younger branches of the army, who complained that they could not get into society at the presidency; but I cannot help thinking that the fault was, in some degree, their own. They were either too proud or too idle to seek it. Sullenly shutting themselves up in their barracks, or in obscure quarters in the Black Town, they expected that men accustomed to have court paid to them for their situations, or engaged in official business, would, or could, go out of their way to find them out. If at a ball, they would complain of the impossibility of procuring partners; but this they owed chiefly to their want of acquaintance; for I did not observe that the ladies—that is the married ones—gave themselves greater airs in India than

dewhere: In fact, a *mère de famille*, from the scarcity of petticoats, thinks it becomes her to be as gay, if not gayer, than single ladies in England. With a Miss it is quite different; for if her appearance be such as to render her desirable as a partner in a dance, she is also, for the same reason, considered by many as a desirable partner in a more important concern, and therefore not likely to be left at liberty to dance with a subaltern, even if she should feel disposed to accept that honour, which is not at all probable. Indeed, the matrimonial market in India is much the same as other markets for live stock, where the best possible price is obtained for the article. The first bid after the arrival of a fleet from Europe may be considered as a kind of fair day, where the new-comers of the softer sex are shown off, and where every family, that has the advantage of possessing a fresh attraction, whether of its own or consigned to it from the mother country, takes care to appear. The rank or property of the squire is the price offered for the article; and in estimating this, the gradations from a member of council or general to an ensign or assistant-surgeon are as well understood and as clearly defined as the gradations of the currency from a sovereign to a farthing, or from a gold mohur to a doody; the civil and military branches of the service preserving the same relative value that is assigned to them in the tables of presidency published in the East India Directory. The system pursued in disposing of the fair objects is exactly the same as that used at the sales of king's stores in a dock-yard, where the auctioneer begins by putting the highest price on the article, and keeps lowering and lowering, till some bidder assents to the price and bears off the goods. First, the young lady is instructed to set her cap at a civilian high in office, or at an officer high on the staff. If in the course of a few months there is no bidding at that price; then she condescends to cast a smile upon the second rank, and so on to the bottom. Should she possess any pretensions to beauty, she is soon snapped up; for the scarcity of the article prevents people from being very fastidious in their taste. If of the true European white, she is almost sure to go off tolerably well; but no mixture of the Asiatic will suit persons of my rank. Should the young lady continue on hand till the arrival of a fleet conveying a fresh supply of fair ones, she is, of course, thrown somewhat into the back-ground, and her chances of a good match considerably diminished; so it often happens, that females are thus compelled to accept offers which, at first starting, they would have rejected with disdain, and in some instances to take the very men whom they once treated with scorn. But she must be a hapless virgin indeed, and possessed of no ordinary attractions, who is compelled, as a *dernier ressort*, to put up with an ensign of native infantry, by whom she may be borne off to spend the honey-moon in a hill-fort. How happy marriages in general prove among Europeans in India may hence be inferred."

At the end of Vol. I. there is a story which we may put into position with this sketch. "In every society there will always be a certain number of low-minded persons, who pay no respect but to rank or riches. One family I recollect in particular at the Presidency, which was so notorious in this respect, that a trick, which was played them by a captain of the navy whom they had offended, afforded considerable amusement, if not gra-

tification, to the greater part of the settlement. Expecting to meet this family at the assembly-rooms, he brought a young midshipman ashore with him, and introduced him as the *Honourable* Mr. so and so. As he anticipated, the bait took, and a set was immediately made at this sprig of nobility by the party in question. The daughters monopolised him as a partner during the evening. His dancing was admired, his face pronounced truly patrician, his manners considered superior, and even his *gaucheries* set down as the *véritable ton*. They begged as a favour that the captain would allow him to stay ashore with them for a short time—they would take such care of him. To which the captain, after some demur, for 'he was given into his special charge,' consented. The next day Middy is taken round to see the lions, and to be introduced to their most fashionable acquaintance. His cocked hat is rather the worse for a sea-voyage, and his dirk is grown shabby; they stop at the Europe shops, and new ones are presented to him by the hands of the young ladies. A ball is given on purpose for him. In short, every possible attention is paid to the little *honourable*, whose noble parents will doubtless seek out the family on its return to England, to repay the obligation; and already had they begun to anticipate the pleasure which they should enjoy at the countess's fashionable parties, and the advantages they should derive from being introduced into the *beau monde* through the means of her ladyship. In fact, Middy was in clover. To be obliged to part with their young friend at last was painful. It cost the fair members of the family some tears, and gained Middy some caresses, and, what was of more value, some substantial tokens of friendship; and fame went so far as to say that he carried away a lock of hair belonging to one of the young ladies. Nor did they part without mutual promises to renew the acquaintance in England. The next day, as the ship was about to sail, the master, a gruff, tobacco-chewing tar, waited upon the family, to thank them for their kindness to his son. Conceive their astonishment! Not long afterwards they took their passage for England; not, certainly, to renew their acquaintance with their *honourable* guest and his noble parents, though, as was shrewdly suspected, to escape the ridicule with which this story had covered them."

The author, however, rates Mrs. Grahame for a libel, in accusing the ladies of India of "making too free with the bottle;" but we must leave discussions for a batch of extracts and anecdotes.

Indian Fruits.—"One thing disappointed me a good deal—that was, the flavour of the East India fruits; for, excepting one or two scarce kinds of the mango, procured with difficulty, hardly any of them are worth eating, having generally a rough pungent taste, without that happy mixture of sweet and sour so agreeable to the palate. I was the more surprised at this, as, from having lived in a cold climate, where Pomona courts heat in every shape, I had always associated in my mind sun-beams and delicious fruit, considering one as the necessary consequence of the other. There is, to be sure, at a place called Santghur about 120 miles from Madras, close under the Ghauts, a garden belonging to the Nabob of Arcot, which produces oranges of a very superior kind; but as I have not heard of any other place in which they arrive at perfection, this agreeable fruit must be considered altogether as an exotic in Hindostan."

Captain Grose.—"This circumstance reminds me also of a story which was told me of Captain Grose, of the Madras army, who was killed at the siege of Seringapatam. He was son of Grose the antiquary, whose talents he inherited. He was remarkable for his wit and humour, and his memory is still cherished by all the lovers of fun who knew him. Having had occasion to make some communication to the head-quarters, he was received much in the usual manner by one of the understrappers, who told him that no verbal communications could be received, but that what he had to say must be sent through the medium of an official letter. He happened, some days afterwards, to have a party dining with him, and among others were a few members of the staff. In the midst of dinner a jackass came running among the tent-ropes, exerting his vocal organs in a manner by no means pleasing to the company. Grose immediately rose, and thus addressed the intruder: 'I presume, sir, you come from head-quarters. I receive no verbal communications whatever, sir. If you have any thing to say to me, sir, I beg you will commit it to paper.' The will which Captain Grose made the night before the storming of Seringapatam, under a presentiment of his fate, was quite in character. It began with the apostrophe of 'O my nose!' and among other bequests contained the present of a wooden sword to an officer of rank to whom he bore no good will, and who was supposed not to be endowed with any superfluous quantity of personal valour."

Besieging.—"To prevent as much as possible the destruction of lives from the fire of the enemy, the practice is to post a man on the flank of the battery, whose business it is to give notice of every shot fired from such guns as are directed against the work at which he is stationed. He makes the signal the moment he perceives the flash of the gun, on which every man who happens to be exposed at the moment shelters himself till the shot has taken place or passed over. This, however, cannot always be done; for, where the fire is kept up with rapidity, or there are many guns engaged on each side, no effectual warning could be given, and the delay would be great. The mention of this practice reminds me of a circumstance which occurred during the siege of Seringapatam. It happened that one of those enormous engines, called Malabar guns, was fired at our works. The man stationed on the flank of the battery for the purpose above-mentioned, seeing the flash, gave the usual signal, 'Shot!' A moment or two afterwards, seeing a large body taking its curving course through the air, he corrected himself by calling out 'Shell!' As the ponderous missile (for it was an enormous stone-shot) approached, he could not tell what to make of it; and his astonishment vented itself in the exclamation of 'Blood and ouns, mortar and all!'"

Accident in Battle.—"In the course of the action I was twice struck by shot, but not in such a manner as to be returned on the list of wounded. The first was a graze in the wrist, which cut through my coat and shirt, but carried away only a small portion of my skin. The next was from a spent grape-shot, which hit me in the pit of the stomach, so as to take away my breath. This, with the fright, caused me nearly to fall from my horse. I thought, of course, that I was shot through the body; and, not liking to stoop my head, for fear of driving the ball in further, I groped about with my hand for the hole, when, not finding any, I ventured to look down, and

could hardly believe that I had escaped my death-wound; though, as it may be supposed, I was not a little pleased to find that I was more frightened than hurt."

SIGHTS OF BOOKS.

Belgic Pastorals; and other Poems. By Francis Glasbe, Esq. 12mo. pp. 184. London, 1829. J. Rodwell.

GHOSTS of our grandmothers, looking pretty and pastoral in pictures, with small straw hats, broad green sashes, a crook, and a little dog or lamb,—we did think pastorals and shepherdesses were now among the antiquities of literature; and it was not till we looked at 1829 on the title-page, that we believed *Belgic Pastorals* to be an effusion of to-day. A more complete collection of rubbish we have not for some time perused. The following titles will give a notion of the subjects—the ensuing verse, of the style. *Pastorals*: "Strephon and Hylas," (these gentlemen converse on the events of the French campaign in the Netherlands, very properly mixing up Napoleon, "Apollo, Mercurius, and the rest,"—"Damon and Colin,"—"Thyrsis and Damon," &c. *Song*: "Cupid, sportive little boy!" "To Eliza," "to Lydia," "to Mary," "to Rosa," &c. &c. These ladies are addressed in elegant little trifles: for example—

"My Mary is the sweetest girl
The village can produce;
The prettiest and the neatest belle,
And she is gay and spruce."

We will apply what our author says of heroes to poets toiling up "the steep Parnassus:"

"I've often seen stout soldiers, sickly, pale,
With bilster'd feet upon this hard road fall,
Knocked up."

Mr. Glasbe must console himself by this being a common occurrence.

The Fate of Graysdale: a Legend. 2 vols. 12mo. London, 1829. J. Duncan.

If this work is by what we believe it to be, a young writer, we must say it is one of considerable promise, evincing talent, but formed on a wrong model. Mysterious old women have had their day, and ghosts are ill calculated for a modern *dénouement*. We do not deny but that a very harrowing tale of "murders horrible" and "vexed sprites" may still be told or read with great effect by a waning midnight fire; but the mind must be previously worked up; and there is nothing in the story before us to warrant its arriving at the same conclusion as the Old English Baron. Gentlemen of most fair report, but haunted by some viewless crime, are a very common circulating commodity; and pedlars, after Wayland Smith and Harry Birch, are goods that hang somewhat on hand. But imitation, the besetting sin of young authors, is here redeemed by more sterling material. The story does not let the attention flag, but is told throughout very spiritedly: ample knowledge of the manners, &c. of the time is displayed, without the least pedantry; some of the characters are very well drawn, the elder Meredith particularly; and, as a whole, the *Fate of Graysdale* will have very sufficient attraction for the novel-reader.

The Annual Peerage of the British Empire for 1829, &c. 2 vols. 18mo. London, Saunders and Otley.

VERY great and well-conceived improvements have been made in this publication; and this, its third year, is, consequently, far superior to its preceding appearances. The volumes are beautifully got up, and the arms, occupying eighty-eight pages, engraved in the best style

—not over-laboured, but elegant and distinct. As far as we have put the letter-press to the test of examination, it seems to us to be at once ample and accurate; and by the omission of long genealogies (which can always be obtained from former editions of any peerages, and which only swell new works of this annual class with repetition), the compilers have been enabled to give much more of the existing state of families than we have hitherto found in productions of the kind. Thus we are made acquainted with collateral branches, and have a great deal of other useful information. We cordially recommend these volumes.

True Stories from the History of Ireland.

By John James M'Gregor.

A NEAT little compilation, and well adapted to the use of beginners; but with nothing of either research or style to call for more particular notice.

A VERY curious work, entitled *Mémoires, Correspondance, et Opuscules inédits, de Paul Louis Courier*, has recently made its appearance in Paris, where it has excited no ordinary degree of interest. Paul Louis Courier, who is well known in France by several satirical works, was formerly in the French artillery, in which, although a common soldier, he asserted his opinions with a boldness which could scarcely be expected in a general officer. After the battle of Wagram, in which, according to his opinion, one of the generals, Cæsar Berthier, had not conducted himself with Roman bravery, Courier, on seeing the military chest of this officer with his name inscribed in large letters, got off his horse, and having with the point of his sword erased the word Cæsar, cried out to the conductor,—"Go and tell your master that he may continue to call himself Berthier, but that I forbid him the use of the Cæsar." When in Italy, the time of Courier was alternately passed on the field of battle, and in studying Greek, or exploring libraries for manuscripts. In this way he discovered the famous fragment of the romance of Daphnis and Chloe, by Longin,—and many others. When Buonaparte became an emperor, was making kings and queens of all his dynasty, and Joseph Buonaparte had been created King of Naples, Courier, then an officer, was on service at court, of which he relates some amusing anecdotes. Among others is the following, dated in 1806: "Méot, the king's cook, is a great favourite with his majesty, who is, they say, the only person with whom he likes to converse. 'Méot,' said the king to him one day, 'you are always thrusting upon me some of your family—brothers, nieces, nephews, and cousins; you expect all to be created great lords and ladies.' 'Sire,' replied Méot, without the least embarrassment, 'it is my dynasty.'"

ORIGINAL CORRESPONDENCE.

Paris, Jan. 11.

M. AUGER having terminated his days by a plunge into the Seine, has furnished a copious subject for conversation during the past week. His friends pretend that "too much learning had made him mad;" others say that he had long premeditated this act of suicide, and was in the full enjoyment of his reason when he committed it.

We have been nearly suffocated since the first of the year, not from heat, but with the dust from literary brains, which booksellers and journalists puff in every direction; it being, say they, salutary to our intellects: yet amongst

the numerous new publications which have appeared, scarcely any are worthy of notice. Genius does not draw from its own resources; therefore, until it creates instead of imitating, we shall have no original compositions.

Government, I believe, intends to favour the establishment of libraries for the use of the working classes and servants. This benevolence on its part, no doubt arises from the same motive as that which influenced Queen Catharine to supply her domestics with books, namely, to keep the d—l out of their heads.

The triumphal arch is at length terminated: the group of the restoration, on a car drawn by four horses, placed on the top of the arch, gives it a very majestic appearance, and adds much to the magnificence of the Thuilleries. The two new streets, du Trocadero and du Duc de Bordeaux, which lead into the rue Rivoli, are nearly completed; so that by degrees Paris will become habitable. Great preparations are making for a ball which is to be given to-morrow evening by the Duchesse de Berri: numbers of English are invited: she is said to be very partial to that nation.

The new bridge of *fil de fer*, I hear, rather in a trembling condition: some fears are entertained of its giving way, notwithstanding the breadth of the pillar which supports it in the middle.

Mr. Bulwer's new work, the *Disowned*, has been announced: in its comparison with *Pelham*, it is not so much lauded as a novel; but *pour l'homme qui cherche des idées profondes et des observations justes*, it will, observes the reviewer, be read with the deepest interest.

Some of the new journals have attacked Mlle. Mars for her performing juvenile characters: this, however, is scarcely fair; for let her rôle be what it may, she never fails to interest; and no young actress can in the least supply her place.

ARTS AND SCIENCES.

FERNANDO PO.

A PRIVATE letter from this island, which we have seen, mentions the discovery of the tea-tree as indigenous. The young colony was in an exceedingly prosperous state; and the conduct of Captain Owen, who had assumed the civil situation of governor, had given general satisfaction, both to the natives and to those under his orders. Several slave-ships had been intercepted and captured by the boats of the Eden, now commanded by Captain Harrison, who left England as a volunteer with Captain Owen, when the settlement at Fernando Po was projected; and there can be no doubt that the anticipations founded on the situation of the island, that the inhuman traffic in slaves would thereby receive an important check, will be fully realised.

PROPOSED SETTLEMENT ON THE WESTERN COAST OF NEW HOLLAND.

HIS Majesty's ship *Sulphur*, which sailed last week from Chatham, with a detachment of troops and stores for the proposed settlement on the Swan River, has been driven into Plymouth by stress of weather, where it is understood some alterations in her arrangement will take place, with a view to the better accommodation of those embarked.

ANTEDILUVIAN BOTANY.

AT a recent sitting of the Académie des Sciences, M. Adolphe Brongniart read a very singular paper, entitled, "General observations on the nature of the vegetation which covered the surface of the earth at the various

epoch of the formation of its shell." According to M. Brongniart, vegetable fossils, studied in the order of their creation, indicate the existence of three grand periods; during each of which vegetation has preserved the same essential characters; while its characters are totally different when it passes from one of those periods to another. The first, or most ancient period, comprehends the space of time which elapsed between the earliest deposit of earthy layers of sediment, and the deposit of the formations of coal; which latter may be considered as resulting from the destruction of the primitive vegetation of the globe. The antiquity of the layers in which the vegetables belonging to this earliest period are found, proves that life began on earth with the vegetable kingdom. During the whole of that period, only animals destitute of vertebrae existed on the spots of earth which were uncovered; and it is doubtful whether there were any fishes in the sea. After this period, we begin to find a new vegetation, quite different from the former; and which continued until the period of the chalk deposits. During that period, it does not appear that there were any mammiferous animals on the earth; which was inhabited by monstrous reptiles, endowed by nature with the power of flying and swimming. The third period is that during which have occurred the last deluges of which our earth has been the scene, with the intervals which have allowed the propagation of many kinds of animals now lost, as well as of those still existing. The fossil remains of trees, such as the American fern-tree, to the luxuriance of which, warmth and moisture are necessary, belonging to the first of the above-mentioned periods, are of extraordinary size, being above double the height of that of the trees of the same species now growing; from which circumstance M. Brongniart infers, that at that period the temperature of the atmosphere was much higher, and the general humidity much greater, than at present. The paper contains a great many curious and interesting details, into which we have not space to enter.

TURKEY.

At a recent sitting of the French Geographical Society, one of the members read a report on a work by the late General Andréossy, entitled, "Constantinople and the Bosphorus in the years 1812, 1813, 1814, and 1816." In the introduction, the author sketches the vicissitudes undergone by the ancient Byzantium. To the historical description of Constantinople succeeds a brief view of the political and private conduct of the reigning sultan, Mahmoud II., to whom the author pays a tribute of praise for the ability and firmness which he has displayed since his accession to the throne, accusing him of only one error,—the treaty of Bucharest, signed on the 28th of May, 1812, the effect of which was to place Turkey in a false position with reference to its formidable adversary, Russia. The body of the work is divided into three books. The first treats of the situation of the Ottoman empire; the second is devoted to the canal of Constantinople, and its neighbourhood. The third part of the work consists of an account of the manner in which Constantinople is supplied by water, both by aqueducts and by subterraneous conduits; and General Andréossy considers the system superior to any which has been adopted in the other parts of Europe. Several of the notes at the end of the respective books are exceedingly interesting; among others, a notice of the first anatomical and medical work

printed at Constantinople, by order of Mahmoud, in 1812; and a biography of the ambassadors from France resident in the capital of the Ottoman empire, from 1535 to 1826. There is also an elaborate map of Constantinople and of the Bosphorus.

DISCOVERIES OF GOLD IN RUSSIA.

THE newspapers, some time ago, gave a long account of some discoveries of gold in the Russian empire, which were stated to be so considerable as to enable the autocrat to wage eternal war against the Turks, without the aid of the Rothschilds and Barings of other countries. The great discoverer of these treasures was said to be a M. Potau, an Englishman, of French parents, residing in London. We now find that the discovery was limited to a mass of pure gold of no very great value; and that the discoverer, M. Ponteau, and not Potau, has not had the smallest testimony of approbation from the sovereign into whose service he has entered.

LITERARY AND LEARNED.

OXFORD, Jan. 17.—Wednesday last, being the first day of Hilary Term, the following degrees were conferred:—

Master of Arts.—Rev. J. A. La Trobe, St. Edmund Hall.

Bachelors of Arts.—G. A. Browne, All Souls' College; J. White, Queen's College; T. Dry, Merton College.

ROYAL SOCIETY.

JAN. 8.—A paper was read, entitled "On the dip of the magnetic needle in London, in August 1828; by Capt. Edward Sabine, of the Royal Artillery, Secretary."

This paper commences by noticing that the Philosophical Transactions contain the record of observations on the dip of the needle in London from the early part of the last century to the present time: that these observations all concur in shewing a progressive decrease of the dip during the whole period in question; but that they are insufficient in number and frequency, and the earlier ones particularly, in the required accuracy, to enable us to determine whether the annual decrease has been uniform or otherwise.

The author having taken much pains to obtain a correct determination of the dip in the Regent's Park in August 1821 (published in the Philosophical Transactions for 1822), repeated his observations in August 1828, at the expiration of seven years from the former determination,—an interval which he considered sufficient to throw light on the rate at which the dip is at present diminishing. In consequence of the increase of buildings in the Regent's Park, he was induced to change the place of observation to the Horticultural Society's garden at Chiswick: the distance apart is about five miles, but the direction is as nearly as possible that of the line of equal dip.

The apparatus, modes of observing, and needles employed, are fully described. The needles were four in number—one of the ordinary construction; a second fitted with Professor Meyer's apparatus for avoiding the errors arising from the non-coincidence of the centres of gravity and motion; a third, having a cross of wires attached to the axis, on the well-known plan of Dr. Mitchell; and a fourth, devised by Mr. Dollond, the middle of which is a cube perforated at right angles, so that the axis may be inserted in eight different ways.

In addition to his own apparatus and needles, the author obtained from the Colonial Department the use of a smaller apparatus, with a needle on Professor Meyer's plan, the same which was used by Capt. Franklin on his last

land expedition. The observations with this apparatus were made by Mr. David Douglas, of the Horticultural Society. The results were as follow:—

With the ordinary needle	69° 46.1
With Meyer's needle	69 47.4
With the needle having an adjustable axis	69 38.3
With Mr. Dollond's needle	69 51.7
With the smaller apparatus	69 51.4

Dip in London in August 1828

69 47 N.

From the observations of 1821 and 1828, the author finds a decrease in the dip in London of 17'·5 in seven years, or an annual decrease of 2'·5.

The average annual decrease for the century preceding 1821 appears, from the most authentic observations, to have exceeded 3'. On examining the series of observations made on the dip in Paris since 1798, by MM. Humboldt, Gay Lussac, and Arago, the author finds a corresponding indication of a recent diminution in the yearly decrease of the dip; it appearing, by those observations, that the average yearly decrease in the first half of the period between 1798 and 1828 exceeded 4'·75, and in the second half fell short of 3'. He concludes by remarking that a repetition of the observations in London, at the expiration of another seven years, and a continuation of those at Paris, will probably afford a decisive indication on this point; and notices, in case the annual change shall prove to be diminishing in this part of the world, the importance of determining the precise period at which the dip shall become stationary, and the minimum to which it shall then have arrived.

JAN. 16th.—"Observations relating to the Function of Digestion." By A. P. W. Philip, M.D. F.R.S., &c.—The author, referring to his former papers, published in the Phil. Trans. concludes that digestion requires for its due performance, both a proper supply of gastric secretion, and a certain muscular action in the stomach; the latter circumstance being needful for the expulsion of that portion of food which has been acted upon by the gastric juice. Nervous power is necessary for secretion; but the muscular action of the stomach being excited by the mechanical stimulus of the contents of that organ, is independent of the nervous power. It had already been shewn by the author, that after the removal of a portion of the eighth pair of nerves, the galvanic influence directed through these nerves will restore the secretion of gastric juice. But Messrs. Breschet and H. Milne Edwards have lately endeavoured to prove that the same effect results also from mechanical irritation of the lower portions of the divided nerves. The author points out several circumstances which appear to have been overlooked by these gentlemen, and which he thinks invalidate the conclusions they have deduced from their experiments. He states that a certain quantity of digested food will always be found in the stomach of the animal for five or six hours after the operation, and even after the lapse of ten or twelve hours, from its being less completely changed, and therefore expelled more slowly than in the natural state. The paper concluded with the recital of experiments made for the author by Mr. Cutler, in which the contents of the stomach of a rabbit, whose eighth pair of nerves, after excision, had been kept mechanically irritated, were compared with those of another rabbit in which the nerves had not been irritated, and of a third which had been left undisturbed. All those who witnessed the result of this experiment, among whom was Mr. Brodie, were convinced that the irritation of

the nerves had no effect whatever in promoting the digestion of the food, neither did it at all contribute to relieve the difficulty of breathing consequent upon the section of the nerves.

SOCIETY OF ANTIQUARIES.

JANUARY 22.—William Richard Hamilton, esq. in the chair. A communication was read from Mr. Frederick Madden, one of the librarians of the British Museum, respecting an account of the walling of the town of New Ross, in Ireland, in the year 1265, among the Harleian MSS., written by Friar Michael, of Kildare.

Mr. Hoffman was ballotted for and duly elected; and it was announced from the chair that the ballot for Henry Crabbe Robinson, esq. of the Inner Temple—James Gooden, esq. of Tavistock-square, and Nicholas Aylward Vigora, esq. F.R.S., of Bruton-street, would take place on Thursday, the 29th of January.

KING'S COLLEGE.

We have pleasure in allaying the apprehensions of the inhabitants of, and around, the Regent's Park, who petitioned against the introduction into the midst of them, of the learning and population of King's College, by stating that, in all probability, the eastern side of Somerset House will be the site of this structure. Mr. Smirke is actively employed in making designs; and we trust to see this fine building speedily completed for this excellent establishment. The situation is central and good.

ROYAL ASIATIC SOCIETY.

SATURDAY, Jan. 10. —After the presentation of several donations, and the election of several members, among whom were the Danish and Swedish ambassadors, a paper written by Colonel Briggs, on the life and writings of Ferihta, was read.

This paper was peculiarly interesting from its containing many anecdotes of the life of the celebrated author of the History of the Mahomedan Power in India, several specimens of his style, and a sketch of the outlines of his history, of which a translation, from the pen of Colonel Briggs, was announced in our last Gazette.

FINE ARTS.

NEW PUBLICATIONS.

Views in Foreign Cities. Drawn from Nature and on Stone, by Harry Wilson.

No. I. Engelmann, Graf, Coindet, and Co. This No. contains four views: one in Ghent, one in Abbeville (Maison Grande, rue de la Tarterie), and two in Rouen—"La Grosse Horloge," and "the Shrine in which were deposited the ashes of Joan of Arc (1431)." Mr. Wilson appears to have studied Prout's manner closely; yet, though the general style and management resemble that artist, there are many parts in the lithographs before us which strongly remind us of Cuiet's Etchings of Old Houses in Chester. The subjects selected by Mr. Wilson are extremely picturesque specimens of architecture, and will form interesting additions to the portfolio of the antiquary, the architect, or the artist.

The Orphan's Prayer, and Dog Days—Companion Prints. Painted and drawn on Stone by J. and G. Foggo. Engelmann and Co.

In these prints there are more of the higher characteristics of art than the titles would lead us to expect. The simple Chantrey-like figure, and the solemn repose which pervades

the entire composition of the "Orphan's Prayer," form a powerful contrast to the animation exhibited in every limb of the joyous child, and the exciting incidents presented to us in the print of "Dog Days."

Le Souvenir. Drawn on Stone by Henry Corbould. Same Publishers.

We doubt not that this will be a very popular print, from three circumstances: first, it is whispered that the original design was made by a lady of title, which we believe to be the case; secondly, the subject of the print is a very pretty woman, with a most sentimental turn of the head; and, thirdly, her gown is cut, worked, and flounced, after the most becoming pattern. Seriously speaking, however, this lithograph is beautifully drawn and exquisitely finished by Mr. Corbould; and the printing is highly creditable, as a specimen of their art, to Messrs. Engelmann's establishment.

Album Titles. By E. Hull. Same Publishers.

We do not notice these as works of art, but with the view of doing good service to the public at large; as every one who can read, write, or draw, has now their album for the amusement of their reading, writing, or drawing friends. Here, then, "my public," are title-pages for your albums! A very pretty gipsy-girl is one, with her budget labelled, "The smallest scraps will be acceptable;" and beneath she is described, in the words of Shakespeare, as "a snapper-up of unconsidered trifles"—(Winter's Tale). Again, we have a beggar-man, worthy of Callot or De la Bella, hobbling up to us with "Scraps thankfully received," inscribed on his apron, and Shakespeare is again quoted—"A thing of shreds and patches." Then we have a most glorious display in the "Magazine of Art." Really we are determined never to design another title-page for any lady's album, when Messrs. Engelmann and Co. are ready so kindly to afford us a supply.

A Catalogue of Engravings by the most esteemed Artists, after the finest Pictures and Drawings of the Schools of Europe. Forming part of the stock of Moon, Boys, and Graves.

We cannot better explain the nature and object of this Catalogue than by extracting from the preface to it the following passage:

"The principal object to which attention has been given in the compilation and arrangement of the following Catalogue, is utility;—to unite with the easiest mode of reference the best and most desirable information as to the particulars of the respective plates and works therein contained; and accordingly, the painters being the foundation on which the engravers build, the first general division of the Catalogue is made to consist of a list of subjects, with the prices annexed, and the sizes as they appear when framed, arranged alphabetically under the names of the painters, and followed by the names of the engravers. This division is succeeded by complete lists of the plates contained in Le Musée Français, Boydell's large Shakespeare, the smaller plates to the same work, the Houghton Gallery, Tomkins', and Forster's British Galleries, Whitaker's Richmond, the Buchanan Gallery, and various other works of importance and interest. The whole is concluded with an alphabetical index of the subjects contained in the catalogue, classed under the respective heads of portraits, scriptural, historical, &c., and preceded by the announcement of many important works in progress, which, it is not doubted, when they are completed, will be found to do

honour even to the very advanced state of refined feeling which now pervades almost every class of society towards the graphic art. The stock from which the present Catalogue has been made, is that which originally belonged to the old-established house of Boydell, with the extensive additions which have since been made to it by their successors and the present proprietors: together, it forms one of the most important collections of prints ever accumulated: it comprises the best works of the modern school, amongst which may be enumerated the names of Lawrence, Wilkie, Turner, Burnet, &c., and which are receiving constant accession: the standard works of the past century, including among the painters those of Reynolds, West, Hogarth, Gainsborough, and others; and among the engravers, the best works of Woollet, Sharp, Earlom, and all the other first-rate engravers of their time: it also embraces the works of the most eminent ancient masters of the Italian, German, Dutch, Flemish, French, and English schools, formed from the most celebrated collections sold of late years. Such being the materials of which the Catalogue is composed, and the arrangement adopted, it is presumed it cannot fail to be useful to all who purchase and collect prints, whether for the portfolio, for ornament, or for use."

Autographs of Royal, Noble, Learned, and Remarkable Personages, conspicuous in English History, &c. Engraved under the direction of Charles John Smith; accompanied by concise Biographical Memoirs and interesting Extracts from the Original Documents, by John Gough Nichols. Part VIII.

FIFTY-SEVEN autographs; all of them more or less valuable—some of them eminently so. We subjoin a specimen of the admirable manner in which Mr. Nichols, in his department of this work, condenses much curious matter into a small compass:

"Elizabeth, Countess of Shrewsbury, the wife of four husbands, the builder of three palaces, and the accumulator of a vast fortune, is indeed a remarkable instance of an ambitious and an intriguing female. She was a daughter of John Hardwick, of Hardwick in Derbyshire, esq., and eventually became heir to her brother. At fourteen she was married to Robert Barley, of Barley in the same county, who died about two years after, in 1532-3, leaving his large estate settled upon her. She next captivated Sir William Cavendish, treasurer of the chamber to King Henry the Eighth, and induced him to sell his lands in the south of England to purchase others within the sphere of her own management. To him she bore a family, among whom were William, the first Earl of Devonshire, and Charles, father of the first Duke of Newcastle. Having again become a widow, this fortune-hunting lady married next, in 1559, Sir William St. Lo, captain of the guard to Queen Elizabeth, whose estates in Gloucestershire she also procured to be settled on herself; and, still rising in fortune and rank, the gallant George, sixth Earl of Shrewsbury, then the greatest peer of the realm, was her fourth successful suitor. And this was on the advantageous condition of two cross matches between their children. Yet, after all this matrimony, 'Bess of Hardwick,' as she was currently called, survived a fourth widowhood for no less than seventeen years, 'in absolute power and plenty.' 'She is said,' remarks the historian of Hallamshire, 'to have been a woman of great wit and beauty. It is certain that she was a woman of much address, had a

and admirably fitted for business, very ambitious, and withal overbearing, selfish, proud,acherous, and unfeeling: one object she pursued through a long life, to amass wealth and aggrandise her family. To this she seems to have sacrificed every principle of honour and affection, and to have completely succeeded.' At the age of eighty-six this extraordinary woman died, Feb. 13, 1607-8."

Engraved Illustrations of Ancient Arms and Armour; after the Drawings and with the Descriptions of Dr. Meyrick. By Joseph Skelton, F.S.A. Part XV.

THE first plate of the present Part of this elegant publication contains ten Champfrelius, of the times of Henry VI., Henry VII., Henry VIII., Edward VI., and Elizabeth. "Frontals, or protections for the horse's head," says Dr. Meyrick, "had been used by the Persians and Greeks of ancient time; but their earliest application in Europe seems to be the commencement of the fifteenth century." The next plate is occupied with a representation, one third the size of the original, of a curiously ornamented Spanish Target, of the year 1536. We have then a variety of two-handed swords and lances; "those apparently unwieldy weapons, yet which are so well poised as on trial to excite astonishment." The fourth plate exhibits the different pieces of which a demi-lancer's armour of the year 1535 is composed, together with a view of the complete suit. In the fifth plate are the Front of a Helmet and a Breast-plate, of the year 1510. The description of the latter comprehends the following anecdote:—"Froissart relates, that at the battle of Poitiers, Sir John Chandos, and the Lord Jean de Clermont, had upon their surcoats a Virgin Mary, or, embroidered on a field azure, accompanied with the rays of the sun argent, without its being previously known to each other, and this was the cause of a quarrel, in which the Lord de Clermont exclaimed, 'You English can invent nothing new, but take for your own whatever you see handsome belonging to others.'"—"It is hoped," adds Dr. Meyrick, with justice and humour, "that we do not now lie under this imputation, and that this work is a proof to the contrary." The rich and beautiful sword presented by Philip III. king of Spain, to Wolfgang Wilhelm, Count Palatine of the Rhine, on his succession to the duchess of Neuberg, and adoption of the Roman Catholic religion, in the year 1614, is the subject of the last plate; and the Part closes with the commencement of the preface to the complete work, which promises to contain much matter that will be highly interesting and amusing to the general reader as well as to the antiquary.

Bohemian and Saxon Scenery. From Drawings by Captain Batty, of the Grenadier Guards, F. R. S. Member of the Imperial Russian Order of St. Anne. Part IX. Jernings.

THE plates in the ninth Part of this beautiful work are, "The Watch-Tower, formerly St. Nicholas's, Copenhagen;" "The Port, Hamburg;" "Palace Church, and Gammel's Island, Copenhagen;" "Pirna, and the Castle of Sonnenstein;" and "St. Mary's and St. Peter's Church, Lubeck." The Port at Hamburg, engraved by R. Wallis, and the Watch-tower at Copenhagen, engraved by E. Goodall, are among the most picturesque. The execution of the clouds and sky in the last mentioned is exquisite. The vignette wood-cuts consist of "St. Herrville, on the Weser;" "St. Sa-

viour's Church, Copenhagen;" (the spiral exterior stair-case which winds round the upper part of the tower of which is very curious,) "Blankenese, near Hamburg;" "Palace of Rosenberg, Copenhagen, built by Inigo Jones, in the reign of Christian IV.;" and an "Old Gateway, at Lubeck."

Snow Balls. Painted by W. Kidd, engraved by J. C. Zeisler.

WE are glad to see a print of this very comic picture (in the possession of Mr. Watson Taylor), which is of a description extremely popular in our day, and executed in a manner calculated to recommend it to the amateur as well as to the less fastidious collector. Two or three boys, including a chimney sweep, are snow-balling a companion, who is as forlorn as the lamb in the engraving of the Wolf and the Lamb;—the contrast of the sweep is humorous; and the various expressions in all the countenances (not excepting the poor dog's), are characteristic and clever.

STATUE OF GEORGE III.

AT a meeting of the Graham Grand Committee, on Friday 16th inst., the late Lord Mayor in the chair, it was decided that, as the statue of the late King in the Royal Exchange was gone to decay, so as to render its removal necessary, from its having been worked in tender marble,—another should be erected in its stead; and directions were given to proceed with one, agreeable to a model submitted by Mr. J. G. Bubb, representing his Majesty in his coronation robes.

THE COLOSSEUM.

WHEN we wrote the account of the Colosseum which appeared in the last Number of the *Literary Gazette*, we were not aware (or we should certainly have mentioned the fact), that in the drawing of the panorama on the canvas the greatest advantage had been derived from the talents and knowledge of Mr. Gandy, jun., son of Mr. Gandy, the Associate of the Royal Academy. This gentleman is, we understand, still occupied on the work.

FRENCH SCULPTURE.

AT Volvic, a small town not far from Clermont, in the department of the Puy-de-Dôme, a school of sculpture has been established, the pupils of which employ their chisels on the blocks of lava with which the neighbouring volcano has filled the valley. These blocks are gray, extremely hard, of a less close grain than marble, but easily worked. The pupils, who are most of them the sons of peasants, begin to shew considerable skill. They have just completed, from models sent to them from Paris, a monument to Prince Lebrun, seven or eight (French) feet broad, and five or six high; composed of four grand allegorical bas-reliefs; the figures of which are nearly the size of life. It is to be erected in the cemetery of Père la Chaise.

ORIGINAL POETRY.

THE AGEDD MYNSTRELLE.

By Robertt Hesterwoods.

WYNTERR, inn alle hys terroures cladd,
Dothe onn the hylls and woldes appeare,
And Sommer, helesesse, lorne, and sadd,
Ne longerr rules the agedd yeare.

Hys cheekes are fulle off seamie scars,
Hys gryzzledd cryne bespreyntt wyth dewe,
Hys eyne two dymme twynklynge starre,
Hys vesturre eabell tyng'dd wyth blew.

¹ Helpless.

² Sprinkled.

The trees are leaffesse alle and bare,
The warrynge stormes and tempests blowe,
And, hie above the cloudes inn ayre,
The mowntaynes reare theyrscalpes off snowe.

The sylverrie streames dyd once appeare
To leapp wyth joie fromm hyll to hyll;
Butt nowe, as though congeall'dd bie feare,
Theyr songes are hush'd dand byllowes styll!

The byrddes, theire wott nott where to goe,
Butt waykynge fle fromm tree to tree:
Alas! wyth themm itt is wynterr nowe,
And wynterr nowe 't is wyth mee!

Ah! lych a ryverr's constantt tyde
Theyr ermeffull songes dyd swotelle flowe,
But nothyng nowe is heardd berryde
The voyce off wanhope² meintt wyth woe.

Butt wann the sonne returnes to erthe
Wyth hys carolyng feeres agayne,
Theyr lyttill hertes wyll daunce forr merrth,
Forgettyng care orr thote off payne.

Butt naughtt unnto the endd off dome
To themm cann joie orr rapture bryng,
Whose hopes are wraptt inn mydnyghtt gloome;
—The frostes off age ne'err thaw'dd inn sprynge.

Forr so I wott 't wyll bee wyth mee;
Sadd stryffe hath wurch'dd mee mykkle woe,
And, shypwreck'dd onn a stormie sea,
Wythoutt a home I wanderr nowe!

Mie boie hee was a gallantt youthh,
And mote have byn mie age's staid;
Butt Carnage fell, unmov'dd bie Routh,⁴
Undydd us bothe inn one darkk fraie.

Forr Ebourr's pale and unweamm'dd⁵ rose
Hee foughttand bledd att Boswourth playne,
And, meiantt amyddt the slauffter'dd foes,
Hys bothie restes where itt was alayne.

Dysorderrd regnyes throughoutt the landd,
And Selynesse⁶ in seene ne moe;
E'ean Hope and Love thatt suryl'dd so blandd,
Nowe weare the sadd aspectt off woe.

Pees, flownn beyondd the starrie skie,
Dysplayes ne moe harr snowe-whyte rode;
Butt thorow ayre dothe blauffterd⁷ fle,
Array'dd inn garmentts stayn'dd wyth blode.

Eftt⁸ onn hys harppe hys handd hee flynggs
To soothh hys tenes wyth musyk's flowe;
Butt as hee touch'dd the tremblyng strynges,
Theire alle between'dd the notes off woe!

Yett onn hys cheekes dyd eftt appeare
Joie's plaiefull lyghtt and rapture's sheene,
And forr awhyle the leven's fiere
Illoomyn'dd too hys fadedd eyne.

So o'err the drearie wastes off snowe
The feerie sonne's enamell'dd raie
Wyll forr a momentt bryghttlie glowe,
And thann as quykcklie glydde awaie.

Oppress'dd wyth fannmynn, age, and gryffe,
Hee heededd nott the lethall blastt,
Butt gladd to fyndde inn dethe releefe,
Onn the bare erthe hee breath'dd hys lastt.

SORROW.

My harp is on the willow tree!
Its voice is mute;—for ceaseless flow,
When I would wake its melody,
Upon the chords the tears of woe.

My harp is on the willow tree!
And though of grief 'twas wont to sing,
The grief that raised its minstrelsy
Expired in sighs upon the string.

³ Despair. ⁴ Compassion. ⁵ Spotless.
⁶ Happiness. ⁷ Again.

Those who once praised, now bid me lay
My hand once more upon the chord;—
By wo inspired, the wreath of hay,
They tell me, will my task reward.
Poor, poor disgraceful meed! to make
A barter of our woes—to deal
Our feeling's blood-drops out, to slake
The morbid thirst the worldly feel!
Grief bath no voices for others! where
Yon vaults a heavenly hope impart—
There, *there*, I'll strike my harp, to hear
The echo of a broken heart. H. T.

It is not so—it is not so;
The world may think me gay,
And on my cheek the ready smile
May ceaseless seem to play:
The ray that tips with gold the stream
Gilds not the depth below—
All bright alike the eye may deem,
But yet—it is not so!
Why to the cold and careless throng
The secret grief reveal?
Why speak of one who *was*, to those
Who do not, cannot feel?
No! Joy may light the brow—unknown,
Unseen, the tear-drop flow;—
'Tis the poor sorrowing heart alone
Responds—it is not so!

DRAMA.

DRURY LANE.

IN despite of criticism, and just criticism too, upon *Cassillon*, as a composition worthy of the dignity of tragedy, that play, as a domestic drama, continues to fill the house whenever it is performed; and if abundance of sobs and tears can compensate an author for the denial of the highest poetic crown, Mr. Walker has good reason to be satisfied with his meed. Yet his case is hard: severe criticism condemns *Cassillon* as no tragedy, and the audiences treat it as a crying sin. We see it has been published, but have not yet had time to peruse it.

ADELPHI.

At this theatre, on Thursday (a day too late for our criticism), was produced a three-act piece, by Moncrieff, entitled *Monsieur Mallet*; or, *My Daughter's Letter*; and founded on Mathews's well-known inquiry at the Boston Post-office. Suffice it to say, that Mathews never appeared to greater advantage, and the effect is "prodigious." Mrs. Yates, Mrs. Hughes, Yates, T. P. Cooke, Benson Hill, Buckstone, are all suited with admirable characters; and nothing could exceed the success of the drama.

WE see by the *Bath Herald*, that Mr. Braham has been replenishing the theatre of that city by his excellent acting in *Love in Wrinkles*, and by the powers of his unequalled voice in that and in other characters. We have noticed that the journals generally have taken up a good-humoured tone of pleasantry on Braham's displaying a highly comic vein in performing. It is true, and almost a natural consequence of the requisite difference of studies, that great singers are seldom great or even what is called respectable actors; but they must forget the *Devil's Bridge*, and several other operas, who fancy that *Love in Wrinkles* is the first piece in which our matchless vocalist has exhibited considerable histrionic abilities.

THE MELODISTS' CLUB.

THE first meeting of this Club for the season takes place at Freemasons' Tavern, on Tuesday.

We hear that H. R.-H. the Duke of Sussex has condescended to become patron of this delightful musical association, and several noblemen and distinguished commoners are vice-presidents. The whole vocal talent in the country is warmly engaged in the design, "the cultivation of national melody;" and Mr. T. Cooke, in the capacity of musical secretary, has the direction of the entertainments.

VARIETIES.

Russian Coin.—In the last year the crown mines in the the Ouralian mountains yielded above 89 pounds of gold, and above 2 pounds of platina; the private mines above 192 pounds of gold, and above 23 pounds of platina. It is the intention of the Emperor Nicolas to issue a coin of platina, of about ten shillings in value, but without peremptorily requiring that it shall be taken.

Improvements of Paris.—Notwithstanding the enormous sums already expended by enterprising capitalists in Paris, many of whom have had reason to regret their speculations, new buildings are projected in the different quarters of the capital. Some of these will be on a scale of great magnificence. The mania at present seems to be for building what are called *passages*, as most of those erected within the last three years have been found to answer tolerably well. A great portion of the *Champs Elysées* will be built upon; for which purpose the ground has been bought at high prices. The rage for speculation, however, is not confined to building; several new coach companies are projected, and even steam-coach companies are talked of.

M. Feronays took leave of the king yesterday, previous to his quitting Paris: he was borne in an arm chair by the Swiss Guards—an honour never before bestowed on a minister; three of the king's servants also followed behind, until he had reached the foot of the stairs. Poor man! it is most likely he will never return, though the physicians give him hopes that change of air will restore his health. (*Paris Letter of Tuesday.*)

Mungo Park.—We observe from Clapper-ton's Journal, that there is some probability of recovering the books, and perhaps MSS., of the late Mungo Park. They are in the possession of one of the African kings.

The largest sheet of paper ever used by a newspaper was sent forth from the press of the *Times* on Monday last. Hitherto, when there was an accumulation of advertisements, or other matter, at the *Times*' office, a supplementary sheet was printed (each sheet bearing, by virtue of a recent act of parliament, a two-penny stamp), and distributed, gratis, to the purchasers of the regular newspaper. By the new arrangement of printing the supplementary matter upon the same sheet, enlarged for that purpose to four feet in length, and a yard in width, a saving of about 70*l.* for each supplementary number will be effected; as the sheet, being undetached, will not require an extra stamp. A writer in an evening paper calculates, that in the forty-eight columns of the *Times* of Monday there are nearly 150,000 words; and a calculating correspondent of our own tells us, that in the colossal sheet in question, there were nearly as many words as in all the morning and evening newspapers which were published on the same day in the French capital.

Constantinople.—It appears by a calculation made so recently as August last, that the population of Constantinople, including all the

suburbs, which had been variously estimated at from 400,000 to 600,000,—does not exceed 380,000; and that the number of houses, of every description, is about 85,000. The number of persons capable of bearing arms in Constantinople, in proportion to the entire population, is said to be very small.

Commercial Enterprise.—During the domination of Buonaparte, sugar, coffee, tobacco, cotton-twist, &c. were sent by sea from London to Salonica (in European Turkey), whence these goods were carried on horses and mules, across Servia and Hungary, into the whole of Germany, and even into France; so that goods were consumed at Calais, coming from England, only seven leagues distant, which goods had made a circuit equivalent, as far as expense went, to a voyage twice round the world!

French and English Travelling.—A recent French writer, describing the state of travelling in France and in England, says, "In France the postillions are frequently drunk, always dirty, and the most coarse and intractable people in the world. In England the contrast is most striking; both men and cattle are always well dressed; the drivers with white cravats, good jackets, and well-napped great-coats; their horses harnessed as if for some grand ceremony. In France a postilion takes care, first of his own safety, and then of that of his horses; to him the safety of the traveller is a concern of supererogation. In England the traveller commands the driver, in France he obeys him."

Natural Philosophy.—It has been proposed to the Académie des Sciences, that henceforth two members of their body shall be appointed to attend the meeting of the lovers of natural philosophy in the North of Europe, whose last convocation was noticed in a recent No. of the *Literary Gazette*.

I suppose you have been already informed of the new imitation of diamonds (*I believe*, discovered by an apothecary when manufacturing a bolus); at least some extraordinary story is related on the subject. Diamonds are lowered here in value in consequence of this invention, as the imitation stone possesses all the properties of the real brilliant,—cuts glass, and sets off ladies' necks to equal advantage.—*Paris Correspondent.*

March of Intellect.—Among the fine-named establishments for which the metropolis is famed, there was, a short time ago, in the Hampstead Road, not far from the New Road, one of a peculiar character,—a "Dogs'-meat and Cats'-meat Bazar"!.

Gallop of Intellect.—Last week three of the second-rate jockeys at Newmarket bespoke a play at the theatre there, and styled themselves in the bills "The Juvenile Patrons of the Drama;" they presented their favourite ladies with tickets, severally accompanied with a play-bill printed on coloured satin, (each of the gentlemen having a colour of his own); and also with a bouquet of real or artificial flowers, bound with ribands of the proper colour!—This beats the march of intellect hollow.

American Bull.—A late Vandalia intelligencer, calculating the increase of the population of Indiana in the last two years, observes that, "allowing five souls to each voter, we have derived from emigration an accession of 20,000." "Five souls to each voter!" is rather more than falls to the lot of electors elsewhere.

LITERARY NOVELTIES.

It is said, that the Lords of the Treasury have issued, or intend to issue, an order to the postmaster-general, permitting the free transmission to authors residing in the

any of the proof sheets of any work going through press, and which may be sent to them for correction. For this purpose the proofs are, it is said, to be sent on to Mr. Francis Freeling, who will enclose them in his post-office cover, and forward them according to the address, and perform the same on their return. This arrangement, if carried into effect, will certainly be an accommodation, as far as it goes; and we think that other important considerations to the interests of literature might be made without injury to, and even to the advantage of, the service. In France all the new publications, except those of very great weight, are forwarded by the mail coaches at a trifling expense; so that persons who reside in the provinces may receive them with the greatest possible rapidity. If at a moderate rate per pound weight new works could be forwarded from London by our mail coaches, individuals who reside at a distance from the large towns to which parcels of newly published books are sent, or even in those towns,—for it does not answer the purpose of a bookseller to have down one or two books in a parcel for a single customer,—would in such an arrangement find a great accommodation. An additional hundred weight to each of the mail coaches would be no drawback upon their speed or safety; and all new works of immediate interest might be thus circulated throughout the country. As in France the regulations alluded to was made exclusively in favour of literature, a method of preventing deception has been adopted. Persons sending books, are required to leave them open at the ends, a band with the address upon it being simply placed round the centre.

By the late French law regulating the publication of the papers in Paris, and what is called its *banquier*, which is equivalent to our bills of mortality, no paper can be published until the proprietors have deposited, by way of security for good conduct, a very large sum of money in the hands of the government. Some of the daily papers, chiefly devoted to literature, contrive, however, to evade this regulation by printing without the backs of the *banquier*, and having the copies sent, when printed, by a quick conveyance for distribution in Paris. Among these is *La Pandore*, which is printed at Senlis, a small place a few leagues from Paris. The only alteration in the appearance of the paper is, that the title, instead of being as before, *La Pandore*, is now *La Pandore à Senlis*, the latter word being put in very small characters.

Notes of the Wars of our Times, by the Author of the *Sketches of the Peninsula*, will be published about June.

A Geography is announced, entitled a Geographical and Statistical Account of the Great World, with a Voyage to several Islands, Vocabulary of the Language, &c.; illustrated by a Map.

Our Genealogies.—Mr. Berry, long Register Clerk at the College of Arms, the author of the *Encyclopædia Genealogica*, and other works upon heraldry and genealogy, has now about to publish, arranged in counties (beginning with Kent and Sussex), the Genealogies of the present noble Families, with numerous Pedigrees, from the collections of each county, and other authentic Manuscript Collections. The utility of such a work is obvious; and it is, we understand, the intention of Mr. Berry to publish two counties annually.

The *Register Bath*.—Dr. Gilney, of Brighton, has published a second edition of his work upon the use of the vapour bath, and we strongly recommend it to the perusal of those who are disposed to try that powerful, and in many cases most efficacious, remedy. As we have lately mentioned this subject, it is perhaps only necessary for us now to observe, that in proportion as a remedy is powerful and efficacious, if properly applied, it must, if injudiciously resorted to, be productive of mischief. This observation applies more particularly to vapour bathing, because it is practised by some persons merely as a luxury, without consideration and without advice, and the consequences have in many instances been serious, in some fatal.

The *Kempster Julian*.—M. Hayler has just published a new edition of the letters of the Emperor Julian, with some fragments of verse. The letters are eighty-one in number. It was M. Hayler's original intention to publish a complete edition of Julian's works, and we think he has not relinquished it.

A poem entitled *Jonas d'Arc*, by Madame de —, is highly noticed by reviewers, and the fair authoress declared worthy of a habitation on Mount Parnassus; but whatever may be the merits of the composition as to correctness of style, there is little of the poetry of thought to be met with in the work.—*Paris Letter*.

LIST OF NEW BOOKS.

—on a Classification of Shipping, 8vo. 6s. 6d. bds.
—Burke's Cicero's Catilinarian Orations, 12mo. 3s. 6d.

METEOROLOGY.

GENERAL ACCOUNT FOR THE YEAR 1828.

In addition to the usual summary, I have been enabled, through the kindness of Mr. Moss, of Cheltenham, and of a Member of the London Meteorological Society, residing at Wycombe, in Buckinghamshire, to lay before your readers a general meteorological statement for the past year, at three different places, whereby, from the comparisons which may be made, the present Number will be rendered, if not to all, at least to lovers of meteorology, peculiarly interesting.

(Kept at Edmonstoun.)

Year	11	29.95	78.4	Year

The mode of keeping the above registers was as follows. At Wycombe, the thermometer and barometer are registered at 8 A. M., at 3 and 10 P. M.: the extreme cold is ascertained by a self-registering thermometer. The wind is set down from the result of the most frequent observations.

At Cheltenham, the temperature is ascertained by a self-registering thermometer, suspended about five feet from the ground, in a north-east aspect, and the observation made daily at 8 o'clock A. M. The wind and barometer are registered at 8 o'clock A. M. and 8 o'clock P. M.

At Edmonstoun, the warmth of the day is observed by means of a thermometer exposed to the north, in the shade, standing about four feet above the surface of the ground; the extreme cold of the night is ascertained by a self-registering thermometer, in a similar situation; the daily range of the barometer is known from observations made at intervals of four hours each, from 8 in the morning till 8 in the evening; the weather and direction of the wind are the result of the most frequent observations; the rain is measured every morning at 8 o'clock.

Edmonstoun.

CHARLES H. ADAMS.

METEOROLOGICAL JOURNAL, 1829.

January.	Thermometer.	Barometer.
Thursday ... 15	From 31. to 39.	29.88 to 29.70
Friday ... 16	38. to 30.	29.63 to 29.59
Saturday ... 17	35. to 32.	29.74 to 29.76
Sunday ... 18	19. to 32.	29.86 to 29.98
Monday ... 19	16. to 32.	30.03 to 30.07
Tuesday ... 20	15. to 33.	29.99 to 29.90
Wednesday ... 21	28. to 29.	29.87 to 29.78

Prevailing wind N. and N.E.

Except the 18th, generally cloudy: the rather severe and continued frost of the past week renders the weather more seasonable than it has hitherto been. Snow fell during the night of the 20th and morning of the 21st.

Edmonstoun.

CHARLES H. ADAMS.

Latitude 51° 37' 32" N.
Longitude 0 3 51 W. of Greenwich.

TO CORRESPONDENTS.

To Mr. John Moore, who asks our opinion of the expediency of "establishing a bookselling business for the sale of odd volumes of books (*only*)," we can merely say that it might, we think, as heretofore at Lackington's, be a very useful adjunct to a general trade, but would not do alone.

A concluding notice of Sharon Turner's *Modern History of England*, is unavoidably postponed.

Colossium.—We have deferred our further account of the Colossium till our next, when a very ample description of its structure, accompanied by a plate, will be given.

Many letters, &c. have reached us too late for notice.

ADVERTISEMENTS,

Connected with Literature and the Arts.

TO BE DISPOSED OF, the STOCK and BUSINESS of a BOOKSELLER and STATIONER.
The Stock is modern, and can be reduced to suit a Purchaser. The Premises are well situated, in a large Seaport Town, and capable of Conventions for the addition of Printing; and have been occupied in the above Trades for a number of Years. Further Particulars may be known of Mr. Joy, 68, St. Paul's Churchyard.

A PARTNER. Wanted, a Partner in an established and very lucrative Printing Business. The principal part of the Connection is of a Public Description, and without Risk. Capital required, from £500. to £600. The most unexceptionable References will be required and given. Apply to R. F. Newman, Esq. Solicitor, Guildhall Buildings; and to Messrs. Smith and Chapman, Wholesale Stationers, Paternoster Row.

MUSIC.

The Nightingale. New Songs, set to Music.
In 1 large vol. duodecimo, with a new Frontispiece, price 4s. 6d. in boards.

THE NIGHTINGALE; a choice Selection of the most admired popular Songs, Heroic, Plaintive, Sentimental, Humorous, and Miscellaneous, arranged for the Violin, Flute, and Voice.
London: Printed for Thomas Tegg, Wholesale Bookseller, Cheap-side; R. Griffin and Co. Glasgow; J. Cumming, Dublin; and sold by all Booksellers.

Where may be had, uniform, price 4s. 6d. each,
The Skylark and the Thrush.

BOOKS PUBLISHED THIS DAY.

Mitchell's Two Tomes
Most beautifully printed, and embellished with 48 Cuts, price 2s. boards.

The Classical English Letter-Writer; designed to improve Young Persons in the Art of Letter-Writing. With Introductory Rules and Observations on Epistolary Composition, &c. 2d. edition, 18mo. 5s. bound.
Printed for Longman, Rees, Orme, Brown, and Green.

Just published by Henry Colburn, 8, New Burlington Street.
In 3 vols. post 8vo.

SAILORS and SAINTS.
By the Authors of the "Naval Sketch Book."
2. The Disowned. By the Author of "Pelham." 2d. edition, in 2 vols. post 8vo. 3s. 6d.
"If 'Pelham' justly raised for its author a very high character, the 'Disowned' will raise it far higher."—*Literary Gazette.*
3. The Castilian. A Spanish Tale. In 2 vols. post 8vo. 3s. 6d.
"The incidents are rich in interest, the story well managed, and the characters well drawn."—*Times.*
4. Tales of Woman; or, Illustrations of the Female Character. In 3 vols. post 8vo. 18s.
Contents:—The Wife—the Mother—the Daughter, &c.
"The 'Tales of Woman' do credit to the sex, and deserve well of the gull and the polite."—*Literary Gazette.*

In 3 vols. post 8vo. 3s. 6d.

AT HOME. A Novel.
By the Author of "English Fashionables Abroad."
"It is not easy to imagine any thing more amusing than the display of the sex which is laid before the reader in this novel; and it will be his own fault, after perusing it, he does not understand something more than he could ever hope to know of that puzzle, woman."—*New Monthly Magazine.*
Printed for Henry Colburn, 8, New Burlington Street.

2d. edition, in 5 vols. 8vo. embellished with Portraits and other Engravings, by the First Artists, price 2l. 10s.

MEMOIRS and CORRESPONDENCE of SAMUEL PEYPS, Esq. F.R.S. Secretary to the Admiralty in the Reigns of Charles II. and James II., and the intimate Friend of the celebrated John Evelyn.
Edited by LORD BRAY BROOKE.
"Notwithstanding the extreme popularity of the Memoirs of Grammont, and the still greater attractions of those of Evelyn, we have no hesitation in stating our opinion that these volumes will outstrip them both in public estimation. They reach the very best ideal of what we desire from such records."—*Literary Gazette.*
Printed for Henry Colburn, 8, New Burlington Street.

TYTLER'S HISTORY of SCOTLAND.
Vol. I. (including the eventful Times of Alexander III. Wallace, and Bruce), 8vo. 18s.

Vol. II. will be ready in a few weeks.

PLAIN SERMONS, on some of the
 ALLURING TRUTHS of the GOSPEL,
 by the Rev. WILLIAM M. MONKLEY, M.A.
 Lect. of Queen's College, Cambridge.
 "Keep in mind that excellent text I mentioned the other
 evening: 'Never preach a single sermon from which an un-
 believing hearer might not hear the plan of salvation, even
 though he never afterwards heard another discourse.'—*Review*
of the Rev. Lloyd Richards.
 Printed for John Hatchard and Son, 17, Piccadilly;
 and Hamilton and Co. Paternoster Row.

3d edition, comprised in 3 vols. 8s. 6d.
ZILLAH; a Tale of the Holy City.
 By the Author of "Broomfield House," &c. &c.
 "Nothing is so rare as a work of information on a most interesting
 subject, presented in a very agreeable form, we recommend it
 highly in all persons of leisure. The religious world especially
 ought to congratulate themselves on its appearance; they are
 usually deterred from the pleasure of reading works of imagination
 because it is so much more difficult to be read; it is
 a novel performance. It may throw light upon the Scriptures;
 it may aid the understanding of them a lighter task; while the
 most complete reader cannot condemn the author for having
 nobly or profanely approached subjects which he might deem
 not to be handled without impiety in a work of fiction."—*Review*
 Printed for Henry Colburn, 8, New Burlington Street.

In 3 vols. post 8vo. 16s.
THE MAN OF TWO LIVES. A
 Narrative, written by Himself.
 "Whether this be, or not, I'll not swear."—*Sketcher*.
 "The subject of this extraordinary narrative consists of the
 history of an individual who is conscious of a previous state of
 existence, and, becoming acquainted with the friends of his
 first self, sees of them the same as he himself, injured, enabled, in
 his second life, to make restitution. For its errors, the idea is
 remarkably original and striking, and gives rise to many
 curious incidents and effects."
 Printed for Henry Colburn, 8, New Burlington Street.
 Of whom, and all Booksellers, may be had,
Frankenstein; or, the Modern Prometheus,
 3 vols. And
The Last Man, 3 vols.

STUART'S ENGLISH AND FOREIGN
 LIBRARY, 128, Chancery Lane, near the New Post Office.
 Terms, 6s. 6d. 3s. 6d. 2s. 6d. and 1s. 6d. per Annum.
 A Supplement to the Catalogue is just pub-
 lishing, containing French and Italian Works, and the new En-
 glish Publications of 1837. The religious world especially
 ought to congratulate themselves on its appearance; they are
 usually deterred from the pleasure of reading works of imagination
 because it is so much more difficult to be read; it is
 a novel performance. It may throw light upon the Scriptures;
 it may aid the understanding of them a lighter task; while the
 most complete reader cannot condemn the author for having
 nobly or profanely approached subjects which he might deem
 not to be handled without impiety in a work of fiction."—*Review*
 Printed for Henry Colburn, 8, New Burlington Street.

THE ILIAD of HOMER, chiefly from the
 Text of Heyne, with copious English Notes, illustrating
 the Grammatical Construction, the Manners and Customs, the
 History and Antiquities of the Heroic Age, and Preliminary
 Remarks on the Poet and his Works.
 By the Rev. WILLIAM TROLOPE, M.A.
 Lect. of Pembroke College, Cambridge, and one of the Masters
 of Christ's Hospital.
 Bound for C. J. G. and J. Richardson, St. Paul's Churchyard,
 and Waterloo Place, Pall Mall, London.
 Of whom may be had, latest published,
Panlogia Græca. Sophocles Œdipus Ty-
mon; Œdipus Coloneus; at Antigone; Euripides Phœnix;
a Rarest System contra Thebes. Quæque scilicet Deceat de
theatris Thebædæ Scripta. Notæ Anglicæ scriptis illustra-
ta. A Latinæ Vocum Affiliatæ adjectæ, Gulielmæ Trollope,
L.L. in 8vo. price 14s. boards.

DR. MAJOR'S ETON LATIN GRAM-
MAR; with Explanatory Notes, and useful Additions
 to the former. This edition has been most carefully re-
 vised, and the Accents and Quantity marked.
 By Dr. CAREY.
 The sale of Twelve very large editions, within a few years, is
 the best evidence of the value and estimation in which the notes
 of Dr. Major are held; and the Librarian so liberally given has
 added the proprietors to spare no expense in rendering this edi-
 tion in every way worthy of their support.
 London: Printed for Harding and Loper; Longman, Rees,
 Taylor, and Green; Baldwin and Cradock; Whittaker,
 Trueman, and Arden; J. Richardson; T. Booter and Sons;
 Simpkin and Marshall; J. Duncan; Hamilton, Adams, and Co.;

 and Pacher; Corrie and Co.; Sautenau and Stretch; J. Col-
 lings; and C. and J. Rivington.
 Of whom may be had, the new edition of
Dr. Major's Eton Latin Grammar, with the
Notes and Quantity marked by Dr. Carey. Price 8s. 6d.

SCHOOL and COLLEGE GREEK
 CLASSICS, with English Notes, Questions, &c.
 At the express desire of many eminent Schoolmasters, Mr.
 Valpy has commenced the publication of a Series of such of the
 Greek Authors as are chiefly read in the upper Classes of School-
 masters. The best Texts are selected, and the Critical and
 Explanatory Notes are presented, it is presumed, in a more
 inviting and accessible form than those of Latin Commentators,
 by avoiding that profusion of annotation which frequently anti-
 cipates the ingenuity, supercedes the industry, and consequently
 hinders rather than promotes the improvement of the pupil. Ex-
 amination Questions, adapted to the points discussed in the Notes,
 and indexes, are also added; and the Series, it is hoped, will con-
 stitute a convenient Introduction to the niceties and elegancies
 of Greek Literature, and to the perusal of that portion of the
 relics of antiquity which is best calculated to interest a youthful
 mind.
 Each volume will be sold separately, and it is intended that
 all shall be published in a cheap duodecimo form.

The following are already published:
Euripides. Hecuba. By the Rev. J. R.
 Major, Master of Witschew School, and of Trin. Col. Cam. 8s.
Euripides. Medea. By the same. 5s.
Sophocles. Œdipus Tyrannus. By the Rev.
 J. Brasse, D.D. late Fellow of Trin. Col. Cam. 8s.
Thucydides, Herodotus, Xenophon, Demos-
thenes, &c. will up edily be published in succession.

2. Greek Gradus; or, Greek, Latin, and
English Prosodial Lexicon. Containing the Interpretation, in
 Latin and English, of all words which occur in the Greek Poets,
 from the earliest period to the time of Ptolemy Philadelphus, and
 also the Quantities of each Syllable; thus combining the advan-
 tages of a Lexicon of the Greek Poets and a Greek Gradus; for the
 Use of Schools and Colleges. By the Rev. J. Brasse, B.D. late
 Fellow of Trin. Col. Cam. 8s. 6d. boards.
 "The Indispensable application required in the compilation
 of the 'Greek Gradus' is manifest; and we heartily recommend
 the work as supplying a desideratum in our school books, and
 likely to be advantageously used to a very wide extent."—*Literary*
Chronicle.

3. Greek Testament, 2d edition. Contain-
 ing copious Critical, Philological, and Explanatory Notes, with
 Latin and English, of all words which occur in the Greek Text,
 from the earliest period to the time of Ptolemy Philadelphus, and
 also the Quantities of each Syllable; thus combining the advan-
 tages of a Lexicon of the Greek Poets and a Greek Gradus; for the
 Use of Schools and Colleges. By the Rev. J. Brasse, B.D. late
 Fellow of Trin. Col. Cam. 8s. 6d. boards.
 "The Indispensable application required in the compilation
 of the 'Greek Gradus' is manifest; and we heartily recommend
 the work as supplying a desideratum in our school books, and
 likely to be advantageously used to a very wide extent."—*Literary*
Chronicle.

4. The Second Greek Delectus; or, New
Analecæ Minora, intended to be read in Schools between Dr. Val-
py's Greek Delectus, and Daisell's Analæcæ Minora. With En-
 glish Notes, and a copious Greek and English Lexicon. By the
 Rev. F. Valpy, M.A. Trin. Col. Cam. and one of the Masters of
 Reading School. 8vo. 8s. 6d.

5. Viger on the Idioms of the Greek Lan-
guage, translated into English and abridged, by the Rev. J. See-
 ger. 8vo. 8s. 6d. boards.

Huogreen on the Greek Particles, in a few
days, 7s. 6d.

Of the same may be had, bound,
 Valpy's Greek Gradus, 8s. 6d.
 Sophocles' Œdipus Ty-
 mon; Œdipus Coloneus; at
 Antigone; Euripides Phœnix;
 a Rarest System contra Thebes.
 Quæque scilicet Deceat de
 theatris Thebædæ Scripta.
 Notæ Anglicæ scriptis illustra-
 ta. A Latinæ Vocum Affiliatæ
 adjectæ, Gulielmæ Trollope,
 L.L. in 8vo. price 14s. boards.
 Of the same may be had, bound,
 Valpy's Greek Gradus, 8s. 6d.
 Sophocles' Œdipus Ty-
 mon; Œdipus Coloneus; at
 Antigone; Euripides Phœnix;
 a Rarest System contra Thebes.
 Quæque scilicet Deceat de
 theatris Thebædæ Scripta.
 Notæ Anglicæ scriptis illustra-
 ta. A Latinæ Vocum Affiliatæ
 adjectæ, Gulielmæ Trollope,
 L.L. in 8vo. price 14s. boards.
 Of the same may be had, bound,
 Valpy's Greek Gradus, 8s. 6d.
 Sophocles' Œdipus Ty-
 mon; Œdipus Coloneus; at
 Antigone; Euripides Phœnix;
 a Rarest System contra Thebes.
 Quæque scilicet Deceat de
 theatris Thebædæ Scripta.
 Notæ Anglicæ scriptis illustra-
 ta. A Latinæ Vocum Affiliatæ
 adjectæ, Gulielmæ Trollope,
 L.L. in 8vo. price 14s. boards.

SERMONS, Plain, Brief, and Explanatory,
 on the Lord's Prayer and the Commandments.
 By JOHN NANCE, D.D.
 Printed for J. Hatchard and Son, 17, Piccadilly; and
 John Elliot, Ashford, Kent.

In Two Parts, 8vo. price 8s. boards.
CALVINISM and ARMINIANISM
 COMPARED in their PRINCIPLES and TEND-
 ENCY; or, the Doctrines of General Redemption, as held by the
 Members of the Church of England, and by the early Dutch
 Arminians, exhibited in their Scriptural Evidence, and in their
 connexion with the Civil and Religious Liberties of Mankind.
 By JAMES NICHOLS.

Published by Longman, Rees, and Co., and C. and J. Rivington.
 "Much information upon this subject, and upon the age of the
 Great Rebellion (more indeed than is collected elsewhere) may
 be found in a modern work, under the unpromising title of 'Cal-
 vinism and Arminianism Compared in their Principles and Tend-
 ency,' by James Nichols, 1836. It ought to have a place in
 every historical, and in every ecclesiastical library. Mr. Nichols
 has also published the first volume of a translation of the 'Works
 of Arminius,' with a great deal of important matter in the Pro-
 legomena and notes."—*Quarterly Review*.
 "We can truly affirm that the book is a real *utrum in parvo*,
 and is not only instructive and exceedingly useful to theological
 students, but frequently entertaining, from the intermixture of
 biography, history, and criticism."—*Gentleman's Magazine*.
 "Calvinism and Arminianism Compared" is from the pen of a
 layman, a man of extensive and accurate reading upon all sub-
 jects connected with the history of Protestantism, and especially
 with the painful annals of Presbyterian and Independent secen-
 dary in this country."—*British Critic*.

Mons. L. Fournier de Porquet's new Works for the Study of the
Italian and French Languages.
 Published by Messrs. Simpkin and Marshall,
 Stationers' Hall Court.

IL FRASEGGIATORE TOSCANO; a
 unique Selection of short Italian Phrases, to facilitate an
 easy and complete knowledge of the formation of the Verbs and
 Syntax of that Tongue; an essential Companion to the Scholar
 of the Language, and the only work yet published as a general
 Sentence Book; containing upwards of 10,000 Phrases, and 20,000
 Words, commonly used in Conversation: framed on the plan of
 Parian Phrasæology. Price 4s. 6d.

2. Il Tesoretto dello Scholare Italiano; or,
 the Art of Translating Easy English Phrases into Italian, by
 means of a Lexicon at the end of the Work: on the Plan of the
 Trésor de l'Ecolier Français. Price 4s. 6d.

3. A Key to Il Tesoretto; or, an Italian
 Translation, with Grammatical Annotations to assist Masters
 and Governesses. Price 4s. 6d.

4. Le Petit Secrétaire Parisien; or, on the Plan
 of the "Trésor de l'Ecolier Français;" or, the Art of Reading
 English Letters into French; with Notes, in which the most
 difficult Idioms are Translated into French at the end of each
 Letter. Price 4s. 6d. This work, conjointly with the "Trésor,"
 will convince those engaged in teaching the French how absurd
 it is to make pupils write numerous exercises for years, without
 ever thinking of making them read off at first sight any English
 into French—an operation not mechanical, but of the mind,
 which, when thus put into operation by a regular attention to
 this plan, removes all their difficulties in speaking the language
 fluently.

5. Sequel to the Parisian Phrasæology; or, a
 Collection of short French Phrases for Beginners, in which Verbs
 regular and irregular have been displayed in a manner conduc-
 ing to retain them with less difficulty than by committing them
 severally to memory—a Companion to the Parisian Phrasæology.
 Price 2s. 6d.

6. Parisian Phrasæology; or, Choix de Phrases
 diverses; being a Collection of Sentences in common use, to fa-
 cilitate the Knowledge of the Formation of French Syntax. In-
 tended for those who are desirous of acquiring an elegant and
 correct mode of speaking the French language; being a copious
 Choice of Examples on all the Rules, and a recapitulation of
 them, extracted from the best modern Authors; an essential
 Companion to the Scholar and Traveller, and also a Sequel to all
 Grammars. A selection of upwards of 10,000 Words, and nearly
 2,000 Phrases, most commonly used in familiar Conversation.
 Price 2s. 6d.

7. Le Trésor de l'Ecolier Français; or, the
 Art of Translating English into French, by means of an English
 and French Index at the end of the Book of all the Words con-
 tained in the "Trésor;" being a Compendium of the most use-
 ful Words used in Conversation, in order to acquire both a the-
 oretical and practical or colloquial Knowledge of that Language.
 On a new system, unknown to modern Teachers. A Work in-
 troduced only for those who have learned the first Rudiments of the
 Language. Price 2s. 6d.

This little book will be found of the greatest assistance in mak-
 ing pupils speak fluently that language. The rapid sale of up-
 wards of 2,000 Copies since it was first published, has convinced
 the author of its intrinsic merit; and that it bids fair to become
 one of the first standard works in England. The second edition,
 revised, corrected, and enlarged, will be ready in the course of
 the present month.

8. A Key to the Trésor de l'Ecolier Fran-
çais; or, a Literal French Translation of the Trésor, with Gram-
 matical Annotations to assist Teachers. Price 4s. 6d.

In 2 vols. post 8vo.
THE CASTILIAN. A Spanish Tale.
 "We most cordially recommend the 'Castilian' to all
 lovers of the historical novel."—*London Weekly Review*.
 "The incidents are rich in interest, the story well managed,
 and the characters well drawn."—*Times*.
 Printed for Henry Colburn, 8, New Burlington Street.

Published by S. Maundrell, Newgate Street.

Early in February will be published, in 3 vols. 8vo.
THE HISTORY of the RISE and PRO-
GRESS of the MAHOMEDAN POWER in INDIA,
from its Commencement in the Year 1000 till 1800.
Translated by Lieut. JOHN BRIGGS, M.R.A.S.
and M.L.S.B.

Late Resident at Satara, from the original Persian of Mahomed
Kasim Ashtabadi, entitled Feroziah.
Printed for Longman, Rees, Orme, Brown, and Green.
* Gentlemen who wish to possess the work, are requested to
send their Names to the Publishers, as only a very limited num-
ber of Copies is printing.

In the press, and shortly will be published, a new and revised
edition (completed to the present period) of

BURKE'S DICTIONARY of the PEER-
AGE and BARONAGE of the BRITISH EMPIRE.
The extraordinary success of this work has imposed a duty upon
the Editor, of which he trusts the forthcoming edition will prove
that he has satisfactorily acquitted himself. Each respective
article will be found corrected with the most minute attention
from the most authentic communications, and where the slight-
est obscurity appeared in the language of any particular house,
the whole has been remodelled. The Editor's attention having been
directed to collaterals, he has introduced all those who come
within the most remote ramifications of family honour: and
he has used more than ordinary care in tracing presumptive
birth.

To render the Heraldic Department more complete, the Armo-
rial Bearings are described in the body of the work, independently
of the Engravings.

To the Baronets of Scotland and Ireland, appertaining to
more than 800 ancient families, whose lineage is given exclu-
sively in this work, the utmost attention has been paid; and the
Editor begs to thank the heads of those houses for the polite
assistance they have afforded him.

Printed for Henry Colburn, 9, New Burlington Street.

Hall's New General Atlas.
On the 2d of February will be published, Part XII. printed
on elephant paper, price 10s. 6d. of a

NEW GENERAL ATLAS, with the
Divisions and Boundaries carefully coloured. Con-
structed entirely from new Drawings, and engraved

No. 628.

SATURDAY, JANUARY 31, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

The History of Persia, from the most early period to the present time. By Major-General Sir John Malcolm, G.C.B. K.L.S. A new Edition, revised and corrected. 2 vols. 8vo. London, 1829. J. Murray.

It is unnecessary now to dwell on the merits of this excellent work—a standard production of our literature: all that remains for us is to express our pleasure at seeing it in another shape and a new edition. Curious in its information, enlightened in its general views, extraordinary in its accurate picture of one of those vast monuments of bigotry and despotism, whose existence seems strange even in the East,—in the History of Persia there is “ample space and verge enough” for every theory and discussion that philosopher, moralist, and politician, might choose to erect: but perhaps we had better leave such graver matters, and content ourselves with a selection from the numerous anecdotes which abound in these pages.

“Jemshedd was the first who discovered wine. He was immoderately fond of grapes, and desired to preserve some, which were placed in a large vessel and lodged in a vault for future use. When the vessel was opened, the grapes had fermented: their juice was so acid, that the king believed it must be poisonous: he had some bottles filled with it, and poison written upon each: these were placed in his room. It happened that one of his favourite ladies was affected with nervous headaches: the pain distracted her so much, that she desired death: observing a bottle with poison written on it, she took it and swallowed its contents. The wine, for such it had become, empowered the lady, who fell into a sound sleep, and awoke much refreshed. Delighted with the remedy, she repeated the doses so often, that the king’s poison was all drunk. He soon discovered this, and forced the lady to confess what she had done. A quantity of wine was made; and Jemshedd and all his court drank of the new beverage, which, from the manner of its discovery, is to this day known in Persia by the name of *seher-e-khoosh*, or the delightful poison.”

“A Persian poet, alluding to the victories which the youthful Feridoun obtained over Zohak, and to the enchantments by which the latter was guarded, and the manner in which they were overcome by his antagonists, beautifully exclaims: ‘The happy Feridoun was not an angel; he was not formed of cloud or amber: it was by his justice and generosity that he gained good and great ends. Be then just and generous, and thou shalt be a Feridoun.’”

“Feridoun was the first monarch who ever rode upon an elephant, or brought these animals into use in war. His wisdom and goodness have been universally celebrated. His testament, addressed to his descendants, contained the following admirable lesson to posterity: ‘Deem every day in your life a leaf in your history: take care, therefore, that nothing be written in it which is not worthy of posterity.’”

There are some amusing traditions about Alexander the Great; our readers may contrast the romantic with the classical history. Respecting the cause of his disagreement with Darab II. the author relates:

“The quarrel, we are told, originated in Alexander refusing to pay the tribute of golden eggs, to which his father had agreed. ‘The bird that laid the eggs has flown to the other world!’ is reported to have been the answer of the Macedonian prince to the Persian envoy who demanded the tribute. After this, Darab sent another ambassador, whom he charged to deliver a bat, a ball, and a bag of very small seed, called *gunjud*. The bat and ball were meant to throw ridicule on Alexander’s youth, being a fit amusement for his age. The bag of seed was intended as an emblem of the innumerable Persian army. Alexander took the bat into his hand, and said, ‘This is my power, with which I will strike the ball of your monarch’s dominion; and this fowl (he had ordered one to be brought) shall soon shew what a mere morsel his army will prove to mine.’ The grain was instantly eaten up; and Alexander gave a wild melon to the envoy, desiring him to tell his sovereign what he had heard and seen, and to give him that fruit, the taste of which would enable him to judge of the bitter lot that awaited him.”

“The astrologers had foretold, that when Alexander’s death was near, he would place his throne where the ground was of iron, and the sky of gold. When the hero, fatigued with conquest, directed his march toward Greece, he was one day seized with a bleeding at the nose. A general, who was near, unlacing his coat of mail, spread it for the prince to sit on; and, to defend him from the sun, held a golden shield over his head. When Alexander saw himself in this situation, he exclaimed, ‘The prediction of the astrologers is accomplished; I no longer belong to the living! Alas! that the work of my youth should be finished! Alas! that the plant of the spring should be cut down like the ripened tree of autumn!’ He wrote to his mother, saying, he should shortly quit this earth, and pass to the regions of the dead. He requested, that the alms given on his death should be bestowed on such as had never seen the miseries of this world, and had never lost those who were dear to them. In conformity to his will, his mother sought, but in vain, for such persons: all had tasted the woes and griefs of life; all had lost those whom they loved. She found in this a consolation, as her son had intended, for her great loss. She saw that her own was the common lot of humanity.”

Our next quotations contain some striking traits of courage, wisdom, &c. in Persian emperors.

“A hundred fables are told of the birth and education of Shahpoor, whose mother is said to have been a daughter of Arduan. This princess, according to the *Rozut-ul-Suffa*, was desirous to revenge her family by poisoning Ardisheer. She was discovered in the attempt, and delivered over to a minister to

be put to death; but was secretly preserved, on her declaring herself pregnant. The child, the infant Shahpoor, was carefully reared. The minister who had ventured on this act of disobedience, afterwards revealed it to his sovereign, when he was lamenting that he had no heir. Ardisheer was overjoyed, but was desirous of trying whether he could recognise his own offspring among others of a similar age. A number of youths, among whom was the young prince, were commanded to play a match at balls before the king. In the course of the play, the ball was struck close to the throne: all the boys stood aloof, except one, (the young Shahpoor,) who went forward with confidence, and picked it up. The monarch looked anxiously at his minister; who, overjoyed at an incident displaying such superior courage, bade him embrace his son. Shahpoor appears to have been alike remarkable for wisdom, valour, and military conduct. Some of his observations have been preserved, which shew great knowledge of the human mind: ‘Words,’ he used to say, ‘may be more vivifying than the showers of spring, and sharper than the sword of destruction. The point of a lance may be withdrawn from the body, but a cruel word can never be extracted from the heart it has once wounded.’”

Baharam advanced into Persia with a large army of Arabs; but to save the blood of his countrymen, he proposed, that the crown should be placed between two furious lions, and should belong to the prince who had the courage to attack such guards. This was agreed to; and Khoosroo, the prince whom the nobles had elevated to the throne, was invited to the achievement; but the situation in which he saw the crown placed, deprived it of all its attractions in his eyes, and he declined the attempt. Baharam flew at the lions; and, though almost unarmed, soon slew both, and seized the crown, amid the shouts of his subjects.”

“Ismail Samanee’s army, after he had taken Herat, was in the most extreme distress for want of money. Ismail had given his word not to levy a contribution on that city; but his soldiers clamorously demanded that he should consider their merits and wants before a faith that had been too hastily pledged. Ismail, however, was firm; as the army became every hour more distressed and discontented, he ordered them to march away, lest the temptation to violate his word, which he had ever held sacred, should be too great. He had gone, we are told by Persian historians, but a short distance, when a ruby necklace of one of his ladies was carried away by a vulture, being from its redness mistaken for meat. The bird was watched, and seen to deposit the jewel in a dry well, which was immediately searched. The necklace was recovered; and several boxes of treasure were found lying near it, which proved to be part of the wealth of Amer, stolen by his servant, Sam, from his palace at Seistan. The monarch rejoiced at this boon of fortune. He paid his army, and bade them learn from what had happened, that God would never desert the

man who withstood temptation, and preserved his faith inviolate.

An event occurred after a victory, alike characteristic of the times, and of the hero by whom it was gained. As Shah Abbas sat on the field of battle, carousing with his chief officers and some of the principal captives, a man of uncommon stature and soldier-like appearance was led past by a youth, who had just made him prisoner. The king demanded who he was. 'I belong to the Kurd family of Mookree,' said the captive. The king happened to have an officer of the house of Mookree in his service, of the name of Roostum Beg, who he knew had a blood feud with the family of the prisoner. 'Deliver that captive to Roostum Beg,' said the king; but that chief refused to receive him. 'I hope your majesty will pardon me,' he said; 'my honour, it is true, calls for his blood, but I have made a vow never to take advantage of an enemy who is bound, and in distress.' This noble and generous speech seemed to reflect upon the king, who, in his irritation, called to the captain of the guards to strike off the head of the prisoner. The gigantic Kurd, the moment he heard this command, broke the cords with which he was fettered, drew his dagger, and darted upon Abbas. A struggle ensued; and, in the general hurry of all to aid their sovereign, every light was extinguished, and no one dared to strike in the dark, lest he should pierce the monarch instead of his enemy. After a moment of inexpressible horror, all were relieved by hearing the king twice exclaim, 'I have seized his hand! I have seized his hand!' Order was restored, and lights brought. The brave captive was slain by a hundred swords; and Abbas, who had wrested the dagger from his hand, resented himself in the assembly, and continued (according to his historian) 'to drink goblets of pure wine, and to receive the heads of his enemies, till twelve o'clock at night.'

Abbas being one day riding with the celebrated Meer Mahomed Bauker Dámád on his right hand, and the equally famed Shaikh Báháudeen Aumilee on his left, desired to discover if there lurked any secret envy or jealousy in the breasts of these two learned priests. Turning to Meer Mahomed Bauker, whose horse was prancing and capering, he observed, 'What a dull brute Shaikh Báháudeen is riding! he cannot make the animal keep pace with us.' 'The wonder is, how the horse moves at all,' said the Moollah, 'when we consider what a load of learning and knowledge he has upon his back.' Abbas, some time after, turned round to Shaikh Báháudeen, and said to him, 'Did you ever see such a prancing animal as that which Meer Mahomed Bauker rides? Surely that is not the style for a horse who carries a grave Moollah.' 'Your majesty will, I am assured,' said the Shaikh, 'forgive the horse, when you reflect on the just right he has to be proud of his rider.' The monarch bent his head forward on his saddle, and returned thanks to the Almighty for the singular blessing he had bestowed on his reign, of two wise and pious men, living at a court, and yet untainted by envy and hatred.

Abbas was led to believe that Suffee Meerza, his eldest son, a youth as remarkable for valour as generosity, had formed a design against his life, in consequence of his having put to death the nobleman who was the friend and favourite of that prince. He forgot that he was a father. He first applied to Káráchee Khan, the brave general who had defeated the Turks at Shiblee, to become the executioner of Suffee. The veteran leader threw himself on the ground, and

entreated his sovereign to deprive him of life rather than render his existence hateful, by compelling him to become the murderer of a gallant prince. Abbas did not urge him further; but he soon found a willing instrument in Beh-bood Khan. That noble, on the pretext of revenging a private injury, stabbed the prince as he was riding to the court, and took refuge in the stable of the king, who, pretending to respect a usage which renders that asylum sacred, refrained from the execution of the assassin. Such an act would, he said, bring suspicion in an affair that required deliberation; and he should therefore defer all proceedings till the infant son of Suffee Meerza was of age, and able to demand vengeance for the blood of his father. But even this thin veil was soon cast aside, and Beh-bood Khan was not only permitted to quit his asylum, but promoted to high stations. It is, however, consolatory to know, that this wretch ultimately met with a fate suited to his crime. Abbas, who, from the moment this rash act was committed, became a prey to remorse, had taken an opportunity of putting to death every one of those courtiers who had poisoned his mind against a son whom he is said to have sincerely mourned; but for Beh-bood Khan he reserved a more inhuman punishment: he commanded that obsequious lord to bring him the head of his own son. The devoted slave obeyed. As he presented the head of the youth, Abbas demanded with a smile of bitter scorn, how he felt? 'I am miserable,' was the reply. 'You should be happy, Beh-bood,' said Abbas, 'for you are ambitious, and in your feelings you are at this moment the equal of your sovereign.' Soon after the death of Suffee Meerza, the two remaining sons of Abbas were both deprived of sight by the cruel suspicions of their unnatural parent. The fate of one of these princes (if we can credit the testimony of a contemporary English writer) was attended with circumstances of the most tragical nature. This youth, whose name was Khodáh-bundáh, was as much distinguished for his courage and talents as his elder brother; but he was more cautious to avoid that attention which he feared would rouse the jealousy of his father; and he not only kept flatterers at a distance, but hated to hear the just praises which his actions obtained him. This conduct only added to that fame which constituted his danger. The first act by which Abbas shewed his suspicion, was ordering the tutor and attached friend of his son to be put to death. Conscious that the only crime of this officer was too great a regard for his master, the prince hastened to court, and in giving vent to his honest indignation, lost all consideration for his own safety. We are told that he was provoked to madness, and in the presence of his father and sovereign drew his sword. The fatal signal for his death was given; but Abbas relented so far as only to deprive him of sight. Shut out from the light of day, the prince became gloomy and desperate; nothing could give him pleasure; and his life passed in venting curses and brooding over plans of vengeance against the author of his being and of his misery. He had two children; the eldest, Fatimah, a lovely girl, was a great favourite of her grandfather, over whose mind she had acquired an astonishing influence. Abbas appeared miserable when little Fatimah was not near him, and her voice alone could soothe him when ruffled by those violent passions to which he every day became more subject. The prince learnt with savage delight how essential his daughter had become to the happiness of his

father; and seizing her as she one day came to fondle upon his bosom, with all the fury of a maniac, he in an instant deprived her of life. Her astonished mother shrieked, and told him it was his darling daughter that he was destroying. Instead of attending to her, his next effort was to seize his infant son, that he might vent his fury upon him. The child was borne from him by the distracted princess, who sent immediately to inform Abbas of what had occurred. The rage and despair into which the sovereign was thrown, gave a momentary joy to his son; glutted with his terrible vengeance, he concluded the scene by swallowing a dose of poison, which in a moment terminated his miserable life."

We purpose inserting another batch of these interesting, and, like the last, frequently painful, anecdotes, in our next.

Fifty Lyrical Ballads. By Thomas Haynes Bayly. Bath, 1829.

THERE are three fairy spells that give the heart's immortality to a song,—a sweet air to its words, a sweet voice to breathe them, and the chance of touching one of those electric associations which haunt every memory. All of these have lent their enchantment to the songs now before us; their music is familiar to every ear, and their poetry to every lip:—simple, touching, catching a thought rather than dwelling on it, making their appeal to the tender and mournful feelings which all share more or less,—many of these ballads are the very perfection of their kind. The "Beacon-light," the "Bridesmaid," "Oh no! we never speak of her," "She never blamed him—never," are as sweet as the music to which they give a language. The only fault of the collection is its being already popular in another shape. We scarcely know what to select in the way of novelty, for quotation; but even if the following two songs are not new to our readers, they will plead their own excuse.

"Oh! am I not a lover still,
In heart and soul the same
As when I sought thy bower first,
And learnt to breathe thy name?
Oh! look I not as proud of thee?
Oh! speak I not as kind?
And when I leave thee, do I not
Leave joy itself behind?
The love I offered long ago
Is but matured by time;
As tendrils round their chosen bough
Cling closer as they climb:
Then am I not a lover still,
In heart and soul the same
As when I sought thy bower first,
And learnt to breathe thy name?"

"Oh! leave me to my sorrow,
For my heart is oppress'd to-day;
Oh! leave me,—and to-morrow
Dark shadows may pass away:
There's a time when all that grieves us
Is felt with a deeper gloom;
There's a time when Hope deceives us,
And we dream of bright days to come.

In winter, from the mountain
The stream in a torrent flows;
In summer, the same fountain
Is calm as a child's repose:
Thus, in grief, the first pang wound us,
And tears of despair rush on;
Time brings forth new flowers around us,
And the tide of our grief is gone!

Then heed not my penative hours,
Nor bid me be cheerful now;
Can sunshine raise the flowers
That droop on a blighted bough?
The lake in the tempest wears not
The brightness it's slumber wore;
The heart of the mourner cares not
For joys that were dear before."

And the following verse from "Oh no! we never speak of her," as it is generally omitted in the copies of the song:

"For ah! there are so many things
Recall the past to me,
The breeze upon the sunny hill,
The billows on the sea,
The rays that deck the sky
Before the sun is set,
Ay, every leaf I look upon
Forbids me to forget."

We must say we like the comic songs the least: we doubt not they have had considerable success in society; but they want good singing, good humour, bright lamps and bright eyes, supper and champagne: they are not for quiet criticism. This volume is intended for private circulation; and we cannot but say that Mr. Bayly's friends are greatly indebted to him.

Geschichte des Kaiserthums von Trebisond.
History of the Empire of Trebisond. By
J. P. Fallmerayer, Historical Professor at
the Lyceum of Landshut. 4to. pp. 354.
Munich, 1827.

TREBISOND, on the Asiatic coast of the Black Sea, in the ancient Colchis, was governed in the thirteenth and fourteenth centuries by a fugitive branch of the imperial family of Comnenas of Constantinople. The history of these emperors was but little known; and M. Fallmerayer, therefore, in elucidating their reign, has cultivated a field which had actually been deserted by historians. He found at Venice an unpublished Greek chronicle of this empire, as well as a manuscript work on Trebisond, by Bessarion, who was a native of that country. He also acknowledges in his preface his obligations to Messrs. Sacy and Hase, who communicated to him extracts from Arabic and Greek manuscripts in the library of Paris. After several chapters on the ancient history of Trebisond, M. Fallmerayer describes in an interesting manner, and with many details, the revolution which, in the year 1185, broke out at Constantinople; and compelled a branch of the dynasty of Comnenas to fly to the Black Sea, and to seek an asylum in Colchis. In the period which immediately preceded this revolution, the various factions had deluged the palace with blood, and filled the empire with disturbances. Andronicus, succeeding to a strangled empress, and having in his turn strangled his nephew Alexis, a youth of fifteen, whom he ought to have maintained in the government, took a mad and odious resolution which was very justly the cause of his fall. To rid himself of the nobles of the empire, whom he suspected, he condemned them to death in a body, under pretence of high treason. One of them, Isaac Angelus, at the moment of his being arrested in order that he might share the fate of the others, slew the emperor's confidant who had been sent to secure him, and appealed to the people for aid. The prisons in which the nobles were confined were burst open, and the revolt became general. Andronicus, having attempted in vain to negotiate with the rebels, endeavoured to escape by sea; but the vessel in which he embarked was driven into port by a tempest, and the emboldened tyrant was seized and torn to pieces. It will scarcely be believed that this Andronicus, who in other respects was about equal as most of his predecessors, is the hero, *par excellence*, of the new historian of Trebisond. He calls him "a great man, whose noble qualities have not been hitherto appreciated." On this part of his subject, M. Fallmerayer says such strange things, that the reader is tempted to fancy him utterly deficient in judgment, and even in common sense; and it is necessary to go through the whole volume to feel satisfied that he is a learned and

able man, misled by an extraordinary prejudice, solely in this history of Andronicus. He reasons at great length, with a view to impress his own conviction upon his readers; and pretends that the emperor was actuated by a great idea!! After all the important measures which he had adopted for the welfare of the empire, there was reason to fear that on his decease every thing would again fall into confusion, by the neglect of the nobles, who delighted in disturbances. "To avert this evil," says the author, "there was only one course; a course from which little minds shrink, but which the most celebrated founders of public felicity among barbarous or degenerate nations have recognised as the sole efficacious plan; namely, the amputation of the gangrenous limbs of the social body, or the massacre of the nobles. Andronicus resolved to establish this sad guarantee for the future happiness of his subjects, by destroying the greater part of the distinguished families of Byzantium." M. Fallmerayer is not aware that he is advocating a frightful theory, and a very convenient one for all tyrants. He is probably young, and has been deluded by the good qualities of this despot, who was anxious to murder for the sake of peace! Good qualities he certainly possessed. He encouraged agriculture and the useful arts; he put an end to the quarrels of the monks on points of doctrine; he maintained rigorous justice; he abolished the venality of public officers, as well as the pretended right to seize shipwrecked goods: but he was not on those accounts "a redeeming genius, a father of his people," as M. Fallmerayer terms him; since he could re-establish tranquillity only by proscriptions *en masse*, and by rivers of blood.—The branch of the Comneni who took refuge in Asia when Isaac Angelus was proclaimed Emperor of Constantinople, and who founded a throne at Trebisond; were not much wiser than the European dynasty. Their empire, which was considerably reduced by the Turkomans and the Mongols, and which perhaps reckoned two millions of souls, and could bring into the field 25,000 troops, was governed with the same weakness, and embarrassed with the same intrigues, as that of Byzantium. M. Fallmerayer considers the principal cause of this to have been the jealousy existing between the rich native families who before the arrival of the Comneni possessed the finest parts of the territory, and the Greek families of the court, who had accompanied or followed the Comneni from Constantinople, and who were the descendants of the soldiers of the palace, or the guard of the Greek emperors. These were distinguished by the appellation of *scholaria*. The scholarian faction made and unmade emperors. The nobles persecuted one another, besieged one another in their strong castles, and ravaged the lands of their enemies, precisely as was done in Europe during the existence of the feudal system. The people were as destitute of courage and energy as the Greeks of the Lower Empire. The Turkomans who infested the neighbouring countries would have subdued the empire of Trebisond with ease, had it not been protected by nature. To penetrate into it, it was necessary to pass narrow defiles, to attack hill-forts, to pierce through forests, &c. The defence of a territory so fortified is easy; and the Turkoman emirs were repeatedly repulsed: but nevertheless they laid waste the unhappy empire. Alexis the Third won the barbarians by marriages. He gave his sister, Maria Comnena, to Kouloubey, the chief of the white horde; and

Theodora, his second sister, to Hadchymir, the chief of Chalybia. He sacrificed his daughter Eudoxia, by marrying her to one of the emirs of the Turkomans. Tahartan, the grand emir of Arsinga, received from him the hand of another princess. These ladies were all beautiful. Eudoxia, whom we have just mentioned, became a widow, and was still so beautiful, that the old Emperor of Constantinople, John Paleologus, after having demanded her for his son, was so enchanted with her when she arrived in his capital, that he took her for himself. In the West, the marriages of Christian princesses with emirs would have been considered as scandalous; but in the East they were by no means so regarded; and it was thought lucky to purchase peace with the barbarians on such terms. On the approach of the Turks in 1440, the emperor, Calo-John, hastened to give Hassan, the Turkoman Sultan of Mesopotamia, his daughter Catharine, celebrated in the East for her beauty; in order that he might have in his son-in-law a protector against the Turks: but twenty years afterwards the Turkish sultan put an end to the poor empire of the Comneni. There were many monasteries and monks in the country of Trebisond; but the army and the fleet were in a sad condition. The inhabitants were capable of disputing about points of faith; superstitions of all kinds were believed; astrologers were consulted; legends were studied; but they were incapable of defending their country; they knew not either how to govern or how to obey. At the end of his history M. Fallmerayer has inserted a number of particulars with regard to the political, ecclesiastical, and literary condition of the empire of Trebisond. His commercial details are incomplete. There are in the annals of Venice and Genoa mercantile records, which appear to have escaped his notice. In other respects his work is carefully executed; and he has the merit of being the first historian of an empire almost entirely forgotten. The Royal Society of Copenhagen has honoured him with its approbation.—(*From the Revue Encyclopédique.*)

Clapperton's Second Expedition: Lander's Journal.

IN our review of this interesting volume we have only got so far as to shew that Lander, with an intelligence above his condition, and a zeal and intrepidity worthy of any condition, was cruelly balked in a resolute endeavour to make his way from Soccatoo by the much-sought-for Niger—supposing that river to be the Quorra, and ultimately to fall into the sea by Funda and Benin, under the name of the Benin or Formosa River. We confess that the map teaches us to doubt this; for Dunrore, whence Lander was carried back to Zegzeg, is (there) on the same degree of latitude with Funda; so that, supposing this theory to be true, he must have travelled nearly due south for seventeen days from Kano to a point from which he must have made a right angle and travelled due west for a fortnight to reach his destination (Funda). But as yet the mountains and rivers in this quarter seem to defy guess-work; and it will be more profitable to turn, and return to Zegzeg with Lander,—a man every way worthy of inheriting the mantle which fell upon him from his gallant and enterprising master.

Our countryman's guides were neither of the most amiable, nor, as it appears, of the most courageous character: he was so much cha-

grined, that he tells us he "cared not much whether he lived or died;" but, after all, perhaps, if he had gone a day or two farther into the adjacent country of his friend the King of Jacoba, he might have fared worse, and been made a Lander roast or stew of. As it was, he was obliged to retrace his steps northward as well as his ill-health permitted. In four days he was again at Cuttup (an ominous name), and left it by another route; and in two days more at Cokalo, a poor village, where, he says, "the chief had made a fetish; and, having roasted a dog, stewed a large snake in oil and water, and boiled a good deal of corn, invited his people to a feast, of which they partook freely. A small bowl of boiled corn, enriched with a portion of the reptile, and the liquid in which it had been dressed, was sent me from the chief's table. Supposing it to be fish on the boiled corn, I ate a mouthful or two; but there being a peculiar and not disagreeable flavour with it, I cursorily asked a person who stood by my side, what kind of fish I was eating; but on his telling me it was part of the snake, I could eat no more. Pascoe, however, was not quite so fastidious, and consumed the remainder with great relish, declaring that, in his opinion, it was much superior to dried ling." [We can well suppose it: for dried ling is an abomination any where; and in Africa must be no dainty of the Ude kind.]

Next day, June 28, the rapid and deep Coodonia river stopped the traveller's progress, and he refused to proceed. The messengers, his police-officers as it were, thereupon left him in dudgeon: and he says—"They abused me in the most insolent terms, and threatened to go immediately and inform their king of my refusal to proceed. I desired them to give my best respects to his Zegzeg majesty, and told them they were at liberty to go as soon as they pleased. They left me in great anger, cursing me as they went; whilst I slowly proceeded with my horses and asses to the village we had left in the morning. Whether the messengers did or did not go to Zegzeg I cannot tell; but they did not return till the 11th July following. I remained all that time in the village, very ill, with nothing to eat but boiled corn, not by any means relishing their roasted dogs. The inhabitants, who came by hundreds each day to visit me, were destitute of apparel of any kind, but, nevertheless, behaved in a modest and becoming manner. The men did not appear to have any occupation or employment whatever, and spent their time in loitering about the village. The women were generally engaged most of the day in manufacturing an oil from a small black seed and the guinea nut."

Except the usual distresses of African transition, nothing particular occurred between the 11th and the 22d July, when Lander entered the city of Karia, the capital of Zegzeg, through a beautiful country, rich and fertile, and principally "laid out in gardens"! The journal continues:

"23d.—Visited the king this morning, taking with me four yards of blue, and the same quantity of scarlet damask; four yards of blue and scarlet silk, a gilt chain, six prints, among which is one of his majesty, and another of the duke of York, two pair of scissors, a quire of paper, a scarlet cap, six yards of white mullin, and a blank drawing-book. This present pleased him highly; and not long after my return to my lodgings, he sent me two fine bullocks. The chief subsequently told me that the reason for his ordering me to be brought back to Zegzeg was on account of the war between Sultan Bello and the King of Funda,

who would murder me as soon as he had me in his power, for having taken presents to his powerful enemy: it was therefore doing me a great act of favour. Abbel Crème, my host, thought it necessary for me to give something to the king's eldest son: I accordingly presented him, shortly afterwards, with two yards of blue and scarlet damask, an unwritten journal-book, half a canister of powder, a quire of paper, and a gilt chain. The prince is a remarkably fine and handsome young man, about twenty-two years of age, and was particularly kind to me. As an especial mark of favour, he took me into his inner apartments to see his wives, fifty in number, who, on my entrance, were all sitting in the shade outside their huts, and industriously occupied in preparing cotton, making thread, and weaving it into cloth. The prince said, 'I have brought the Christian to see you.' They no sooner looked up than they all instantly dropped their work, and ran, or rather flew, into their coozies, and I saw no more of them. Four of these ladies reside together in one coozie. In the course of the day the prince offered me a young female slave, named Aboudah, for a wife! I accepted of her with gratitude, as I knew she would be serviceable to me on my journey, and I should also have the satisfaction of giving her her freedom on arriving at the sea-coast."

Next day he was allowed to depart for the coast, by the more beaten way of Badagry;—but why should we trouble our readers with the names of kingdoms, such as Funda, Fellatah, Bowchee, Houssa, Guarie, Tappa, Yarida, Jaboo, Kotoukara, &c. &c., when it is more than probable, that the next European who ventures thither, will either find or give new names to nearly them all? At Guarie, on the 29th and 30th, the journal is curious, as referring to the descent of various rivers towards the Bight of Benin; but there is nothing circumstantial enough to be relied upon as a certain guide. At the town of Beari, August 10th, the record tells: "Started at the same hour as yesterday, and halted in the town of Beari at 2 p. m. Instead of journeying in a south-west direction to Youri, took another road, and kept due south, having been informed that a party of merchants had been plundered, and many of them murdered, on the road I intended taking. The chief sent me a sheep, a Muscovy duck, a quantity of yams, and some beer made from Indian corn. Returned him one yard of scarlet and blue silk, a scarlet cap, and four prints, which much delighted him. As soon as one of the head men was aware of my approach to the king's residence, he blew a shrill and loud blast through a long brass trumpet, the noise of which brought all the principal male inhabitants to the spot, who entered the hut, and seated themselves in a circle round their sovereign and myself. The chief is a fine-looking man, apparently about fifty years of age, with a noble expression of countenance, and a commanding air. The coozie into which I was introduced is the largest I had ever seen in Africa, being not less, I should think, than eighty yards in circumference. A man stood by the side of the chief while I remained, who repeated to him what I had to say, and the answers were returned to me by the same individual: this singular custom is, I believe, peculiar to Beari, as I never observed it in any other town in Africa. The chief asked the usual questions about my king and country. The town is surrounded by a high wall and a deep ditch, and contains about four thousand inhabitants, some of whom had seen us before at Womba."

It was now, by selling white-paper books and needles, &c., when required, that Lander raised funds for the expenses of his journey; and near Boussa (13th Aug.), he relates:

"A man from the town, in a state of intoxication, came to my tent this evening, with a calabash of bum, and insisted, in an insolent tone, that I should come out and drink with him. Being busily engaged in packing up the articles that had been put out to dry, I did not choose to oblige him so far. When he found I had no inclination to leave the tent, he said he was determined to come in. Wishing to intimidate the fellow, I took a loaded pistol, and went to him, threatening to shoot him unless he immediately left the place; but this, instead of having the desired effect, only exasperated him the more; and flourishing a long spear he had with him over his head, as quick as lightning he made a desperate thrust at me. Slipping a little on one side, I caught the weapon in my hands, within an inch of my breast, which saved my life. I was highly incensed at this violent act, and told the people who stood by, and were spectators of the whole affair, that if they did not that moment take him from the tent, I would shoot him in earnest: half a dozen of them accordingly dragged him away. Next morning the fellow returned, and throwing himself at my feet, begged I would not inform Sultan Magie of his conduct: for if it came to his ears he would lose his head. I forgave him, on condition that he should never get tipsy again"—(which condition, if he, like Europeans addicted to drunkenness, forgets to fulfil, there is at least this much in his favour,—it is not very likely that he will again annoy any white person with his vagaries). Lander soon after cut into the route by which the party had ascended from the coast to Soccatoo: the following, however, seem to us to be desirable quotations to illustrate African manners."

At Wowow (August 29)—"The king sent me a goat, cut up into small pieces, and a large bowl of tuah, to make a *sadaeco* for my poor master:—a ceremony common in many places in the interior, on the decease of any person of consequence. The pieces of goat and the bowl of tuah are sent to the mallam, or priest, who repeats a short prayer over them: it is, however, necessary, before this can be performed, to place a gold or silver coin, or at least an article made of either of those metals, on the top of the bowl. Having no coin I could part with, I put a silver pencil-case in its stead, which was never returned me. After the prayer has been pronounced over the tuah and goat's flesh, they are sent back to the person to whom they belong, and any who is disposed comes and eats; each person, before tasting, repeating this pious ejaculation—'God send him safe to heaven!' The goat's flesh and tuah sent to me were soon consumed.—30th. Having finished cleaning the muskets and pistols, asked the chief permission to leave Wowow. The old man, smiling, told me not half my business was done; he wanted six charms, which I alone could write. These charms were to be worn on his person, and to possess the following virtues: 1st charm. If his enemies thought of making war on him, it would cause them to forget to put it in practice. 2d. If they should be on their way to his city, for the purpose of warring, it would turn them back. 3d. If they should discharge their arrows at his people, when close to the city walls, it would cause them to rebound in their own faces, and wound them. 4th. It was the province of this charm to prevent his guns

from bursting. 5th, was to preserve the person who might hold the gun from receiving any injury, should it unfortunately explode. The 6th and last charm was to make him the happiest and most successful of men.—31st. Carried the charms to the king, on which I had written scraps of old English ballads, which made him in the best humour in the world.—September 1st. The king still wished to detain me longer, and insisted on my selling or giving him my gun and pistols, the only arms I had left. I endeavoured to soften him by every means in my power; but finding him firm in his determination of having the gun, and at least one of the pistols, and knowing resistance would be ridiculous, I sent them to him, leaving it entirely to his generosity to give what he thought proper. The liberal-minded chief shortly afterwards returned 4,000 cowries (worth little more than a dollar) as a sufficient remuneration for the gun and pistol, but made me a present the next day of a beautiful little mare.—3d. Early in the morning the old chief desired to see me before I left, and obtained from me a promise to return to him after having visited my own country. He shewed me various patterns of silk for a robe I was to bring from England for him; and said, as I was going out of the apartment, 'Your countrymen may come here and build a town, and trade up and down the Niger: we know now that they are good men, but we did not think so when the white men who were drowned at Bousa were in the country.' He kept me with him till nine o'clock in the morning, when, on going to my hut, I found a party of merchants waiting for me, whom the kind old chief had detained, on purpose that they might accompany me to Khama (which had been concealed from me entirely), the roads to that city being infested with bands of robbers. Crossed the river Auli at twelve at noon. The current being very rapid, we had extreme difficulty in getting over; but no accident occurred, and we fixed our tent on the south bank of the river. In the evening the mallam, or priest of the merchants, came to my tent, and gave me the following account of Mungo Park and his unfortunate companions: 'You are not, Christian, the first white man I have seen. I knew three of your countrymen very well. They arrived at Youri at the fest of the Rhamadan (April). I went with two of them three times to the sultan. The person that appeared to be the head of the party made the sultan a valuable present on one of his visits, which consisted of a handsome gun, a cutlass, a large piece of scarlet cloth, a great quantity of beads, several knives, and a looking-glass. He was a very tall and powerful man, with long arms and large hands, as which he wore leather gloves reaching above the elbows. Wore a white straw hat, long coat, full white trowsers, and red leather boots. Had black hair and eyes, with a bushy beard and moustaches of the same colour. The Sultan of Youri advised your countrymen to proceed the remainder of the way on land, as the passage by water was rendered dangerous by numerous sunken rocks in the Niger, and a cruel race of people inhabiting the towns on its banks. They refused, however, to accede to this, observing, that they were bound to proceed down the Niger to the salt water.' The old mallam further observed, that 'as soon as the Sultan of Youri heard of their death, he was much affected; but it was out of his power to punish the people who had driven them into the water. A pestilence sucking Bousa at the time, swept off the

king and most of the inhabitants, particularly those who were concerned in the transaction. The remainder, fancying it was a judgment of the white man's God, placed every thing belonging to the Christians in a hut, and set it on fire.' It is not a little remarkable that it is now a common saying all through the interior of Africa, 'Do not hurt a Christian; for if you do, you will die like the people of Bousa.' The old man left me shortly afterwards, and I thanked him for his information thus voluntarily given.

"Sept. 9th. At half-past six in the morning continued our journey, and at noon entered the city of Khama. Went immediately to the king's residence, who, as soon as he saw me, asked how I dared to come into his town without having previously sent him a messenger to inform him of my approach. I answered I had sent one of his own men, three or four days before, to acquaint him of it. 'That is of no consequence,' he continued; 'you should have sent another this morning. Get on horseback directly, and return an hour and a half's journey the way you came: on arriving there, send me a messenger, and I will order a sufficient escort to conduct you into the city in a manner deserving your rank and respectability.' I was in the act of obeying this odd mandate, when he bawled after me: 'I forgive you this time, Christian; but never be so remiss again.' The chief is an eccentric but friendly kind of man, and regretted very much my father's death, which had been told him some days before by a merchant. He had heard the Fellatas had behaved very roughly to us, and had robbed us; but asked what business we had at Socatoo? I told him we were at Kano, on our road to Bornou, when Sultan Bello sent for us, and we were obliged in consequence to visit him. He offered to send me safely to Bornou, and said he was tributary to the sheik. I replied, that Bello had taken the presents intended for him, and that I had none left worthy so great a prince, therefore could not accept his kind offer. My present to the chief consisted of a silk sword-sash, three yards of scarlet and blue damask, the same quantity of blue silk, a red cap, two pairs of scissors, and a hundred needles. I likewise gave him my old tent, which was full of holes, and quite useless. Remained at Khama five days, during which time the queen's treatment was kind and generous, supplying us every day with excellent provisions in great abundance. The day before my departure the king gave me a strong pony; and observed that, 'if my king wished, at any future period, to send any one to Bornou, he would conduct him there by a safe route, without the necessity of going through the Fellata country.' The king of Khama is, without exception, the finest and handsomest man we had seen in Africa (far superior to Bello); and, with the exception of the king of Yariha, was most respectably dressed.

"16th. Arrived at Mossa, a town situated on the banks of a river of the same name, which divides Yariha from Borgoo. The river was overflown, and the current strong and rapid; in consequence of which the people of the town were afraid to ferry us over. No food of any kind this day. 17th. Asked the king of Khama's messenger why he was so much afraid of crossing the water, observing that I had myself swam across many larger and more rapid rivers; and among others mentioned the Niger. The man, in great trepidation, begged me, as I valued my life, not to mention the names of rivers in the hearing of the Mossa, who was a female

river, and had many rivals in the affections of the Niger, who was her husband. She had a capricious, jealous, and cruel disposition; and if I ventured to place myself in her power, she would certainly swallow me up, as I had spoken slightly of her. She was continually quarrelling with her husband, thinking he was too familiar with other rivers; and where they met, they made the 'devil's own noise' with their disputes. I roared with laughter, when the man had done speaking, at the loves of the Niger, which made him very angry, and I had much to do to pacify him. Being unable to procure provisions of any kind in the village, went to the chief, and wished to know whether he intended to starve us. The old scoundrel had a garden in which he grew a quantity of yams; but he refused to sell me any, asserting that he had none for himself. I then asked leave for Pascoe to cut grass in his garden for the horses, suspecting his yams might be hid in some part of it: this he sulkily granted. In the evening Pascoe returned with a bundle of grass, concealed in which were several yams he had had the good fortune to discover. If this had not been the case, I really believe we should all have died of hunger."

At Katunga, the capital of Yariha, "The low grounds were rendered almost impassable by reason of the rain, which fell in torrents. On our arrival I was put into the same house we occupied on our journey into the interior.—26th. The king would not let me wait on him, fearing it might wet my feet; and accordingly he visited me with five hundred of his wives (out of two thousand), and the principal inhabitants of the city. The wives welcomed my return by singing a simple and plaintive air, with much pathos and feeling: their voices were sweet and musical; and the whole had a novel and pleasing effect. Nothing could be heard but their strains, to which every one listened with the profoundest attention until the conclusion of the performance. The king expressed his sorrow for my master's death; and questioned me very minutely on the motives that induced us to go into the interior. On telling him it was to see if there was any thing worth trading for in the country, he appeared satisfied. He was richly dressed in a scarlet damask robe, and a pair of trowsers made of country cloth, scarlet ground with a blue stripe; the former ornamented with coral beads; his legs, as far as the knees, were stained red with heunah; and on his feet he wore red leather sandals. A cap made of blue damask, thickly studded with coral beads, was on his head; and silver rings hung round his neck, arms, and legs. I offered him the horse I had purchased at Kano, a fine animal, that had carried me the whole of the way from that city; and regretted my inability to make him a more valuable present; but promised, if he permitted two messengers to accompany me to the sea-coast, I would send him something else. In the evening I received a goat and a great quantity of yams from the king.—27th. The king having desired me to call on some of his head men, I waited on the master of the horse, and two others. The former gave me a goat and a bottle of honey. I remarked I was very poor, and could make him no return.—30th. I informed the king I was short of money, on which he generously sent me a duck and four thousand cowries (little more than a dollar). The eunuch, the king's head man, begged of me my remaining pistol, two dollars, and a scarlet cap, which I was necessitated to give him. He also wanted my ass to make a fetish, but this I refused to let him have. This even-

ing I sent for the ass from a neighbouring pasture, when I found the poor animal had been shot in the side with two poisoned arrows. I have no doubt but this cruel action was performed at the instigation of the disappointed eunuch. The beast became a complete skeleton, and after languishing for six days in great agony, I desired Pascoe and Jowdie to take him to a short distance, and cut his throat. When the king heard of the circumstance, he immediately ordered the carcass to be cut into quarters, and conveyed to his house. After which he ordered the meat to be dressed, and having assembled his wives and head men, they regaled themselves on it with peculiar satisfaction. Wishing to pay for so delicious a treat, the king sent me a goat and a thousand cowries for the dead ass. The people of Yariba are not very delicate in the choice of their food; they eat frogs, monkeys, dogs, cats, rats, mice, and various other kinds of vermin. A fat dog will always fetch a better price than a goat. Locusts and black ants, just as they are able to take wing, are a great luxury. Caterpillars also are held in very high estimation. The caterpillars are stewed, and ate with yams and tuah. Ants and locusts are fried in butter, and are said to be delicious. I could never make up my mind to taste any of these rich insects; Pascoe, however, is particularly fond of them, and calls them land-shrimps. It is a custom in Katunga, when the king dies, for his eldest son, first wife, and all the head men of the kingdom, to drink poison over his grave, and are afterwards buried with him. None of the king's sons ever come to the throne. After the king's death, his successor is chosen from among the wisest persons of the country; an elderly man is generally preferred. Remained at Katunga till the 21st of October, when the king gave me 4000 cowries, and some trona to sell on the road. He ordered his head messengers to accompany me, with a desire they should command the chiefs of every town through which we were to pass, to contribute, according to their means, to our support."

It must be very inconvenient to place old persons on the throne, seeing that the poisoning ceremony at their death is likely to deprive the country of all its head men. Were such the custom in England, what changes in the house of peers and in the ministry would be frequent! It might however have the effect of lessening the love of, and struggle for, high places. At Badagry the Portuguese traders tried to poison poor Lander, but he escaped. We notice the fact, as a clue to much of the jealousy and cruelty which this expedition experienced at the hands of the natives. The slave dealers at least succeeded in poisoning the minds of the Africans; and thus we have to record, independently of climate, the very fatal issue of the mission.

Burckhardt's Travels in Arabia.

MEKKA.

CONTINUING the review from our last, and the account given of the curiosities of Mekka, we must confine ourselves to a portion of what relates to the Kaaba, which stands in the middle of the great mosque Beitullah, or El Haram, remarkable only on account of the worshipped object which it encloses.

"The Kaaba stands in an oblong square, two hundred and fifty paces long, and two hundred broad, none of the sides of which run quite in a straight line, though at first sight the whole appears to be of a regular shape. This open square is enclosed on the eastern side by a colonnade: the pillars stand in a quadruple

row: they are three deep on the other sides, and united by pointed arches, every four of which support a small dome, plastered and whitened on the outside. These domes, according to Kotobeddyn, are one hundred and fifty-two in number. Along the whole colonnade, on the four sides, lamps are suspended from the arches. Some are lighted every night, and all during the nights of Ramadhan. The pillars are above twenty feet in height, and generally from one foot and a half to one foot and three quarters in diameter; but little regularity has been observed in regard to them. Some are of white marble, granite, or porphyry, but the greater number are of common stone of the Mekka mountains. El Fasy states the whole at five hundred and eighty-nine, and says they are all of marble, excepting one hundred and twenty-six, which are of common stone, and three of composition.

"Seven paved causeways lead from the colonnades towards the Kaaba, or holy house, in the centre. They are of sufficient breadth to admit four or five persons to walk abreast, and they are elevated about nine inches above the ground. Between these causeways, which are covered with fine gravel or sand, grass appears growing in several places, produced by the Zemzem water oozing out of the jars, which are placed in the ground in long rows during the day.

"The Kaaba is an oblong massive structure, eighteen paces in length, fourteen in breadth, and from thirty-five to forty feet in height. I took the bearing of one of its longest sides, and found it to be N.N.W. $\frac{1}{4}$ W. It is constructed of the gray Mekka stone, in large blocks of different sizes, joined together in a very rough manner, and with bad cement. It was entirely rebuilt as it now stands in A.D. 1627: the torrent, in the preceding year, had thrown down three of its sides; and preparatory to its re-erection, the fourth side was, according to Asamy, pulled down, after the olemas, or learned divines, had been consulted on the question, whether mortals might be permitted to destroy any part of the holy edifice without incurring the charge of sacrilege and infidelity. The Kaaba stands upon a base two feet in height, which presents a sharp inclined plane; its roof being flat, it has at a distance the appearance of a perfect cube. The only door which affords entrance, and which is opened but two or three times in the year, is on the north side, and about seven feet above the ground. In entering it, therefore, wooden steps are used—of them I shall speak hereafter. In the first periods of Islam, however, when it was rebuilt in A.H. 64, by Ibn Zebeyr, chief of Mekka, the nephew of Aysha, it had two doors even with the ground floor of the mosque. The present door (which, according to Azraky, was brought hither from Constantinople in 1633,) is wholly coated with silver, and has several gilt ornaments. Upon its threshold are placed every night various small lighted wax candles, and perfuming-pans, filled with musk, aloe-wood, &c. At the north-east corner of the Kaaba, near the door, is the famous 'Black Stone'; it forms a part of the sharp angle of the building, at four or five feet above the ground. It is an irregular oval, about seven inches in diameter, with an undulated surface, composed of about a dozen smaller stones of different sizes and shapes, well joined together with a small quantity of cement, and perfectly smoothed: it looks as if the whole had been broken into many pieces by a violent blow, and then united again. It is very difficult to determine accurately the quality of this stone,

which has been worn to its present surface by the millions of touches and kisses it has received. It appeared to me like a lava, containing several small extraneous particles of a whitish and of a yellowish substance. Its colour is now a deep reddish brown, approaching to black: it is surrounded on all sides by a border, composed of a substance which I took to be a close cement of pitch and gravel, of a similar, but not quite the same brownish colour. This border serves to support its detached pieces; it is two or three inches in breadth, and rises a little above the surface of the stone. Both the border and the stone itself are encircled by a silver band, broader below than above and on the two sides, with a considerable swelling below, as if a part of the stone were hidden under it. The lower part of the border is studded with silver nails. In the south-east corner of the Kaaba, or, as the Arabs call it, Roken el Yemany, there is another stone, about five feet from the ground; it is one foot and a half in length, and two inches in breadth, placed upright, and of the common Mekka stone. This the people walking round the Kaaba touch only with the right hand: they do not kiss it. On the north side of the Kaaba, just by its door, and close to the wall, is a slight hollow in the ground, lined with marble, and sufficiently large to admit of three persons sitting. Here it is thought meritorious to pray: the spot is called El Madjen, and supposed to be that where Abraham and his son Ismayl kneaded the chalk and mud which they used in building the Kaaba; and near this Madjen the former is said to have placed the large stone upon which he stood while working at the masonry. On the basis of the Kaaba, just over the Madjen, is an ancient Cufic inscription; but this I was unable to decipher, and had no opportunity of copying it. I do not find it mentioned by any of the historians. On the west side of the Kaaba, about two feet below its summit, is the famous Myzab, or water-spout, through which the rain-water collected on the roof of the building is discharged, so as to fall upon the ground; it is about four feet in length, and six inches in breadth, as well as I could judge from below, with borders equal in height to its breadth. At the mouth hangs what is called the beard of the Myzab, a gilt board, over which the water falls. This spout was sent hither from Constantinople in A.H. 981, and is reported to be of pure gold. The pavement round the Kaaba, below the Myzab, was laid down in A.H. 826, and consists of various-coloured stones, forming a very handsome specimen of mosaic. There are two large slabs of fine *verde-antico* in the centre, which, according to Makrizi, were sent thither as presents from Cairo, in A.H. 241. This is the spot where, according to Mohammedan tradition, Ismayl, the son of Ibrahim, or Abraham, and his mother Hagar, are buried; and here it is meritorious for the pilgrim to recite a prayer of two rikats. On this west side is a semi-circular wall, the two extremities of which are in a line with the sides of the Kaaba, and distant from it three or four feet, leaving an opening which leads to the burying-place of Ismayl.

"The four sides of the Kaaba are covered with a black silk stuff, hanging down, and leaving the roof bare. This curtain, or veil, is called *kesoua*, and renewed annually at the time of the Hadj, being brought from Cairo, where it is manufactured at the grand seignior's expense. On it are various prayers interwoven in the same colour as the stuff, and it is, therefore, extremely difficult to read them. A little

above the middle, and running round the whole building, is a line of similar inscriptions, worked in gold thread. That part of the ke-sous which covers the door is richly embroidered with silver. Openings are left for the Black Stone, and the other in the south-east corner, which thus remain uncovered. The ke-sous is always of the same form and pattern. * * * The black colour of the ke-sous, covering a large cube in the midst of a vast square, gives to the Kaaba, at first sight, a very singular and imposing appearance; as it is not fastened down tightly, the slightest breeze causes it to move in slow undulations, which are hailed with prayers by the congregation assembled around the building, as a sign of the presence of its guardian angels, whose wings, by their motion, are supposed to be the cause of the waving of the covering. Seventy thousand angels have the Kaaba in their holy care, and are ordered to transport it to Paradise when the trumpet of the last judgment shall be sounded. The clothing of the Kaaba was an ancient custom of the Pagan Arabs."

The following are also remarkable particulars; and,—considering that Mekka has never been painted by a Christian or renegade or impostor hand, that we are aware of,—possessing more than common interest.

"It is only during the hours of prayer that the great mosques of these countries partake of the sanctity of prayer, or in any degree seem to be regarded as consecrated places. In El Azhar, the first mosque at Cairo, I have seen boys crying pancakes for sale, barbers shaving their customers, and many of the lower orders eating their dinners, where, during prayers, not the slightest motion, nor even whisper, diverts the attention of the congregation. Not a sound but the voice of the imam is heard during prayers in the great mosque at Mekka, which at other times is the place of meeting for men of business to converse on their affairs, and is sometimes so full of poor hadjys, or of ~~timid~~ ^{timid} ~~personally~~ ^{personally} ~~about~~ ^{about} under the colonnade, in the midst of their miserable baggage, as to have the appearance of an hospital rather than a temple. Boys play in the great square, and servants carry luggage across it, to pass by the nearest route from one part of the town to the other. In these respects the temple of Mekka resembles the other great mosques of the East. But the holy Kaaba is rendered the scene of such indecencies and criminal acts, as cannot with propriety be more particularly noticed. They are not only practised here with impunity, but, it may be said, almost publicly; and my indignation has often been excited, on witnessing abominations which called forth from other passing spectators nothing more than a laugh or a slight reprimand. In several parts of the colonnade public schools are held, where young children are taught to spell and read: they form most noisy groups, and the schoolmaster's stick is in constant action. Some learned men of Mekka deliver lectures on religious subjects every afternoon under the colonnade, but the auditors are seldom numerous. On Fridays, after prayer, some Turkish olemas explain to their countrymen assembled around them a few chapters of the Koran, after which each of the audience takes the hand of the expositor, and drops money into his cap. I particularly admired the fluency of speech of one of these olemas, although I did not understand him, the lecture being delivered in the Turkish language. His pronunciations, and the inflexions of his voice, were most expressive; but, like an actor on the stage, he would laugh and cry in the same

minute, and adapt his features to his purpose in the most skilful manner. He was a native of Brusa, and amassed a considerable sum of money. Near the gate of the-mosque called Bab-es'-Salam, a few Arab sheikhs daily take their seat, with their ink-stand and paper, ready to write, for any applicant, letters, accounts, contracts, or any similar document. They also deal in written charms, like those current in the black countries, such as amulets, and love-receipts, called 'Kotob muhbat o kuboul.' They are principally employed by Bedouins, and demand an exorbitant remuneration. Winding-sheets (*keffen*), and other linen washed in the waters of Zemzem, are constantly seen hanging to dry between the columns. Many hadjys purchase at Mekka the shroud in which they wish to be buried, and wash it themselves at the well of Zemzem, supposing that, if the corpse be wrapped in linen which has been wetted with this holy water, the peace of the soul after death will be more effectually secured. Some hadjys make this linen an article of traffic. Mekka generally, but the mosque in particular, abounds with flocks of wild pigeons, which are considered to be the inviolable property of the temple, and are called the Pigeons of the Beitullah. Nobody dares to kill any of them, even when they enter the private houses. In the square of the mosque several small stone basins are regularly filled with water for their use; here also Arab women expose to sale, upon small straw mats, corn and durra, which the pilgrims purchase and throw to the pigeons. I have seen some of the public women take this mode of exhibiting themselves; and of bargaining with the pilgrims, under pretence of selling them corn for the sacred pigeons."

There are also many pigeons which do not fly; but of these, under the name of pilgrims, &c., we have already extracted an account: we will leave the scene of hypocrisy, credulity, and human absurdity, with one other quotation; but cannot find space for it till our next No.

SIGHTS OF BOOKS.

A Second Judgment of Babylon the Great; or, more Men and Things in the British Capital. By the Author of "Babylon the Great." 2 vols. London, 1829. H. Colburn.

THIS is book-manufacturing, wholesale, and not book-writing. The first Babylon was the production of a shrewd, observant person, who knew nothing of the interior and finer characteristics of the immense city about which he made a three-volumed work: his knowledge went not beyond the newspaper and the magazine—publications laudable in their way, but by no means lights to the real illumination of society. Yet the talent of the author enabled him to produce one of those publications which have their readers and their day, and are forgotten. Their merits entitle them to no sequel, and they ought to have none; and they would have none, unless book-making were a trade in which routine and system usurped the prerogatives of intelligence and genius. The volumes now before us are wearisome common-places about the law, and the Stock Exchange, and banking, and gaming-houses, and theatres, and Jews, and vestries, and other topics which are discussed in every journal that issues from the press. There is good sense enough in stringing these things together; but neither originality of observation, depth of thought, nor pointedness of language, to render them more engaging in this dully-laborious concoction. We cannot select one extract that could amuse or inform our readers. An author should live

twenty years in London before he ventures to describe it in any part. We do not believe this author had seen its outside half a year before he thought he could lift all its veils.

The Life and Times of William Laud, D.D., Lord Archbishop of Canterbury. By J. Parker Lawson, M.A. 2 vols. 8vo. London, 1829. Rivingtons.

THE immense quantity that has been written and published about Laud, is a sufficient proof of the vast importance of his character and deeds to English history. We have therefore been surprised to find a very brilliant critic in the Edinburgh Review endeavouring to represent him as an imbecile, pusillanimous, and feeble personage:—the man who performed so high a part, must have had superior endowments. At the same time, we are ready to allow that Laud was a zealot, if not a bigot, narrow in his principles, and harsh and cruel in his disposition. It is of the nature of religious contention and of political struggle, to harden the hearts and exasperate the feelings of all concerned in them: and looking at this period with impartiality, it must be confessed, that oppression, tyranny, and persecution, on the one hand, was encountered by hatred, barbarity, and ruthless revenge, on the other. Laud has been identified with the high church and state party, and consequently assailed by dissenters and whigs; but the church ought to be independent of such a supporter, and the state dissociated from such an ally—though Laud and Stafford were, in bad times, obliged to be sacrificed, before the altar and the throne could be overturned. The present work is one of laborious partisanship, which may be upheld by ultra principles, and assailed by the opposite spirit, as a politico-polemical publication; but it can never take its place as authentic history. We could wish to see a good volume on the literary portion of Laud's life, in which he was truly great, and respecting which, much that is new and interesting might be procured.

ORIGINAL CORRESPONDENCE.

January 27th, 1839.

THE ball given by *son altesse la Duchesse de Berri* has, in some degree, given a variety to conversation; and instead of being asked, "Is it not very cold?"—"What horrid weather!" one hears a detailed account of the costume worn by her royal highness, the number of quadrilles she danced, who appeared her favourite cavaliers (for princesses are allowed a plurality), the name of the gentleman who leaned over her chair at supper, the colour of his hair, the form of his moustache, how his cravat was tied, the exact measure of his waist, the words he addressed to the duchess, her reply, and a thousand anecdotes suited to fashionable gossip. The fête was most brilliant. The walls of the palace were decorated with the richest tapestry, and the corridors lined with orange trees laden with their fruit, ever-greens, roses, and even lilies, in blossom; so that January and May were united. *L'homme le plus aimable* was his Majesty Charles X.; he, however, only remained until half-past eleven: French ladies pretend that no one is *si charmant, si galant*; for that he always forgets the king, and only remembers the courtier, when he is in society. A supper of eighteen hundred covers was served at one, and lasted until five o'clock in the morning. The entertainment, I understand, cost eighty thousand francs. The duchess sent ten thousand francs to the poor on the following day.

There are at present few decided mendi-

cants to be seen in the streets of Paris; distress, nevertheless, is greater than ever, but it reigns amidst the better classes, who "to beg are ashamed." The number of *soi-disant* gentlemen who are out of employment, and who can only live by ways and means, is incalculable: It happens also that men well-dressed often stop the passer-by to ask assistance. Now it is the fashion to write and speak of the misery of humanity; yet, I believe few, if any, care to be of service to others, though all wish to get credit for benevolence—there is no poet or prose writer of the age who does not pretend to sympathy: but one would wish to see actions instead of words, as proofs of the sincerity of the speaker.

Last night an officer of the Guards was given a cold bath by some robbers, who had previously taken his watch from him; fortunately, the part of the Seine into which they threw him was close to hot baths, and he was in consequence saved.

A restaurateur has offered to feed five hundred people for two sous a-head, by means of the vapour arising from his stews, soups, and pasties: he pretends that he can by this means live eight days without eating; and that such unsubstantial diet may equally support the poorer classes.

The theatres are tolerably well attended; few, however, go for the performances, but rather as a rendezvous to see and be seen; and, to kill time, I hear that private theatricals are to be established, that tickets are to be paid for, and the money collected to be applied to charitable purposes!!!

ARTS AND SCIENCES.

ROYAL INSTITUTION EVENING MEETINGS. THE first of these laudable meetings for the present session was held yesterday evening. Notwithstanding the severe frost and heavy snow, there could not have been fewer than five hundred members and visitors assembled and distributed throughout the numerous rooms of the Institution. During the evening the library-table was surrounded by the members and their friends, all of whom must have derived ample gratification in viewing the several interesting donations and "exhibitions" which lay on it. The former consisted of various paintings, drawings, and specimens, from India, illustrative of the mythology and the arts of that country; some arrow-heads beautifully formed of whet-stone, by the Esquimaux; Egyptian inscription on copper; fine castings in bronze by Mr. Parker, &c. &c. On the table were Finden's engraving of the King, from Lawrence; and Sievier's bust of the late Daniel Moore, a vice-president of the Institution—the expense defrayed by subscription among the members, as a testimony of posthumous regard.

At the usual hour (half-past nine o'clock) the company adjourned to the theatre. Mr. Brande then delivered the first lecture of the season: it was on the "supply of water to the metropolis." The lecturer opened his discourse (extempore) with some remarks on the great importance of pure water to the inhabitants of such a metropolis as London; took a review of the different plans by which it is at present supplied, as well as of those which have been brought forward since the question became the subject of parliamentary inquiry; he then dilated on the present *status quo*, and observed, that if the metropolis could not boast of having bronze and marble fountains, like many of the cities and towns on the continent, the supply was much more abundant; and perhaps, after all that had been

said about the impurity of Thames water, it was not so prejudicial to health as might be imagined by some. He then gave the following analysis:—

Thames Water.....		10-000.	
Carbonate of Lime	1.33	1.55
Sulphate of Lime	0.15	0.12
Muriate of Soda and Muriate of } Magnesia	0.20	0.23
		1.68 1.90
Organic Matter.....	0.07	2.02
		1.95 3.92

Speaking of the means by which London is supplied with water, Mr. Brande brought forward some curious details: it appears that the supplies are, daily, of the—

	Gallons.	Cubic Feet.	No. of Trenches.	No. of Basins.	Total Water.
New River Company.....	13,000,000	4,000,000	67,000	3 (60 + 60 + 120)	= 230
East London.....	6,000,000	900,000	42,000	4 (40 + 40 + 70 + 90)	= 240
West Middlesex.....	2,500,000	380,000	15,000	3 (77 + 70 + 104)	= 248
Chelsea.....	1,700,000	268,000	12,000	2 (69 + 70)	= 139
Grand Junction.....	2,300,000	450,000	7,700	3 (100 + 100 + 70)	= 270
Lambeth.....	1,544,000	260,000	16,000	2 (35 + 80)	= 115
Vauxhall.....	100,000	16,000	10,000	2 (45 + 30)	= 68
South-west.....	720,000	112,000	7,000	2 (45 + 30)	= 68
	20,774,000	4,217,000	177,700	51	= 1338

Mr. Brande exhibited the model of a filtering machine used by one of these companies, which was capable of filtering, in all weathers, 500,000 cubic feet of water per day: specimens of filtered and non-filtered water were also exhibited. The lecturer concluded amidst great applause.

SOCIETY FOR THE ENCOURAGEMENT OF ARTS, MANUFACTURES, AND COMMERCE.

THE Society had resolved, before the Christmas vacation, that seven evening meetings should be held during the present session, specially devoted to the illustration of the arts and manufactures of the country. Accordingly, the first of these meetings took place on Tuesday last, the 27th. The subject treated of, was earthenware, as far as relates to the manufacture of bricks and tiles, and the various kinds of red pottery, from the coarsest to the finest, glazed and unglazed.

The secretary, Mr. Aikin, read a paper that he had drawn up, in which he traced the history of brick- and tile-making from the construction of the tower and city of Babel to modern times. This part of the subject was illustrated by the exhibition of bricks impressed with inscriptions in the arrow-head characters, from the Birs Nemrod, the most conspicuous of the mounds that form the ruins of Babylon; by ornamented bricks from the ruins of Gour, one of the antique capitals of India; and from Nipal, the mountainous country north of the Ganges; from the Bur-

mese country; and from China. Roman bricks, from the fortified stations of that people in Britain, were also exhibited. The secretary then gave a succinct description of brick-making as practised in the vicinity of London; pointing out the characters and principal local situations of the beds of clay, and the different qualities of the bricks and tiles that they yield.

He next treated of the art of pottery; of the potter's wheel; and of the art of tempering and mixing clays according to the required quality of the ware. The degree of proficiency attained by the ancients was shown by specimens of Etruscan or Greek vases; of Samian pottery of cups and other utensils from Herculaneum and Pompeii; of imitations of the Etruscan ware manufactured at Naples; of lamps and other articles in terra cotta from Athens, and from Martaban in Ava; and of antique Peruvian pottery made before the discovery of America by the Europeans. He then treated in detail of the manufacture of glazed and unglazed red-ware as practised in the neighbourhood of London; and concluded the subject with an account of the process of making stone-ware, illustrated by specimens from one of the principal manufacturers of it at Lambeth.

The secretary stated, that the oriental specimens exhibited were from the museum of the East India Company, the directors of which, at the suggestion of Dr. Wilkins, the librarian, had, with characteristic liberality, sanctioned the loan of them for the evening. The Greek vases were from the collection of T. Hope, esq.; and the other antiques were furnished by T. Todd, esq., T. Winder, esq., and T. Fisher, esq. The specimens of modern pottery, showing the various steps in the process of the fabric, were from the manufactories of Mr. Jones and of Mr. Wisker, at Lambeth.

Besides the specimens illustrative of the immediate objects of the meeting, a very interesting series was sent by Mr. Mawe, of the Strand, consisting of the black and the red marbles of Derbyshire, of fluor spar, of alabaster, of green arragonite, and of fibrous gypsum, all from the same county, wrought into vases, pateras, and other ornamental articles.

MEDICO-BOTANICAL SOCIETY.

Tuesday Evening.

EARL STANHOPE, president, in the chair. Papers were read on several medicinal plants of Cuba, and on the diuretic properties of the genus *euaisetum*, or horsetail. Donations were enumerated from the Horticultural Society of Berlin, Medical and Physical Society of Calcutta, &c. Earl Stanhope moved the reading and confirming of the minutes of a former meeting; one of these minutes had reference to the "expulsion" of Mr. Brown, the distinguished botanist. Dr. Sigmund, in forcible language, objected to the motion, and suggested the propriety of referring the matter relative to Mr. Brown's expulsion to the council. Dr. Churchill followed on the same side: the eyes of the whole scientific community were directed to the Society since Mr. Brown had been expelled; many eminent members had seceded, and it had been whispered, that Sir James M'Grigor, the late president, also had retired owing to the same cause.

The noble chairman emphatically contradicted the assertion regarding Sir James M'Grigor's leaving the president's chair; he had been assured by Sir James himself, that the circumstance of his vacating the chair was neither directly nor indirectly connected with

Mr. Brown's expulsion. He would be glad if the council could retrace its steps in reference to that business; at the same time he was bound to say that he could not see how it was to be done.

The question relative to the confirming of the minutes was again put and carried *pro forma*, with an understanding that Mr. Brown's affair was to be referred to the council.

After a few remarks from Mr. Frost upon the medical qualities of some plants on the table, the meeting broke up.

CELESTIAL PHENOMENA FOR FEBRUARY.

NOTWITHSTANDING the bleak influence of the wintry blast, which has been felt with such severity during the past month, as well amidst scowling clouds, as when the sun shone with clear yet cheerless ray, tending only to render the keenness of the air more apparent,—notwithstanding this dreariness, the sun is re-ascending his shining path, to marshal the seasons and conduct the year; and as he pursues his oblique course, still augmenting his power, before another revolution of the moon is completed, some of the early harbingers of spring will burst forth from their long concealment, and appear as sure pledges of the soft and vernal season.

Lunar Phases and Conjunctions.

	D.	H.	M.
☾ New Moon in Capricornus . . .	3	14	31
☾ First Quarter in Aries . . .	10	7	23
☾ Full Moon in Leo . . .	18	7	15
☾ Last Quarter in Ophiuchus . . .	26	8	30

The moon will be in conjunction with

	D.	H.	M.
Venus in Sagittarius . . .	1	10	45
Mercury in Aquarius . . .	4	16	30
Mars in Pisces . . .	7	23	13
Saturn in Cancer . . .	15	16	40
Jupiter in Scorpio . . .	26	18	7

12th day—Mercury at his greatest elongation, in the stream issuing from the urn of Aquarius, and visible as an evening star.

Venus, the morning star, is gradually diminishing in splendour, as she retreats from the earth, and approaches her superior conjunction.

15th day, 16 hrs.—In conjunction with Uranus in Capricornus, and south of the two stars in the horn of the Goat.

1st day, 10 hrs.—Mars in conjunction with Pictus, a star of the fourth magnitude in the ecliptic. 19th day—enters the constellation Aries.

Jupiter forms a right-angled triangle with the red star Antares and β Scorpii. The following will be the visible eclipses of the satellites:

First Satellite.	Immersion	D.	H.	M.	S.
Second Satellite.	do.	10	17	46	41

Saturn continues in the constellation Cancer, and passes the meridian at the following times respectively:

D.	H.	M.	D.	H.	M.	D.	H.	M.
1	11	7	13	10	16	25	9	27

The double ring of Saturn constantly presents ample amusement, and affords high gratification; the contemplation of its form, position, and magnitude, supplying materials for speculation on the probable purposes for which such a zone of light was ordained to circulate round the central orb.

It is worthy of remark, that this stupendous and singular system of Saturn (its orb, ring, and satellites,) had performed 190 uncounted revolutions of 29 years, 174 days, 1 hour, 51 min., 11.2 sec., through the star-gemmed zodiac—and the earth in its smaller orbit had described 3,614 circles round the sun—before this magnificent apparatus was revealed to the eye of man;—unknown to the antediluvian astronomers, though some of these had an op-

portunity of tracing the course of the planet through upwards of thirty complete revolutions;—unconceived of by those who cultivated the science in the plains of Chaldean;—equally so by the philosophers of Egypt, Greece, and Rome;—by most of the nations of antiquity—deemed dreary and uncheering in itself, and baleful and malignant in its influence on other bodies:—it was reserved for recent times to behold and investigate this beneficent display of the Creator's power and wisdom.

Till the invention of telescopes, Saturn held no particular rank in the heavens, beyond that distinction which the alowness, yet regularity of its motion, and degree of brilliancy, rendered remarkable: its singularity of appearance was first observed by Galileo, in the year 1610, who described it as consisting of three globes—one larger, with a smaller one on each side: he veiled his discovery in a Latin sentence, which he transposed, that his observation might remain secret, and yet afford him at some future time the opportunity of claiming the honour of the discovery. Huygens completed the discovery, and explained the phenomena of the ring, that, in its course round the sun, it assumed a variety of oval forms, from its being seen obliquely,—gradually contracting from a certain ellipticity to an almost imperceptible line, and again expanding till it resumed its maximum of ellipticity,—the ring being most open when the planet was in 19 deg. of Sagittarius and 19 deg. of Gemini, and appearing as a line across the disc in 19 deg. of Pisces and 19 deg. of Virgo.

So remarkable a body in the planetary train, from its dissimilarity to the others, soon excited the vigilance of the astronomers of that period, and left little to reward the research of those of the present day, beyond the task of correcting, with their exquisitely constructed instruments, its various dimensions. The following are the micrometrical observations of this planet, made at Dorpat, in 1826, by Professor Struve, with Fraunhofer's large refractor:—

External diameter of the external ring . . .	40.315
Internal diameter of the external ring . . .	36.385
External diameter of the internal ring . . .	34.379
Internal diameter of the internal ring . . .	28.748
Equatorial diameter of Saturn . . .	18.045
Breadth of the external ring . . .	3.410
Breadth of the chasm between the rings . . .	0.408
Breadth of the internal ring . . .	3.915
Distance of the ring from Saturn . . .	4.352
Equatorial radius of Saturn . . .	9.022
Inclination of the ring to the ecliptic . . .	29° 54'

It has been remarked, by several accurate astronomers, that the dark space between the orb of Saturn and the ring appears greater on the eastern than on the western side of the planet, and has been supposed by some to be an optical illusion. From the results, however, of several careful measurements, Professor Struve is decidedly of opinion that the orb is not in the centre of the ring. Both the rings are brighter than the orb, and the outer one brighter than the inner. The thickness of the double ring has been considered as incapable of measurement;—from observations by Schroter,

* The ancient name of Saturn was Chronos, time; so named from the slowness of its motion: it was also called Phœnon, shining or appearing, which denomination is rather singular, Saturn not being the most brilliant of the planets. This name may be accounted for, from the superstitious feelings of the ancients, who regarded this planet as of evil omen, from its leader hue and remote situation: their custom was to propitiate the smiles of fortune by giving flattering names to those influences they deemed prejudicial. Among the Jews, this planet is supposed to be the one referred to in the sacred writings as Chilon, or "Remphan, the star of your god." Saturn is also called Remphan in the Persian language; and among the Chinese, Tu, or Tien—earth; a reference, probably, to its inferior brightness.

it is found to be 0".125; it is also supposed that the edge of the ring is of a spherical, or rather spheroidal form. When the ring is in the plane of the eye, its surface is found not to be exactly uniform, sometimes one area entirely disappearing, at other times both being observed to be detached from the planet: these irregularities on its surface are considered as necessary for maintaining the ring in equilibrium; for if a perfectly uniform body, it would yield to the slightest attraction, which might ultimately precipitate it on the surface of the orb.

The appearance of the double ring to the inhabitants of the globe of Saturn must be inconceivably splendid and magnificent, varying in appearance according to the situation in which it is beheld. From the regions several degrees distant from each pole, the inhabitants cannot possibly see this grand spectacle—being below their horizon. In approaching the latitude of 60 deg., it must be first seen as a bright segment of a disc, just emerging above the horizon, of the brightness of the morning twilight, only more defined;—nearer the equator, as a vast luminous arch;—and when contemplated from the middle zone of the planet, a bright band would be observed crossing the zenith, and terminating in the eastern and western points of the horizon. Hence, the glory of the celestial canopy during a Saturnian night must, to that planet, indeed, be far exceeding what we behold from our earth; particularly from those places where the ring can be surveyed in its concave and convex forms, stretching across the firmament, and apparently resting on the verge of the horizon: above and beneath the arch, the same constellations which ornament our sky would be observed shining with subdued splendour;—while, at different distances and positions without the ring would be seen, gliding swiftly, the satellites of Saturn, either rising, setting, or on the meridian; others entering into the shadow of the orb, or emerging from it; each exhibiting every variety of phase—from the delicate crescent to the semi-lunar—from a gibbous to a full-orbed brightness.

Does such beauty and design beam upon a desert, and shed its radiance upon realms of solitude and silence,—to be witnessed by no intellectual eye in those vast regions, and seem only in miniature by a few individuals from this remote and comparatively minute earth? Doubtless, from such a glorious abode, the voice of gratitude and adoration continually ascends to the great Creator for such a resplendent retinue, by which its distance from the sun is so amply compensated.

But Contemplation rests her weary wings,
And stops awhile to tremble and adore.

Deptford.

J. T. B.

PLATINA COINAGE.

IN our last Number we mentioned the coinage of money in Russia of the platina found in the Oural Mountains; and we are now indebted to the polite attention of M. Smirnov (secretary to Prince Lieven) for a fine specimen of a coin of that metal, dated St. Petersburg, 1828; and of the value of three roubles, or nearly ten shillings in silver. It is about the size of a sovereign, and so beautifully executed as to do great credit to the mintage and arts in Russia. On the one side is the Russian eagle, admirably emblazoned, with its honourable shields and bearings; and on the reverse, a central inscription, stating the amount of the piece, and round the border the words "2 Zol. [quasi Zolotniks] 41 parts of pure Oural Platina." The edge is

handsomely milled; and, altogether, the money is, as we have said, a curious and beautiful specimen of metallic currency.

It is a circumstance perhaps worthy of attention, and recalled to our memory by this subject, and by the recent paper of Dr. Wollaston explaining the malleability of platina, that some years ago a plan was submitted, through our means, to Lord Liverpool, for alloying the coinage of this country with that metal. The object proposed was to prevent the disappearance of our gold when the exchanges happened to be against us; for the platina being of a proportionate intrinsic value would render it a losing process to submit the guinea or sovereign, of which it formed a part, to the crucible. We know not what became of this project, but remember that we considered it to be extremely ingenious and feasible at the time. We have only to add, that the Russian *Two Zolotniks* weighs more than a sovereign, and not quite so much as a sovereign and sixpence.

FINE ARTS.

BRITISH INSTITUTION.

ON Monday the British Gallery will be opened with a collection of works by British artists; and it affords us great delight to announce (from a private view of it) that it is not only equal to any former exhibition of the kind, but, in our judgment, superior to any of its predecessors. There are, it is true, few pictures in the highest walk of art; but there is also far less of mediocrity or inferiority than we have hitherto seen. The rooms are rich in landscape; in smaller classic productions; in familiar life both pathetic and playful; in humorous subjects; in architectural interiors and exteriors, animated with figures; in fanciful or poetical compositions;—and, indeed, in all the pleasing varieties of pictorial creation. To this pleasing result many of our first-rate artists have contributed; and we are also happy to observe that the younger professors rising into fame, have fully confirmed the expectations built upon their preceding exertions.

To these we shall in due time pay, as usual, the tribute of separate notice: at present we will mention no names, and avoid that invidious course by bestowing a most hearty and well-deserved eulogy upon the whole.

THE COLOSSEUM.

WE proceed to redeem the pledge which we gave our readers in our 626th Number, namely, that we would take an early opportunity of detailing the architectural structure of the Colosseum, and of endeavouring by a plate to communicate some notion of the curious contrivances which were resorted to, and the serious perils which were incurred, in the production of the beautiful panorama which forms the principal ornament of the interior of that fine and magnificent building.

The Colosseum was commenced in 1824, and completed (as far as regarded the external building) in 1826; from the designs, and under the superintendence, of Mr. Decimus Burton. It is a polygon of sixteen faces, each twenty-five feet in length. Attached, on the west side, is a noble Grecian-Doric portico, of six columns, occupying three of the faces of the polygon. The order of the portico is continued round the entire building: the entablature being supported by antæ, or pilasters placed at the angles.

A massive step, which, with the plinth line, forms two risers, each two feet six inches high,

and similar to those of the portico, is continued round the building: evidently with a view of adding to its simplicity and solid effect, and of forming a grand basis for the whole structure.

Upon the entablature is an attic, from which springs a dome, having three gradini, or steps, at bottom, and a moulding and parapet at the summit; behind which is a gallery, formed for the purpose of viewing the surrounding scenery. The upper portion of the dome is glazed, giving it the appearance of one vast skylight, seventy-five feet in diameter: the rest of the dome is covered with copper, and painted.

The greatest external diameter of the polygonal building is one hundred and thirty-two feet: the greatest internal diameter is one hundred and twenty-six feet. The height of the walls is, externally, sixty-four feet; internally, seventy-nine feet, and to the sky-light one hundred and twelve feet.

The example of the Parthenon appears to have been followed in the proportions of the columns and architectural members of the portico; but they are of larger dimensions than those of the Parthenon; the diameter of the columns being six feet two inches and a half, and their height thirty-five feet six inches.

The roof of the portico is seventy-five feet in extent: the flank is fifty-three feet six inches.

The portico and the walls of the Colosseum are built of brick, and stuccoed with the Portland-stone cement.

The walls are three feet thick at the bottom, and diminish to one foot ten inches above the roof-plate.

At sixty feet above the footings spring the principal ribs of the dome. They are forty-eight in number, and are formed with six thicknesses of inch-and-a-half plank; at bottom, fourteen inches deep. At top, there are only four thicknesses, all securely bolted and spiked together, and the heading joints every where alternately. They are fastened to cast-iron shoes at bottom, secured to a strong plate, which, in the manner of a hoop, binds the whole together. There are eleven tiers of intermediate hoops, or entablatures; and the whole of this framing is filled in with strong diagonal bracing. The ribs abut at top against a strong circular curb; and a perfect equilibrium has been maintained throughout.

The metal astragals of the sky-lights are above the ribs and timbers, and form part of the false external dome, which, to add grace to the outline of the structure, is made to spring at fifteen feet higher than the principal dome: the construction of the ribs, &c. being similar, but the scantlings less. This external dome is boarded and covered with copper, from the attic as high as to the sky-light, which extends fifteen feet beyond the gallery before mentioned. The portion, therefore, of the dome which is glazed exceeds three thousand feet. In addition to these two domes there is an internal one, formed of slight-framed ribs, lathed and plastered, and constituting the ceiling, which blends with the canvass of the panoramic picture at the horizontal line; thus enabling the artist, as we mentioned in our former notice, to avail himself of its spacious superficies for the sky,—an improvement which, we understand, has in no other case been attained.

The visitors enter from the portico into a vestibule which is lighted from the roof, and is divided into three compartments. Its dimensions are seventy feet long, by fourteen wide; forty feet high in the centre compartment, and twenty feet high on the staircases at each end. The right-hand staircase is for the visitors pay-

ing the larger price; and descends to a lobby under the entrance, and thence by a corridor to the spiral staircase which leads to the lowest of the three galleries for viewing the picture. Unconnected with the intermediate gallery, there is a communication from the lowest gallery to the highest; and thence to the refreshment-rooms and the exterior of the dome. From the corridor on the ground-floor there is also a communication with a grand circular saloon, for the reception of the company, previous to, and after, the ascent; and from a lobby, connected with this room and the corridor, the visitors may enter the small circular chamber to which we adverted in our last notice, and be raised by machinery to the level of the first or lowest gallery. The staircase on the left, on entering the vestibule, leads to the second-price gallery; in the first place descending to a lobby and corridor, the ascent from which is by a spiral staircase, under those which have been already mentioned.

The central erection, in which these staircases and the ascending-room are contained, is of timber, framed in the strongest manner. The principal uprights are twelve in number; seventy-three feet high; one foot square; set upon a circular curb of brick-work; hooped round with iron; and further secured by close diagonal bracing, and by two other circular curbs; from the upper one of which rises a cone of timbers thirty-four feet high, supporting the upper refreshment-rooms, the original ball and the imitation of the cross* taken down from St. Paul's, the crow's nest in which Mr. Horner made the original drawings for the panorama, and the staircase to the exterior of the building.

Another circle of upright timbers, twenty-four in number, is constructed at seven feet outside that already described; and between the two circles the staircases wind. The fronts of the galleries are planned with pilasters and an entablature in the lower one, and piers supporting arches in the second. These produce an architectural character, and at the same time tend materially to assist the pictorial effect of the panorama, which is thus viewed through the several openings; the piers, entablature, &c. forming, as it were, so many frames, and enabling the visitor to contemplate separately and uninterruptedly any particular portion of the extensive scene before him.

Having thus given a succinct, but, we trust, a clear, account of the construction of an edifice which is allowed by every body to be at once one of the most simple and one of the most noble ornaments of which London can boast, we have only to subjoin an explanation of the plate, illustrative of the various devices invented for the purpose of facilitating the execution of the picture. It must be obvious that all scaffoldings, &c. for a large painting require, in the first place, as much steadiness as can be imparted to them; in the second place, as much security, not only real, but apparent, as can be obtained (artists being generally unused to, and incommode by, any flights, except those of fancy); and, in the third place, the use of as few planks, poles, ropes, and other materials, as possible; their intervention preventing the progress of the general effect of the work from being adequately observed—a circumstance of the utmost importance. To the difficulties attendant

* In our former notice we were in error in stating that both the ball and the cross here placed were the ball and cross taken down a few years ago from the top of St. Paul's.

upon ordinary cases, were superadded, in the present instance, the difficulties which arose in consequence of the form of the upper part of the building; the diameter of the dome of which exceeds by thirty feet the diameter of the dome of St. Paul's.

Table of References to the Plate.

A. Column or Tower in the centre of the building, for supporting the Ascending-Room, &c.
B. Entrance to the Ascending-Room.

C. Saloon for the reception of works of art.
D. Passage leading to the Saloon, Galleries, and Ascending-Room.
E. F. Two separate Spiral Flights of Steps, leading to the Galleries, &c.
G. H. I. Galleries from which the Picture is to be viewed.
K. Refreshment-Room.
L. Rooms for Music or Balls. The effect of either is delightful.
M. The Old Ball from St. Paul's Cathedral.
N. Stairs leading to the Outside of the Building.
a. b. Sky-lights. c. Plaster Dome, on which the sky is painted. d. Canvass on which the part of the picture up to the horizon is painted. e. Gallery, suspended by

ropes, used for painting the distance, and uniting the plaster and the canvass. f. Temporary Bridge from the Gallery G to the Gallery e, from the end of which the echo of the building might be heard to the greatest advantage. g. One of Fifteen Triangular Platforms, used for painting the sky. h. Platforms fixed on the ropes of the Gallery a, used for finishing and clouding the sky. k. Different methods for getting at the lower parts of the canvass. l. Baskets for conveying colours, &c. to the artists. m. Cross or Shears: formed of two poles, from which a cradle or box is suspended, for finishing the picture after the removal of all the scaffolding and ropes.

LITERARY AND LEARNED.

Oxford, Jan. 24.—On Thursday last the following degrees were conferred:

Doctor in Medicine.—J. Alderson, Magdalen Hall.
Masters of Arts.—W. L. Nicholls, Queen's College; Rev. I. King, Christ Church; Rev. H. B. Wilson, St. John's College.
Bachelors of Arts.—G. Phillimore, G. C. Lewis, St. John's; J. E. Robinson, W. H. Hitchcock, Christ Church.

ROYAL SOCIETY.

To bring up our arrears of proceedings, we refer back to 26th November, 1828, when a paper was read, entitled "An Account of some Experiments on the Torpedo," by Sir Humphrey Davy, Bart., F.R.S., &c.

The author, after noticing the peculiarities discovered by Walsh in the electricity of the torpedo, and the opinion of Cavendish that it resembles the action of an electrical battery weakly charged, adverts to the conjecture of Volta, who considered it as similar to that of the galvanic pile. Being on the coast of the Mediterranean in 1814 and 1815, the author, desirous of ascertaining the justness of Volta's comparison, passed the shocks given by living torpedos through the interrupted circuit made by silver wire through water, but could not perceive the slightest decomposition of that fluid; the same shocks made to pass through a

fine silver wire, less than one-thousandth of an inch in diameter, did not produce ignition. Volta, to whom the author communicated the result of these experiments, considers the conditions of the organs of the torpedo to be best represented by a pile of which the fluid substance was a very imperfect conductor, such as honey, and which, though it communicated weak shocks, yet did not decompose water.

The author also ascertained that the electrical shocks of the torpedo, even when powerful, produced no sensible effect on an extremely delicate magnetic electrometer. He explains these negative results, by supposing that the

motion of the electricity in the torpedinal organ is in no measurable time, and wants that continuity of current requisite for the production of magnetic effect.

January 29th, 1829. The president in the chair.—The reading of a paper on the appearances of the "Aurora Borealis in Scotland" was resumed and concluded.

Professor Antoine Laurent de Jussieu, member of the Academy of Sciences of Paris, and nephew to the celebrated Jussieu, was elected a foreign member.

Professor Nobili, author of several treatises on electricity, exhibited some specimens of metals which had been subjected to galvanic influence in a peculiar manner. A plate of steel that had been acted upon in this way, and divided into symmetrical compartments, displayed great iridescent beauty: it was presented to the Society by the professor.

SOCIETY OF ANTIQUARIES.

THURSDAY, 29th January, 1829. William Hamilton, esq. in the chair.—A paper, by Mr. Crofton Croker, was read, describing a great variety of specimens of Roman pottery discovered by him last autumn, in an excavation made under the war bank, in the vicinity of Caesar's camp, on Keston Common, near Bromley, in Kent (see *Literary Gazette* of the time). From the immense variety of pottery found during the excavation, exceeding 200 specimens, not only of an ornamental, but also of a culinary description, together with quantities of human bones, stone coffins, and coins, and also the walls of a Roman temple which were uncovered,—there are strong reasons for believing that the city of Noviomagus was situated in the immediate vicinity of the war bank. The entrenchments of Caesar's camp, on the neighbouring hill, may be accurately traced throughout; and a visit to these interesting remains is well worthy of the attention of the lover of antiquarian research. Mr. Croker's paper was accompanied by a set of masterly drawings; the same size, and coloured in exact imitation of the original specimens, from the pencil of Mr. W. H. Brooke, the artist, a fellow of the Society, and liberally presented by him.—A paper on ancient playing-cards, or tablets, was also read; together with an unpublished letter of Queen Elizabeth. Messrs. Robinson, Gooden, and Vigors (as announced last week), were severally balloted for, and declared duly elected.

ORIGINAL POETRY.

LINES TO THE AUTHOR AFTER READING THE SORROWS OF ROSALIE.*

One of those gifted ones that walk the earth,
Like angels in their beauty, and the while
The air is filled with music from their wings.

Love's thoughts are writ on rose-leaves, but with tears;
And those are what she taught her charmed lute,
Looking herself the loveliest she sung.

THEY tell me, lady, that thy face

Is as an angel's fair,

That tenderness is all the trace

Of earth thy features wear;

That we might hold thee scarp still,

But sighs with smiles unite,

And that thy large dark eyes will fill

With tears as well as light.

* Having the wholesome fear of the Bayad and Medea before our eyes, we rarely admit compositions addressed to particular persons into our columns. The present exception is made, because it has delighted us to see one of the greatest female ornaments of Britain's poetic page, devoting a ray of her brilliant genius in giving a generous welcome to a new sister of the song; and because the talents of L. E. L. have shed a general interest over the subject, which divests it of all individuality, and renders it worthy of public regard.—*Ed. L. G.*

They tell me that thy wit when gay

Will turn to sad again—

The likeness of the lightning ray,

That melts in summer rain;

And that the magic of thy words

Is even as thy song—

The sweetness of the sea-shell chords

The night-winds bear along.

I well believe all they can say

Of fairy charm is thine—

My lips are murmuring now thy lay,

My tears on thy last line:

I've drank the music, sweet and low,

Waked by thy graceful hand;

I must speak of thee—I am now

"Beneath the enchanter's wand."

I dream thee beautiful and bright,

Amid the festal crowd,

With lip and eye of flashing light,

Thy own self disavowed.

They see the loveliness that burns,

The splendour round the shrine—

But not the poet-soul which turns

Thy nature to divine.

I dream thee in thy lonely hour,

Thy long dark hair unbound,

The braiding pearl, the wreathing flower,

Flung careless on the ground;

The crimson eager on thy cheek,

The light dark in thine eye—

While from thy parted lips there break

Sweet sounds, half song, half sigh.

A tale of feminine fond love,

The tender and the tried,

The heart's sweet faith, which looks above,

Long after hope has died.

Even as the Spring comes to the rose,

And flings its leaves apart,

So what should woman's hand unclose?—

The page of woman's heart.

The song is sad which thou hast sung:

Is sad!—how canst thou know—

The loved, the lovely, and the young—

A single touch of wo.

Ah, yes! the fire is in thy breast,

The seal upon thy brow,

Life has no calm, no listless rest,

For such a one as thou;—

Thou, bleeding in thy harp and heart

The passionate, the wild,

The softness of the woman's part,

The sweetness of the child;

With feelings like the fine lute-strings,

A single touch will break;

With hopes that wear an angel's wings,

And make the heaven they seek.

The stern, the selfish, and the cold,

With feelings all repeat—

The many cast in one base mould,

For them life yields her best:

They plod upon one even way,

Till time, not life, is o'er;

Death cannot make them colder clay

Than what they were before.

But thou—go ask thy lute what fate

May for thy future be,

And it will tell thee tears await

The path of one like thee:

Too sensitive, like early flowers,

One unkind breath to bear,

What in this weary world of ours,

But tears can be thy share?

Yet little would I that such words

Of prophecy were sooth:

I am so used to mournful chords,

To me they sound like truth.

And if Fate have one stainless leaf,

That page to thee belong:

Sweet lady, only dream of grief,

And let the dream be song.

I pity those who sigh for thee,

I envy those who love;

For loved thy nature's formed to be,

As seraphs' are above.

I fling thee laurel offerings,

I own thy spirit's spell,

I greet the music of thy strings—

Sweet lady, fare thee well.

L. E. L.

DRAMA.

ADELPHI.

MONSIEUR MALLET is carrying all before him, and this charming little theatre fills to an overflow every night; as if the English (who, Monsieur says, "do not know ven dey are beat enough") did not know when they were amused enough. It is indeed a capital little drama, uniting much natural feeling with much of national peculiarity, bordering on burlesque. This is a difficult game to play: to laugh on one side of the face, and cry on the other, is no easy achievement. But it is here fairly and delightfully accomplished; and Mathews shews himself a master of the quickly alternating smile and tear. His personation of the old exiled noble, the Frenchman, and the father, is a fine piece of acting; and those who have thought that his extraordinary powers of imitation were his chief qualifications for the stage, had better see him in *Monsieur Mallet*. But, as we slightly noticed last week, all the parts are cast with a force that would support the first of our comedies. Mrs. Yates, touching, graceful, and charming, converts the simple character of *Adelaide*, the daughter of M. Mallet, into an exhibition of first-rate *paucité* and pathos—she is just what the child of such a parent should be. Then comes Yates himself, the prince of "Niggers," the black Roscins of the Back Lane of the Boston Private Theatricals: full of life and animation, his servile fears hardly restrain this sable hero-of the sock and buskin:

"Let Yecules himself do what his may,
De dog vill mew, de cat vill bark all day;"

and both his mew and his bark are excessively entertaining. Were he any where but in his own happy home, the Adelphi, we would suggest to him to take a benefit with the representation of a Nigger parody of "Shake-a-spear." Wilkinson, whom we formerly and unjustly omitted to mention, is greatly small in the *Footmaster of Boston*, whose reading of the directions (and of the insides) of letters is quietly ludicrous, and tells, as all quiet humour does, effectively. Benson Hill is a landlord, colonel, &c.; Backstone, a Kentucky attorney, legislator, and dealer in log-wood; Mrs. Hughes, a back-settlement young lady, very desirous of being otherwise settled by marriage with this Kentucky sweetheart; Butler, a Boston merchant; Hemmings, the lover of Mlle. Mallet; and T. P. Cooke the genuine Uncle Ben, of German extraction, and gifted with a remarkable poetical vein:—and what more could be desired, with a smart dramatic frame-work, to make one of those pieces which delight every body? So it is at the Adelphi; and till their season ends, we will venture to predict, unless M. Mallet likes crowds, he will enjoy no repose.

On Monday, an interlude, entitled *Too Late for Love*, was performed with perfect success. If we remember rightly, it is abridged, and otherwise but little altered, from *The Girl*

Midi—a force of older times, when such beings existed. In its revival, Mrs. Edwin is much distinguished as a votary of a school of art of which we see too little on the modern stage. The compliment will be understood, if we state that her acting in this piece made us think of Mrs. Davenport, and still more of Mrs. Gibbs: it was truly comic and excellent, and was deservedly applauded throughout (including an encored song). Mathews, in a hot (Captain) Curry, threw much fun into the scene. Miss Daly, at short notice (*pro* Miss Graddon, with a bad cold), acquitted herself very cleverly; and Mr. Sinclair, who had too little employment, sang most sweetly, and in a dualling way proved himself equal to all kinds of sharps—and flats.

At the larger theatres during the last eight days there has been a repose upon successfully established pieces; so that we have only to intimate the note of preparation for novelties next week: namely, a new opera, the words and music by Bishop; a new comedy, in three acts, by Lunn, and powerfully cast; and a farce from the mirth-making pen of Peake.

In the way of dramatic gossip, we may notice that Kean has definitively quitted Covent Garden, in consequence of the results of his late sudden illness; and that Liston met with an accident in stepping from his carriage, by which his shoulder was dislocated, but, being speedily replaced, the bad effect has not been so severe as to prevent him from continuing to perform.

We observe that the licenser, Mr. Colman, has been most officiously and vexatiously interfering with the Oratorios, which, under the able direction of Mr. Hawes, promised to begin with great taste and spirit last night. He, it seems, has forbidden the performance of Mehul's "Joseph and his Brethren," because it was not licensed—no fees paid. Mr. Hawes was thus compelled to substitute another oratorio; and he had the courage and good sense to meet this oppressive act by a public appeal. Indeed, the licenser has been far too long permitted to annoy the drama, by the puerile and absurd obstacles which he is continually imposing.

ROYAL ACADEMY OF MUSIC.

On Saturday last, the pupils of the Royal Academy of Music, under the patronage of his Majesty, commenced a second series of operatic performances for three nights at the English Opera House, with the *Barber of Seville*. The cast of parts was the same as before, and Dr. Began directed the whole with his wonted art and spirit.

The *Melodists' Club* had its first meeting on Thursday, at Freemasons' Tavern, where the attendance was numerous, and the musical entertainment delicious. His Royal Highness the Duke of Sussex was announced as patron, and several noblemen as vice-presidents: we will give some account of the meeting in our next Number.

VARIETIES.

Tapestry.—In the present exhibition at Paris of porcelain, tapestry, &c., a copy, manufactured at the Gobelins, of a picture by M. Van der Schuer, "Charles the Fifth visiting the church of St. Denis," is spoken of by the Parisian connoisseurs as a masterpiece of harmony and propriety.

Mr. Shield.—This celebrated composer, the father of English melody, died on Sunday last at a very advanced age. No man was ever

more popular in his day, and many of his delightful compositions will continue to charm generations yet to come.

The French Scientific Expedition to Egypt.—Letters have been received in Paris from different persons who form part of this expedition, to the middle of November; but we do not find that they contain accounts of any new discoveries of interest. In addition to the letters already published in this country, some of the French papers contain communications of less pretension, from other gentlemen, who appear to have been equally struck with the wonders of Egypt. It would seem, from their description of Cairo, that the gaieties and amusements of the French Palais Royal fall far short of the festivities of the Egyptian city.

Extremes of Heat and Cold.—The longest duration of cold, during the night, ever known at Berlin, was in 1823, from the 30th of December to the 10th of January, when the thermometer, during the twelve nights, was 10 degrees below zero of Réaumur; and in the year 1776, from the 25th January to the 2d February, the thermometer, for the ten nights, stood at the same point. In 1823, even during the day, the thermometer was constantly below zero of Fahrenheit. The greatest duration of heat was in 1826, from the 5th to the 10th of July, when the thermometer was, during the day, above 25 of Réaumur (upwards of 83 of Fahrenheit); and it was the same in 1802, from the 21st to the 25th of August. The greatest cold known in St. Petersburg was in the year 1772, when the thermometer was 35·7 below zero of Fahrenheit; and the greatest heat was in 1788, when the thermometer stood at 26·7 of Réaumur—91·4 of Fahrenheit. At Berne, in Switzerland, however, the extremes of heat and cold have occasionally been more intense than in St. Petersburg. In the year 1789 the thermometer stood, at Berne, at 24 below zero of Réaumur; and in the year 1807 the heat was, at one time, 29 of Réaumur, or 95·25 of Fahrenheit. At Montpellier, in the year 1823, the heat was so great, that for two or three days the thermometer marked more than 100 of Fahrenheit. In the year 1795 the extreme of cold at Paris was 18·8 below the freezing point of Réaumur, or 8·68 below the freezing point of Fahrenheit; and the extreme of heat in 1793 was 30·7 of Réaumur, or 99·6 of Fahrenheit.

Frederick Von Schlegel, the celebrated German lecturer and poet, died a few days ago at Vienna.

Freedom of Education.—Several Societies in Paris have combined to offer a prize of 1,600 francs for the best essay in favour of freedom of education. The principal topics to which they wish the competitors to direct their attention are, the right or expediency of the legislative, the executive, or any other public authority intermeddling with education; the necessity for any precautions or regulations upon the subject; the evils which such supposed necessity has hitherto occasioned; and the best means by which those evils may henceforth be avoided.

Yellow Fever.—A physician at Viana, in Navarre, of the name of Pagés, observed there during the last year several cases of sporadic yellow fever; which is the more remarkable, as Viana is situated amidst mountains, more than forty leagues from the sea, and as the absence of all maritime commerce excludes any idea of the importation of the malady. It did not shew itself to be contagious.

Chemistry.—The report of a committee of the Académie des Sciences, to whom the sub-

ject had been referred, speaks in terms of strong commendation of a paper by M. Serullas, respecting a new compound of chlorine and cyanogen, or perchlorate of cyanogen, cyanic acid. It is said that the facts which this chemist has discovered are of the highest importance, and that he is entitled to admiration for the courage with which he exposed himself to the serious dangers that attended his various investigations and experiments.

Vaucluse.—The lovers of romance will regret to hear that the neighbourhood of this celebrated fountain has been much deteriorated by time and the progress of society. A large paper-mill occupies the place where once stood the venerable castle of the lords of the soil. The Sorgue, formerly so poetical, is become an industrious stream, and gives motion to a number of manufactories of various kinds.

Optics.—M. de Loche, a member of the Academical Society of Savoy, has published an account of an optical phenomenon, on which he bestows the name of "apparent translucidity," because it consists in giving the effect of transparency to an opaque body interposed between one of the eyes of the observer and a distant object, in such a manner that the details of that object are projected on the surface of the opaque body, and that the two images are seen in superposition.

New Thermometer.—A horizontal thermometer has been invented at Paris, of which report speaks highly. A letter from M. de Humboldt characterises it as an admirable instrument.

Homography.—Such is the name (implying that the representation is derived directly from the object represented,) which the inventor of a new mode of lithography devoted to the representation of plants has given to his invention. The Académie des Sciences has referred the consideration of it to a committee.

Egyptian Cubit.—M. Jomard has lately published a letter on a new cubit, recently found at Memphis by M. Drovetti, comparing it with the various measures of the same description hitherto known; and with which it appears to agree in essential respects, although it differs from them in minute particulars.

A Tough morsel.—A French writer, speaking of the relative situation of England and Ireland, says that the larger island devoured the smaller, but has never been able to digest it!

LITERARY NOVELTIES.

A second edition is preparing of an *Itinerary of Provence and the Rhone*, made during the year 1819, by John Hughes, A.M. of Oriel College, Oxford, and illustrated by views from the drawings of De Wint, and engraved by W. B. Cooke, G. Cooke, and J. C. Allen, uniform with Batty and other European scenery.

Mr. Valpy is now publishing a series of School and College Greek Classics, with English notes, in a duodecimo form; the *Medea* and *Hecuba* of Euripides, as well as the *Œdipus* of Sophocles, are ready; and *Thucydides*, *Hærodotus*, *Xenophon*, &c. are to follow in succession.

Mr. Atherton announces the second volume of his poem entitled the *Fall of Nineveh*, for March next.

The extensive historical work by Sir James Mackintosh, so long expected, is now so nearly ready for the press, that the first volume will, we are assured, appear in the early part of the ensuing season. Contemporaneously with this work, Sir James has been induced to prepare for the Cabinet Cyclopædia a *Popular History of England*, forming three volumes of that publication. Such a sketch of English history has been long a desideratum in our literature.

The *Natural History* of several new and beautiful Living Objects for the Microscope, with the Phenomena presented by them under observation, &c. illustrated by coloured engravings, from drawings of the actual Living Subjects, by C. R. Goring, M.D. and Andrew Pritchard, will shortly appear in Paris.

Miss Isabel Hill is about to publish a volume of *Holyday Dreams*, or *Light Reading in Poetry and Prose*. This authoress six years ago made a favourable impression on the literary world by a drama called the *Foot's Child*; *Constance*, a prose tale; and *Zephaniah*, or the

Amulet, a poem;—and has since contributed to some of the *Annals*, and other periodical works.

French Voyage of Discovery.—The voyage round the world performed by Captain Duperrey, in the *Coquille*, during the years 1822, 1823, 1824, and 1825, is now in a course of publication at Paris. This work will be in four divisions: 1. Zoological; 2. Botanical; 3. The History of the Voyage; 4. Hydrographical and Physical. The Zoological division (two volumes 4to., with an atlas of about 140 coloured plates), edited by Messrs. Lesson and Gaimard, will be in twenty-six Numbers, eight of which are now on sale. The Botanical division (one volume 4to., with an atlas of about 115 plates, twenty-six coloured), edited by Messrs. Bory de Saint-Vincent and Adolphe Brongniart, from the materials collected by M. Durville, the botanist of the expedition, will immediately follow: four Numbers of it are on sale. The History of the Voyage (two volumes 4to., with an atlas of sixty coloured plates), to which are annexed vocabularies of savage languages, will be published concurrently with the Zoological division: two Numbers are on sale. The Hydrographical, Nautical, and Physical division (one volume 4to., with an atlas of fifty coloured plates) will be published in the course of the year.—Judging from the Numbers which have appeared, this will be a publication of great value. The History of the Voyage will be the more interesting, as the navigators had the opportunity of successively visiting and comparing the two opposite coasts of South America; and, farther, of comparing New Zealand and New Holland, as well as Oceania with Polynesia. The numerous vocabularies will afford abundant matter for philological study. The zoological and botanical Numbers which have appeared are exceedingly curious; and the plates are splendid.

In the Press. Part I. of a Catalogue Raisonné of the Works of the most eminent Dutch, Flemish, and French Painters, with a copious description of their principal Pictures, the prices they have at various times been sold for on the Continent and in England, and a reference to the Galleries and Private Collections in which a large portion of them are at present,—the names of the artists by whom they have been engraved, with other incidental observations; by John Smith, picture-dealer, Great Marlborough Street.—A second edition of Mr. Derwent Conway's *Society Walks through Many Lands: A Personal Narrative of a Journey through Norway*, &c. by the same author, is to form an early volume of Constable's Miscellany.

LIST OF NEW BOOKS.

Winstanley on the Arts, &c. 8vo. 5s. bds.—Jennings' *Paris*, Part I. 4to. 5s.; India paper, 10s.—Treatise on Surveying and Plan Drawing, 8vo. 6d. bds.—Lady's Library, Part I. 2s. 6d. sd.—*Flowers of Amboise* and *Wit*, 18mo. 5s. bds.—*Old Ways and New Ways*, folio, 6s. sd.; coloured, 12s. sd.—*Westall's Great Britain*, Part I. 4to. 5s.; India paper, 10s.—*Q's First Spelling Book*, 18mo. 2s. 6d.; coloured, 3s. 6d. bds.—*Tales of Passion*, by the Author of *Gilbert Earl*, 3 vols. post 8vo. 11. 11s. 6d. bds.—*The Living and the Dead*, *Stanzas*, series, post 8vo. 10s. 6d. bds.—*Pratt's Laws relating to Property*, 8vo. 10s. 6d. bds.—*Anglo-Saxon Grammar*, Vol. VII. 4to. 11s. 6d. bds.—*Tales*, by the Author of *Antiquities to Mummies*, 18mo. 6s. bds.—*Cicero's Prose of Cato*, 8vo. 6s. 6d. bds.—*Libes Scholasticus*, an Account of Fellowships, &c. 18mo. 6d. bds.—*Stegall's Manual for Apothecaries' Hall*, 18mo. 5s. bds.—*Horne's Manual of Parochial Psalmody*, 18mo. 1s. 6d. canvas; 4s. fine, black calf.—*Henshaw's Psalm and Hymn Tunes for Horne's Manual*, 6s. sd.—*Mémoires du Maréchal Suchet*, Vol. I. 8vo. 10s. 6d. sd.—*A Second Judgment of Babylon the Great*, 9 vols. post 8vo. 11. 1s. bds.

Longitude 0 31 W. of Greenwich.

TO CORRESPONDENTS.

As anxious to give our readers, and especially those distant from London, as perfect an idea as we could of that most extraordinary work the Colosseum, we have this week devoted a considerable space to its illustration, owing to which we are rather cramped in other parts, and obliged to abridge and defer many things intended for publication. Should any further references to, or explanations of, our plate appear to be necessary, we shall return to the subject next week.

We cannot yet approve of C. A. sufficiently for insertion: nor of J. B. of Trinity College.

We must negative Warkworth.
Much as we admire P. A.'s subject, we are sorry to say we think his lines want regularity and originality.—T. M. also declined.

To Virgil Vernon: we are not in the habit of inserting extracts from unpublished poems.

ADVERTISEMENTS,

Connected with Literature and the Arts.

DISTRESS. An instance of infinite

Literary Distress (involving an Author of great Learning and Virtue, and a numerous Domestic Circle), having been divulged in the hope of Aid, where circumstances rendered that Aid impossible, the noble example of the benevolent Fostate at the Head of the *Standard List* has led to a voluntary Subscription, which promises to fulfil all the good proposed by it; but which this public means is taken to promote, in consequence of the time lost, and inconvenience experienced, in seeking private Contributions.

The receipt of this generous aid has rendered it necessary to repeat this advertisement only once more in the journals, by which it is believed that the further sum required (not more than a similar amount), will be obtained.
Subscriptions will be received by Messrs. Hoare, Bankers, Fleet Street; and by Mr. Scripps, at the "Literary Gazette" Office.

BATH AND WEST OF ENGLAND SOCIETY FOR THE ENCOURAGEMENT OF AGRICULTURE, ARTS, MANUFACTURES, AND COMMERCE.

At the Annual Meeting of the above Society, held Tuesday, Dec. 9, 1828.

WM. DICKINSON, Esq. M.P., V.P., in the Chair.

The following Premiums were offered:
1. To the individual in any part of Great Britain who shall, in the most satisfactory manner, discuss the question, whether, as a national object, it is desirable to Great Britain to raise such a supply of fine carding wool as may limit, or supersede, the necessity for foreign importation?—a premium of 50s.
2. For a satisfactory account of the advantages derived from giving salt to not fewer than 50 sheep; to cattle not fewer than six; and to horses not fewer than four;—a premium of Twenty-five guineas.

3. For the best Essay on the improvements in agriculture that have been successfully introduced into this kingdom within the last fifty years,—an honorary reward proportioned to merit.
4. For a clear and explicit account of any new experiment in husbandry which the writer has himself made, and which the Society shall deem of an interesting nature,—an honorary reward proportioned to merit.

5. For the best Treatise, showing where any crop may be beneficially introduced between crops now commonly cultivated, either as a food for animals on the land, or on lands incapable of sustaining animals, by ploughing to or otherwise to ascertain if an addition can be made to the existing produce of arable land, at stages when it would be otherwise considered unproductive,—a premium of 10s.
6. To the person who shall ascertain the cause, and suggest the best mode of prevention and cure, of scouring in cattle, observable by their feeding on different pastures; and more particularly in those depastured during the summer months on lands lying under beds of the blue lias, in the marsh districts of Somersetshire.—10s.

7. To the person who, in the year 1831 shall give the most satisfactory account of the cause and cure of barrenness in fruit-trees, including a practical examination of the opinions and experiments which have been published by Mr. Lyeon, on the subject of barking trees as a remedy for this defect.—10s.

8. For the best practical Treatise on the means of converting vegetable food, comprehending all the natural and artificial grasses, hay, roots, and green vegetables, into animal,—to embrace the subject of selling, the economy of manure, and any other information which may promote the object of this premium.—Twenty guineas.

9. For the best practical Essay on the better management and improvement of parish roads.—5s.

By Order, B. LEIGH LYE, Sub-Treasurer and Sec.

10. Essays in claim of the Premiums to be awarded this year to be sent to the Secretary on or before the 1st of September 1829.

To the Nobility, Clergy, and Literary Public.

W. STRONG, BOOKSELLER, BRISTOL.

TOL, begs to announce, that he has purchased the Business, together with the whole of the well-known and valuable COLLECTION OF BOOKS, formed with great care for nearly half a Century, by the late Mr. GILBERT DYER, Bookseller, Exeter, and to which many rare and important Works have been added by his Son and Successor.

W. H. flatters himself that from the possession of the above important Stock and Business at Exeter; in addition to his Bristol Collection, and from his exclusive attention to the Bookselling Business, he shall be able to afford Collectors an opportunity of enriching their Libraries with many singularly curious and valuable Books which are of rare occurrence, and which have not appeared in modern Catalogues. And to the Universities, Public Libraries, and Institutions, a similar opportunity will be afforded of making their Libraries more complete.

Catalogue, Part I. of the Exeter Library, will be published on the 15th February next; comprising Early printed Bibles, MSS. Miscels, Prayers, and other Liturgical Works—The Fathers of the English Church, and the best Expositors of the Scriptures, Ecclesiastical History and Biography—Potemial and Practical Theology, including the chief Works of the Church of England Divines, and of the Puritan and Nonconformist—An interesting Collection of Old Roman Catholic Divinity, and the Controversies of the Catholic and Partisan and other Protestant Churches, from the Reformation to the present Time—together with a large Collection of Sermons.

Part II. will be published with all possible speed, and will contain Foreign Theology.
Libraries purchased and Books exchanged.

BRITISH INSTITUTION, FALL

MALL.
The Gallery for the Exhibition and Sale of the Works of British Artists, including the Pictures of His late Majesty presenting the Sword to Earl Howe, on board the *Queen Charlotte*, after the Victory of the First of June, 1794; and Lord Nelson bearing the *Victory*, off Cape St. Vincent, presented by the British Institution to the Royal Hospital of Greenwich, will be opened on Monday next, Feb. 2d, and continue open daily, from Ten in the Morning until Five in the Evening.
Admission, 1s.—Catalogue, 1s.
WILLIAM BARNARD, Keeper.

not published, fitted up in a neat Case, price 10s. 6d.

A PANORAMA OF THE RHINE, and of the adjacent Country from COLOGNE to MAYENCE, accompanied with Maps, exhibiting the whole Course of the River. Also a Descriptive Pamphlet, entitled the *Steam-Boat Companion*.

London: Published by Samuel Leigh, 15, Strand.
Of whom may be obtained.

A Variety of Works for Travellers on the Continent.

In royal 8vo. illustrated by 17 folding Plates, price 18s.

SYNOPSIS OF PRACTICAL PERSPECTIVE, Linear and Aerial.

By T. H. FIELDING,
Teacher of Drawing to the Senior Class at the H. E. I. C.'s Military Seminary.

London: Printed for James Carpenter and Son, Old Bond Street; Longman and Co. Paternoster Row; Parbury, Allen, and Co. Leadenhall Street.

MUSIC.

The Nightingale. New Song, art to Music.
In 1 large vol. duodecimo, with a fine Frontispiece, price 4s. 6d. in boards.

THE NIGHTINGALE; a choice Selection

of the most admired popular Songs, Heroic, Plaintive, Sentimental, Humorous, and Bacchanalian, arranged for the Violin, Flute, and Voice.

London: Printed for Thomas Tegg, Wholesale Bookseller, Chancery; R. Griffin and Co. Glasgow; J. Cumming, Dublin; and sold by all Booksellers.

Where may be had, uniform, price 4s. 6d. each.

The Skylark and the Thrush.

BOOKS PUBLISHED THIS DAY.

2d edition, comprised in 3 vols. 31s. 6d.

ZILLAH; a Tale of the Holy City.

By the Author of "Brambletye House," &c. &c.

"Viewing it as a work of information on a most interesting subject, presented in a very agreeable form, we recommend it to our readers. The religious world especially ought to congratulate themselves on its appearance; they are usually debarred from the pleasure of reading works of imagination—here is one which might be preached from the pulpit; it is a 'sacred performance.' Many throw light on the subject, it may even make the despising of the higher talents of the most scrupulous reader cannot condemn the author for having really or profanely approached subjects which he might deem could not be handled without impiety in a work of fiction."—*Spectator*.

Printed for Henry Colburn, 8, New Burlington Street.

In two neat vols. post 8vo. price 18s. boards.

ALMA MATER; or, Seven Years at the

University of Cambridge.

By a TRINITY MAN.

Sold by Black, Young, and Young; and all other Booksellers.

In 8 vols. post 8vo. 18s.

THE MAN OF TWO LIVES. A

Narrative, written by Himself.

"Whether this be, or be not, the most extraordinary event of the history of an individual who is conscious of a previous state of existence, and who, becoming acquainted with the friends of his former self, some of whom he had deeply injured, is enabled, in his second life, to make atonement for his errors. The idea is unquestionably original and striking, and gives rise to many curious incidents and effects."

Printed for Henry Colburn, 8, New Burlington Street.

Of whom, and all Booksellers, may be had.

Frankenstein; or, the Modern Prometheus,

3 vols. And

The Last Man, 3 vols.

In Two Parts, 8vo. price 20s. boards.

CALVINISM AND ARMINIANISM

COMPARED IN THEIR PRINCIPLES AND TENDENCY; or, the Doctrines of General Redemption, as held by the Members of the Church of England, and by the early Dutch Arminians, exhibited in their Scriptural Evidence, and in their connexion with the Civil and Religious Liberties of Mankind.

By JAMES NICHOLS.

Published by Longman, Rees, and Co.; and C. and J. Rivington.

"Much information upon this subject, and upon the age of the Great Rebellion (more indeed than is collected elsewhere) may be found in a modern work, under the unassuming title of 'Calvinism and Arminianism Compared in their Principles and Tendency,' by James Nichols. 1824. It ought to have a place in every historical, and in every ecclesiastical library. Mr. Nichols has also published the first volume of a translation of the 'Works of Arminius,' with a great deal of important matter in the Preface and notes."—*Quarterly Review*.

"We can truly affirm that the book is a real *salutem* in per se, and is not only instructive and exceedingly useful to theological students, but frequently entertaining, from the intimacy of biography, history, and criticism."—*Gentleman's Magazine*.

"Calvinism and Arminianism Compared" is from the pen of a layman, a man of extensive and accurate reading upon all subjects connected with the history of Protestantism, and especially with the painful annals of Presbyterian and Independent ascendancy in this country."—*British Critic*.

A. Travels in Arabia, comprehending the Holy Land of the Mussulmans. By the late John Burckhardt.

Printed for John Taylor, Bookseller and Publisher to the University, 30, Upper Gower Street; and sold by James Duncan, 37,

SATURDAY, FEBRUARY 7, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

A History of England from the First Invasion by the Romans, &c. By J. Lingard, D.D. Vol. VII. 4to. pp. 636. London, 1829. Baldwin and Craddock; and B. Fellowes.

THIS, the penultimate volume of Dr. Lingard's great work, carries on his History from the establishment of the Commonwealth, 1649, to the year 1673; the remainder of the reign of Charles, and that of James, being intended for the concluding volume. Like those which have preceded it, the present portion of Dr. L.'s labours is very ably written; and, speaking of it simply in a literary point of view, is deserving of a high eulogium. Whether the author is partial, whether he suppresses or mistakes, we leave it to critics who have more leisure for inquiry and comparison to determine: it is enough for us to observe, that great talents are evident throughout, that the style is good, and that the reader is borne along by the narrative in a very agreeable manner; while the foot references shew that the author has not been sparing of research. Considering, perhaps, that, as a Roman Catholic, Dr. Lingard must have strong feelings towards *epo sile*, and, it is now than probable, proposed to himself to advance the cause and the cause of his religion by this History,—it is but just to confess, that there is an apparent fairness in his statements, which is well calculated to obtain belief for them, and which could only be shaken by such arguments and proofs as have been brought against some of his former quotations and assertions. We enter no farther into the question; but proceed to notice the principal features developed in the volume before us, as a specimen of its other and more general characteristics.

In 1609, it is said, Dr. Heylin's History of the Reformation shook "the credulity" of James, the Duke of York, and led to his re-stabilisation with the Church of Rome:—

"He was not blind," it seems, "to the dangers to which such a change would expose him; and he therefore purposed to continue outwardly in communion with the established church, while he attended at the Catholic service in private. But, to his surprise, he learned from Symonds, a Jesuit missionary, that no dispensation could authorise such duplicity of conduct: a similar answer was returned to the same question from the pope; and James immediately took his resolution. He communicated to the king in private that he was determined to embrace the Catholic faith; and Charles, without hesitation, replied, that he was of the same mind, and would consult with the duke on the subject in the presence of Lord Arundel, Lord Arlington, and Arington's confidential friend, Sir Thomas Clifford. Of these three, the first was a known Catholic; the other two had hitherto professed themselves Protestants, but more for fashion's sake, than through any real attachment to the *shined* creed. They, like most others in the higher circles of society at that period, had, in

the language of James, 'their religion still to choose.' The meeting was held in the duke's closet. Charles, with tears in his eyes, lamented the hardship of being compelled to profess a religion which he did not approve, declared his determination to emancipate himself from this restraint, and requested the opinion of those present, as to the most eligible means of effecting his purpose with safety and success. They advised him to communicate his intention to Louis, and to solicit the powerful aid of that monarch. Here occurs a very interesting question,—was Charles sincere or not? That of the two churches he preferred the more ancient, there can be no doubt. Both the Duke of Ormond and Daniel O'Nial had seen reason to suspect him of a secret leaning towards the Catholic worship about the time of the conferences at the Pyrenees; and he had recently avowed the same to Arlington and Clifford. But the king's religious belief was of his own creation."

Now, however, the secret negotiation with Louis proceeded with great activity; and that infamous treaty of 1670, alluded to by Mr. Fox in his Life of James II., but the existence of any copy of which has been doubted, was the result. Of this bargain, Dr. L. remarks:

"Though much was afterwards said, little was certainly known. All the parties concerned, both the sovereigns and the negotiators, observed an impenetrable secrecy. What became of the copy transmitted to France, is unknown: its counterpart was confided to the custody of Sir Thomas Clifford, and is still in the keeping of his descendant, the Lord Clifford of Chudleigh. The principal articles were: 1. That the King of England should publicly profess himself a Catholic at such time as should appear to him most expedient; and subsequently to that profession should join with Louis in a war against the Dutch republic, at such time as the most Christian king should judge proper: 2. That to enable the King of England to suppress any insurrection which might be occasioned by his conversion, the King of France should grant him an aid of two millions of livres, by two payments, at the expiration of three months, and six months after the ratification of the treaty; and should also assist him with an armed force of six thousand men, if the service of such a force should be thought necessary: 3. That Louis should observe inviolably the treaty of Aix-la-Chapelle, and Charles be allowed to maintain that treaty in conformity with the conditions of the triple alliance: 4. That if, eventually, any new rights on the Spanish monarchy should accrue to the King of France, the King of England should aid him with all his power in the acquisition of those rights: 5. That both princes should make war on the United Provinces, and that neither should conclude peace or truce with them without the advice and consent of his ally: 6. That the King of France should take on himself the whole charge of the war by land, receiving from England an auxiliary force of six thousand men: 7. That by sea Charles should fur-

nish fifty, Louis thirty, men of war; that the combined fleet should be placed under the command of the Duke of York; and that, to enable the King of England to support the charge of the naval armament, he should receive every year of the war the sum of three millions of livres from the King of France: 8. That out of the conquests which might be made during the war, his Britannic majesty should be satisfied with Walcheren, Sluys, and the island of Cadzand; and that, in separate articles, provision should be made for the interests of the Prince of Orange, so that he might find his advantage in the war: 9. And that, to unite more closely the interests and affections of the subjects of both crowns, the treaty of commerce already commenced should be speedily concluded."

Some curious and disgraceful political manoeuvring ensued, one of the chief objects of which was to mystify the Duke of Buckingham, and his colleagues Aahley and Lauderdale. Dalrymple, whose Memoirs are the most statesman-like and sagacious of any published relative to the period, is referred to for the fact, that Buckingham, "the dupe, had the satisfaction of concluding a treaty, of which he vainly deemed himself the author, but which in reality was a mere copy of the former, with the sole omission of the article respecting religion."

Who were the cheaters, and who the cheats, it is not easy to decide at this late hour: it was a time of utter profligacy and prostitution; and it is hardly uncharitable to surmise, that the principal actors generally were a set of selfish and unprincipled scoundrels. During epochs of long repose and political tranquillity, men have few temptations to tempt them to swerve from honesty and tolerable consistency; but this is circumstance—not human nature. When struggle comes, when interests clash, when sudden and violent transitions take place, as in all cases of revolution, whether ministerial or national, the baser principles invariably rush into play, and the baser persons acquire the most notorious ascendancy (for where virtue exists, it seeks refuge in retirement); and we witness such scenes as the English commonwealth and the French republic exhibited, to the dismay and regret of all lovers of true liberty. Nay, were we to look no farther back than the last twelve months of our own history, what a frightful aspect of trimming and tergiversation would meet our eyes—in a hundred barefaced instances; a stain upon the boasted independence and honour of the British character! Men following servilely that which they bitterly opposed; supporting that which they swore their lives were pledged to resist; and, more contemptible and miserable still, vacillating this way and that, in a disposition not unworthy of the profligate days of Charles, till they can ascertain which creed, political or religious, it will best suit their interests to choose. But let us return to our historian of older date, for a pattern,—

"To all an example, to no one a pattern"—he continues from our last extract:

"To this farce was added another. When the first instalment became due, Louis inquired of his good brother, whether he was yet prepared to make the declaration of his Catholicity? Charles replied, that he thought it advisable previously to consult the pope, and to obtain such conditions as might render the change less objectionable to his people. This answer was approved; and, in consequence, a vigorous attempt was made to induce him to join in the war first, and publish his conversion afterwards. But the king was inflexible, and to a second requisition replied, that he could discover no person fit to be trusted with so delicate a negotiation. Louis offered the bishop of Laon, whose services were accepted; but, in a few days, it occurred to Charles that the reigning pontiff was old and infirm, and that it would be more prudent to wait till the accession of his successor: next, he determined to employ an Englishman, and spent some time before he named the president of the English college at Douai; then he contrived to obtain a delay of three months, under pretence of framing and amending the instructions to be given to this envoy; and at last honestly declared that existing circumstances compelled him to postpone the execution of his design to some more favourable opportunity. A year later Louis returned to the same subject, and Charles objected religious scruples, which made him desirous of consulting some celebrated theologian, but a theologian also skilled in chemistry, that the subject of their conversations might be supposed to be his favourite science! Soon afterwards he determined to make the celebration of mass in English, and the administration of the sacrament under both forms the indispensable conditions of his conversion. But Louis was then satisfied: he had obtained his purpose of drawing the king into the war, and therefore ceased to call for a declaration, which must have rendered him a useless and burdensome ally."

Upon this picture of chicanery, why should we dwell? We only append, in the form of a note, the second article of the secret treaty, as given us by Dr. Lingard, on the authority of the original, in the possession of Lord Clifford; it is a memorable and extraordinary document.

"Le Seigneur Roy de la Grande-Bretagne étant convaincu de la vérité de la religion Catholique, et résolu d'en faire sa déclaration, et de se réconcilier avec l'Eglise Romaine, aussy tost que le bien des affaires de son royaume luy pourra permettre, a tout sujet d'espérer et de se permettre de l'affection et de la fidélité de ses sujets qu'aucun d'eux, mesme de ceux sur qui Dieu n'aura pas encore assez abondamment répandu ses grâces pour les disposer par cet exemple à l'auguste et se convertir, ne manqueront jamais à l'obéissance inviolable que tous les peuples doivent à leurs souverains mesme de religion contraire; n'antmoins, comme il se trouve quelques fois des esprits brouillons et inquiets, qui s'efforcent de troubler la tranquillité publique, principalement lorsqu'ils peuvent couvrir leurs mauvaises desseins du prétexte plausible de religion; sa majesté de la Grande-Bretagne, qui n'a rien plus à cœur (après le repos de sa conscience) que d'affermir celui que la douceur de son gouvernement a procuré à ses sujets, a cru que le meilleur moyen d'empêcher qu'il ne fust altéré, seroit d'estre assuré en cas de besoin de l'assistance de sa majesté très-chrétienne, laquelle voulant en cette occasion donner au Seigneur Roy de la Grande-Bretagne des preuves indubitables de la sincérité de son amitié, et contribuer au bon succès d'un dessein si glorieux, si utile à sa majesté de la Grande-Bretagne, mesme à toute la religion Catholique, a promis et promet de donner pour cet effet au dit Seigneur Roy de la Grande-Bretagne la somme de deux millions de livres tournoises, dont la moitié sera payée trois mois après l'échange des ratifications du présent traité, en espèce à l'ordre dudit Seigneur Roy de la Grande-Bretagne à Calais, Dieppe, ou bien au Havre de Grace, ou remis par lettres de change à Londres au risque, péril, et frais, dudit Seigneur Roy très-chrétien; et l'autre moitié de la mesme manière dans trois mois après; et en outre ledit Seigneur Roy très-chrétien s'oblige d'assister de troupes sa majesté de la Grande-Bretagne, jusqu'au nombre de six mille hommes de pied, s'il est besoin, et mesme de les lever et entretenir à ses propres frais et dépens, tant que ledit Seigneur Roy de la Grande-Bretagne jugera en avoir besoin pour l'exécution de son dessein; et ledites troupes seront transportées par les vaisseaux du Roy de la Grande-Bretagne en tels lieux

et ports qu'il jugera le plus à propos pour la bien de son service; et du jour de leur embarquement seront payées, ainsy qu'il est dit, par sa majesté très-chrétienne, et obéiront aux ordres du dit Seigneur Roy de la Grande-Bretagne, et le temps de ladite déclaration de Catholicité est entièrement remis au choix dudit Seigneur Roy de la Grande-Bretagne."

Tales of a Voyager to the Arctic Ocean.
Second Series. 3 vols. 12mo. London, 1829.
Colburn.

WHERE will our novel-writers go next for *matériel*?—Jew and Gentile, east and west, high and low, have been already depicted: the Hottentots seem the only people whose manners, customs, &c. have not been illustrated by a novel. Our Arctic Voyager had all the advantage of an unknown country and a sounding title: they ushered him into society, and his reception has been such as to induce a second appearance, to which we are well inclined to give a cordial reception. Two of the stories are excellent of their kind: the one, Letitia, of fearful involution, turns upon a mysterious murder; the second, the T-man, has much humour, and in one part excites even intense interest: the others are about the common standard of magazine tales—rather amusing, but inferior to their competitors. The two which we have mentioned as our favourites occupy each nearly a volume, and detached parts would give little idea of their sustained effect; we will therefore recommend them very deservedly, and take a few chance leaves from our Voyager's diary.

"A young seal became my guest, after receiving, or fancying itself to have received, the contents of a fowling-piece in its body. This animal, by a little attention and coaxing, grew placid enough to eat and grunt, a degree of good humour not frequently exhibited by a captive phoca. It fed with a good appetite upon raw flesh and fat, upon 'grout,' or boiled oatmeal, and upon bergoo, or oatmeal stirred with hot water to the consistence of hasty pudding; and it took great delight in swallowing lumps of ice and pellets of snow, by way of dessert. When brought out of its kennel to be washed, it shewed all possible inclination to return to its former state of freedom, and snapped at any one who offered to interrupt its hasty career towards the sea. But when the deck was covered with snow, it exhibited the joy of a horse let loose into a field; it snorted and pranced about to the best of its ability, and rolled upon its back, and extended its limbs, to increase the genial impressions of its couch, with that serene gratification of look expressed by a fat sow made happy by a bed of mud. At other times, scratching its head and back was a sure way to win its approbation; and it demonstrated its pleasure at the attention, by accommodating its position to the hand, and expanding its hide to facilitate the operation, while its flippers moved mechanically, as if to assist in the performance. All persons, however, were not equally well received, even as flatterers and back-scratchers—a fact which seemed to shew that poor 'Bonze' possessed some powers of discrimination; for, although the most harmless and interesting of seals, he had a great number of enemies among the crew."

The sailors being blocked in by ice, resort to the following charm:—

"The spell consisted in thrusting pins into the heart of a small animal, such as a gull or a mallehneck, and afterwards throwing it, thus transfixed, into the fire, there to remain till it was consumed. The reader will be disposed to doubt my sincerity, when I tell him that this ridiculous mummery was actually

performed 'betwixt decks' by part of our crew. Another of these magic agencies in the capture of whales, ought to have been mentioned when the spanning of harpoons was described, as it formed part of the ceremonies used during that preparation for the fishery. This is the insertion of various pieces of riband between the strands of the foreganger, or rope immediately connected with the harpoon, which are supposed to confer luck on the instrument thus adorned. Small silver coins are sometimes appended to the ribands to increase their power; but when the garters of the fair, presented by their own hands to the amorous whale-fisher, can be affixed by the favoured lover to his line, the hopes attached to his boat are still more auspicious, and he wields his weapon with confidence proportioned to its augmented merits."

A walk on one of the floes (large bodies of ice) would seem almost to realise the old nursery song of,

Sliding on the ice all of a summer's day.

"The water was like glass, clear and smooth, and reflecting the heavens, and the images of a thousand elevations and grotesque variations of the marble shore. Not a breeze played over its brilliant surface, nor did a wave ripple beneath the hollow margin of the floe. We could perceive medusæ trailing their scarlet fibrils deep within the transparent element, while the tongues or jutting bases of the ice were seen extending out from the main body in magnificent expansions, 'full fathom five' below the spectator. The awful depth to which the sight can penetrate by the assistance of these irregular projections, is a source of the sublime to be found only in these regions of grandeur and peculiar beauty. Under a bright clear sky, the alabaster whiteness of the tongues reflects the light, though buried far beneath the surface of the water, and the visual faculty seems to acquire power as it descends from shelf to shelf, and from point to point, into the profound abyss of the ocean."

"When the sea is but faintly coloured, its tints are most evident while flowing over the projections of the flaw; and the beauty of a sapphire liquid, foiled by a sheet of snowy ice, is transcendent. Green-tinted water affords a sight less pleasing; but a splendid medusa, sailing slowly above the marble rock, glitters like a brilliant jewel composed of a thousand gems. As we continued our progress along the floe, the heat of the sun, reflected from its surface, became oppressive. Forgetful of my former condition, I first threw off my coat, and next flung open my vest, to admit the refreshing atmosphere to my bosom. I felt as thirsty as if I were toiling along a dusty road, copious perspiration bedewed my limbs, my back seemed to burn in the noon-tide rays; and I looked around on the wild realm of ice, and the wide expanse of water, half doubting that I was in the latitude of Spitzbergen."

"On the present occasion, our Zetland improvisatori were particularly animated in their extemporaneous effusions, and ran round the capstern rapidly, to words signifying their hope of soon sharing an allowance of spirits; a luxury of which our prudential regime had deprived them whilst we remained beset, occasionally varying their exclamations with anticipations of the other benefits they expected to obtain by the deliverance of the vessel from her icy fetters. The limit of the choral expression is always marked by the velocity with which the leader of the band, that is, the individual who first gives out the stave, completes a *drap-en*

the look as he hovers round his har, and he resumes his chant at the same spot at which it was begun. Hence, when the circulations of the performers are quickened by the yielding of the obstruction to the wind-ing in of the warp, and the velocity of the turns will not allow of the repetition of the canticle first set up, the quize break into some other more brief outcry, suited to their movement; and at times, especially when reinforced by an action of hands, they whirl round the cap-stern with the utmost swiftness, shrieking, laughing, dancing, and flinging out their heels, like a company of savage revellers capering about some object of convivial worship with extravagant demonstrations of mental and bodily excitement. Such was the glee and glad-ness upon of our Highlandmen, when they found the Leviathan, so long immovable, and consequently unprofitable, now gliding onward with increasing speed towards freedom and the possibility of exercising her whale-capturing functions. No sooner had they got the ship under way, and felt her yield to the impulse of their warp, as if she gradually awoke from a deep lethargy, and slowly resumed her sus-pended family of motion, than they began their song, one of them striking up, seemingly with the first idea that entered his imagina-tion, while the others caught at his words, and repeated them to a kind of Chinese melody; the whole at length uniting their voices into one chant, which, though evidently the out-putting of a jovial spirit, had, from its un-erased tone and constant echo of the same ex-pression, a half-wild, half-melancholy effect upon the ear. The foreign accent of the sing-ers (for the Shetland natives have a strikingly peculiar twang in their pronunciation) con-tributed not a little to invest their music with a strange imposing character; while the strong contrast between the import of their exclamation and its somewhat dirge-like accompani-ment of voice, gave their stave a serio-comic air, well illustrated by the ludicrous display of angry feelings depicted on the habitually grave and simple countenances of the performers. As the vessel advanced, gathering swiftness from the increased efforts of the capstern heavers, and to the momentum she had received from their previous exertion, and the strain upon the warp, yielding rapidly to the increasing resistance of the wen, allowed them to run ahead with their haws at a pace more soul-stir-ving than their first movements had afforded, and they grew fast and furious. It had begun with 'Yah! yah! here's a full ship for the wren, and a full panikie for Peattie Peyster-son, le lalle, le lalle, le lalle'; but this soon, after many repetitions, was changed for one of briefer duration and more expressive import, as they courged after each other with increasing rapidity; their steps grew frolic-some, and their voices were elevated till they rose with energy; they shouted, shrieked, and sang; and at length they wanted no-thing requisite to make them true representa-tives of a troop of roving bacchanals, but the drummers perched upon the drumhead of the wren, and some of that good liquor whose consumption had thus inspired them with quick spirit.

After some ornithological descriptions, the author says—

"Another kind of bird at this time began to attract my attention by its lively motion, its wild and singular cry, and the vast flock it formed in the mornings and evenings of the days we passed near the coast of Green-land. This was the roach or roach, (also alle, or

little auk,) a bird of the size of a dove, but shaped more like a duck or a dabchick, pos-sessing a quick eye, and a facility of diving which often enabled it to avoid the contents of a fowling-piece, though the shot flew direct to the spot it had occupied. Its call, resembling in some degree a sudden burst of shrill quaint laughter, or more closely the instrumental music from a piece of tin beat double over a strip of ribbon, with which Punch summons a congre-gation to view his antics in the streets of Lon-don, was heard on every side, and every piece of ice and hole of water was visited by numerous groups of these active little animals, whose oft-repeated note and unceasing restlessness pro-duced an agreeably animated effect amidst the scenery they frequented. Indeed, they became great favourites with me, especially after I learnt that a sea-pie was improved by the addition of several of them to its other contents, and I never let an opportunity slip of procuring a supply for this especial purpose. The roach appears to feed only on shrimps and water-in-sects, and together with the loom, a bird ap-proximating closely to it in plumage and con-figuration, though considerably larger, forms the ordinary game of these seas; for filmars and the gull tribe are never eaten, except when short allowance, or weariness of the ship's pro-visions, renders them palatable. The other feathered inhabitants of the Greenland ocean, though eatable and esteemed as delicacies—the elder duck, the dovekie, the snow bunting, &c. are too seldom met with in sufficient abundance to constitute a source of food; but their absence I considered well supplied, in a reflective point of view, by the myriads of roaches that offered themselves to our palates."

The pleasures of the arctic regions may be surmised from the following:—

"We chiefly had a continuation of thick weather, with repeated showers of rain, and alternate calms and gales. Every substance that could imbibe moisture became literally soaked with fluid, either poured down upon it from the clouds, or condensed upon it from the mists that penetrated into the recesses of our vessel, while whatever delights I had experienced amongst these regions of splendid beauty were equalled by the miseries which ac-cumulated round me now. It would, indeed, be beyond the powers of imagination to conceive the dismal aspect that presents itself on all sides, and in all situations, to the Arctic voy-ager, during this portion of his wanderings. On deck, he sees his ship moored almost con-stantly to a sheet of ice, whose dull white mar-gin is just perceptible beneath the skirts of a murky cloud, which hangs like a cumbrous cur-tain over the floe. Above him, the slackened cordage, half hidden in mist, gathers a heavy load of moisture, which it lets fall in sudden showers upon his head, as the vessel rolls and heaves lazily upon the sullen tide. Close around him, the damp fog spreads its shilling wreaths, as if wrapping him in a wet embrace. He feels his warmth abstracted, while the drizzly at-mosphere clings coldly to his frame, seeming to penetrate his garments, and apply itself immedi-ately to his skin. He hears nothing but the dreary echoes of the sea, swelling up beneath the hollowed edges of the ice, and breaking in monotonous and regularly repeated murmurs amongst its labyrinths; or if, occasionally, sounds of animation strike his ear, they are but the sudden dropping of a malleum unseen into the water, and its succeeding noisy paddling towards him, to discover what food may be obtained in his vicinity. Below, all is dulness, gloominess, and want of cheer. He still finds

the cold, dank air around him, even at the fire-side; he sees its heavy charge deposited on the walls or bulkheads of his retreat, and trickling down in countless streams towards the deck or floor; he hears nothing but the endless and sad forebodings of the discontented whalefishers, and, unless he can inspire them with hope and liveliness, or engage them in some interesting recital, he must retire to his bed-cabin, to read in peace and warmth, or sit by the stove and keep chime with the forlorn knell of disap-pointment tolled out by his associates.

"For the sailors there was occupation, in the cleansing of bears' and seals' hides,—a task performed by first spreading a thick layer of saw-dust over the skin, and rolling it up tight-ly, then enclosing it, thus prepared, in a stout bag, filled also with saw-dust, and subjecting it either to long-continued threshing with a flail, or to a perpetual slow revolution, produced by treading upon it with the feet. For this latter purpose, the operator is placed between two ice-poles, fixed horizontally at a proper height for him to support himself upon his hands, whilst he walks backwards, kneading the sack containing the bear's skin and saw-dust with his heels, as he steps heavily in a retrograde direc-tion. The object of these processes is to excite a degree of heat in the hide that will melt out its grease, which the saw-dust absorbs, as it repeatedly shifts its position round the felt during the motion to which it is subjected. Dressed in this manner, a bear or seal's skin loses its stiffness, its oiliness, and its dingy hue, and becomes soft and supple to the feeling, and glossy in appearance."

The chief faults of our author are, "spin-ning his yarn" somewhat too lengthily, and a taste for doing fine and philosophical in the way of description: but, take them all in all, these are very amusing volumes, and will, we think, be popular among a large class of readers.

The Living and the Dead. By a Country Curate. Second Series. Vol. II. 12mo. pp. 311. London, 1829. H. Colburn.

MR. ERSKINE NEALE, the author of these volumes, is, we believe, a curate at Liverpool, and a relative of the late Mr. Archibald Constable. In consequence of the latter circum-stance, it is probable he obtained that informa-tion about the Byron family, Joanna Baillie, Archdeacon Daubeny, and other literary per-sons, which excited a considerable stir when his first performance appeared; and for the par-ticulars of which we beg to refer to our Nos. 529, 532, (March 10th and 31st, 1827.) We then spoke of Mr. Neale as of a spirited and clever writer, whose chief fault was the close juxtaposition of the facetious and serious; but whose work altogether was possessed of much interest and powers of entertainment. The same remarks apply to his second attempt—the touching and rational is generally praise-worthy; the sportive and satirical by no means equally successful. We shall, for these reasons, follow our own example, and repeat our course, by extracting a sufficient number of miscel-laneous quotations to justify our criticism, and to illustrate the character of the production before us.

The first paper, or rather the frame-work, is entitled "A Country Curate's Pilgrimage," and describes the various "noticeable" people in the cures to which the historiographer was called: thus, at Hornchurch we have the por-trait of a widow lady:—

"Mrs. Dysart was 'a woman of parts.' She aspired to this character, and did her best to support it. 'I'm no French scholar,' was her

daily exclamation, 'and I scorn deceit. Education has done nothing for me. I'm a *literal* woman. But Providence has blessed me with parts, and I feel I can use them.' Often did I wish, and hundreds, I can vouch for it, have done the same, that she had not been quite so literal, and that education had done more for her. She would ask such excruciating questions, and talk at times, notwithstanding her parts, such ineffable nonsense, that it was almost martyrdom to listen to her. She was fond of asserting that the climate of Devonshire and India was 'much the same,' and that she had 'a brother who died at Torquay, on the fifth of February, of a *coup de l'isle*.' 'So you were born at Morpeth,' said she to a gawky Northumbrian; 'pray did you know my father?' 'No.' 'Well! I am amazed! Why, he was the encumbrance of the living for upwards of forty years!' Moreover, she had the most unfortunate memory imaginable. Any family misfortune, mis-alliance, divorce, elopement, any blot in a noble escutcheon, any event or occurrence, death or duel, which, from its nature or consequences, was better forgotten, was faithfully treasured up in her memory, and produced, 'time, place, and occasion fitting.' Thus I heard her ask a Mr. Shirley whether it was true that Earl Ferrers was hung in a silken cord, and went in his own coach to Tyburn? because, 'as one of the family, you must know; so do tell me all about it.'—'Marlow! Marlow!' said she, on being introduced to a gentleman of that name; 'why, there was a Lady Marlow that went off with a Colonel Clavering: a very pretty woman she was; and mightily was the affair canvassed at the time. Pray, sir, are you any relation?' She was addressing the son.—'Manesty! Manesty!' said she, at a large dinner; 'I've heard that name before I'm sure.' She looked full in the face of the unfortunate man who owned it. 'I have some recollection connected with that name, if I could but hit upon it.' Oh! I have it. Manesty—ay, it is no common name. There was a very s-h-o-c-k-i-n-g fellow of that name at Cambridge in my brother's time. He used to cry fire at one o'clock in the morning, in the midst of the quadrangle, and alarm the master and fellows of his college beyond measure. Then as to his principles, no girl who had any pretensions—but, however, he was rusticated.' Coughs went round the table. Every body seemed on a sudden to have taken cold. But the woman of parts elevated her voice, and proceeded: 'He was rusticated twice, and finally expelled. Pray, sir, can you give me any intelligence as to what ultimately became of him?—not that any family would care to own him!' The unhappy object of her inquiries, with a face the colour of scarlet, and in a state of the most pitiable confusion, fronted her."

Here is another trait of character:—

"Mr. Halford, a very worthy Devonshire squire, sent for Mr. Green, the civil engineer, from Exeter, and desired that he would forthwith widen the main entrance to Hembury House. 'The passage is too narrow. I have felt it to be so for years. It must be widened; it shall be widened; and that immediately. Survey the premises: make a plan: let the thing be set about at once.' 'Nothing can be easier,' was the engineer's reply. 'Take down this wall, and a few inches will.' 'What! take down the wall of my kitchen? No; that's what I'll never allow to be done while I am above ground. My kitchen is small enough already. I never have company but my ears are stunned with my cook's complaints of its

size. No, sir; some other expedient must be hit upon;—think again. 'Well, friend, then suppose we take down the other wall, and remove it a few feet.' 'The deuce you would! Pray, sir, do you know what wall that is? That's the wall of my study. I can scarcely swing a cat in it as it is; and by reducing it as you propose, you would leave me a room I could not by possibility breathe in—three feet by three for a man of my size! Pray, sir, do you wish me to be smothered in my own house? Monstrous!' 'Friend,' said the engineer, waxing warmer than Quakers, even wet ones, usually do, 'thy conduct deserves that epithet, not mine. Thou sendest for me, at a distance of twenty miles, to widen the passage to thy house, which thou affirmest *must positively be done*. I propose taking down one wall; thou objectest. I then suggest the removal of the other; thou peremptorily refusest. How dost thou intend thy wish to be accomplished, and what object can be served by my coming? Thou hast abundance of money, but surely lackest common sense.'"

The next division is a tale of Lord Llanberis, and one of striking effect; but we pass it for more manageable matter.

"My next sphere of duty was Yarmouth in Norfolk: a parish whose population amounted to nineteen thousand, and whose duties were proportionably heavy. In this large and laborious cure I had happily a colleague: he was an extraordinary being. Poor Theakstone! with him it was throughout *fronti nulla fides*! Under a careless, blunt, and clownish exterior, he concealed the most sensitive feelings that man was ever cursed with. With a mind highly cultivated, stored with classical allusion and sportive repartee, he rarely touched on any topic that was not strictly professional. Active and energetic beyond example when roused, his natural habits were those of the most determined sluggishness. Two-thirds of his existence were spent in bed; and when reproached for his indolence, he would invariably reply, with a sigh and an air of melancholy conviction that was utterly overpowering, '*Sleep with me is a disease*.' He had, too, one of the most singular methods of writing his sermons that man ever devised or practised. He would on the Monday fix on a text. Upon this he would muse and meditate, dream and doze, till Friday. He would then, on the cover of a letter—for he despised the dull, formal 'practice of spoiling sheet after sheet of good paper,' and his MS. when complete was a bundle of shreds and scraps, which, on one occasion, flew round the pulpit like Sibylline leaves—carefully note down his divisions; and on Saturday night, at nine, after his third cup of tea, 'three and no more,' he would set to work in earnest, and finish at eleven: revise once, and the process was ended. Its result was an able, earnest, highly original, and very powerful sermon. But he was also a very efficient parish priest. There was a sincerity, a straightforwardness, a manliness of thought and action about him, that convinced the veriest gainsayer that his heart was devoted to his profession. He was deservedly popular where he most wished to be known, and where he alone cared to be loved, among the children of want and victims of sorrow. His time, his exertions, his purse, all were at their command. And though they might smile, and, in truth, often did smile, at his many peculiarities, his cordial sympathy won their affections, while his self-denial and consistent life commanded their respect. My sketch of him would be unpardonably defective were I to omit all allusion to his style. This,

though it might be deprecated at Belgrave Chapel or the Foundling, was admirably adapted to the mixed and motley congregation among whom it was his lot to minister. A few of his originalities occur to me. 'Do you come to the house of God to have your ears tickled with eloquence, and your proud hearts flattered by the accents of entreaty and persuasion? 'The wages of sin is death.' 'The soul that sinneth, it shall die.' I tell you *Truth*. She stands in no need of these artificial decorations. *Come then to the house of God not as CRITICS, but as SINNERS*.—You lead the most careless lives, and set your offspring the worst of examples, and then feel infinite mortification and chagrin that they turn out idle, disobedient, worthless characters. Like produces like. Pray, did you ever hear of two black people who had a white child? Be rational in your expectations. Learn to be virtuous yourselves, if you wish your children to grow up so. Form them by your own example; or expect not that while you openly prove to them you honour not your God, they will ever learn to honour you, their father and mother.—The Jews have a legend, that when Titus had destroyed Jerusalem, God Almighty, to be avenged on the enemy of his people, sent a copper fly for his punishment, which crept up his nose, and fed upon his brain till it had killed him. Such then, according to their belief, was the end of this mighty and successful warrior. Alas! how often do the objects toward which we look, and to which we cling for happiness, prove sources of the most exquisite misery! Like the mule of Absalom, they flee from us when we appear to need them most. Rachel cries, 'Give me children, and I die!' The babe is sent; and, lo! Benjamin the son of her wishes, becomes Benoni the son of her grief, and her soul departs from her! The commencement of his sermons was, at times, no less extraordinary. He was preaching on one occasion before a mariners' association, and this was the opening of a discourse, in other respects unexceptionable, and abounding in passages of power and pathos, which no man but himself could have written.—'The first maxim in navigation is to give danger a wide berth.' At another time he deemed it proper to notice the career and end of an individual, well known in the parish, who had in another county paid the forfeit of his life to the laws of his country. He commenced thus—'Lillyman, the incendiary, was hung last week at Northampton.' It was in these occasional sermons that he excelled. The most happy effects did in many instances attend them. And I should be guilty of great injustice to his memory were I to withhold my conviction that his labours were singularly crowned and blessed by that Omnipotent Being whom he devotedly served."

We conclude for this No. with an anecdote of public interest. At the retired church of Ashbourne is "a remarkable monument by Banks to the memory of a very lovely and intelligent little girl, a baronet's only child. It bears an inscription which, to use the mildest term, as it contains not the slightest reference to Christian hopes, should have been refused admittance within a Christian church. To the sentiments

* In a recent Number we had occasion to advise a *lay* author now and then to look into his Bible; and that such advice should have been necessary in his case was not perhaps very strange; but we do confess we are somewhat surprised to find it quite as much called for in the person of a *clerical* writer, and one, too, belonging to a class of men generally having the credit of especial assiduity in that respect. Yet such is the fact: for the quotation to which we have affixed an asterisk, is not only incorrectly cited, but is, besides, sheer nonsense. When we last read that holy book, we found the passage thus: "Give me children, or else I die."—Ed. L. G.

in truth, Paine himself, had he been alive, could have raised no objection. The figure, which is recumbent, is that of a little girl; the attitude exquisitely natural and graceful. It recalls most forcibly to the recollection Chantrey's far-famed monument in Lichfield Cathedral; for the resemblance, both in design and execution, between these beautiful specimens of art is close and striking. I was assured that, previous to his executing that most magnificent yet most touching piece of sculpture, which alone would have sufficed to immortalise his name, Chantrey was, at his own request, locked up alone in the church for two hours. This fact may be apocryphal; at least I cannot vouch for it. But the following I do affirm most confidently. When I hinted to the venerable mason who shews the monument, and who, being a retainer of the Boothby family, feels their honour identified with her own, that Chantrey's was by far the finer effort of the two, and that I wished I had that yet to see; and my companion added, that though the design of the Boothby monument was good, the execution was coarse and clumsy in the extreme, compared with the elaborate finish of the Robinson's. 'Humph,' said the old lady, with a most vinegar expression of countenance, with a degree of angry hauteur, an air of inimitable dignity that Yates would have travelled fifty miles to witness; 'the like of that's what I now hear every day. Hang that fellow Chantrey, or Cante, or what you call him; I wish he had never been born!' The Ashbourne people are naturally proud of the monument. With them it is a kind of idol, to which every stranger is required to do homage. Among others, when Prince Leopold passed through Ashbourne, and inquiries were made by some of his royal highness's suite as to the 'lions' of the neighbourhood—'We have one of our own, sir,' was the ready reply; 'a noble piece of sculpture in the church.' To the church the mourner was on the very point of repairance, when Sir Robert Gardiner suddenly interrupted the description to which the sculpture question belonged. 'It is a monument, sir—no one passes through without seeing it; for it is not to be met with in England—it is a monument to an only child, whose mother died.' 'Not now,' said the prince faintly; 'not now. I too have lost—' and he turned away from the carriage in tears.—Nor in speaking of Ashbourne, as connected with art, must mention be omitted of a portrait of Dr. Johnson, in the possession of a gentleman no less distinguished for the ability and impartiality with which he discharges the functions of a county magistrate, than for his private worth and excellence as a man. No cursory visit will do this noble picture justice. To be appreciated, it must be minutely examined and thoroughly studied. The colouring is fine and true to a degree, and the expression of countenance milder and more pleasing than any portrait of our great moralist that I am acquainted with. It has been pronounced by the Rev. Holwell Carr—himself no puny critic, and no mean authority in matters relating to the arts—to be the finest portrait of the great lexicographer extant. It may be observed, too, by the way, that to Ashbourne we owe Mr. Canning was remarkably partial. For it lived a female relative to whom he was warmly attached, and under whose roof many of his happiest hours were spent. It is stated, in a little poem, entitled 'A Spring Morning in a Parsonage,' one of the earliest efforts of his pen, is still in existence; and I have good reason for knowing, that but a very few weeks

previous to his death, he stated, in conversation, what delight he should feel in 'going into that neighbourhood, and revisiting haunts which to him had been scenes of almost unalloyed enjoyment.' I could scarcely believe, so exquisitely tranquil is the scene,—the very murmur of the stream which flows around seems to soften itself in unison with the stillness of the landscape—that Ashbourne had ever been other than the abode of rural peace and comfort; and yet I was assured that during the war there was scarcely any limit to the bustle and gaiety which pervaded it.*

* At Mayfield, near Ashbourne, is a cottage where Moore, it is stated, composed *Lalla Rookh*. "For some years this distinguished poet lived at the neighbouring village of Mayfield; and there was no end to the pleasanties and anecdotes that were floating about its coteries respecting him; no limit to the recollections which existed of the peculiarities of the poet, of the wit and drollery of the man. Go where you would, his literary relics were pointed out to you. One family possessed pens—and oh! Mr. Bramah! such pens! they would have borne a comparison with Miss Mitford's; and those who are acquainted with that lady's literary implements and accessories will admit this is no common-place praise—pens that wrote 'Paradise and the Peri' in *Lalla Rookh*! Another shewed you a glove torn up into thin shreds in the most even and regular manner possible; each shred being in breadth about the eighth of an inch, and the work of the teeth! Pairs were demolished in this way during the progress of the 'Life of Sheridan.' A third called your attention to a note written in a strain of the most playful banter, and announcing the next 'tragic-comedy meeting.' A fourth repeated a merry impromptu; and a fifth played a very pathetic air, composed and adapted for some beautiful lines of Mrs. Ople's. But to return to Mayfield. Our desire to go over the cottage which he had inhabited was irresistible. It is neat, but very small, and remarkable for nothing except combining a most sheltered situation with the most extensive prospect. Still one had pleasure in going over it, and peering into the little book-room, to catch the 'Poet's Den,' from which so much true poetry had issued to delight and amuse mankind. But our satisfaction was not without its portion of alloy. As we approached the cottage, a figure scarcely human appeared at one of the windows. Unaware that it was again inhabited, we hesitated about entering; when a livid, half-starved visage presented itself through the lattice, and a thin, shrill voice discordantly ejaculated—'Come in, gentlemen, come in. Don't be afraid! I'm only a tailor at work on the premises.' This villainous salutation damped sadly the illusion of the scene; and it was some time before we rallied sufficiently from this horrible desecration to descend to the poet's walk in the shrubbery, where, pacing up and down the live-long morning, he composed his '*Lalla Rookh*.' It is a little confined gravel-walk, in length about twenty paces; so narrow, that there is barely room on it for two persons to walk abreast: bounded on one side by a straggling row of stunted laurels, on the other by some old decayed wooden paling; at the end of it was a huge haystack. Here, without prospect, space, fields, flowers, or natural beauties of description, was that most imaginative poem conceived, planned, and executed. It was at Mayfield, too, that those bitter stanzas were written on the death of Sheridan. There is a curious circumstance connected with them: they were sent to Perry, the well-known editor of the *Morning Chronicle*. Perry, though no stickler in a general way, was staggered at the venom of two stanzas, to which I need not more particularly allude, and wrote to inquire whether he might be permitted to omit them. The reply which he received was shortly this: 'You may insert the lines in the *Chronicle* or not, as you please: I am perfectly indifferent about it; but if you do insert them, it must be *verbatim*.' Mr. Moore's fame would not have suffered by their suppression: his heart would have been a gainer. Some of his happiest efforts are connected with the localities of Ashbourne. The beautiful lines, beginning

'Those evening bells, those evening bells,'

were suggested, it is said, by hearing the Ashbourne peal; and sweetly indeed do they sound at that distance, 'both mournfully and slow;' while those exquisitely touching stanzas,

'Weep not for those whom the veil of the tomb
In life's happy morning hath hid from our eyes,'

were avowedly written on the sister of an Ashbourne gentleman, Mr. P.—B.—. But to his drolleries. He avowed on all occasions an utter horror of ugly women. He was heard, one evening, to observe to a lady, whose person was pre-eminently plain, but who nevertheless had been anxiously doing her little endeavours to attract his attention, 'I cannot endure an ugly woman. I'm sure I could never live with one. A man that marries an ugly woman cannot be happy.' The lady observed, that 'such an observation she could not permit to pass without remark. She knew many plain couples who lived most happily.' 'Don't talk of it,' said the wit; 'don't talk of it. It can't be.' 'But I tell you,' said the lady, who became all at once both plucked and positive, 'it can be, and it is. I will name individuals so circumstanced. You have heard of Colonel and Mrs. —. She speaks in a deep, gruff bass

Burckhardt's Travels in Arabia.

MEKKA.

AGREEABLY to the promise in our last, we now conclude our Review of these *Travels*, with a further description of the Kaaba, its officers, hadjys, &c.; and again express our high opinion of the talents of the learned editor, to whom we are indebted for the publication of the many curious and novel descriptions of Arabian manners and customs contained in this interesting volume.

"The first officer of the mosque is the Nayb el Haram, or Hares el Haram, the guardian who keeps the keys of the Kaaba. In his hands are deposited the sums bestowed as presents to the building, and which he distributes in conjunction with the Kadhy: under his directions, also, the repairs of the building are carried on. I have been assured, but do not know how truly, that the Nayb el Haram's yearly accounts, which are countersigned by the Sherif and Kadhy, and sent to Constantinople, amount to three hundred purses, merely for the expenses of the necessary repairs, lighting, carpets, &c., and the maintenance of the eunuchs belonging to the temple. This officer happens at present to be one of the heads of the three only families descended from the ancient Koraysh who remain resident at Mekka. Next to him, the second officer of the mosque in rank is the Aga of the eunuchs, or, as he is called, Agat el Towashye. The eunuchs perform the duty of police officers in the temple; they prevent disorders, and daily wash and

voice; he in a thin, shrill treble. She looks like a John Doree; he like a dried alligator. They are called Bubble and Squeak by some of their neighbours; Venus and Adonis by others. But what of that? They are not handsome, to be sure; and there is neither mirror nor pier-glass to be found, search their house from one end of it to the other. But what of that? No *unwholesome reflections* can, in such a case, be cast by either party! I know them well; and a more harmonious couple I never met with. Now, Mr. Moore, in reply, what have you to urge? I flatter myself I have overthrown your theory completely.' 'Not a whit. Colonel — has got into a scrape, and like a soldier puts the best face he can upon it.' Those still exist who were witnesses to his exultation when one morning he entered Mrs. —'s drawing-room, with an open letter in his hand, and in his peculiarly joyous and animated manner exclaimed: 'Don't be surprised if I play all sorts of antics! I am like a child with a new rattle! Here is a letter from my friend Lord Byron, telling me he has dedicated to me his poem of the Corsair. Ah, Mrs. — it is nothing new for a poor poet to dedicate his poem to a great lord; but it is something passing strange for a great lord to dedicate his book to a poor poet.' Those who know him most intimately feel no sort of hesitation in declaring, that he has again and again been heard to express regret at the earlier efforts of his muse; or reluctance in stating, at the same time, as a fact, that Mr. M. on two different occasions endeavoured to repurchase the copyright of certain poems; but, in each instance, the sum demanded was so exorbitant, as of itself to put an end to the negotiation. The attempt, however, does him honour. And, affectionate father as he is well known to be, when he looks at his beautiful little daughter, and those fears, and hopes, and cares, and anxieties, come over him which almost choke a parent's utterance as he gazes on a promising and idolised child, he will own the censures passed on those poems to be just: nay more—every year will find him more and more sensible of the paramount importance of the union of female purity with female loveliness—more alive to the imperative duty, on a father's part, to guard the maiden bosom from the slightest taint of licentiousness. It is a fact not generally suspected, though his last work, 'The Epicurean,' affords strong internal evidence of the truth of the observation, that few are more thoroughly conversant with Scripture than himself. Many of Aethes's most beautiful remarks are simple paraphrases of the sacred volume. He has been heard to quote from it with the happiest effect—to say there was no book like it—no book, regarding it as a mere human composition, which could on any subject even 'approach it in poetry, beauty, pathos, and sublimity.' Long may these sentiments abide in him! And as no man, to use his own words, 'ever had fiercer enemies or firmer friends'—as no man, to use those of others, was ever more bitter and sarcastic as a political enemy, more affectionate and devoted as a private friend, the more deeply his future writings are impregnated with the spirit of that volume, the more heartfelt, let him be well assured, will be his gratification in that hour when 'we shall think of those we love, only to regret that we have not loved more dearly, when we shall remember our enemies only to forgive them.'

sweep, with large brooms, the pavement round the Kaaba. In times of rain, I have seen the water stand on the pavement to the height of a foot: on such occasions many of the hadjys assist the eunuchs in removing it through several holes made in the pavement, which, it is said, lead to large vaults beneath the Kaaba, though the historians of Mekka and of the temple make no mention of them. The eunuchs are dressed in the Constantinopolitan *kaouk*, with wide robes bound by a sash, and carry a long stick in their hands. The engraving of their dress given by d'Ohsson is strikingly correct; as are, in general, all the representations of costume in that work, which I had an opportunity of comparing with the original. The number of eunuchs now exceeds forty, and they are supplied by Pashas and other grandees, who send them, when young, as presents to the mosque: one hundred dollars are sent with each as an outfit. Mohammed Aly presented ten young eunuchs to the mosque. At present there are ten grown-up persons, and twenty boys; the latter live together in a house till they are sufficiently instructed to be given in charge to their elder brethren, with whom they remain a few years, and then set up their own establishments. Extraordinary as it may appear, the grown-up eunuchs are all married to black slaves, and maintain several male and female slaves in their houses as servants. They affect great importance; and, in case of quarrels or riots, lay freely about them with their sticks. Many of the lower classes of Mekka kiss their hands on approaching them. Their chief, or Aga, whom they elect among themselves, is a great personage, and is entitled to sit in the presence of the Pasha and the Sherif. The eunuchs have a large income from the revenues of the mosque, and from private donations of the hadjys; they also receive regular stipends from Constantinople, and derive profit from trade; for, like almost all the people of Mekka, and even the first clergy, they are more or less engaged in traffic; and their ardour in the pursuit of commercial gain is much greater than that which they evince in the execution of their official duties, being equalled only by the eagerness with which they court the friendship of wealthy hadjys. Most of the eunuchs, or Towashyeh, are negroes; a few were copper-coloured Indians. One of the former is sometimes sent to the Soudan countries, to collect presents for the Kaaba. The fate of a eunuch of this description is mentioned by Bruce. Some years since a Towashyeh obtained permission to return to Soudan, on presenting another person to the mosque in his stead. He then repaired to Borgo, west of Darfour, and is now the powerful governor of a province. Whenever negro hadjys come to Mekka, they never fail to pay assiduous court to the Towashyehs. A Towashyeh, after having been once attached to the service of the Kaaba, which confers on him the appellation of Towashyeh el Neby (the prophet's eunuch), can never enter into any other service.—In the time of Ramadhan, (the last days of which month, in 1814, I passed at Mekka,) the mosque is particularly brilliant. The hadjys, at that period, (which happened to be in the hottest time of the year,) generally performed the three first daily prayers at home, but assembled in large crowds in the mosque for their evening devotions. Every one then carried in his handkerchief a few dates, a little bread and cheese, or some grapes, which he placed before him, waiting for the moment of the call to evening prayers to be allowed to break the fast. During this period of suspense, they

would politely offer to their neighbours a part of their meal, and receive as much in return. Some hadjys, to gain the reputation of peculiar charitableness, were going from man to man, and placing before each a few morsels of viands, followed by beggars, who, in their turn, received these morsels from those hadjys before whom they had been placed. As soon as the Imam on the top of Zemzem began his cry of 'Allahou Akbar,' (God is most great!) every one hastened to drink of the jar of Zemzem water placed before him, and to eat something, previous to joining in the prayer; after which they all returned home to supper, and again revisited the mosque for the celebration of the last evening orisons. At this time the whole square and colonnades were illuminated by thousands of lamps; and, in addition to these, most of the hadjys had each his own lantern standing on the ground before him. The brilliancy of this spectacle, and the cool breeze pervading the square, caused multitudes to linger here till midnight. This square, the only wide and open place in the whole town, admits through all its gates the cooling breeze; but this the Mekkawys ascribe to the waving wings of those angels who guard the mosque. I witnessed the enthusiasm of a Darfour pilgrim, who arrived at Mekka on the last night of Ramadhan. After a long journey across barren and solitary deserts, on his entering the illuminated temple he was so much struck with its appearance, and overawed by the black Kaaba, that he fell prostrate close by the place where I was sitting, and remained long in that posture of adoration. He then rose, burst into a flood of tears, and in the height of his emotion, instead of reciting the usual prayers of the visitor, only exclaimed, 'O God, now take my soul, for this is Paradise!'—The termination of the Hadj gives a very different appearance to the temple. Disease and mortality, which succeed to the fatigues endured on the journey, or are caused by the light covering of the ihram, the unhealthy lodgings at Mekka, the bad fare, and sometimes absolute want, fill the mosque with dead bodies, carried thither to receive the Imam's prayer; or with sick persons, many of whom, when their dissolution approaches, are brought to the colonnades, that they may either be cured by a sight of the Kaaba, or at least have the satisfaction of expiring within the sacred enclosure. Poor hadjys, worn out with disease and hunger, are seen dragging their emaciated bodies along the columns; and when no longer able to stretch forth their hand to ask the passenger for charity, they place a bowl to receive alms near the mat on which they lay themselves. When they feel their last moments approaching, they cover themselves with their tattered garments; and often a whole day passes before it is discovered that they are dead. For a month subsequent to the conclusion of the Hadj, I found, almost every morning, corpses of pilgrims lying in the mosque; myself and a Greek hadji, whom accident had brought to the spot, once closed the eyes of a poor Mogrebeyn pilgrim, who had crawled into the neighbourhood of the Kaaba, to breathe his last, as the Moslems say, 'in the arms of the prophet and of the guardian angels.' He intimated by signs his wish that we should sprinkle Zemzem water over him; and while we were doing so, he expired: half an hour afterwards he was buried. There are several persons in the service of the mosque employed to wash carefully the spot on which those who expire in the mosque have lain, and to bury all the poor and friendless strangers who die at Mekka."

Sir J. Malcolm's History of Persia.

THE general outlines and the history of Persia are so well known, or can be so easily gathered from any gazetteer or geographical grammar, that we consider it to be our most judicious course, to continue our illustrations of this sterling work, by extracts which exhibit national manners and feelings. These, with curious and characteristic anecdotes, out of the multitude with which Sir J. Malcolm enlivens his historical details, form, in our opinion, a very striking picture of this remarkable people.

"Nadir Kooli himself never boasted of a proud genealogy: even his flattering historians, though he informs us that the father of his hero was a man of some consequence in his tribe, reveals the truth by a metaphorical apology for low birth, saying, that the diamond has its value from its own lustre, not from that of the rock where it grew. We learn from other sources, that he earned his livelihood by making coats and caps of sheepskins. Nadir often spoke of his low birth; and when the pride of the royal house of Delhi required that his son, who was to marry a princess of that family, should give an account of his male ancestors for seven generations, the conqueror exclaimed: 'Tell them that he is son of Nadir Shah, the son of the sword, the grandson of the sword, and so on, till they have a descent of seventy instead of seven generations!' " "A Persian MS. in my possession relates an anecdote of Nadir, which shews how he understood the feelings of the most ignorant and the wickedest of his subjects. A native merchant, travelling from Cabool, had been robbed in a plain near Nishapore, and carried his complaint to the sovereign. 'Was there no one near but the robbers?' said Nadir. 'None,' was the reply. 'Were there no trees, or stones, or bushes?' 'Yes,' said the man, 'there was one large solitary tree, under whose shade I was reposing when I was attacked.' Nadir, on hearing this, affected great fury, and ordered two executioners to proceed and flog the tree every morning, till it either restored the lost property, or revealed the names of the thieves. The mandate of a king of Persia is always law; that of Nadir was as irrevocable as fate. The executioners went; and the tree had not suffered flagellation above a week, when all the stolen goods were found one morning at its root. The alarmed robbers, who soon heard of the extravagant severity which inflicted such blows on an inanimate substance, trembled at the thought of the horrible punishment that awaited them, if they were ever discovered. When the result was reported to Nadir, he smiled and said, 'I knew what flogging that tree would produce.' " "The contempt of Nadir for the arts by which the dervishes and other religious mendicants imposed on the credulity of his countrymen, was shewn on every occasion. Many believed that the holy Imam Reza, who is interred at Meshed, continued to work miracles; and this belief gave rise to number of impositions. Persons, pretending to be blind, went to his tomb; and, after long period of prayer, opened their eyes, and declared that their sight had been restored to the holy Imam. One of these was seated at the gate of the sacred mausoleum when Nadir passed. 'How long have you been blind?' said the monarch. 'Two years,' answered the man. 'A proof,' replied Nadir, 'that you have no faith. If you had been a true believer, you would have been cured long ago. Recall my friend, if I come back and find you as y

are, I will strike your head off.' When Adir returned, the frightened fellow pretended to pray violently, and all at once found his sight. 'A miracle! a miracle!' the populace exclaimed, and tore off his coat in small pieces, as relics. The monarch smiled, and observed, 'that faith was every thing.'"

"Kerrem Khan often repeated an anecdote of his early life, which shewed a feeling very uncommon among men of his condition. 'When I was a poor soldier,' said he, 'in Nâdir Shah's camp, my necessity led me to steal from a saddler a gold embossed saddle, sent by an Affghan chief to be repaired. I soon afterwards learnt that the saddler was in prison, and sentenced to be hung. My conscience smote me, and I replaced the saddle exactly in the place whence I took it. I watched till it was discovered by the saddler's wife: on seeing it, she gave a scream of joy, fell down on her knees, and prayed aloud that the person who had brought it back might live to have a hundred gold embossed saddles. I am quite certain,' Kerrem used to add, smiling, 'that the honest prayer of the old woman has aided my fortune in attaining that splendour which she desired I should enjoy.' * * * It is the usage with the king of Persia to devote a number of hours every day to hear the complaints of his subjects. An anecdote is related of Kerrem Khan, which, while it shews the confidence reposed in his temper and justice, admirably illustrates the consideration and feeling with which he performed this important duty. He was one day retiring from his judgment-seat, harassed and fatigued with a long attendance, when a man rushed forward in apparent distraction, calling out in a loud voice for justice. 'Who are you?' said Kerrem. 'I am a merchant,' replied the man, 'and have been robbed and plundered by some thieves of all I possess.' 'What were you about,' said the prince, 'when you were robbed?' 'I was asleep,' answered the man. 'And why did you sleep?' exclaimed Kerrem in a peevish and impatient tone. 'Because,' said the undaunted Persian, 'I made a mistake, and thought you were awake.' The irritation of the royal judge vanished: he was too much pleased with the manly boldness of the petitioner to be offended at the reproach. Turning to his vizier, he bade him pay the amount of the merchant's losses from the treasury. 'We must,' he added, 'try to recover the property from the robbers.'"

"I find in one of my manuscripts a remarkable anecdote of Aga Mahomed Khan's conduct on one occasion. The meerza or secretary of Looft Ali was made prisoner, and brought before him. He demanded how he had dared to write firmans or mandates to him who was a sovereign? 'I wrote them,' said the man, 'by the order of my master, Looft Ali: my fear of him when present was greater than my dread of you who were at a distance.' 'Strike off his hands, and tear out his eyes!' exclaimed the enraged monarch. The savage order was instantly obeyed. Next day he sent for the son of the man whom he had so inhumanly treated, and said: 'Tell your father that the prophet has upbraided me in a dream for my cruel usage of him: what can I do to repair the injuries I have done?' 'He will desire, if he lives,' said the youth, 'to pass the remainder of his days at the tomb of the holy Ali, at Najaf.' The king immediately directed that mats, tents, and every necessary equipment, should be furnished for his journey. He also sent him a present of three hundred tomans (about three hundred pounds sterling), and en-

treated the young man to solicit his father to forgive him, and to remember him in his prayers."

"Joseph Emin, a brave and venturesome Armenian, furnishes us with many curious facts relating to the condition of Georgia. He gives no very favourable character of any class of its inhabitants; and he expresses his opinion of the nobles in this very odd but emphatic manner: 'They were born twenty-four hours before the devil!'"

"Aga Mahomed often related an anecdote which displays his feelings while he was a prisoner in the hands of Kerrem Khan, and gives an insight into his extraordinary character. 'I had no power,' he said, 'of declaring openly that revenge which I always harboured against the murderers of my father, and the despoilers of my inheritance; but while I sat with Kerrem Khan in his hall of public assembly, I often employed myself in cutting his fine carpets with a penknife which I concealed under my cloak, and my mind felt some relief in doing him thus secretly all the injury I could.' When Aga Mahomed Khan mentioned this, the carpets that he had tried to destroy were become his own; and he used to add, 'I am now sorry for what I did: it was foolish, and shewed a want of foresight.'"

Speaking of the Georgians: "Slavery was the state to which many of these had been doomed from their birth: and, if we except the great misfortune to which the younger captives* were exposed, of being educated in a different religion from their parents, their lot was not unhappy. The females, from their superior beauty, became in general the favourites of their harams, and some of them were married to their masters: while the males, according to the usage of the country, were treated with kindness and partiality. They almost invariably obtained their liberty when they embraced the religion of their conquerors; and as they grew up, were either enrolled as soldiers, or retained as domestics. In the former case they frequently rose to high command and station; in the latter they were always favoured and confidential servants; and their children, being born in the house, were considered almost as relations of the family."

Aga Mahomed's "contempt of luxury was shewn on all occasions; and his policy made him seize every opportunity of giving his leaders and troops a pride in those hardships and privations to which their profession doomed them. After a march, or when fatigued with hunting, he would seat himself on the ground, and share with his officers in any repast that was brought. It happened one day, as he was eating some of the hard black bread and sour milk which form the common fare of the Persian soldier, that one of his principal ministers, who was seated near him, began to eat of the same food. The monarch instantly commanded him to desist. 'Eat as much as you like of your rich pillows and fine sweetmeats,' said he; 'but never again let me see a fellow of a secretary, like you, touch the food of my soldiers.' The minister, with an inward smile, heard himself condemned to eat none but good and delicate viands, while the military chiefs and soldiers that sat around felt it as a distinction to live on a coarse diet which their sovereign shared, and

* * * Numbers of those who had attained the age of maturity preserved their own religion, and among them many females. An affluent merchant told me he had offered marriage to a beautiful Georgian, whom he had purchased from a soldier, if she would become Mahomedan, but in vain: and 'she prays so prettily,' he added, smiling, 'to her little images, that I have been half tempted myself to become an idolater.'

from the very taste of which he had just debarred one of the first civil officers in the realm. * * * From the habit of amassing riches, he became at last avaricious in a degree hardly to be believed. We are informed by one writer, that having overheard a poor man, whose ears he had ordered to be cut off for some trivial offence, offer a few pieces of silver to the executioner if he would take off only a part of them, the king called to the man, and told him, that if he would give him double the amount he had just offered to his servant, his ears should not be touched. The peasant threw himself on the ground to return thanks, and was going away, deeming the demand for money a mere plesantry; but he was recalled, and soon convinced that his pardon depended on his instantly satisfying the mean avarice of the monarch. From another account we learn, that Aga Mahomed actually combined with an artful religious mendicant to obtain money from his courtiers. The man met him at a place appointed, when surrounded by officers of state. Apparently struck by his appearance and story, the king ordered a large amount to be given to him, and recommended the holy man to equal attention from others. The example of the sovereign was followed by the whole court; and the mendicant received a considerable sum. It was late at night before the impatience of Aga Mahomed revealed the secret. 'I have been cheated!' he exclaimed to his minister; 'that scoundrel of a mendicant, whom you saw this morning, not only promised to return what I gave him, but to give me half of what he received from others!' Horsemen were sent in every direction, but the wily fellow evaded all pursuit; and the courtiers secretly rejoiced in the disappointment of their monarch's cupidity."

"In one of my Persian manuscripts on the Soofees, is the following curious account of Shaikh Mohyudeen Abdool Kauder, of Ghilan, who was born A. H. 471, and died in 561. His mother declared that, when he was at the breast, he never tasted milk during the holy month of Ramzan: and in one of his works he gives the following account of himself. 'The day before the feast of Araf I went out into the fields and laid hold on the tail of a cow, which turned round and exclaimed: 'Oh Abdool Kauder, am I not that which thou has created me?' I returned home and went up to the terrace of my house: I saw all the pilgrims standing at the mountain of Arafât, at Mecca. I went and told my mother I must devote myself to God: I wished to proceed to Bagdad, to obtain knowledge. I informed her what I had seen, and she wept: then taking out eighty deenars, she told me that, as I had a brother, half of that was all my inheritance. She made me swear, when she gave it to me, never to tell a lie; and afterwards bade me farewell, exclaiming, 'Go, my son, I give thee to God. We shall not meet again until the day of judgment!' I went on well till I came near to Hamadan, when our kâfilâh was plundered by sixty horsemen. One fellow asked me what I had got? 'Forty deenars,' I said, 'are sewed under my garment.' The fellow laughed, thinking, no doubt, I was joking him. 'What have you got?' said another. I gave him the same answer. When they were dividing the spoil, I was called to an eminence where their chief stood. 'What property have you, my little fellow?' said he. 'I have told two of your people already,' I replied; 'I have forty deenars sewed up carefully in my clothes.' He desired them to be ript open, and found my money. 'And how came you,' said he with

surprise, 'to declare so openly what has been so carefully hidden?' 'Because,' I replied, 'I will not be false to my mother, to whom I have promised that I will never conceal the truth.' 'Child,' said the robber, 'hast thou such a sense of thy duty to thy mother at thy years; and am I insensible, at my age, of the duty I owe to my God? Give me thy hand, innocent boy,' he continued, 'that I may swear repentance upon it.' He did so. His followers were all alike struck with the scene. 'You have been our leader in guilt,' said they to their chief, 'be the same in the path of virtue;' and instantly, at his order, they made restitution of their spoil, and vowed repentance on my hand.' Mohy-u-deen arrived at Bagdad in A. H. 488, and, consequently, when this event happened, must have been sixteen or seventeen years of age. His learning and virtue are spoken of with rapture. According to the author I write from, God granted all his requests; and the divine vengeance fell on those he hated. In A. H. 521 he began his public lectures. High Soonee authorities, of the sect of Shaffei, report many of his miracles. He himself gives the following account of his fasting, previous to his becoming a disciple of his teacher. 'I was eleven years in a *burj* (tower); and when there, I declared to God I would not eat or drink till some one caused me to do so. I remained forty days; after which a person brought a little meat, put it before me, and went away: my life was nearly springing out at the sight of the victuals, but I refrained; and I heard a voice from within me call out, 'I am hungry, I am hungry;' at that moment Shaikh Aboo Syud Mukzoomee (a celebrated Soofee) passed, and hearing the voice, exclaimed: 'What is that?' 'It is my mortal part,' I replied; 'but the soul is yet firm, and awaits the result.' 'Come to my house,' he said; and went away. I resolved, however, to fulfil my vow, and remained where I was: but ~~he~~ came and told me to follow the Syud, whom I found at his door waiting. 'You would not comply with any wish,' said he, 'till it was enforced by Elias.' After this he gave me meat and drink in plenty, and then invested me with a *khirkâ*, (or sacred mantle,) and I became his confirmed friend and companion."

Another paper of these entertaining anecdotes will close our selections from this interesting and valuable history.

Scriptorum Veterum nova Collectio, à Vaticanis Codicibus. Edita ab Angelo Maio, Bibliotheca Vaticanae Praefecto. Tomus III. Romae, 1828. 4to. pp. 800.

THIS third volume, in Greek and Latin, contains, besides the editor's preface, 1. The lives of all the Caesars, till Michael VIII. Paleologus; a history which embraces 1300 years, written in 10,410 Greek iambs by Efreminus, and translated into Latin by the editor. The last part of this history gives us also the catalogue of the patriarchs of Constantinople during the above period. 2. A treatise by Metodius, a monk, against schism, in Greek, with a Latin translation by the editor. 3. The commentaries of Caius Marcus Victorinus, on the letters of St. Paul to the Galatians, to the Philippians, and to the Ephesians. 4. An essay, by the same Victorinus, in defence of the Christian religion against the natural philosophers. 5. A description of various Cassinese codices, and of the learned works of the celebrated Joseph Simon Assemani. 6. A letter, or rather a treatise, of Fernando Diaconus against the Arians, from a Cassinese codex.

7. A prologue, by the editor, respecting the publication of discourses and commentaries taken from very ancient palimpsests. 8. An ancient commentary on the Gospel of St. Luke. 9. Very ancient sermons, with ample annotations by the editor; to which are added, some liturgical fragments of equal antiquity. 10. A fragment against the Arians. 11. A letter of Florus Diaconus respecting the emendation of the Psalter. 12. A prologue of St. Isidore, prefixed to an edition of the Psalter by him. 13. The Gospel of St. Matthew according to a most ancient MS. 14. Julius Paris, abridger of Valerius Maximus. 15. Januarius Neposianus, another abridger of Valerius Maximus. 16. An ancient epitome of the books of St. Augustine upon music. 17. Four ancient homilies. 18. Two Greek orations of Theodulus; one on the duties of the king towards the people, the other on the duties of the people towards the king. 19. Four new Greek Sibylline books, of above 1000 Greek hexameters. The frontispiece of the volume is adorned with a fac-simile engraving of ancient writing.

Classicum Auctorum à Vaticanis Codicibus editorum Tomus I., complectens Ciceronis de Republica quae supersunt, Gargilii Martialis de Arboribus Pomiferis, Sallustii Historiarum, et Archimedis Fragmenta: cum quinque tabulis aeneis. Curante A. Maio, Bib. Vat. Praef. Romae, 1828. 8vo. pp. 518.

THIS is a new series of authors strictly classical. The first is Cicero on the Republic, as far as it has been possible to recover it in our times, by taking it from a codex rescriptus, and adding the various fragments quoted by known authors. The editor has revised his first edition both of the text of Cicero and of his own notes, and has added various inedited fragments of the Greek Proclus, which illustrate the Republic of Plato in passages parallel with those of Cicero. The next is an inedited piece by Gargilius Martialis, de Arboribus Pomiferis, taken from a palimpsest at Naples, and divided into four sections, *de amygdalâ, de persico, de cydonio, de castaneâ*. Then follows a valuable fragment of the third book of the lost histories of Sallust, well and correctly engraved on three plates. The preceding editions of this fragment have been extremely bad. Two very ancient parchments in the Vatican have at length restored it in its real merit. The volume is concluded by some theorems in Greek, from the work of Archimedes on bodies floating in water, which was published in Latin by Commandini; but the Greek text perished without seeing the light—for that of the Frenchman Rivalt is of his own composition. Of this lost Greek text we here recover some fragments.

Classicum Auctorum, &c. Tom. II. 8vo. pp. 553. Romae, 1828.

IN this second volume, which is as interesting as the first, the editor offers to the public all the new writings of Cicero which, besides the Republic, have been recently discovered by him, and some also by others, besides an ancient and learned inedited commentator on Cicero's orations. Lastly, a great part of the orations against Verres, from an admirable palimpsest, which very frequently differs from the printed copies. The new parts of Cicero's orations are, pro Flacco, in Clodium et Curionem; de aere alieno Milonis, de rege Alexandrino, pro Scauro, pro Tullio, pro Milone, pro Fonteio, pro Rabirio: gems for all of which we are indebted to the study of the pa-

limpsests. The classical commentator illustrates twelve of Cicero's orations, and is full of erudition and good sense, with an elegant style, and affords important information to antiquaries and philologists; and the text of the orations against Verres, as now published, will undoubtedly be adopted as the most authentic in future editions, since the codex from which it is taken is so near the age of its author; of the writing of which, as well as of the above-mentioned commentator, a copious specimen, engraved on copper, is given.

SIGHTS OF BOOKS.

Reginald Trevor; or, the Welsh Loyalists. By Edward Trevor Anwyl. 3 vols. 12mo. New-man and Co.

BATTLE, murder, and sudden death, love and difficulties—all terminating in that *summum bonum* of novelists, marriage—compose a novel at least as good as the generality of its brethren, and peculiarly entitled to regard, as relating to a theme not too much hackneyed—Welsh scenery and manners.

William Montgomery; or, the Young Artist By Mrs. Blackford, Author of "the Eskdale Herd-Boy," &c. Pp. 311. London. Hurst, Chance, and Co.

A VERY pleasing production for the use of young people; and the last tale, though by a different hand, is well worthy of the attention of our juvenile friends.

Montmorency; a Tragic Drama. By W. H. Montague. London, 1828. Joy.

THE first of a series of historical and other dramas, written with a considerable portion of spirit: and the leading character, the brave and unfortunate Montmorency, might be made very interesting in the hands of an efficient actor. Perhaps compression is what we should principally advise our young author to study.

Specimens of a Translation of the Henriade of Voltaire. 8vo. pp. 38. London, 1828. George Swire.

ONE of the best specimens of translation we have seen;—enough to make us recommend a more original exertion of his talents to the author. The *Henriade*, however well translated, would be matter of indifference to most English readers; and those capable of appreciating its beauties would prefer it in its native dress. We cannot but think its translator capable of something more attractive.

ORIGINAL CORRESPONDENCE.

Paris, Jan. 23.

THERE is no place, perhaps, where transitions from gay to grave are more frequently experienced than in this city. Last week the royal *château* was the theatre of pleasure and feasting; and, but a few days since, its walls were hung with black in memory of the assassination of the unfortunate Louis XVI. It is impossible to contemplate the palace of the Tuileries on that day, without feeling an indescribable sensation of awe and melancholy: the leaflessness of the trees which surround it, the silence of the sentinels, the deserted walks, the rigour of the season, all combine to inspire gloom,—for Nature herself seems to sympathise with the horrors of which it was the consummation.

Towards the evening of the memorable 21st of January, a remarkable circumstance took place in the Tuileries' gardens: three gentlemen, the eldest of whom appeared to have counted four score years, walked for more than an hour up and down the centre

ally, and seemed, by the movements of his hands, and some broken sentences which were gathered from his conversation, to be recalling past events, and tracing with memory's pencil scenes of blood and misery. He wept violently, and gave at least one example, in this age of *oubli*, of the constancy of attachment. I could not discover the name of the aged stranger; but on leaving the gardens he looked towards the king's apartments, and, raising his hands, exclaimed, "*Malheureux Français!*"

The Parisian surgeons and physicians are much enraged at the assertions of certain English writers; namely, that at the hospitals in this capital they despatch their patients in double-quick time, for the purpose of dissection. *As la vie pique surtout*, the whole *Æsculapean* body are up in arms, and a great slaughter is to be expected.

Another magnificent ball is to be given in a day or two by her grace la Duchesse de Berri:—I suppose as a digestive to sorrow, and a contrast to the gloom which prevailed a few days ago. The French have so much *sensibilité*, they require to be *distrain*!

ARTS AND SCIENCES.

ROYAL INSTITUTION.

FRIDAY evening, Jan. 30.—The subject for this evening was, "Observations, original and select, on Vegetable Metamorphoses," by Mr. Burnet.

The lecturer briefly adverted to the metamorphoses of the poets, as founded upon the regular changes which the substance of plants undergoes when influenced by vegetable life; and also to the absurd theories relative to metamorphoses entertained by early and even by more recent philosophers. He then took a view of the interesting and extraordinary changes which are common in the vegetative process; and detailed a series of them which can be effected by art, whereby one part of a plant is made to perform the functions of another;—the branches to become roots, and the roots branches;—the leaf-buds to become flower-buds (producing fruit), and the flower-buds leaf-buds. Mr. Burnet next noticed the extraordinary change which takes place in the aspect, weight, bulk, and general character of plants when subjected to careful cultivation. *Lz. gr.*: the cauliflower originally weighed only a quarter of an ounce; in like manner the weight of the common cabbage, prior to cultivation, was about half an ounce: specimens of that esculent were now to be found weighing sixty pounds each! "These metamorphoses," said Mr. Burnet, "are of the highest importance, because they give man a certain degree of command over the produce of the seed obtained from the soil." The observations were well received. At their close Mr. Faraday stepped forward and said, that a future occasional remarks would be made on any scientific donations which might be placed on the library-table: this intimation was received with hearty plaudits. Mr. Faraday then directed the attention of the audience to several specimens of steel plates prepared by Signor Nobili, of Modena, and called by him *metallo-chrome*, from the beautiful series of colours exhibited upon them: "these colours," said Mr. F., "are produced by the precipitation of very thin films of metal upon the steel under the influence of the voltaic pile, and form part of the general series of colours exhibited by the same plates, and described by Newton." Signor Nobili has, it appears, the power of giving a great variety of tints to these designs, thereby rendering them

highly ornamental. Mr. Faraday explained the general principles of the process from the lecture-table.

Besides Signor Nobili's plates, there were exhibited various models of Hindu manufacturing implements, lent by the Asiatic Society, and also some finely illuminated Hindu mythological drawings. An improved reflecting telescope by Mr. Cuthbert was also on the table: it is only half the usual length of a reflecting telescope of equal power, and possesses great steadiness and portability: the stand is so constructed that the telescope can be instantly moved in any required direction, independently of the screws: thus affording a great saving of time and trouble in the making of observations on celestial bodies.

There was a good attendance of members and visitors during the evening: amongst the latter we noticed the Countess of Glengall and one of the Ladies Seymour: several noble lords were also present during the delivery of Mr. Burnet's lecture.

LINNÆAN SOCIETY: 45TH SESSION.

Nov. 4.—A paper was read, entitled, a "Description of a new species of the genus *Phalangista*, from New Holland," by Thomas Bell, esq. F.R.S. and L.S.

Dec. 2.—An account of a new species of Pheasant, by Mr. Benjamin Leadbeater, F.L.S. Two living specimens of this splendid bird, which is originally from the mountains of Cochin China, were presented by the King of Ava to Sir Archibald Campbell, and by him to the Countess Amherst. Her ladyship succeeded in bringing them both alive to England; but they unfortunately died soon after their arrival.

Nov. 18.—On the nature and origin of the ligulate rays in *Zinnia*, and on a remarkable multiplication observed in the parts of fructification of that genus, by Mr. David Don, Lib. L.S. Notices of several land and freshwater Shells, new to Great Britain, with occasional observations; in a letter addressed to Lewis Warton Dillwyn, esq. F.R.S. and L.S., by J. G. Jeffreys, esq.

Dec. 16.—Observations on some species of the genera *Tetrao* (grouse) and *Ortyx*, natives of North America; with descriptions of four new species of the former, and two of the latter genus, by Mr. David Douglas, F.L.S. Specimens of these birds were exhibited to the meeting, and some of the grouse were of great beauty, especially one, named *Tetrao urophasianus*, about the size of the wood-grouse (*Tetrao urogallus*), which it may be considered to represent in the new continent.

Jan. 20.—Descriptions of new genera and species of the class *Compositæ*, belonging to the Floras of Peru, Mexico, and Chile, by Mr. David Don, Lib. L.S.

Feb. 3.—Some observations on the common Bat of Pennant; with an attempt to prove its identity with the *Pipistrelle* of French authors, by the Rev. Leonard Jenyns, M.A. F.L.S.

At this meeting, Mons. Bonpland, the celebrated companion of Humboldt in his travels in South America; Mons. Brisseau Mirbel, of the French Academy; Professor Meckel, of Halle; Professor Say, of Philadelphia; and Dr. Wahlenberg, of Upsal, were proposed as foreign members of the Society.

SOCIETY OF ARTS.

Wednesday Evening.

WILLIAM TOOKE, esq., vice-president, in the chair. The large silver medal was awarded, by ballot, to Mr. Carey, for his mode of pre-

venting rot in ships' timbers, by means of charcoal and a solution of salt.

The Secretary read the minutes of a former meeting, relative to the discontinuing of the practice of distributing the Society's annual prizes, at the King's Theatre. Martin Stapleton, esq. moved that the re-consideration of the question be postponed to an extraordinary general meeting of the members. After a very protracted discussion, in which the expediency of returning to the Society's house with the annual distribution, and of discontinuing the King's Theatre, was tolerably evident, Mr. Stapleton's motion was put, and negatived by a considerable majority. The minutes stand for confirmation at next meeting.

NATIONAL REPOSITORY.

ALL specimens sent to the National Repository for the ensuing exhibition (which it is intended to open this month), are to remain under the control of the Board of Management until the close of the exhibition, when, unless sold for their benefit, they will be re-delivered to the owners.

The models and specimens intrusted to the Repository are carefully preserved; but the board of management is not responsible for any damage that may arise by accident: and artisans and manufacturers who may be desirous of bringing productions of their skill and industry before the public at the exhibition, are invited to send their names and addresses, and the prices of the various articles to the Secretary.

The gallery is now open daily for the reception of novelties, and no charges are made for the benefit of exhibition.

INSTITUTION OF CIVIL ENGINEERS.

At the annual general meeting of this Institution, held on the 20th Jan., a most gratifying report was laid before the members by the council, to whom the interests of the Society are committed, and who are annually elected from the class of ordinary members. In this report, besides a favourable financial statement, the institution is congratulated on the accession of twenty-three new members during the last year. In the present year, eight new members have been proposed.

The evening conversations commenced on the 27th ultimo. The first of these meetings was honoured by the presence of an active honorary member, the President of the Royal Society. The questions discussed, were, on "the best method of preserving iron from rust," and on "the best method of improving turnpike roads." Among the valuable remarks induced by the first question, the President of the Institution minutely described the process adopted for the preservation of the iron-work used in the Menai bridge.

On the latter question, Mr. Nimbo, whose experience is acknowledged in that particular branch of engineering, entered into an accurate detail of his method of forming roads over bogs: he gave sections, dimensions, and even the technical terms used for every part of such works, as executed by him in Ireland. The fruits of many years' experience, enhanced in value by the judicious comments of the better informed members, are thus offered in the form of conversation, with a liberality which is a pleasant, and perhaps a novel, feature of this Institution.

LA PEROUSE.

We could hardly have imagined, after the conclusive account given in our *Gazette* of the 12th of April last, together with an engraving of the

arms* of Colignon, the naturalist, who accompanied La Pérouse, which, on comparison with the arms belonging to that name in works of French heraldry, proved that the articles found at Manicolo, must have belonged to the expedition whose catastrophe had been so long a subject of mystery—we could hardly have imagined, we say, that after these circumstances were published, any doubt could remain on the question, or any later claim be set up to the merit of having solved it. It appears, however, that though Captain Peter Dillon, in 1826, obtained such intelligence as to induce him, under the auspices of the East India Company, to return in September, 1827, to Manicolo (or Vanicolo), and there ascertain the facts we have stated, obtaining five brass guns, a mortar, ships' knees, a frigate's rudder, &c., bells, plate, (including the candlestick alluded to,) and other articles of French manufacture, and stamped with *feurs-de-lis*,—it is now alleged that Captain d'Urville, of the *Astrolabe*, assisted by the inhabitants of Tucopia, who had previously accompanied Captain Dillon, made this discovery in March 1828, i. e. at the very time we were publishing throughout Europe those particulars which entirely set the matter to rest. We cannot but consider this attempt as very unfair towards Captain Dillon and towards our Indian government, which so liberally promoted the inquiry, whether carried on by French or English navigators. *Palma qui meruit ferat*, is a just motto, and we trust it will be immediately awarded in this instance by the Savans, and Literary and Scientific Institutions, as well as by the King of France, to whom, we understand, Captain Dillon has proceeded with the relics which he procured at Manicolo. We beg to refer them to our Journal of the date above quoted; and we have no doubt but our countryman will receive the honour and the reward so justly due to his enterprise.

LITERARY AND LEARNED.

OXFORD, Jan. 31.—On Wednesday last the following degrees were conferred:—

Masters of Arts.—Rev. W. Palmer, Magdalen Hall; F. H. Gresswell, Fellow of Brasenose College; Rev. H. Freeman, Wadham College; R. C. Dallas, Oriel College.
Bachelors of Arts.—C. W. Fuller, Christ Church; C. M. Newbold, G. D. Grundy, Brasenose College.

ROYAL SOCIETY.

NOVEMBER 27th.—A paper was read, entitled, "A Description of a Microscopic Doublet," by D. H. Wollaston, M.D., V.P.R.S.

The author, considering that in all microscopes distinct vision is impeded instead of being assisted by whatever light may be thrown upon the object beyond what is fully commanded by the object-glass, obviates this evil by collecting the admitted light to a focus in the same as the object to be examined. For this purpose he employs a plane mirror to direct the light, and a plane convex lens to collect it; the plane side of the lens being towards the object to be illuminated. Availing himself of the property possessed by that form of eye-piece for astronomical telescopes called the Huygenian, of correcting both chromatic and spherical aberration, the author conceived that, by applying to a microscope the same combination reversed, he might obtain similar advantages. The construction he employed resembles two thimbles fitted one within the other by screwing, and with a perforation at the extremity of each. In these perforations are fixed two suitable plano-convex lenses, which may thus have their axes easily brought into the same

line by means of their plane surfaces, while their distance from each other may be adjusted by screwing, so as to produce the best effect of which they are capable. The best relative proportion of the foci of the two lenses appears, from the trials made by the author, to be that of three to one. The distances between their plane surfaces should in general be about 1.4 of the shorter focus, but should be varied by trial till the utmost possible degree of distinctness has been attained. The lenses must be fixed in their cells with their plane sides next to the object to be viewed. The exterior cell of the compound magnifier should be formed with a flanch, so that it may rest upon the piece that receives it. The plane convex lens by which the object is illuminated is enclosed in a tube about six inches long, blackened in the inside, and having a circular perforation below of about three-tenths of an inch in diameter for limiting the light reflected from the plane mirror. The centre of this aperture must be in the common axis of the lenses; and the image of the perforation formed by the large lens must be brought, by proper adjustment of the distance of that lens, into the same plane as the object to be examined. With a microscope so constructed, the author has seen the finest striae and serratures upon the scales of the lepidians and podura, and the scales upon a gnat's wing, with a degree of delicate perspicuity not attainable with any other microscope he has tried. In consequence of the plane surfaces of the lens being next to the object viewed, the microscope of Dr. Wollaston possesses the important advantage of having its action undisturbed by the contact of a fluid under examination.

January 29th.—A paper was read on a definite arrangement and order of the appearance and progress of the Aurora Borealis, and in its height above the surface of the earth; by the Rev. James Farquharson, minister of the parish of Alford, in Aberdeenshire. Communicated by the president.

The results of the numerous observations of the author on the Aurora Borealis, which on several occasions were made under very favourable circumstances, had already been announced in a short paper published in 1823 in the Edinburgh Philosophical Journal; and it was concluded from them that the Aurora Borealis has in all cases a determinate arrangement and figure, and follows an invariable order in its appearance and progress; that the pencils of rays or streamers, as they are called, generally make their first appearance in the north, and as they rise from the horizon assume the form of an arch, extending from east to west, and having its vertex in the plane of the magnetic meridian; the arch itself being at right angles to the plane. While the arch is near the horizon, its breadth from north to south is considerable, and the streamers of which it is composed appear to be nearly at right angles to the general line of the arch, their directions converging to a point a few degrees to the south of the zenith. As the arch moves forward towards the south, its lateral dimensions appear to contract, the intensity of its light increases, and the direction of the streamers, still tending to the same point in the heavens, approaches more nearly to parallelism with that of the arch. When it has passed the zenith, and arrived at the above-mentioned point, a little to the south of the zenith, the arch is seen as a narrow belt, three or four degrees only in breadth, and with well-defined edges. In its further progress southwards it again enlarges in breadth, and exhibits in a reverse

order the same succession of changes as before. Hence the author concludes that the streamers have individually a position nearly vertical or parallel to the magnetic dip; and they form a thin fringe, stretching often to a great distance from east to west, at right angles to the magnetic meridian, and that the movement of the fringe from north to south takes place by the extinction of streamers at its northern side, and the formation of new ones contiguous to its southern side.

From a variety of observations which were detailed in this paper, the author infers, in opposition to the opinion of Mr. Dalton, that the region occupied by this meteor is above, but contiguous to, that of the clouds, or at least to that in which aqueous vapour is condensed, so as afterwards to appear in the form of clouds. The height of this region he estimates as in general about two thousand feet above the surface; and he is of opinion, that while such is the height of the lower ends of the vertical streamers, their upper ends may have an elevation of two or three thousand feet more.

February 5th.—The president in the chair. A paper by Dr. Wollaston, on a Differential Barometer, was read. A model of this curious instrument, constructed by the doctor himself, was exhibited. This barometer is designed for the purpose of ascertaining the different pressure of the atmosphere in various situations on the earth's surface.

Mr. Walker's third nautical paper, on the Stability of Compound Vessels, was also read.

ORIENTAL TRANSLATION FUND.

We understand that the progress of this Fund is beyond all hopes. The committee have several volumes nearly ready to place in the hands of the subscribers, and are about to put very many others to the press. They are likely to draw within their focus all the Oriental works in Europe; and if properly supported, they promise to be one of the most powerful literary bodies hitherto established in any age or country. Their publications also possess another quality calculated to make them exceedingly valuable, from their title-pages being beautifully illuminated, and bearing the name of the subscriber highly emblazoned; thus rendering each work a distinguished heirloom, which may be preserved in every great family of the kingdom.

THE GRECIAN DILEMMA.

To the Editor, &c.

SIR,—In the Morning Chronicle of the 18th ult. appeared an article containing a celebrated question, to which I now propose to give an answer, and which article I here quote.

"The Dilemma retorted; or, the Master outwitted by his Scholar.—It appears that the ancient lawyers were not less versed in the subtleties of logic than their successors, the gentlemen of the long robe at present. We have been favoured with the following instance of special pleading in the courts of Athens:—Euathlus promised Protagoras a reward when he had taught him the art of pleading; and it was to be paid him the first day that he gained any cause in the court. After a considerable time, Protagoras goes to law with Euathlus for the reward, and uses this dilemma:—'Either the cause will go on my side or on yours: if the cause goes on my side, you must pay me according to the sentence of the judge; if the cause goes on your side, you must pay me according to your bargain; therefore, whether the cause goes for me or against me, you must pay me the reward.' But Euathlus retorted this dilemma thus:—'Either I shall gain the cause or lose it: if I gain the cause, nothing will be due to you according to the sentence of the judge; if I lose the cause, nothing will be due to you according to my bargain; therefore, whether I gain or lose the cause, I will not pay you; for nothing will be due to you.'"

Reid, in his examination of Aristotle's Logic, gives a full account of this dilemma; and from him I extract what follows. "Euathlus bound himself to pay Protagoras as soon as he should plead a cause before the judges and gain it. But Euathlus, having been taught to plead, shewed no desire to exercise the art, and consequently none to pay Protagoras. The latter seeing this, goes to law, and speaks thus: 'O most foolish

* These arms appeared on a plated candlestick, discovered, together with arms, pieces of money, &c. in the possession of the natives.

ring man! do you not see that in any event I must gain my point? If the judges give sentence for me, you must pay by their sentence; if against me, the condition of our bargain is fulfilled, and you have no plea left for your delay, after having pleaded and gained a cause." But Eschinger, retorts thus: "O most wise master! do you not see that whatever sentence the judges pass, I am safe? If they give sentence for me, I am acquitted by their sentence; if against me, the condition of our bargain is not fulfilled, by my pleading a cause, and losing it."

According to Reid, the judges were so perplexed by this dilemma, that they declined giving sentence. Reid himself does not attempt to solve it. Laharpe, in his *Cours de Littérature*, does attempt, but fails—for he exists the knot instead of untying it. Nor am I aware that a solution has been given by any other author.

In deciding, the judges necessarily either annul or respect the bargain made by P. and E. If they annul it, they avoid the dilemma; for the dilemma cannot exist if the bargain is annulled. If they respect it, they encounter the dilemma; for the dilemma exists of necessity if the bargain is respected.

I. Suppose the judges to annul the bargain. The case is now clear and simple, and divested of all logical intricacy—as the dilemma does not exist. If they decide for P., E. must pay; as he has no ground left by which to avoid paying, the bargain being annulled. If they decide for E., P. cannot come to him for payment; as he cannot now urge the terms of the bargain, that being annulled.

II. Suppose the judges to respect the bargain. The case is now difficult and perplexing, and involved in logical intricacy—so the dilemma does exist. Let us, for convenience, divide the case into two parts:

1. If the judges decide for P., E. cannot be compelled to pay; as he avoids paying by the terms of the bargain, that being respected. But how, it may be asked, can the bargain protect him against the decision of the judges? In this way: he brings a second action to compel P. to fulfil the bargain; and in this he gains the cause, the judges deciding that P. shall fulfil the bargain. But do not the two decisions, it may be asked, involve a contradiction in terms? Do they not say and unsay the same thing? By no means. In the first trial the point at issue is—shall P. receive a sum of money? &c. &c. shall he receive money absolutely, unconditionally, independently on the bargain? In the second trial the point at issue is—shall P. fulfil the bargain? &c. &c. shall he receive money relatively, conditionally, dependently on the bargain? The first trial is not founded on the bargain, and has no reference to it; the second trial has reference to the bargain, and is founded on it. The judges therefore may, consistently with logic, decide for P. in the first trial, and against him in the second; the trials turning on different points.

2. If the judges decide for E., P. can compel him to pay; as he cannot now urge the terms of the bargain, that being respected. But how, it may be asked, can the bargain protect him against the decision of the judges? In this way: he brings a second action to compel E. to fulfil the bargain; and in this he gains the cause, the judges deciding that E. shall fulfil the bargain. But do not the two decisions, it may be asked, involve a contradiction in terms? Do they not say and unsay the same thing? By no means. In the first trial the point at issue is—shall E. pay a sum of money? &c. &c. shall he pay money absolutely, unconditionally, independently on the bargain? In the second trial the point at issue is—shall E. fulfil the bargain? &c. &c. shall he pay money relatively, conditionally, dependently on the bargain? The first trial is not founded on the bargain, and has no reference to it; the second trial has reference to the bargain, and is founded on it. The judges therefore may, consistently with logic, decide for E. in the first trial, and against him in the second; the trials turning on different points.

The dilemma has no concern with the query, Which is he fault, P. or E.? The answer to this query must be found in the ordinary way, being determined by the nature of the case. Suppose it to be known which is the guilty person, then, and not till then, can the dilemma come into operation. The tendency of the dilemma is to prevent punishment from falling on the guilty, by opposing the decision to the bargain and the bargain to the decision, and thus making them neutralise each other. In short, the dilemma tends to save the guilty from being punished, not from being known.

1. Suppose the judges to be satisfied that P. meant to defraud. If they annul the bargain, i. e. if they avoid the dilemma, they should decide against him: if they respect the bargain, i. e. if they encounter the dilemma, they should decide for him, to enable E. to come upon him by means of the bargain.

2. Suppose the judges to be satisfied that E. meant to defraud. If they annul the bargain, i. e. if they avoid the dilemma, they should decide against him: if they respect the bargain, i. e. if they encounter the dilemma, they should decide for him, to enable P. to come upon him by means of the bargain. And as, according to the story, E. was the person who meant to defraud, the judges should have acted on the second plan.

Having thus given my solution of this dilemma, I shall feel obliged by your inserting it in your popular periodical—I am, Sir, &c. JOHN ROGERS.
13, New Road, Finsbury, Jan. 9, 1829.

FINE ARTS.

BRITISH GALLERY.

In our last we paid a just tribute of praise to the interesting Exhibition which has been

opened to the public at the Gallery of the British Institution. In one point of view, however, the number of clever works which that Exhibition contains is a subject of painful contemplation; and that feeling is increased upon reading the following advertisement, which the directors of the Institution (evidently with the kindest intentions) have prefixed to their Catalogue, and by which it appears that they have been compelled to reject, for want of room, not only performances of an inferior character, but even pictures "of considerable merit."

"Many more pictures having been sent to the British Institution this year for exhibition than usual, the directors have been obliged to return several works of considerable merit, lamenting that the limited space of their gallery precluded the possibility of admitting them."

This superabundance of production must lead to the most melancholy results. What Canova said of the young sculptors of Italy in his day, is but too applicable to the young artists of England at the present moment:—"Now that Italy and all Europe are full to repletion of works of art, what can all these young students expect?" In many, we fear in most, cases, only a life of severe struggle and bitter disappointment. It is with reluctance that we thus express ourselves; but we feel the force and honesty of Mr. Fuseli's sentiment in one of his lectures—"it is better to deter than to delude."

We proceed, in fulfilment of our promise, to particularise some of the most prominent and beautiful of the works which compose the Exhibition.

No. 62. *Battle of St. Vincent*. G. Jones, R.A. No. 156. *His late Majesty presenting a Sword to Earl Howe*. H. P. Briggs, A.R.A.—These two pictures, which were painted for the British Institution, for the purpose of being presented to Greenwich Hospital, may not inaptly be considered as representing cause and effect, service and reward. If, in some respects, they are not exactly what could be wished, allowance must be made for the difficulties under which an artist labours to whom subjects of such a nature are prescribed.

No. 474. *Satan*. J. Partridge.—A single figure, exhibiting great simplicity of composition and vigour of character: it is also finely coloured.

No. 109. *Mary Magdalen*. T. Barker.—In the purely historical style of Domenichino.

No. 276. *A View of part of Cyrene*. H. Beechey.—Exceedingly sublime, and reminding us strongly of some of the finest pictures of the two Poussins.

These works struck us as among the foremost of the high and classical character in art. We now turn to more familiar subjects.

No. 166. *The Disconsolate*. G. S. Newton.—An artist who has given abundant proof that he can paint the face, and paint it well, may hide it without dishonour; and indeed may, as in the present instance, excite a more intense feeling by the concealment. There is exquisite pathos in this fascinating little picture; and nothing can exceed the grace and beauty of the composition, or the richness and harmony of the colouring.

No. 52. *A Turk*. R. P. Bonington.—An additional reason for lamenting the premature fate of this highly-gifted young artist.

No. 57. *The Hall of Cedric; Ivanhoe*. Jos. West.—On first looking at this beautiful little work, we thought that there had been some mistake, and that it was a sketch by one of the old masters, probably Paul Veronese, which had been left on the wall from the last Exhibi-

tion. We do not recollect having before seen the name of the able artist; but we offer him the tribute of our hearty and sincere commendation.

No. 32. *Italian Boy and Monkey*. A. Morton.—Mr. Morton has here reached the climax of excellence in this class of painting subjects, and may challenge competition with any of the productions of Flemish art. It is impossible to look at the arch countenance of the young vagabond (whose face is familiar to us) without cheerful feelings.

No. 55. *The Young Artist*. Mrs. W. Carpenter.—One of the happiest efforts of Mrs. Carpenter's happy pencil. The expression of the principal figure (a girl at that delightful age immediately preceding the pollution and distortion which the passions too frequently occasion) is full of taste, sweetness, and delicacy; and the whole picture is chastely and beautifully coloured.

No. 3. *The Prisoner*. No. 4. *A Foraging Party routed*. No. 156. *The Modern Diogenes*. T. Webster.—We suspect that Mr. Webster must himself have been a very naughty boy; he seems so thoroughly conversant with all the mischievous tricks of naughty boys, and with all the discipline which those tricks draw down on their perpetrators. If so, however, it only shows that a very naughty boy may make a very good painter; perhaps, there is more in the hypothesis than appears at first sight,—the naughty boy, the better the painter!

No. 150. *Auld Robin Gray*. T. Knight.—Why place so clever a picture as this so truth below the eye? Often as the subject has been treated, it has never been handled with more skill. The reluctance of the yottig lassie, the assiduity of the old lover, and the anxiety of the parents, are all highly expressive. The style of execution is perfect;—forming the happy medium between too hard and too loose, too broad and too minute, too careful and too slowly.

No. 50. *Love at Naples*. T. Uwins.—Love any where is a very agreeable kind of pastime; but at Naples it seems to be absolutely luxurious. We are rejoiced to find Mr. Uwins profiting so much from his studies in Italy. This is a beautiful composition, richly and powerfully executed.

No. 54. *The Bandit's Home*. T. V. Barber.—A picture which, although hung at an elevation most injurious to its effect, appears to us to be possessed of great merit.

No. 116. *Jan Steen's Proposal*. J. N. Wright.—This is a very pleasing and satisfactory example of the facility with which our artists can imitate the Flemish school.

No. 78. *The Hookah-bearer*. H. W. Pickersgill, R.A.—All that could be done with such a subject has been accomplished by Mr. Pickersgill. The character is very fine, and the colouring powerful and harmonious.

No. 51. *Cottage Children going to Bed*. Sir W. Beechey, R.A.—A rich and playful recreation of Sir William's masterly pencil.

No. 53. *Italian Boy and Organ*. F. Simonau.—Powerfully deceptive.

No. 178. *Sketch from Nature*. F. R. Lee.—Too modest a title. It is a study from nature, and a beautiful study too.

No. 21. *Autumn; Beech-trees, with Cattle*. F. R. Lee.—A charming composition; full of truth and picturesque quality.

No. 95. *Head of an Old Lady*. J. Boaden.—A masterly portrait.

(To be continued.)

NEW PUBLICATIONS.

Portrait of the Marchioness of Wellesley.

WE lately noticed one of a very fine series of portraits engraved for La Belle Assemblée, with great praise; and have now equal pleasure in bestowing a still higher meed on the fiftieth of the class; viz. that of the Marchioness of Wellesley, painted by Robertson, and engraved by Dean. There is considerable interest attached to this noble lady, for many reasons; and we fancy this representation of her beauty will tend, in no small degree, to increase that feeling. As a production of art, it is a perfect gem,—firm yet soft, graceful, clear, and spirited.

Portrait of Louis Eustache Ude, Author of the French Cook. Drawn by D. M'Clise. Engraved by Deane. J. Ebers and Co.

AT length the interesting, intellectual, and immortal countenance of the illustrious Louis Eustache Ude has received due portraiture; and his many admirers—ourselves among the number—can now possess an excellent likeness of his culinary majesty. The costume is admirably characteristic of the man. He reposes on the luxurious and tasselled pillow of his easy chair, in fur-collared coat *brodée*; rings—cameo and diamond—glitter on his hands, which rest upon the baton of office; the muslin frill—the brooch—all proclaim the ton supreme which pervades the *tout ensemble* of the Ude. Who would not be a cook? we are tempted to exclaim: but no—every cook is not a Ude! Ude is by no means, as Mr. Crofton Croker very justly observes, the black-muzzled person represented in a former lithographic portrait.* His face is light, lustrous, and laughing—"a fellow of infinite jest,"—as merry as Mathews in the *May Queen*, and withal *rempli du talent*; redolent of quickness, sagacity, and penetration. Well as Mr. D. M'Clise has executed this portrait, we are again tempted to exclaim—every cook is not a Ude—why has not Sir Thomas Lawrence painted, and Finden engraved, the first of living cooks?—But this we hope yet to see: in the mean while, the present excellent portrait is not unworthy of being hung over the fire-place of every dining-room where a good table is kept.

Lodge's Portraits of Illustrious Personages.

Harding and Lepard.

THE second monthly No. of this work has appeared at the prescribed time, and fully justifies the confidence reposed in the conductors of the undertaking. It is stated in a prefix, that more than two thousand subscribers have given their names towards its reward; and that in consequence the engravers have been obliged to finish a fourth set of plates. This is as it should be—merit in a production of national value and gratifying public patronage. We have no doubt but that several editions after this fourth will be called for, and that we shall witness the curious circumstance of seeing a good many more than four sets of plates in progress at the same time for the same publication.

ORIGINAL POETRY.

TO A LADY,

Who persisted in her intention of writing Receipts in a Book better calculated for Poetry.

By the Author of the "Sorrows of Rosalie."

AND wilt thou, lady, on so fair a page,
Write dirty butchers' bills and dull receipts?
Wilt thou those delicate Bath sheets engage
With the account of weekly loaves and meats?

* See the second volume of "Legends of the Lakes of Killarney," by Mr. Croker.

Lady, forbear! while yet 'tis time, forbear!

If thou hast written but a single bill,
Oh! quickly from the book the venom tear,
And leave its pages unpolluted still!

But no! thou art determined. Thus we find
(Materials the richest and the best)

Some young, warm heart—some gentle, guileless mind—

Spoilt by cold, calculating interest.

Deep in the core, those sordid thoughts become
More dark and black on each succeeding day;

And, like *your ink*, where once they find a
No after years can wash the stain away!

MODEST ASSURANCE.

"Ah! could we only feel but sure!"—Anon.

I SHOULD not mind pulling the nose
Of the biggest O'Rooke on the Shannon;
Or taking my noon-day repose
Inside of a jubilee cannon.

Not the tithe of a pin should I care
To have a turn-out with old Boney;
Nor to go, just to change this damp air,
For the summer, to Sierra Leone.

I should not much mind being made
A part of a South Afric mission;
Nay, I should not be greatly afraid
To encounter—a learned physician.

Were I stopp'd by a night-prowling prig,
I would not e'en bawl for assistance—
The fact is, I don't care a fig
For the whole of my present existence!

For if this poor life should get lost,
Which I got from my father and mother,
The Insurance-office is forced
To provide me at once with another!

Ah! I wish I could only insure
My houses, hopes, children, and wife,
And be sure that they all would endure
As long as this lachrymose life!

My expectancies—(that's a good sum!)
For I give all my fancies full scope—
And my legacies—"yet for to come"—
Should all be insured at the "Hope."

My head goes of course to the "Crown"—
(My head! they can't give me a worse
one!);

The "Protector," and all in the town,
Must protect all the rest of my person.

At the "Phoenix" I'd mind and have "done"
My dear interesting young flock;
But my Billy should go to the "Sun"—
His cradle, of course, to the "Rock."

All my *signal* services, too,
Should soon be insured at the "Beacon";
—But why do I idly pursue

A subject so worthless to speak on!

Why, why, do I value all these,
And fear so devoutly to lose 'em?
When I can't know a moment of ease
By insuring the heart in my bosom!

For every fire-office confess'd,
Though engines and floods it supplies,
It could not insure my poor breast
From the widow M'Gill's merry eyes!

South Britain,
Jan. 20th, 1823.

SIMKINS SIMKINS.

MUSIC.

THE MELODISTS' CLUB.

ON Thursday in last week, as mentioned in our preceding No., the first meeting of this Club for the season took place at Freemasons' Tavern, when above forty sat down to dinner, after hearing a very brief, but very beautiful, grace chanted, for the first time, by

Mr. Braham, Mr. Leete, Mr. Cooke, Mr. Parry, Mr. Watson, Mr. Clifton, and other eminent professional gentlemen. At the conclusion of the meal, "Non Nobis" was also finely given by the same admired-singers; and in the course of the evening the following were the musical entertainments. By Mr. Braham, Planche's stirring air of "The King, God bless him!" sung in a style that defies description, and enthusiastically encored; Mr. Code's charming glee for the Dublin Beef-steak Club, set by Sir J. Stevenson; a sweet song by Mr. Bianchi Taylor; a glee, Horsley's *chef-d'œuvre*, led by Mr. Watson, and delightfully performed; an instrumental piece on the piano-forte, from Rossini's opera of the *Siege of Corinth*, by Mr. Schutz, in which this young artist, yet under 17 years of age, displayed the most masterly skill, taste, and execution; a noble sea-song by Braham, as altered from Carter by T. Cooke; the Widow Mahony, a humorous Irish ditty, by Mr. Blewitt, sung with much comic effect and the genuine brogue; a song by Mr. Gould, an amateur; a chant in the minor key, given in consequence of the memory of Mr. Shield being proposed as a toast; two glees, the last a charming composition of T. Cooke's; a mock Italian song by the same clever and versatile musician himself, with the most laughable accompaniments on the piano and violin; the Death of Nelson, superbly sung by Braham, who never was in higher voice; a duet of great merit by Messrs. Bedford and Stansbury; beside other varied and pleasing contributions to the social and harmonious enjoyments of the occasion. It need scarcely be added, that the company were delighted with a treat, such as can rarely be procured in the musical world—so much talent being congregated, and every individual being emulous to afford the utmost pleasure in their power to the applauding auditors around them.

The grand object of this association being to cultivate National Melody,—that simple ballad style, which is so deservedly beloved by all—whether the perception has been improved by cultivation, or the ear is left to its natural sense—it is unnecessary for us to say much on the less important matter, the toasts and speeches of the day. The latter had the merit of great brevity, so that the harmony was little interrupted; and the principal matters stated were, that H. R. H. the Duke of Sussex had condescendingly agreed to become patron of the Club, and to dine with it several times during the season; that Lords Blessington, Bristol, Saltown, and other noblemen and gentlemen of high rank, had consented to be vice-presidents; that the musical direction at the dinners was confided to the abilities of Mr. T. Cooke; that nine new members were elected and admitted on the occasion; and that numerous applications for admission were upon the books. Altogether, the prospects of the Club seemed to be of the fairest order; and we have little doubt that, besides being a resort of no common enjoyment to the lovers of music, it will speedily operate very favourably in promoting the cultivation of English melody,—a branch hitherto far too much neglected, or almost left to chance and accident.

LES TROIS TROUBADOURS.

ON Monday last, and during the week, there has been a change in the performances of these agreeable musicians, whose entertainment is calculated to pass away an hour very pleasantly. The leader of the little band is obviously an accomplished composer, and plays upon many (it is said ten) instruments in a superior style.

He varied the guitar music and the singing by pieces on the violin and violoncello, in which such execution was shown; but the chief treat is in the *chansons à la Troubadour*, which are given with great sweetness, elegance, and finish, by the principal singer. Of these, Bayard, Encore un Mot, and le Mot d'Amour, are much and deservedly applauded.

DRAMA.

KING'S THEATRE.

THE King's Theatre opened on Saturday night last, and, contrary to general expectation, without a serious disturbance. A few persons in the gallery commenced hissing the moment the overture began; but their sibilations were soon drowned in the applause that rose from the other parts of the house,—and the performance passed off with great spirit and universal approbation. The fact is, that the pit-ites were most pleasantly disappointed by finding that their accommodation had been attended to in a very great degree, and that the introduction of a few stalls more than last season was amply compensated for by the unquestionable improvements in the other part of the pit, which is now the best in England. With regard to the squabble between M. Laporte and the musicians, we regret, in common with all who love good music, the absence of such men as Dragonetti, Lindley, &c.; but if their multifarious engagements prevent them from properly attending to the rehearsals, and interfere so much as has been represented with the general business of the theatre, we cannot be surprised that M. Laporte, who has been wound up (we think most illiberally) to an excessive rent, should endeavour to secure an independent orchestra, and diminish in some degree the many anxieties of his responsible situation. The slight want of *ensemble* which was now and then perceivable, on Saturday evening, will, we have no doubt, speedily disappear; and, much as we admire talents, we cannot say we are sorry when great men, or ladies either,* are taught the wholesome lesson that they may be spared, and the scene not absolutely stand still in consequence. M. Laporte has unfortunately connected himself with a person exceedingly obnoxious to the musical world, and whose reputation as a man is not of such unsullied brightness as to dazzle the observer of his conduct as a director. "Tell me whose company you keep, and I'll tell you who you are," is an old proverb which we are sorry M. Laporte did not remember. As his sincere friend, we advise him to take the earliest opportunity of cutting the connexion, and we shall then have no doubt of his reaping the reward of his spirit, intelligence, and activity.

Of the new performers we are happy to be enabled to speak in terms of the most unqualified praise. Madame Pisoni is probably the most finished singer ever heard in this country, and an admirable actor to boot; though, really, as to limbs and face, rather extraordinary than shapely and beautiful.† Signora Monticelli, who bears a striking resemblance to Ronza de Begnis, possesses an agreeable voice, and is a good musician; and Donelli is the most spirited and effective of tenors:

* We take this opportunity of thanking Mr. Hawes for his spirited conduct respecting Miss Byfield. That young lady, as our readers are aware, stands high in our opinion. We consider her, after Miss Paton and Miss Stephens, the best singer on the stage, and we consequently regret that she should be silly enough to care where her name was placed in the bill. We trust she will benefit by this salutary warning, and earnestly recommend all managers to follow up the sensible example set them by Mr. Hawes.

† Of this lady, whatever success may attend her, and whatever conquests she may make, it can truly be sung—

"Oh, no! 'twas neither shape nor feature."

the first half dozen bars he sang, stamped him in the favour of the audience; and, with the exception of our own Braham, we have not for many years heard any trusical hero with such unmixed satisfaction. On Tuesday, one of the most republican things ever done at a King's Theatre, was perpetrated:—Curioni being afflicted with catarrh, the unhappy king (by no means, as it seems, a necessary character in the opera) was totally omitted. Scribe's admirable ballet, *La Somnambule*, followed the opera; and though the acting of Pauline as the heroine will not bear comparison with the performance of Monteu, the original and inimitable supporter of the part, it was highly creditable to her, and gratifying to the spectators, who evidently enjoyed the appearance of an entertainment so superior to the unmeaning diversissements which have been too long dignified by the name of ballets at this theatre. Mr. W. Grieve, of Covent Garden Theatre, has painted the scenery for *La Somnambule*: we need scarcely add, that here is another subject of congratulation. We have some hopes now of seeing the King's Theatre what an establishment patronised by the nobility of England ought to be—the first in the world.

COVENT GARDEN.

A COMIC piece in three acts, entitled *The Widow's Bewitched*, was produced here on Tuesday last, and went off with considerable applause. *La Quarantaine*, a one-act vaudeville, by Scribe and Mazères, has furnished Mr. Lunn with that part of his plot which relates to the loves and stratagems of Captain Frankly (Green), and the handsome young widow Delamore (Mrs. Chatterley); with which has been woven a Catherine-and-Petruchio sort of story, in which a certain Captain of the Blues (C. Kemble) woes, wins, and tames another widow (Miss Chester), in the character of his own brother. The dialogue of the piece is lively and natural; and, though we think there is hardly matter enough in it for three acts, we should imagine the pleasant acting of Kemble, Green, Power, Bartley, and Meadows, Miss Chester and Mrs. Chatterley, would, were it compressed into two, carry it merrily through the season.

The opera of *Yelva*, brought out on Thursday by Mr. Bishop, as dramatist, poet, and composer, was, we regret to say, an utter failure. There is some pretty music; but the whole piece is insufferably dull, and was deservedly condemned to oblivion.

Miss Smithson has made an engagement with the managers of Covent Garden: Sontag has re-appeared in Paris.

THEATRICAL ARCHITECTURE.—We were last week gratified with the sight of a remarkable set of drawings, designs, measurements, &c. of the Parisian Theatres, by M. Schlick, a Danish artist, brought to this country under high auspices, and certainly of singularly minute and finished execution. We can compare them to nothing so much as to the exquisite illustrations of ancient misals; though they are upon a considerable scale, and enter into every possible minutiae of the edifices, whether external or internal. The diligence in collecting the materials, and the labour in drawing and colouring these examples, must have been immense; and many useful hints, both as regards structure and embellishment, may be obtained from their examination. Several of our leading dramatic proprietors, and most celebrated scene-painters, as well as other individuals fond of the drama and the arts, enjoyed a

high treat in looking over these productions of M. Schlick, who, we have no doubt, will soon be better known by the British public,—for fame must attend his talents and exertions.

VARIETIES.

Académie des Sciences.—At a recent election of a corresponding member of the Academy, Mr. Barlow obtained the majority of votes.

Institute for the Blind in Copenhagen.—An institution for the blind was established at Copenhagen about seventeen years ago. In the first year the number admitted was only twelve, and the income was only 1,500 dollars banco. In 1828 there were 80 inmates, and the income in the year was 54,000 dollars banco.

Zoological Society.—Such of the animals in the gardens of the Society in the Regent's Park as were unable to endure the severity of our wintry weather, have been temporarily removed under cover to stables in Camden Town. We believe that the question between Mr. Maberley and the Society, respecting the site and height of the buildings belonging to the latter, is by no means decided, as has been stated in the newspapers.

A letter from Berlin states that the celebrated traveller, Baron Alexander de Humboldt, is making preparations for his journey to the Caucasus. The Emperor of Russia had sent him an invitation to visit the mountains of the Ural, at the expense of his government, and to communicate to the imperial cabinet his views upon the working of the mines in that country, and the amelioration of which it is susceptible. The baron accepted this invitation, and will, at the same time, proceed to the Caucasus, to study minutely every thing remarkable presented by that ancient and interesting country. He will be accompanied by several persons versed in geography and natural philosophy.

We see, from a report of his anniversary meeting in the Newcastle paper, that the Antiquarian Society of that place proceeds in its career with great energy and success; though among its recent losses it had to lament Bewick and Mr. Baron Selon, who died in Sweden while pursuing his diligent researches into the Runic antiquities.

A girl has been sleeping some few months near Cambridge, which has kept the Philosophical Society of that town wide awake all the while. The facts appear to be well authenticated; and there is no saying how long the wench may remain inanimate, and the Society active.

Croydon Palace.—In a recent Number we stated that this venerable relic of our ancestors had been sold by auction, for the purpose of demolition. We find that we were misinformed; and that though put up for sale, it was not disposed of, but is at present in the market—offering a fine opportunity to any public-spirited individual disposed to possess and preserve so universally admired a specimen of ancient architecture.

Botany.—Extensive experiments have been recently made by Dr. Goepppard, a German botanist, with hydrocyanic (prussic) acid in plants and seeds. On twenty-four plants of different kinds, submitted to the action of this poison, both in the fluid and vapour, the same destruction of life ensued as in the animal creation: the seeds so treated were entirely deprived of the power of germination. In the plants from which prussic acid is obtained in the greatest quantity, viz. the laurel, the bird cherry, and the dwarf almond, the same effect was produced as on the others.

Windsor.—A curious subterranean passage has been discovered on the north side of the terrace at Windsor Castle: it is cut through the solid rock for about sixty feet, and is, at the entrance (thirty feet below the surface of the earth), six feet high and five feet wide.

It appears, from a recent barometrical admeasurement by Cambessedes, the botanist, that the height of the Puy de Torrelas, in Majorca, is about 4,400 English feet above the level of the sea.

LITERARY NOVELTIES.

Military Memoirs of Four Brothers, natives of Staffordshire, engaged in the service of their Country, in the New World, Africa, and on the Continent of Europe, is announced by the Survivor.

The celebrated Barras, who acted so conspicuous a part in the French Revolution, died last week in Paris, at the age of 72. He has left Memoirs of his life and times, which, it is stated, are to be published.

A translation of Washington Irving's Life of Columbus, and also a translation of the works of Cooper the American novelist, have been published in Germany.

Lithographic engravings of Retzsch's well-known Outlines in illustration of Goethe's Faust, have recently been published at St. Petersburg, and several thousand copies were readily disposed of.

Prince Augustus of Ansbach has just added to his splendid collection the celebrated picture by Paul Petter, which was formerly one of the most distinguished ornaments of the gallery formed by Lucien Buonaparte.

A new novel from the pen of Mr. Galt, entitled, *My Landlady and her Lodgers*, is announced: the MS. is on its way from Canada.

The games at chess played between London and Edinburgh are about to be published.

The northern capital gives very little note of preparation in respect to other publications.

LIST OF NEW BOOKS.

Cooper (Sir A.) on the Breast, Part I. Imperial 4to. 11s. 6d. bds.—Clarke on the Teeth, 8vo. 5s. bds.—*Germany on the Dry Rot*, 8vo. 10s. 6d. bds.—*Encyclopædia Metropolitana* (Pure Sciences), Vol. 1. 4to. 2s. 2d. bds.—*Greek Extracts* used at the Edinburgh Academy, 12mo. 6s. 6d. bds.—*Huntingford's Testimonies*, 8vo. 10s. 6d. bds.—*Daffin on Deformity of the Spine in Females*, 8vo. 7s. 6d. bds.—*Feld's Practical Perspective*, royal 8vo. 18s. bds.

TO CORRESPONDENTS.

To The Literary Gazette.—Having again to notice unavoidable omissions and postponements in this Number, and being anxious that our Journal should continue to be a complete record and epitome of the Literature, Science, Arts, and Improvements of the time, we have arranged to present our subscribers, gratuitously, with an extra half-sheet, as occasion may require. We could only by this means be enabled to supply that important intelligence which is embraced in our new plan,—of giving all the proceedings of all the great public Institutions in London, the space occupied by reports of which must either have been taken from branches already too much cramped, or thus voluntarily offered at our expense to our friends and the public. We propose to begin next Saturday.

We have a hundred excuses to offer to a hundred correspondents: want of time to attend to so many as daily require answers from us,—indisposition,—sometimes vexation at being needlessly occupied,—the pressure of never-ending novelties in all the branches embraced by our Journal, will plead for us with the intelligent and friendly.

T. M.'s compositions do not suit us.
J. H.'s favour as early as possible. E. O. ditto.
A correspondent recommends an action at law to try the validity of *fagging* at public schools: we recommend the law as a remedy for nothing, whatever the evil may be. Mr. Reynnolds's work, and Mr. de Roquet's, shall not be postponed longer than we can help.

We thank Inquirer, but could not use his communications.

is very pretty, but we can say nothing decidedly to him.

ADVERTISEMENTS.

Connected with Literature and the Arts.

BRITISH INSTITUTION, FALL

MAIL.
The Gallery for the Exhibition and Sale of the Works of British Artists, including the Pictures of His late Majesty presenting the Sword to Earl Howe, on board the Queen Charlotte, after the Victory of the First of June, 1794; and Lord Nelson boarding the San Joseph, off Cape St. Vincent, presented by the British Institution to the Royal Hospital of Greenwich, is open daily, from Ten in the Morning until Five in the Evening.

Admission, 1s.—Catalogue, 1s.
WILLIAM BARNARD, Keeper.

VOCAL AND DRAMATIC INSTITUTION.

Established upon the Principles of the Foreign Conservatory, for the Scientific Vocal Education of a numerous Body of Pupils, combining Languages, Elocution, Action, Dancing, Fencing, Exercises, and all Dramatic Requisites; Theatrical Practice, &c. to qualify for the Orchestra and Theatre; with an exclusive Department for Talents in Dancing, Action, &c. to accomplish for the Ballet.

The Terms are a very moderate Admission Fee, and a small Quarterly Payment.

Professors—Vocal Department.—Singing (Italian), Signor Lanzani and Signor Crevello; ditto (English), Mr. Oratorini, Mr. H. Phillips, Mr. Hobbs, and Mr. Hawes. Elocution, Mr. Wright. Italian Language, Signor Zillani, and Signor Belfanti. Dancing and Dramatic Action, Mr. D'Egville. Fencing and Sword Exercises, Mr. George Roland. Organist and Pianist, Mr. G. Gulchard.

The Ballet Department will be under the immediate direction of Mr. D'Egville, with Mr. Noble, and a Professor from the Royal Academy of Paris.

Full Particulars to be had at the Office of the Institution, No. 206, Regent Street, near Cavendish Square; and by Letter (post free), addressed to the Secretary; also at the principal Music Establishments and Libraries.

TO PARENTS AND GUARDIANS.

Wanted, a well-educated Youth, as an Apprentice to a Bookbinder. A Premium will be required.
Apply to Longman and Co. No. 39, Paternoster Row.

THE COLLECTORS AND PUBLIC are

very respectfully informed, that early in March will be SOLD BY AUCTION, by Mr. CHRISTIE, at his great Room, 5, King Street, St. James's Square, the entire and genuine Collection of highly valuable Engravings and Etchings, and original Drawings, by Italian and Dutch Masters, of CHRISTIAN JOST, Jac. deceased, long distinguished for his accurate Knowledge of Prints, and for his Judgment in collecting, for which he long Residence in his Native Country, and frequent Excursions into the Netherlands and Germany, afforded him singular opportunities. They comprise some fine and curious Specimens of M. Antonio, Italian Etchings, and Works of the elegant Modern School of B. Morbier; several interesting Engravings by Andrian Edelinck, and the great French Engravers; Rarities by M. Schoen, J. V. Mechen, the Hopfens, A. Durer, and Pentz; the Works of Rubens and Van Dyck, and (as Embroider's Etchings), Rembrandt's Works, 600 Prints, of the most brilliant Impressions, and in the finest state, including Variations of extreme rarity; the late Professor having made the Works of this Master the object of his particular study and research, with a view to collecting his finest productions and materials to illustrate the Biography of Rembrandt. An unrivalled Collection of the Works of Hollar, nearly 3000 in number, among which are the Portraits of Sir T. Chaulers, surpassing in brilliancy every Impression of this rare Print ever brought to sale in this Country; and all the rare Portraits, Foreign and English Topography, a Map of London (unique), and the rare fancy Pieces of this esteemed Engraver. Among the Dutch Etchings, are Oude's Concert, with the white Background; Bachuysen's large Sea-landscapes, under an Edifice, &c. &c. Also, Pleas Van Amerst's Works, with all the Variations, an unique Set; Rembrandt's Heads, Proofs and Duplicate Etchings; English and Foreign Portraits; Books of Prints and Picturesque Towns; the Musée Français, Morocco; Barthe's Works, 1. p. The Drawings, by Rembrandt, Berghem, A. and W. de Velde, F. Potter, (particularly a coloured Drawing procured from the Family of Potter), Both, Ostade, Blommestein, Jan Eggen, Vesscher, &c. &c. Also a grand Landscape, by Both, the Farewell Picture.

Catalogues are preparing.

This day is published, price 1s. only; India Proofs 2s., each No. containing Four Engravings, with Descriptive Letterpress, Nos. I. and II. of

VIEWS IN DUBLIN, forming Part of the

General Series of Fisher's Grand National Improvements, and Picturesque Illustrations of the British Empire in the Nineteenth Century.

Also, price 1s.; India Proofs 2s. No. I. of Views in Lancashire.

Of whom may be had, by the same Author,
An English Vocabulary, in which the Words are arranged indiscriminately; designed as a Sequel to the Scholar's Spelling Assistant. In 18mo. a new edition, 8s. bound.

THE EDINBURGH GAZETTEER; or, Geographical Dictionary, containing a Description of the various Countries, &c. of the World.

A new edition of an Abridgment of the above, in 1 vol. 8vo. is nearly ready.
As an Accompaniment to the above, may be had,
A New General Atlas, constructed by A. Arrowsmith, Hydrographer to the King, from the latest Authorities, comprehended in 54 Maps. Royal 4to. 11. 16s. half-bound, or coloured, 11. 4s.
Printed for Longman, Rees, Orme, Brown, and Green.

THE PRINCIPLES of CHRISTIAN PHILOSOPHY, containing the Doctrines, Duties, Admonitions, and Consolations of the Christian Religion.

By JOHN BURNES, M.D.
Regius Professor of Surgery in the University of Glasgow, &c.
London: Printed for Longman, Rees, Orme, Brown, and Green; sold by A. Black, Edinburgh; and all the Booksellers in Glasgow.
Of whom may be had, by the same Author,
The Principles of Midwifery. 7th edition, 8vo. 16s.

THE LAST AUTUMN at a FAVOURITE RESIDENCE; with other Poems.

By Mrs. LAWRENCE.
Printed for Longman, Rees, Orme, Brown, and Green, London; and G. and J. Robinson, Liverpool.

EXERCISES for WRITING GERMAN, according to the Rules of Grammar.

By GEORGE HENRY NOEHDEN, LL.D. Ph.D.
Printed for Longman, Rees, Orme, Brown, and Green; Bossey and Sons; J. Bohn; J. Bookler; Dulau and Co.; Simpkin and Marshall; Black, Young, and Young; Treutzel, Wirtz, and Co.; and J. Maynard.
Of whom may be had, by the same Author,
A Grammar of the German Language. 5th edition, 18mo. 10s. 6d. boards.

Rabenhorst's Pocket Dictionary of the German and English Languages, in Two Parts.

By G. H. NOEHDEN, LL.D. Ph.D. 2d edition, price 18s. bound.

SELECT PORTIONS of SACRED HISTORY, conveyed in Sense for Latin Verses. Intended chiefly for the Use of Schools.

By the Rev. FRANCIS HODGSON, M.A.
Author of a "Translation of Ovid," &c.
Printed for John Taylor, Bookseller and Publisher to the University of London; 30, Upper Gower Street, and sold by James Dunlop, 57, Paternoster Row; and J. A. Hickey, Fleet Street.

Todd's Johnson's Dictionary, Second Edition. Complete in 3 vols. 4to. with considerable Additions, price 7l. 7s. boards.

A DICTIONARY of the ENGLISH LANGUAGE, in which the Words are deduced from their Originals, and illustrated in their different Significations, by Examples from the best Writers; together with a History of the Language, and an English Grammar.

By SAMUEL JOHNSON, LL.D.
With numerous Corrections, and the Addition of several Thousand Words, as also with Additions to the History of the Language, and to the Grammar.
By the Rev. H. J. TODD, M.A. F.R.S. and M.R.S.L. Chaplain in Ordinary to His Majesty, and Rector of Buntingford, Cambridgeshire.
Printed for C. J., G., and F. Rivington; T. Egerton; E. Jeffery and Son; Longman, Rees, Orme, Brown, and Green; J. and W. T. Clarke; Bossey and Sons; T. Cadell; J. and A. Arch; W. Stewart; S. Bagster; J. Murray; J. Bookler; J. Richardson; J. M. Richardson; Hatchard and Son; R. Scholey; B. H. Evans; J. Bohn; Baldwin and Cradock; J. Bohn; Harding and Lepard; Hamilton, Adams, and Co.; Simpkin and Marshall; J. Duncan; G. B. Whittaker and Co.; Farbury, Allen, and Co.; T. Bumpus; H. Batsworth; G. and A. Green; J. Martin; E. Hodgson; T. and W. Boone; Trevellick, Wirtz, and Co.; J. Dowling; J. Bain; W. Pickering; Smith, Elder, and Co.; Wightman and Cramp, London; Wilson and Sons, York; J. Parker, Oxford; and Stirling and Kenney, Edinburgh.
Of whom may be had,
A Dictionary of the English Language, abridged from the above, by Alexander Chalmers, F.R.S. In 10s. 6d. boards.
Todd's Johnson's Dictionary of the English Language, Miscellaneous, with a copious Vocabulary of Greek, Latin, and Scriptural Proper Names, divided into Syllables, and accented for Pronunciation. By Thomas Rees, LL.D. F.R.S. In 18mo. Portrait, 3s. bound.

BOOKS IN THE PRESS.

In the press, and shortly will be published, a new and revised edition (completed to the present period) of
BURKE'S DICTIONARY of the PEER-AGE and BARONETAGE of the BRITISH EMPIRE. The extraordinary success of this work has imposed a duty upon the Editor, of which he trusts the forthcoming edition will prove that he has satisfactorily acquitted himself. Each respective article will be found corrected with the most minute attention, from the most authentic and authentic sources; and where the slightest obscurity appeared in the lineage of any particular house, the whole has been remodelled. The Editor's attention having been directed to collaterals, he has introduced all those who come within the most remote remembrance of family honours; and he has used more than ordinary care in tracing pedigree heirs.
To render the Heraldic Department more complete, the Armorial Bearings are described in the body of the work, independently of the Engravings.
To the Baronetages of Scotland and Ireland, appertaining to many near 800 ancient families, whose lineage is given exclusively in this work, the utmost attention has been paid; and the Editor begs to thank the friends of these houses for the polite assistance they have afforded him.
Printed for Henry Colburn, 9, New Burlington Street.

MY LAND LADY and HER LODGERS.

By the Author of "Annals of the Parish," &c.
Andrew Wyle, &c.
Printed for William Blackwood, Edinburgh; and T. Cadell, Strand, London.

THE IMPROVED SYLLABIC SPELLING-BOOK; or, a Summary Method of Teaching Children to Read, upon the principle originally discovered by the SIEUR BERTHAUD, adapted to the English Language.

By Mrs. WILLIAMS.
Printed for Whittaker, Treacher, and Arnot, Ave Maria Lane.
By the same Author,
The 3d edition, with Additions and Improvements, 8s. half-bd.
Conversations on English Grammar, in a Series of familiar and entertaining Dialogues between a Mother and her Daughters, in which the various Rules of Grammar are introduced and explained in a manner calculated to excite the attention of Children, and at the same time, to convey their minds clear and comprehensive ideas of the Principles of Language; with a number of appropriate Questions following each Conversation. Adapted to the Use of Establishments for Young Ladies, as well as to private Tutoring.

A NEW SYSTEM of GEOLOGY, in which the great Revelations of the Earth and Animated Nature are reconciled at once to Modern Science and to Sacred History.

By ANDREW URE, M.D. F.R.S.
Member of the Geological and Astronomical Societies of London, &c. &c. &c.
Also,
The Second Volume of Dr. Arnot's Elements of Physics, or Natural Philosophy Explained.
Printed for Longman, Rees, Orme, Brown, and Green.

REVIEW OF NEW BOOKS.

Remarks on the Practical Effect of Imprisonment for Debt, and on the Laws of Insolvency. By Henry Dance, Provisional Assignee of Insolvent Debtors in England. 8vo. pp. 16. London, 1829. Ridgway.

HAD Mr. Henry Dance been a Chinese, instead of a good honest Englishman, we have no doubt but that an exposition so useful and valuable as the present would have raised him to, at least, the dignity of a minister of two gold buttons and a peacock's feather; since his majesty of the celestial empire is obviously so much of the same way of thinking, that in a proclamation issued a few years ago, and called forth by the multitude of provincial appeals which distracted his government, he ordered "strict search to be made to ferret out all lawsuit-eating blackguards; and when found, to punish them most severely." But as Mr. Dance lives in a litigious and lawsuit-loving land, it is probable that his reward will not be so great; albeit he deserves the thanks of every humane, sensible, and worthy person in these realms.

The question which he agitates and discusses with so much of information, and ability, in a pamphlet of only sixteen pages, is one which more generally and more nearly affects the wealth and happiness of the people of Britain than any other whatever;—more than political economy, the currency, education; i. e. the state of intellect, or even Catholic Emancipation. There is no rank too high, and there is no station too low, not to feel the effects of our legal system; its abuses and oppressions penetrate and prevail over the palaces of princes and the hovels of paupers; it runs into the core of public institutions, and it runs into the distresses of private misfortune. A bankruptcy is to this monster a glorious banquet, at which hungry creditors look sadly on; particular losses and disappointments are its daily food; it darts upon the stricken deer; and it delights to make the slight and curable wounds of society mortal, that it may live on the blood of its victims. Thus our crowded jails are alike a disgrace to policy and morals, to civilization and Christianity, to humanity and religion. And what can be said of the system of a country and of its legislature, that the crime of owing forty shillings is as readily punished as any offence short of a capital felony; and where a power is given to oppress over his fellow-subject, inconsistent with every principle of justice (not to speak of mercy), but calculated to create and cherish the violent passions in the depraved heart of man,—the lust of tyranny, petty malice, and malignant revenge? Such is the picture drawn by Mr. Dance in considering the practical effect of imprisonment for debt, and its consequences, the law of insolvency, which turns the well-meaning and unfortunate, while it transfers impunity on the fraudulent contractor, the swindler, and the villain. And Mr. Dance is not only a competent authority

on these points,—he is the best authority in England; for his interests are involved in the opposite side, and his situation as provisional assignee of insolvent debtors has afforded his intelligent mind more insight into the actual evils of the practice than any other individual could attain. We therefore look upon his testimony as irresistible; and we cordially say, that there is not a merchant, tradesman, or mechanic, in the kingdom, who may not acquire the clearest views, and reap the soundest advice, from the perusal of his patriotic production.

"Imprisonment for debt (he observes) is of so very ancient a date, that until lately it has seemed as if the policy of its continuance might hardly admit of question. But the force of circumstances has at last opened the consideration of this point, and it has become evident, that, rooted as the system appears to be, the time approaches when its permanency, its modification, or its abolition, must depend on argument and reason, in preference to prescriptive claim. An arrest for debt is the only instance in which one subject holds the liberty of another in his own power without the previous control of any tribunal whatever: the sole condition is, that he shall make oath of a debt being due to him, amounting to at least twenty pounds. It is needless to inquire how this power originated, or has been maintained; my present question is, ought it to continue? It must be granted me, that the object of this extraordinary power can be no other than to enable creditors to recover their just debts with more certainty and expedition, and at a less expense, than they otherwise could. I think I may safely say, that I have had during the last nine years the best possible opportunity for impartial observation on this subject; and it has impressed me with a most sincere conviction that none of these requisites are attained; but that, on the contrary, the results are—uncertainty, delay, and increased expense."

And how can it be otherwise? Without going into the country—swarms who subsist on the wrecks of poverty, misery, and accident,—who, if they did not aggravate losses, and press on uncertainty and want of ready preparation, could not subsist at all,—let us only look at the state of London, divided as it were into districts and portions to be preyed upon by a class altogether unproductive to the community. In a calculation recently published from authentic records, it appears that in London alone there are three thousand one hundred and five lawyers, barristers, special pleaders, attorneys, &c.; with comparatively few exceptions, men who live in the enjoyment of every luxury, and the accumulation of prodigious wealth—remembering, moreover, that the lowest and poorest do infinitely more mischief, and create far greater havoc and wretchedness among their fellow-creatures, than the more elevated and rich;* for

* It is fearful, however, to calculate the enormous mass of wretchedness that must be inflicted by one attorney in great practice in common law—such as are in the

in the administration of our laws, the gratings are more multitudinous and fatal than the tigers' bites. "Let us (says Mr. Dance) trace the usual progress of a single case, and consider the effects produced. We will suppose a tradesman possessing a small capital, invested in his business, and having debts due to and from him; we will also suppose that the regular profits of his trade, if realised, are just sufficient to enable him to maintain himself and his family, of course allowing a moderate annual average for losses by bad debts. So long as this average is not exceeded, all is well; but the moment it increases, the derangement of his affairs commences, and he becomes unable to make his payments with his former regularity. In this situation, it generally happens that some one of his creditors takes, or threatens to take, legal proceedings against him. To save his credit and avoid a prison, he is obliged to make a sacrifice in some way or other, so as to procure ready money, and discharge the demand; but, whatever means he adopts, the diminution of his resources must be greater than the aid he obtains. The consequences cannot be obviated, and they follow sooner or later, as he becomes less able to satisfy succeeding claims. Arrests multiply; he procures bail, and so gains time, though at a frightful expense; but after paying several of his most severe creditors twenty shillings in the pound, with the addition of their costs and his own, he can pay no longer. The next arrest takes him to prison; there he becomes not only an unproductive member of the community, but an actual encumbrance; and so he must remain, or apply for his release under the act for relief of insolvent debtors. After what has happened, it is almost certain that his estate cannot pay more than a very trifling dividend (if any at all) on his remaining debts, and he is left in total beggary to begin the world again. The case I have here drawn, represents a much larger class than is generally imagined; and in reviewing it, we must observe, that those creditors who forbear to sue, lose their whole debts; while of the severe creditors, some obtain twenty shillings in the pound, and others lose not only their debts, but the costs they have incurred for the chance of recovering them. Thus it is evident that a most unequal distribution of the debtor's property takes place, though at a very considerable expense. The loss of the many is caused by the severe conduct of the few. The law alone is in fault here; for the law does not afford an honest man, who finds himself insolvent, the power to cause an equal distribution of his property among his creditors at a moderate expense. Common sense tells us that, as soon as a man is really insolvent, the law (which should be impartial) ought to interpose, and prevent any of his

city, making perhaps their 10,000*l.* a-year. Before this sum can be cleared, he must every day of his life doom a fellow-creature to the loss of liberty, and families to distraction and ruin; he must violate the bed of sickness, and blast the hopes of thousands; he must make the hope of industry desolate, and destroy for ever the characters of many a worthy member of society.

creditors (for they cannot be impartial) from obtaining an undue proportion of the property. But instead of this, the law, as it now exists, invites every creditor to press forward in a race of preference for himself, at a sacrifice of the general interest. It is quite bad enough that any should be paid in full, when all cannot; and it is yet worse, that the only legal mode of obtaining this preference should include a necessity for lessening the general fund still more by the addition of costs; but costs are far from being the whole of the mischief induced by this state of the law, for, heavy as they are, they do not equal the expenses and losses consequent on such proceedings. Many of these are, for obvious reasons, kept out of sight by one party, and not challenged by the other. Such are the expenses of obtaining ready money by illegal discounts, by pawning, and, above all, by sales of property out of the usual course of trade.* Such are, also, the expenses of procuring bail, of living at lock-up houses, and (in country cases) of travelling to London to surrender in discharge of bail; and, lastly, the difference between the value of stock or furniture, and more particularly of fixtures, when available for the purposes of the owner, either for trade or for household use, and when sacrificed under legal process. I wish creditors in general could be impressed with the fact, that all these expenses, however disguised, do, in truth, come out of *their own pockets*; I wish they would also reflect, that the destruction does not end with the case to which they intend it to be limited. In the multitude of insolvents' schedules which I have examined, I have often seen the names of men as detaining and opposing creditors, whom I have afterwards observed as insolvents themselves, and attributing their ruin to losses by bad debts and excessive law expenses. It is true, that those whose system is to proceed strictly, may often recover both debts and costs, when, by forbearance, they would have lost them; but they cannot always be foremost in a race where their competitors are unknown to them. The first creditor by whom any debtor is arrested, begins his ruin; but that creditor can never be certain that he is not thereby striking the first blow of a series, the last of which is to destroy himself. All these considerations lead me to the conclusion, that the law of arrest and imprisonment for debt, is actually *prejudicial to the interests of the very creditors on whose behalf it is pretended to be upheld*; and that means ought to be devised for enabling them to obtain a just division of the property of their debtors, at the smallest expense possible."

The good sense of this extract forbids comment: it must convince every judgment, and does great honour to the writer. But the counsel it gives, though most beneficial to all else, would, if followed, be the ruin of a considerable proportion of our *three thousand one hundred and five*: say of two thousand of the harpies! and suppose they only earn 1000*l.* a-year each, (we

* "It may not be generally known, that there are houses established for the express purpose of purchasing goods, and of removing them in a few hours, without limitation as to their nature, quality, or bulk. They are paid for in ready money, but, of course, at a rate which is intended to leave an enormous profit to the buyer; and, as it necessarily follows that he must again dispose of them below their real value, the transaction inflicts a still greater loss on the creditors of the seller. Many extensive frauds originate in the facilities afforded by these establishments, into whose receptacles it often happens that large quantities of goods, obtained from the manufacturing districts on credit, are removed immediately after their arrival in London, and sold for half, or less than half, the invoice prices. I do not state all this from report merely—I know it to be true, and so do many others; but I wish it to reach those quarters whence a remedy may be obtained."

believe it would be nearer the truth to estimate them at 2000*l.* per ann.—for few of the greedy rogues can exist upon less than one,) and you have 2,000,000*l.*!!! a year saved in the metropolis alone, and chiefly levied upon indigence, difficult circumstances, temporary embarrassments, necessity, and utter desolation. Whether contemplated all together, or in detail, this is a grievous and monstrous state of things. But let us again hearken to Mr. Dance:—"I have hitherto (he says) considered this subject only as it appears to affect the pecuniary interests of creditors; but I cannot overlook the argument on the score of humanity. Whoever doubts its claims to consideration on this ground, ought to take a few opportunities of inspecting the interior of the prisons, more especially about the times appointed for the admission and departure of visitors. Let him then attentively examine the general appearance and behaviour of the wives and children seeking access to, or taking leave of, their husbands and fathers; and when this fails to produce conviction, farther reasoning would be wasted. . . . The more honest and the more unfortunate a debtor is, the more he feels his situation; and, therefore, the greater is the degree of punishment inflicted on him by imprisonment. This is a curious fact, which I leave the admirers of the system to digest at their leisure. I shall only add to it, that of the many cases referred to me for examination, the most glaringly fraudulent were those of two men, at different periods, both of whom, I afterwards had occasion to learn, refused to come before the court for their final hearing, lest, by any means, they might be discharged from prison, in which they had determined on remaining."

After some just and pertinent remarks on regular and irregular trading, in both of which, owing to the state of our laws, the "good are made to pay for the bad," our author continues:

"The destruction of this irregular credit seems to me of itself almost a sufficient motive for the repeal of the law. . . . Fraud ought undoubtedly to be punished—in many cases, perhaps, more severely than it now is; but my objection is, that at present we commence by imprisoning a debtor, and make the proof of his honesty the condition of his discharge, instead of making the proof of his fraud the condition of his imprisonment. It is not until after this has been done, that he should receive the sentence of the court, which should then be really carried into effect, and not remain subject to the caprice or the collusion of a creditor, who may enforce or abandon it without control."

But Mr. Dance's pamphlet would have been very incomplete, if, having so honestly and ably exposed the mass of ills under which we labour, he had not also indicated some remedy for the disease. This he has done with equal talent and discretion:—

"There are," he writes, "many existing prejudices to be overcome, which I am willing, to a certain extent, to respect in others, though I cannot entertain them myself; I will therefore suggest (as an experiment for a limited time only, if it be thought better so), that any debtor, without being in custody, shall be permitted to declare himself insolvent, and give up his property to his creditors, and thereupon shall receive a protection from arrest or imprisonment for debt, for such reasonable time as will allow of his case being brought to a hearing. That the examination, and all other proceedings, shall be had as at present, and that sentences of imprisonment, in cases of

fraud, shall be strictly carried into execution, subject to mitigation, only at the discretion of the court. Of course it will be necessary to provide, that whenever a debtor has been previously arrested, and has procured bail, they shall be exonerated when he gives up his property. The improvements which I expect will be attained by this measure, will be easily perceived, from what I have already stated. It will be, in a word, a law for the honest and unfortunate; and those who believe, as I do, that there are many such, must certainly advocate the proposition for its positive good; while those who believe them to be few, must admit that, if they are right, such a regulation would prove comparatively inoperative, and therefore nearly harmless."

Such a reform might restore this enlightened nation; this nation which so loudly boasts of its institutions as being superior to all others in the world; this nation which so loudly preclaims its love of freedom, and incarcerates thousands of its people for the most paltry debts; this nation, blessed with the march of intellect, and the schoolmaster abroad; this nation, an example for every nation on the face of the earth;—might restore it, we repeat, to something of a level with the barbarians of heathen, Mahometan, and unilluminated regions.

"The Eastern merchant (says Mr. Burckhardt) seldom enters into hazardous speculations, but limits his transactions to the extent of his capital. Credit to a great amount is obtained with difficulty. Failures are, therefore, of rare occurrence; and when a man becomes embarrassed, either from an unsuccessful speculation or inevitable losses, his creditors forbear to press their demands, and are generally paid after a few years' patience; thereby saving the merchant's credit, and preventing the consequences of bankruptcy." What fools these people must be, when compared with those in that happy land of liberty, Old England! Under similar circumstances here, after a period of long struggle and long suffering,—the race being who shall pounce first upon the unfortunate victim, whose difficulties shall have been made insurmountable by the process,—the gentle aid of the law shall be evoked, the docket shall be struck, he shall be ruined in credit, and he shall go to prison; a host of attorneys shall bestow upon his spoils; assignees, and commissioners, and counsel, shall participate in his estate; his goods and chattels shall be sold at less than half their value; and, on paying some two or one-and-sixpence in the pound, he shall be given back to society, an impoverished and broken-hearted being, disgraced and unnerved, and unfit for any exertions which could ever make him a useful member of the body from which he had been so unnecessarily and so cruelly cut off. The rotten branch can never add to the vigour and beauty of the tree again.

Here, then, we conclude: but let us not be supposed, in our observation on the law and its ministers, to intend a sweeping censure on the latter. Many of them are an honour to human nature, and the more because they resist the overwhelming temptations to be otherwise, which are too strong for the immense majority of their professional brethren. We know and appreciate men of this description, who, instead of inflaming, repress litigation, and who earn a noble and elevated subsistence by the performance of those numerous legal duties and offices which are absolutely necessary to the motion and order of the social machine. These men are benefactors to their country; and we call

upon them to consummate their high character by their aid in producing those reforms which would weed them of noxious associates, under the laws a blessing instead of a curse, and relieve the population of Great Britain of a land which presses more severely upon it than national debt, taxes, tithes, and poor-rates, all combined together!

The Token; a Christmas and New Year's Present. Edited by N. P. Willis. 12mo. pp. 348. R. J. Kennett, London; S. G. Goodrich, Boston. 1839.

INFERIOR certainly to our own splendid *Annual* in the expense and beauty of engravings, which could only have been produced and patronised when art and luxury were at their height, but in all else fully their equal,—we greet with great cordiality the arrival of the first American *Annual*. It is a very charming little volume, and says much for the taste and talent diffused through American society; for the minds which can produce and appreciate the elegancies of literature, must have before progressed through its rougher paths:—our literary taste grows on our literary cultivation. There are in the *Token* some very pretty tales, which blend the humorous and pathetic well together. “The Son of a Gentleman,” “Retrospections,” “The Ruse,” “The Emigrants,” and “Otter-Bag,” possess a degree of freshness and originality which too many of their English competitors want; for a family-likeness in their features—deaths, marriages, &c.—is the besetting fault of a great many of our English *Annual* story-tellers.

The following sketch of a New England family has pleased us much:—

“I think, sir,” said the artist, “that the New England people are naturally of a cool temperament, sensible, wary, and calculating; but when once their imaginations or passions are thoroughly excited, you cannot turn them from the heat of their humour, or convince them they have mistaken their own interest. You may as easily direct the whirlwind, or stay the course of a torrent with the rushes on its bank.” “We are rather obstinate, I confess, when our opinion is formed,” said Erskine. “Yes; and we think nothing you determine on impossible in performance or attainment,” replied the artist. “I have seen many of your Yankees, who come here with their families almost as docile as Adam when he was banished from Eden; and yet they were expecting to amass the wealth of princes, and attain the highest honours of the state. This enthusiasm is shared, too, by the women, and even little children. I never saw a finer illustration of the ‘Pleasures of Hope’ than I witnessed a few weeks since. I spent a month last summer wandering over the Alleghany hills; and during my rambles, I fell in with a family who were removing from Connecticut to Ohio. I saw them first at noon-day, as they were about to rest for an hour or two. The horses were loosed from the waggon; but here,—I can show you a sketch of the scene; I took it at the time, and have since removed some pains to retouch and finish it. Indeed, I think I succeeded tolerably well in giving the spirit, the peculiar character, of the individuals to their respective pictures, and that is the perfection of our art.” “Yes; but to impart the character of a person to his picture, is necessary, I presume, that you know something of his history,” said Mr. Erskine. “Exactly so,” returned the artist. “But I had a fine opportunity for that. I passed a day with this family, and rendered them some trifling

assistance, and was repaid by a communication, unreserved, I think, of all the changes and chances they had experienced. I never in my life saw a more interesting family. They appeared so good, so devoted to each other, so ardent in their expectations of success, and so unpractised in the deceptions of the world. But look at my sketch. This old man told me he was descended, by the mother’s side, from the noted Mr. Hooker, the Connecticut divine so famed for his courageous piety, that he trembled not at ‘spirit of health or goblin damned.’

And truly, when I saw this old man walking with a firm and vigorous step, though he bore the weight of seventy years, and heard him conversing with the cheerfulness of youth on his future plans and prospects, though always with reference to the will of God, I thought the descendant did not shame the progenitor. I drew him as I first saw him, watering his horses at one of those bright rills that, when swelled by recent rains, come leaping down the mountain from their hiding-places among the rocks and shrubs. There is his wife, with such a humble and resigned countenance, mingled with that deep affection, which seems, like the rill, to gather strength in its descent to her posterity. She has her little grand-daughter at her knee—by the way, the loveliest creature I ever beheld. Her auburn hair, clustered in natural curls all over her head, and her blue eyes were so bright with joy and innocence, that I could not look at her without thinking of heaven. Oh! she will be too fair a flower to bloom in our solitary wilds! Beside the old lady sits her son: he was a very handsome man, and his countenance indicative of an excellent disposition; but there was little of that energy about him which usually distinguishes the emigrant from the East. I thought him very amiable, but that he was not in his proper element—that to have tilled his small farm beside the soft-flowing Connecticut would have been more congenial to his mind, than to explore the pathless forests and mighty rivers of our Western country. But he had a fine, active boy, a lad of eight, perhaps, who looked as if he would delight to ramble over the whole earth. His face beamed with rapture, and his eye with inquiry, at every strange object he saw. He resembled his mother; and I could not do justice to her. She was one of those creatures of spirit and feeling who ‘would move heaven and earth,’ were it possible, to serve those she loved. Ambitious she was as Semiramis; and yet it was an ambition that hardly had reference to self. See! with what a queenly air she is looking around, over the boundless valley of the Ohio, then just opening before her. She was a very beautiful woman; but there was at that moment something in her countenance much dearer than beauty. It was the conjugal, the maternal expression of triumph and affection, that seemed to say, ‘here my husband will be distinguished, and my children rich and happy.’ She was, in truth, the presiding and animating spirit of the party. I found she wedded for ‘pure, pure love,’ as the old song says, and against the advice and wishes of her friends, who had provided one they deemed a better match for her. But Cupid delights in thwarting human prudence; and he had smitten with mutual passion the daughter of the rich merchant and the son of the poor farmer—and so they married. I do not think the young woman regretted her choice; but I believe she was disappointed in the degree of felicity she had expected to enjoy. How could it be otherwise, when she had, doubtless, pictured a Paradise of domestic bliss? The old lady told me her

daughter-in-law made an excellent wife, but that she was never quite contented with their little farm; and so, to please her, they were removing to a country where they could obtain more land. In short, I found, to compare small things with great, that it was the same cause which made the proud triumvir lose a world, namely, the influence of a woman, that had induced this prudent and peaceful family to quit the hearth and the altar of their childhood and old age, and set out on a pilgrimage to the wilderness of Ohio.”

We should think there was great truth in the annexed passage. “I was going to say, that the white men of Europe, and I might have said of America also, have exceedingly false and absurd notions of what they call Indian eloquence. The language of a red orator is nothing. You see speeches every day that pass for Indian oratory,—speeches that are imitated by all who desire to give others an idea of Indian oratory; and yet, sir, I assure you that I do not know of a speech in the world, nor of a single paragraph I might say, decidedly characteristic of the native Indian—the serious, proud, uncorrupted Indian of the back-woods. His language is remarkable for sobriety, for a severe and familiar plainness—not for bold ornament or metaphor. It abounds with short, strong phraseology, and abruptness, but not with such abruptness, I will say that for the Indian orator, as we see every where now in the reported speeches of the red men. The very few ornaments—and very few they are, whatever people may suppose, that occur in the speech of a red man—are not so much his ornaments as they are the ornaments of his tribe or people. They are a part of the very language he speaks, and are, after all, but few, and meagre enough, considered as conventional poetry or metaphor, though important as a part of the language. They are never the poetical combinations nor the rhetorical embellishments of the individual. His thoughts are eloquent, but never in the way that ours are, with beauty of speech—they are so with a sort of barbarous candour and straightforwardness. They are full of passion, full of energy,—but they are never what they are represented to be; they are never beautiful, they are never charged with tropes, nor capable of being tortured into mere poetry. His imagery is a sort of household, every-day imagery; and, I am rather inclined to believe, the fragments of another language—a language older than that in which he speaks now, whatever that may be, or derived from the barbarous poetry of some earlier and mightier people; for the idiom is peculiar, the phraseology and the thought foreign—that is, unlike the body of the language in which these little fragments are found, as it were, imbedded, like so many bright shells or gems of beauty, in a dull, fixed medium of earth.—And, what is much more wonderful, sir, in my view, these peculiar turns of speech and figurative combinations are, if not precisely alike, much more alike in every language of North America than perhaps any other part of any other two languages that prevail here. Thus, go where you will, you hear the red men talk of burying the hatchet, of smoking the pipe of peace, of planting the tree of peace in the rock, or of keeping the chain of peace for ever bright; of the land of souls, and of hearts growing soft with fear: but while you encounter these particular forms of speech, with a multitude more, among all the tribes of America, among those who dwell hundreds and hundreds of leagues apart, having no knowledge of one another, they always appear to be unlike the great body of the lan-

* This refers to one of the engravings.

guage in which they are found. Cases have occurred where two wild men have met; neither of whom understood a syllable of the other's tongue; and yet, by means of a few of these beautiful strange fragments, of what I take to have been a very old and rich language, aided by looks and gesture, they have been able to understand each other;—"Which goes to shew, my dear sir, that, after all, poetry is a sort of universal language, if not in Europe, at least here—here among the mighty woods and waters of America." He drew a long breath, and proceeded. "Perhaps the best specimen of Indian oratory that we have now, is the speech of Logan, the Mingo chief; and yet Mr. Jefferson, to whom we are indebted for it, knows very well, that instead of being a true speech, or the translation of a true speech, is altogether untrue." "Indeed!" "Altogether untrue, sir; and as for the speeches that are generally put forth in America, or published by authority, after there has been a war, a treaty of cession, a talk, and a great council, they are positively mere trash and counterfeit—considered, I mean, with regard to the peculiarity of style or thought of the speaker; and about as much like the speech of a true Indian orator, as a bad imitation of bad poetry would be like the speech of a man of business, thoroughly at home with his subject, and full of good sense; or about as much like the truth as the poetry of Ossian would be like the speech of a thoughtful, brave man, who had a bargain to make with a foe. The interpreters—the doers of these things into English—are sad fellows, to be sure; a set of audacious blockheads nineteen times out of twenty—without a common share of the commonest education; whose meagre knowledge of the Indian dialect has been picked up any how, while they were trading for beaver; and are generally a patch-work of all the fine phrases they may happen to remember, about pipes and hatchets, great talkers and good fathers, and great spirits and war-clubbers."

Before we advance to the poetry, we must observe that it is preceded by a very pretty rose-coloured presentation-page, just fit for some very graceful inscription to some very fair lady: a little Cupid has made a boat of his bow, an arrow crosses the light veil which serves for a sail, and a torch is the mast; and a wreath of flowers is in the hand of the young god, who is sailing in triumph over the globe.

The following poems will speak for themselves.

"What is that, Mother?"

What is that, mother?

The lark, my child!
The moon has but just looked out and smiled,
When he starts from his humble grassy nest,
And is up and away, with the dew on his breast,
And a hymn in his heart, to you pure bright sphere,
To warble it out in his Maker's ear—
Ever, my child, be thy morning lays
Tuned, like the lark's, to thy Maker's praise.

What is that, mother?

The dove, my son!
And that low sweet voice, like a widow's moan,
Is flowing out from her gentle breast,
Constant and pure, by that lonely nest,
As the wave is poured from some crystal urn,
For her distant dear one's quick return—
Ever, my son, be thou like the dove,
In friendship as faithful, as constant in love!

What is that, mother?

The eagle, boy!
Proudly careering his course of joy!
Firm, on his own mountain vantage relying,
Breasting the dark storm, the red bolt dashing—
His wing on the wind, and his eye in the sun,
He swerves not a hair, but bears onward, right on—
Boy! may the eagle's flight ever be thine,
Onward, and upward, and true to the line!

What is that, mother?

The swan, my love!
He is floating down from his native grove;
No loved one now, no nestling nigh,
He is floating down by himself to die;

Death darkens his eye and unplumes his wings,
Yet his sweetest song is the last he sings—
Live so, my love, that when death shall come,
Swan-like and sweet, it may waft thee home!"

"Psyche, before the Tribunal of Venus."

Lift up thine eyes, sweet Psyche! What is she,
That those soft fringes timidly should fail
Before her, and that spiritual brow
Be shadowed as her presence were a cloud?
A loftier gift is thine than she can give,
That queen of beauty. She may mould the brow
To perfectness, and give unto the form
A beautiful proportion; she may stain
The eye with a celestial blue—the cheek
With carmine of the sunset; she may breathe
Grace into every motion, like the play
Of the least visible tissue of a cloud;
She may give all that is within her own
Bright census—and one silent look of thine,
Like stronger magic, will outcharm it all.
Ay, for the soul is better than its frame,
The spirit than its temple. What's the brow,
Or the eye's lustre, or the step of air,
Or colour, but the beautiful links that chain
The mind from its rare element? There lies
A talisman in intellect, which yields
Celestial music, when the master-hand
Touches it cunningly. It sleeps beneath
The outward semblance, and to common sight
Is an invisible and hidden thing;
But when the lip is faded, and the cheek
Robbed of its daintiness, and when the form
Matches the sense no more, and human love
Falters in its idolatry,—this spell
Will hold its strength unbroken, and go on
Stealing anew the affections.

Marvel not,
That Love leans sadly on his bended bow:
He hath found out the loveliness of mind,
And he is spoli for beauty. So 'twill be
Ever—the glory of the human form
Is but a perishing thing, and Love will droop
When its brief grace hath faded. But the mind
Perisheth not; and when the outward charm
Hath had its brief existence, it awakes,
And is the lovelier that it slept so long—
Like wells that, by the wasting of their flow,
Have had their deeper fountains broken up."

We cannot but observe, both with reference to the volume now before us, and other productions of the American muse, how very much the writings of L. E. L. have given their tone to Transatlantic poetry; their style is modelled on the school of which she is the founder: the same vein of metaphysical sentiment; the same wish to give inanimate nature our own feelings, making a sympathy between them, sometimes fanciful, but oftener touching; the same desire to exalt the humanity of love by the refinement of sorrow; the short sketches in blank verse; and much, too, of that carelessness of diction, and neglect of action in the narratives, which are among her faults. The earlier American Souvenirs are chiefly composed of selections from her writings; and now that they have brought their own talents to the work, and are giving their Annuals a national character, the same influence is still perceptible; though, we must say, amid her many imitators, they are the only ones that have also their own original features:—if the spirit of song has been awakened by strange music, it awakes to revel in a new and beautiful world of its own.

Researches into the Origin and Affinity of the principal Languages of Europe and Asia.
By Lieut.-Col. Vans Kennedy, of the Bombay Military Establishment. 4to. pp. 338. London, 1828. Longman and Co.

THE affinity of languages has for nearly two centuries excited great curiosity in Europe, and much diversity of opinion has been expressed on this subject. It must, however, be confessed, that the extremely injudicious manner in which inquiries into the derivations and relationships of languages have frequently been conducted, have rather injured than benefited the study—it having produced an impression on the public mind, that an ingenious etymologist, by apparently arbitrary permutations, ad-

ditions, and contractions, can prove the identity of almost any two words of almost any two languages, and can do this in utter disregard of, or opposition to, their proper sound, primary meaning, or grammatical form.

Although such is the public feeling in relation to etymological investigations, yet as it is almost universally allowed, that those investigations, conducted on correct principles, shed light on the early history and migrations of nations, as well as elucidate language, it is very desirable that so useful a study should be rescued from its, perhaps well-merited, state of disrepute, by a clear demonstration of the fact, that there are principles by which the connexion or non-connexion of languages may be firmly established. Colonel Kennedy has laid down these principles, and illustrated and applied them in his *Researches*; and it is fortunate for the cause of literature that the task should have been undertaken by a man so eminently qualified by his immense acquirements and long study of the subject, and executed in a manner that is, generally, very satisfactory.

The idea that fragments of the language that was spoken before the dispersion at Babel exist in most parts of the world, has been zealously advocated by M. Klaproth in his *Asia Polyglotta*, and by Mr. Sharon Turner in the first volume of the *Transactions of the Royal Society of Literature*. It is also the basis of a work published at Karlsruhe in 1826, entitled *Synglosse oder grundsätze der Sprachforschung*, von Junius Faber; of which a French translation was printed at Paris in 1828, in the name of Baron de Merian, as an original work. We suspect, however, that M. Klaproth is intimately acquainted with an individual who owes paternal care to both these publications.

While these and some other writers plead for the existence of vestiges of the antediluvian language, others, in opposition to the Biblical account of the confusion of tongues, have insisted on its present existence in nearly its original state. Goropius Becanus's opinion, that Dutch was the language spoken in heaven, and by Adam and his posterity, is universally known, from its pre-eminent absurdity; and Webb attempted to prove that Chinese was the primitive language: but the majority of writers on this very difficult subject have assumed that it was Hebrew. Kennedy, however, differs from them, in thinking "that the primitive speech of mankind was abolished at Babel, and various distinct languages created by the same power by whom the former was originally communicated to mankind;" and "that geography, chronology, and history, demonstrate the impossibility of Hebrew being the primitive tongue, from which all other languages are derived; for the land of the Hebrews was bounded on all sides by countries in which a kindred language prevailed, and with the people beyond which they never had, in earlier times, any intercourse whatever—as is fully proved by their own history; nor could the few individuals of Abraham's family, or the slaves of the Egyptians who afterwards became the Hebrew people, have possibly communicated their language, even if they preserved a peculiar one, to other nations. The argument, *a priori*, being consequently so irrefutable, it becomes unnecessary to enter into any examination of the Hebrew language itself: and I shall therefore merely observe, that I have carefully examined the lexicons of Buxtorf and Castell, and that I have not been able to discover in them a single word which can be identified with any term in Sanscrit, Greek, Latin, Persian, German, or English."

Most of our readers will, we imagine, consider the concluding part of this extract to be nearly as erroneous as the assertion in the *Annual Register*,* "that the ancient Celtic is Hebrew itself;" or Biblelander's opinion, that there is a great affinity between Greek and Welsh!

On the very interesting subject of the various distinct languages created at Babel, Colonel Kennedy is nearly silent; although, we think, he might have added to Sir W. Jones's enumeration of them some others besides the Mongol, and one or two more that are incidentally mentioned. It appears, for instance, to us that some difficulty would be found in attempting to trace Chinese to either Sanscrit, Arabic, or Tartar; although De Paaw derives it from Mongol, and Webb makes it the parent of Greek.

The following quotation is given because it contains the author's ideas on a primitive language, and an explanation of the general object of his very erudite researches:

"If language was invented by man, the theory of its formation proposed by Adam Smith is certainly the most clear and satisfactory; but this theory, it is evident, can apply to one people only, for it attempts not to explain the causes which have occasioned that variety of names which are given by different nations to one and the same object. This difference the Mosaic history ascribes to a miraculous interposition of the Supreme Being; and had mankind ever spoken only one language, such a miracle seems alone adequate to account for there now no longer existing any trace of this primitive tongue in the different languages of the world; for no instance occurs of a language which has once existed becoming entirely extinct; and, consequently, had this primitive tongue remained in use, some identical terms, and particularly some similarity of grammatical structure, must still be discoverable in every dialect of Asia and Europe: but not a single word or grammatical inflexion, as far as I am aware, has ever been discovered, or can be discovered, which exists equally in Sanscrit, Arabic, and Tartar. Apply this test to the various languages that have been derived from them, and it will be immediately observed that although similar words may be found in all of them, still every term that is contained in each cannot be traced through all the dialects that belong to the same family. In all such examinations, the etymologist is obliged to confess, that the more the subject is investigated, the more improbable becomes the conjecture, that all languages have been derived from one and the same origin; for at every step that he prosecutes his researches, this supposed identity gradually diminishes, until it entirely disappears, long before he attains the end of his pursuit. But he finds, without the least research, numerous words in all known languages which bear no resemblance to each other, and the system of which it is impossible to discover or to trace to a parent tongue. It cannot, however, be denied, that cognate and identical terms and similarity of grammatical structure, are discoverable in several languages; and this affinity, if it does not prove the derivation of one from the other, must at least establish that they were all derived from some one common source. The object, therefore, of the following *Researches* is not to investigate the origin of speech, or to attempt to reduce the various languages of the world to one pri-

mitive tongue; but merely to exhibit the striking affinity that exists between the Sanscrit, Greek, Latin, Persian, and Gothic languages. As, however, mere etymological and grammatical disquisitions can afford little interest, I have also entered into an inquiry respecting the causes to which this affinity ought to be attributed. The relation that these languages bear to each other has already excited much attention; but I am not aware that any person has yet undertaken to investigate the subject fully, or to support his opinions by any extended list of the similar words that occur in them. As, therefore, the only satisfactory proof in all etymological inquiries is identity of terms, I now produce a collection of 900 Sanscrit words which exist either in Greek, Latin, Persian, German, or English. All these words are primitives, or uncompound; and when it is recollected that these form a small proportion of the words contained in any language, it must appear the more surprising that so many of the Sanscrit primitives can still be discovered, after the lapse of ages, in languages now so widely separated."

The extremely unsatisfactory modes of reasoning employed by many etymologists, and the manifest falsehood of their deductions, have proved that it is not only necessary to shew an unforced identity of many words in two languages, before adopting the conclusion that an affinity exists between these languages, but that it is also necessary to prove that an affinity exists in their grammatical structure. Indeed, similarity of grammatical structure is a much stronger proof of common origin or derivation than verbal resemblances are. For, as the author of the *Researches* remarks—"the grammatical structure of a language must have been coeval with its origin, and is so indispensably requisite for its distinct existence, that whenever the grammatical inflections of one language are found in another, no possible causes can be assigned for such a similarity, except that the one language was derived from the other, or that they both sprang from the same common source. Could, therefore, any words be produced from the Arabic class of languages which corresponded in sound and meaning with those of other tongues, still the peculiar grammatical structure of the Arabic would evince that these words must have become common to the two languages from some accidental cause, and would consequently be no proof that any affinity whatever existed between them."

Again: "It is singular that etymologists have not adverted to the remarkable difference which exists between the grammatical structure of Hebrew and that of Sanscrit and Greek; for various causes might have occasioned the passing of single words from one original language into another, and such terms therefore would be no proof of the affinity or common derivation of these two languages. The grammatical structure, on the contrary, is peculiar to each distinct tongue, and even to each cognate dialect of the same language, and must have been coeval with the origin of each. If, therefore, Sanscrit and Greek were derived from Hebrew, in what manner did these languages acquire the numerous inflections which give their nouns and verbs such precision and variety, when the alleged parent tongue possesses scarcely any inflections? In what manner did the daughters learn to luxuriate in the compound terms to which they are indebted for such elegance and beauty, when the mother abhors the ornament of composition? In short, to what causes shall be ascribed the copious

richness of Sanscrit and Greek, if they owe their origin to a language which has always been remarkable for its irremediable poverty?"

Baron William Humboldt, in a paper on the Affinities of Oriental Languages, lately read to the Royal Asiatic Society, and which is to form part of the second volume of that Society's *Transactions*, expresses precisely the same idea, in the following terms: "All research into the affinity of languages which does not enter quite as much into the examination of the grammatical system as into that of words, is faulty and imperfect; and the proofs of the real affinity of languages, that is to say, the question whether two languages belong to the same family, ought to be principally deduced from the grammatical system, and can be deduced from that alone; since the identity of words only proves a resemblance such as may be purely historical and accidental."

As the absolute identity of ideas contained in these quotations would appear to warrant the conclusion that Baron Humboldt had copied from Colonel Kennedy, we state, on the authority of Baron Humboldt himself, that he had not even looked into Colonel Kennedy's *Researches* before his attention was called to this remarkable coincidence.

These principles will, we imagine, be approved by every philosophical linguist; and it is by attention to the grammatical structure of languages, in connexion with the sound and meaning of words, that Colonel Kennedy has come to the conclusion, that a striking affinity exists between the Sanscrit, Greek, Latin, Persian, and Gothic languages.

Alexander I. of Russia.

DURING the last fifteen years of his life, the mind of the late Autocrat of all the Russias was more than gently swayed by religious fervour. Many of his public acts during that period, either originated in a spirit of enthusiastic piety, or may be referred to its influence. Few, indeed, were the individuals to whom this fact was known; and the few to whom that knowledge was imparted, felt that the multitude would hail it with a taunt or a sneer,—and were silent. Until the present moment, therefore, we have had much that is of considerable interest as regards that monarch, withheld from us; but the companion and guide of his hours of religious exercise and meditation has now become their chronicler; and the minister of the Gospel, to whom Alexander confided the pangs and throes of his heart, now relates the events of his closing years, at the risk of all evils which may await his revealings. He thus speaks of the scenes or sentiments to the truth of which he bears evidence:—

"In the earlier part of his career, Alexander, being raised to a station whence he could command every luxury or enjoyment of the western or eastern world, lent himself with ardour to a life of extravagance and debauchery. At a maturer age he confessed, that, amidst all his carousings, pleasures, and dissipation, he felt an internal void; and in spite of his utmost efforts to shake the feeling off by renewed and redoubled excesses, he could never succeed in silencing the 'still, small voice' that spoke within him. He repeatedly resolved upon changing his mode of life: the resolution was formed, but the hour of execution put off to 'the morrow.' There had always been a tendency to religious feeling lurking in his breast, and he gradually acquired a deeper relish for the society of those whose conduct bespoke the existence of a similar impulse in their own.

*Vol. xlviii. p. 287; cited in Higgins's Celtic Druids. The author of the last-named work asserts that the Celtic and Sanscrit languages are the same: pp. 62, 64.

In the year 1812 he was in Baden, and sought the companionship of *Stilling*; but neither was the heart satisfied, nor the wounded spirit healed; for there is no real peace, where both are not in a state at least of partial reconciliation with their divine original.

"As his youthful years dropped away, Alexander's character, day by day, assumed a deepening tinge of seriousness. He strove to acquire the mastery of his passions; he fought hard to put away the irritability with which he encountered any opposition to his will; and pondered over the page of Scripture, which became his inseparable companion. He had derived partial relief from this source, when the year 1813 called him beyond his own frontier, to seek his adversary on the soil of Germany. A lady in Riga, who was acquainted with the religious turn his mind had taken, recommended him to study the 91st Psalm; and a letter to Mademoiselle de Stourdza gave him the first impression of confidence in Madame de Krüdener, who had written to him previously, and awakened an expectation, that she would succeed in allaying the internal oppression under which he was suffering.

"The campaign of 1815 brought him to Heilbronn in Württemberg. On the 4th of June, a lady was announced as desirous of waiting upon him; and this lady proved to be the identical person whom he had so long been anxious to consult. She was instantly admitted to his presence: she found him so perfectly prepared, that, even in this first interview, she endeavoured to persuade the emperor to begin the task of self-examination, to inquire into the vicious character of his past life, and to ascertain the treachery of the principles on which he had built his attempts at amendment:—'Be assured, sire,' she added with earnest energy, 'that you have not yet approached the throne of mercy with that humility which becomes a sinner suing for forgiveness; nor have you yet received pardon at the hands of that Being, who, and who alone, is of power to remit earthly transgressions. You are still in a state of sinfulness, and have yet to cast yourself in deep humility before your Saviour! You have yet to exclaim with the repentant publican, 'Lord! be merciful to me a sinner!' This is a state which prevents you from living in peace. Harken to the voice of one who was herself a hardened offender, but has found mercy and forgiveness at the foot of the Cross!'

"The interview was of three hours duration. The emperor was at first surprised, then convinced; and to conviction succeeded a sense of his weakness, and fervent humility. He acknowledged her words to be keen as a two-edged sword, but full of truth and balm. When she had closed her exhortations, and came to entreat his forgiveness of the strong language in which she had indulged, he replied, 'You need feel no alarm; every word you have uttered has found an advocate in my own breast; and you have enabled me to discover much within me, of which I have never hitherto been conscious. I thank God for this; and am sensible how greatly I need a frequent repetition of these admonitions. I implore you, therefore, not to abridge me of their benefits.' She promised to follow him to his headquarters at Heidelberg; where she hired a small house on the left bank of the Neckar, in which it was his custom to devote three or four hours every evening to religious conversation and the study of the Scriptures. Neither these interviews, nor their subsequent inter-

course at Paris, had any other object in view,—much less political speculations.

"Alexander observed, some time afterwards, that whatever might be the pressure of his other occupations, whether in camp or in the field, he had been long in the habit of reading three chapters of the Bible daily; one out of the Old Testament, one out of the Gospel, and the third out of the Epistles; nor would he suffer even the roar of cannon to interrupt his reading. In spite of this exemplary custom, and the benefit he derived from regular prayer, he did not feel reconciled to his own misgivings; but took frequent opportunities of praying in private with those who had similar predispositions with himself.

"He said that the thirty-fifth Psalm quieted every apprehension he had entertained as to the result of the campaign of the allied powers in France; and in speaking of this circumstance he gave expression to sentiments worthy of being written in gold:—'*I pray without ceasing for my enemies, and I feel that I can love them, even as we are bidden by the Gospel.*' Some days afterwards, intelligence reached us that the allies had been worsted; and there was not a soul amongst us who was not dismayed and crest-fallen, except Alexander himself, who instantly threw himself on his knees, read the thirty-seventh Psalm, and, as if he had acquired strength and inspiration from this act of piety, rose and hastened to the allied leaders, re-kindled their sinking courage, shewed them the advantages of an immediate assault upon the enemy, and bade them be confident of victory. The result justified his representations, and called forth a fresh expression of his deep sense of the Divine mercy. After the allies had entered Paris as conquerors, nothing appeared to afford him higher gratification than that his second entrance into it had not been stained by bloodshed.

"He fully believed that the eye of God watched over his days; and he was not only an ensample of mildness and benevolence to all around, but was earnestly solicitous that others should act, like himself, from the influence of the religion of the heart. The following may serve to corroborate this 'good report':—Being informed that a number of Prussian officers were eagerly looking for an opportunity to take a desperate vengeance for the injuries which the French had heaped upon their native country, he sent for them, addressed them in the language of a brother in arms and fellow-soldier; and endeavoured to inspire them with more kindly feelings. Their violence and thirst for retaliation gradually gave way to his benevolent remonstrances; and, perceiving the happy effect which he had produced, he dismissed them with this noble injunction: 'You called yourselves Christians, and seek to be avenged? Dare a Christian use such language? Oh! let me entreat you not to follow in the steps of those by whom you have been wronged. Be it yours to set them an example of forgiveness: this, and this only, is the revenge befitting Christians.' The parties thus addressed are said to have foregone their vindictive design.

"It was indeed his own custom to return good for evil wherever the occasion permitted it. More than once has he been heard to say, 'I am Christ's disciple, and keep his Gospel ever before me: willingly would I walk two miles if any one forced me to walk one, and readily would I add my mantle were I robbed of my coat.' Many will deem that he pushed this principle to a needless extreme on the subsequent occasion. He was in the practice of

passing many of his evening hours in company with Madame de Krüdener and the writer, who occupied a house near the Elysée Bourbon, which was his residence when he last abode in Paris,—and was invariably accompanied by Joseph, a confidential valet of Prince Wolkonski. On one of these visits he roughly reprimanded his attendant, as he entered an ante-chamber, for neglect of some order he was to have executed previously; and then going into Madame de Krüdener's drawing-room, he had scarcely had time to answer her inquiry after his health, when he suddenly apologised for his abruptness, left the apartment, ran up to the astounded Joseph, and was not satisfied till he had solicited and obtained his forgiveness of the harsh language he had used: he then returned, with a smile of self-satisfaction on his brow, to the religious meditations and exercises which were the objects of his visits.

"A sense of heartfelt thankfulness towards the Supreme, was not only the moving impulse with him in ordering his troops to celebrate a religious festival at Vertus, in Champagne, but was the immediate cause of the conclusion of the so much-abused 'treaty of Holy Alliance.' Its origin was gratitude—its object was 'peace and good will towards man.' Both have been slandered by the Jacobin, the regicide, and the atheist! It was drawn by his own hand, and Madame de K. and the writer* were consulted upon it; but neither of them suggested or modelled it, as has been insinuated.

"The same high sense of Christian duty which thus ennobled Alexander's character, directed his subsequent conduct at Moscow, Aix-la-Chapelle, and Verona, and hallowed his parting hour with its consolations, when he resigned his earthly crown in the Crimea."

Sermons, Doctrinal and Practical, for Plain People. By the Rev. G. R. Gleig, M.A. M.R.S.L. London, 1829.

No sort of book issuing from the press stands so fair a chance, in the present day, of being entirely overlooked as a volume of sermons. This fact (well known to all persons conversant with the mysteries of publishing and selling books) does not, we would fain hope, prove so much against the religious and moral feelings of the age as at first it might appear to do. It is, however, notorious, that unless the name of the author be of sufficient celebrity to form a passport to public notice, a volume of sermons is pretty sure to pass quietly to oblivion, unblamed, unpraised, and, we fear, unread.

We are free to confess, that it was the name of the accomplished author that attracted our attention to the sermons which are the subject of this article. We had heard that Mr. Gleig was rated highly by his friends as a sound and even learned theologian; but to us he was known only as a writer, of great and varied powers, on subjects purely secular; and we felt no slight curiosity to see whether those powers, which give such extraordinary interest to his other writings, would stand the author in good stead in his sermons. We ventured to hope well, and we have been any thing rather than disappointed. Though these sermons are excellently suited to the class of persons to whom they are addressed, we will venture to assert that no man, even of the most cultivated mind, will read them without pleasure. In truth, the singularly nervous language with which Mr. Gleig so easily and naturally clothes his

* H. L. Empétyas, author of the Notice sur Alexandre, Empereur de Russie—Geneva, 1868; from whose recent publication this paper is extracted.

thoughts, and the fervent imagination which dwells and dwells with his subject, without being carried away by it, have told with remarkable advantage in these discourses.

Many of them are on doctrinal subjects, and the sermons of that class invariably contain clear and candid expositions of the all-important truths to which they relate.

We transcribe, but do not select, a few extracts: in fact, there is no attempt in the book at writing fine passages, and we think there are no indifferent ones. The author is speaking of heathen believers in a future state.

"Who, in a matter which involves the whole of his future welfare—a matter of life or death, of wealth or poverty, of joy or sorrow, of ease or pain—who loves to depend upon a probability, a conjecture, a hope, an expectation, gathered from mere guesses and surmises? No one: and hence it is that even those anxious aspirants after immortality give a thousand proofs, in what they have left behind them, that the persuasion was not so surely grounded in them as to be in any degree enlivening or consolatory. If such, however, were men's notions respecting the existence of the soul in a state separate from the body, we cannot by any means wonder if the idea of a resurrection of the body itself is never once hinted at or spoken of by any ancient volume besides the Bible. Only think of the thing for one moment. What is the body when taken apart from the soul? A lump of matter arranged after a particular fashion—put together like a clock or watch, or any other machine, but having no life in it but that which springs from the soul or immaterial principle. Consider, too, what the process is which the human body undergoes after the soul has left it; rapidly it decays, falls to pieces, moulders away—becomes earthy, surely undistinguishable from the soil in which it is laid. And what more? Like all other earths or soils, it shoots itself forth again in the shape of grass, weeds, it may be plants or trees. Of the grass thus produced, other animals eat; they are killed and eaten in their turn; and thus, that which five hundred years ago was a moving man, is now we know not what—its parts are all scattered and dispersed over the universe, and other animals have since out of them and fallen again. That I am not telling you what is incorrect, you may be at once convinced, when you are assured, as the experience of your own senses may assure you, that there is not in the whole world one man more of matter now than there was when the world was first created. Matter has changed its shape and its forms over and over again, but in quantity it is exactly the same—neither increased nor diminished—as when the universe began to be. When you consider all this, I say, you will not wonder when you are told, that it is in the Sacred Scriptures of God alone that we may look, I say not for the assurance, but for the remotest hint or reference to a resurrection of the body."

A serious man hardly passes a day, and never a week, without meeting some warning to his conscience; something to call to mind what his great object ought to be through life. The more we live, too, the more serious and the more striking these warnings become. That the old tale, the dropping into the grave of a friend, or relative, or acquaintance, or neighbor—any thing be better calculated to put in mind of the utter worthlessness of all earthly pursuits, and the extreme uncertainty of our own lives. Does it not remind us, when we choose to consider it with attention, that we know not of which we hear so much,

are not things far away, but close at hand, soon to be made known to us by means of our own senses; and that those everlasting destinies, concerning which we are too apt to speculate as matters not to be settled for these many years, may, in our own cases, as in the case of others, be settled before to-morrow. Yet with this knowledge brought so continually before us, we venture, day after day, to commit sin. But it may be said, the events are not in our minds when we fall into those sins. So much the greater pity; so much the greater pity it is, that events so serious and so important should ever cease to have some weight upon a rational soul. Besides, the fact that our lives hang by a hair, is so frequently repeated to us, and the examples of that truth so constantly before our eyes, that I fear we never can forget either the one or the other without an exertion. We drive away the image from our minds, and then say we could not see it, and that it had no influence over us. This is a very sinful neglect of God's warning voice; perhaps to the full as heinous as is the particular act of guilt by which some one of his divine commands has been set at defiance."

The Living and the Dead.

IN concluding our review of this publication, we may mention, that Mr. Neale is decidedly one of the evangelical party in our national church; and throughout the volume before us supports that cause both by argument and caricature. We are not sure that some of his pictures are calculated to do the church, generally, any service.

"My next station was Cornwood: its rector a Mr. Grayburn. Mr. Grayburn was a hale, handsome, hearty-looking man of about fifty; who for the last ten years had been in a dying state." His existence was most precarious! He could hardly count upon its continuance from one hour to another. He laboured—such was his account of himself at our first interview—under "a complication of disorders." His medical men, indeed, had told him that the functions of his liver were most materially deranged; that he was threatened with epilepsy, and that an attack of elephantiasis was by no means improbable; but he had arrived at a very different conclusion. He had long been persuaded that his mesenteric glands had ceased to perform their office, and that the coat of his stomach was entirely worn away. A pigeon-pie which stood beside him in its last agonies, and a bottle of Madeira nearly empty, which had constituted his lunch, seemed, he thought, to give a kind of practical lie to his theory; but his case was beyond me: so I bowed, and was silent; while Mr. Grayburn sighed, and proceeded. 'It was painful,' he remarked, 'to revert to the past; but he had received a shock about ten years ago, from which his constitution had never rallied! It was a most mysterious business; he did not feel equal to give me the particulars.' What they were, I could never learn. Miss Grayburn occasionally alluded, in her rapid, sketchy manner, to this 'unexpected shock'; but when pressed, she likewise felt herself unequal to enter into particulars; but invariably concluded by expressing her conviction that 'her dear brother would never recover it.' I trust I do not do him injustice; but if I was to die for it—I may be wrong—I'm sure I've no wish to belie him—but I do verily believe the shock consisted in his unexpectedly finding himself heir to an estate of six thousand per annum. Since that very deplorable incident, which had so entirely deranged his system, he had been

unable to do his duty. Assistance was indispensable. There was a something, a feeling, a sensation, an obstruction, which invariably overpowered him if he attempted the discharge of his professional engagements. He had consulted every man of eminence in the country. In fact, he had been a fortune to all the medical men within his reach; and his own body-surgeon had built a house, solely, as he was frank enough to declare, upon the capacity of Mr. Grayburn's swallow! While his neighbourhood overflowed with medical men, all of whom felt satisfied they could relieve him!—Did a new medicine come out? at all hazards he would try it! Was a new name announced in the medical world? he went up to town forthwith. The gentleman might be able to throw 'some light upon his case.' Mr. Abenethy he had seen once, and once only. 'Would that my state of health had permitted my giving Mr. A. my opinion of him!' 'Sir, he committed an outrage, I can call it nothing less, upon me! I mentioned incidentally, while I was detailing to that gentleman the history of my case, *seriatim*, (from a memorandum-book that I always carry in my left pocket, with my name, age, profession, and residence, written legibly in the first page, in order that, should my sufferings terminate suddenly in the street, the bystanders may be at no loss respecting me, and that I may be treated with that respect which my station and character require.)—I mentioned, I say, incidentally, that I was a county magistrate. Only conceive my feelings, my nerves—what a revulsion—the blow—the shock! Place yourself in my frail and feeble condition; suppose yourself for one instant in my dilapidated state, when he came forward with a hop, skip, and a whistle—and—recommended me—a turn in the tread-mill!' It was after the commission of this outrage that Mr. Grayburn resolved on adding a resident surgeon to his establishment. For this '*gentle sinecure*,'—in giving Mr. G.'s history I have mainly adhered to his own phraseology,—he selected a Mr. Gotham Lillycrop. The terms of their agreement were somewhat of the drollest. Mr. Lillycrop's salary received a sensible addition every year that Mr. Grayburn lived. I was told he was a very stout, rosy, robust young fellow when he entered upon his duties as Mr. G.'s constitutional curator. I could scarcely believe it; for when I saw him he was as thin as Lord Durham, had a complexion like a Swedish turnip, complained desperately of want of appetite, and seemed worn to a shadow. In fact, his was no '*sinecure*.' Temper, time, patience, all were in perpetual requisition. Mr. Grayburn's demands were endless. Never was a man so painfully possessed of the fear of death. He succeeded in keeping every one about him in an incessant fever of anxiety. Night after night did Mr. Lillycrop sit up by the bedside of Mr. Grayburn, who would affirm it was utterly impossible he could live till morning, *only to watch his patron's slumbers*; for, among other extraordinary symptoms of Mr. Grayburn's case, was this—that, when he was at the worst, he was sure to sleep like a ploughboy! Again and again did poor Mr. Lillycrop hint that his own health was giving way, and that he feared he should be obliged to resign his post. 'I can't last much longer. If you remain with me till the close, you will find a most grateful remembrance of you in my will. Do as you please; but by deserting me you will forfeit an independence. I have left you, Mr. Lillycrop, affluence for life. Would you desert me when it is clear my very hours are numbered? God help me! I shall not be

many days longer a burden to any one! I repeat it, do as you please; but if you *do* abandon me in my extremity, you will find you have relinquished—I will not say what! And poor Mr. Lillycrop wasted away.”

The author's first and only love had married another, and left him not to be consoled: we quote the following passage, as an example of the bad taste we have condemned in a clergyman's writing:—

“I now approach a most painful part of my history. Would to God I had it not to record! years have passed away since its occurrence; and the sorrows of poor Adela have long since been hushed in the grave: yet, when the sad detail passes in review before me, my grief is as poignant as ever; and—and—there are some wounds which defy the power of Time to heal. I was in London on business relating to the affairs of Lord Llanberria, and after a long and fatiguing day, devoted to the perusal of papers and parchments, was returning through Piccadilly to a late dinner, when, as I passed Burlington House, a faint low voice murmured, ‘Mr. Barnard!—do I see Mr. Barnard?’ I involuntarily turned round, then feeling convinced I had been mistaken, quickened my pace, when the words, uttered in wilder accents, reached me—‘What! don't you know me? Arthur—Arthur Barnard! O God! he too deserts me!’ Haggard as were the features, tawdry as the dress, and wretched as the whole appearance of this deserted being seemed to be, those tones—that voice—I should have recognised it even amidst the thrill of the last trumpet.”

Such ambition of a striking and powerful style, approaching so elegantly to profanity, needs no comment. The next may be read as a variety:—

“The besetting sin of the age—Mr. Irving says it will end in 1848—from its wickedness it well deserves it—is the subjection of every object to the standard of UTILITY! *Cui bono?* is the motto of a numerous class, which has not been unaptly styled the Chrestomathic School; a sect whose principles and practice too frequently produce the most lamentable and irreparable consequences. The rules of calculation and traffic are by them constantly brought to bear upon every subject, whether the object of consideration comes within their province or not. Be it a work of art or an object of nature—be it a picture or a statue—a venerable ruin or a beautiful grove—it is the same thing to them. *Cui bono?* is still applied as the test and measure of utility. ‘Of what use is it?’ is the question uniformly asked. In other words, ‘What will it fetch if brought to the hammer?’ This is the bed of Procrustes, upon which every thing, however unassimilated to it in its nature, is tortured and sacrificed to the purposes of gain. If its stature be beyond the measure of their standard, they, like the Athenian freebooter, lop it without mercy; if within it, they stretch it to the required extent with the same savage unconcern. The pursuit that leans not to their theory is ‘nothing worth;’ like the

mathematician, who having been persuaded by a friend to read *Paradise Lost*, returned it to the lender, who was anticipating his expressions of delight, with the remark—‘it was pretty, but it proved nothing!’ If the spirit of calculation affects the imaginative arts and artists, the objects of taste and art are in no less danger from the thousand-and-one projects, which are frequently held out for the purpose of entrapping some unwary speculator, and of deforming the face of the country. I reflect with complacency on the panic of 1826, since, in consequence, some most wild and extravagant schemes have descended with hisses into the gulf of oblivion; and by their timely explosion many a venerable park and sequestered valley will now escape the intrusion and annoyance of rail-ways and canals—many a sylvan glade retain its leafy honours inviolate. We of the hills could once look with pity and self-congratulation upon the level districts threaded in all directions by canals, rail-ways, and turnpikes. Trusting in the impracticability of mountains, the antiquary and lover of the picturesque could there fancy himself secure from intrusion. But he has long since learnt to lament the fallacy of his calculations. Canals, his utter abomination, have been introduced into his most hallowed retreats. The very fastnesses of the mountain are no longer a protection from the hand of scientific daring and commercial speculation. If a channel cannot be carried along its precipitous side, a murky tunnel is driven through its marble centre. The most inaccessible districts are no longer secure, since road-making, rail-ways, and canals, have been brought to their present perfection. Science and commerce arm their ministers and their votaries against the beauties of nature and the relics of antiquity; and the most interesting features of both are too often recklessly and wantonly disfigured by their operations. What escapes the mattock of Telford, does Green destroy; and what escapes the pick-axe of Green, does M'Adam destroy. One improver regards a straight line as the line of beauty, since he discovered that it is the shortest possible distance between any two points. With him, therefore, a love for direct lines is the ruling passion. He plans a new road a few yards in length; and, in order to complete it, blows up some beetling crag, gray with time and hung with ivy! If it be crowned with some venerable ruin, so much the better. ‘Capital! excellent! the stones of both crag and castle will be at hand to make the road; and the Trust will save three pounds thirteen and ninepence in carriage and labour.’”

Most heartily do we, in spirit, concur with all the paper, “the Modern Moloch,” whence the foregoing extract is made; but we must conclude, and with only one other specimen. From “My Predecessors” we have the following:

“A noted affector of quaint and extraordinary texts was Mr. Newlight. His first sermon was from Ezra, i. 9. ‘Nine-and-twenty knives.’ He held that every word of Scripture was capable of being spiritualised, or *improved*, as was his favourite term; and he therefore ‘cultivated especially those parts of the field’ of sacred lore, which were usually passed over as barren and unproductive. This memorable discourse he divided into nine-and-twenty heads—thus making the divisions of his subject correspond to the number of knives mentioned by the sacred chronicler. He referred to the different kinds of knives to be found in holy writ—the knife which Abraham took to slay his son—the knife as sharp as a razor, which Ezekiel was com-

manded to use—the knife to be set to the throat of a man given to gluttony—the knives with which the prophets of Baal lacerated themselves at the sacrifice on Mount Carmel—and so on to the end of twenty-nine. The preacher then proceeded to shew that these twenty-nine knives, as part of the sacred furniture of the temple, were designed to represent the methods by which the elect were cut off from all dependence upon self.—Can such extravagancies tend to the everlasting welfare of man, or to the honour of the Almighty? Mr. Newlight evinced, on all occasions, the most marked contempt for human learning. He vaunted his own total want of acquaintance with the learned languages, and his admittance into holy orders without the expense, and, he might add, advantage, of a college course. His most valued brother and correspondent, William Huntington, S.S., ranked with him above all the D.D.'s and S.T.P.'s in both universities; and yet Mr. Newlight subsequently condescended to *purchase* a St. Andrew's degree! He could read God's word, he would argue, in his mother-tongue. That was sufficient to enable any man to learn the way of salvation if he were one of the elect;—if he were not, even had he the gift of tongues, it would be unavailing! With such means for commenting upon Scripture, it will not be surprising to find that Mr. Newlight's glosses were of the most extraordinary kind. That most beautiful and impressive illustration of a benignant and ever-watchful Providence over the minutest concerns of his creatures, ‘The very hairs of your head are all numbered,’ was thus tortured and mangled by Nicanor: he contended that it was meant by the Saviour to prove that the ‘*heirs of immortality*,’ the elect, were all numbered, and that consequently salvation was confined to a chosen few! Such were the commentaries and criticisms of Mr. Nicanor Newlight.”

We have scarcely any occasion to repeat our praise of the author's talents, for our extracts must have exemplified them; nor, perhaps, our censure of his entering too much into the privacies of life and personalities, for we fear that this fault also has been but too evident in our selections. It is, indeed, the sin of the age, and the bane of our literature.

Sir J. Malcolm's History of Persia.

WE are almost sorry to be brought in a third paper to an end of these characteristic and interesting extracts: but even the Persian empire must come to an end.

“The mountain of Alwund, near Hamadan, is supposed to produce some plants that are essential for finding the philosopher's stone; hence many persons in that city waste their life in the pursuit. A few years ago one of its rich inhabitants was assured by a poor man that he had made the glorious discovery: ‘But,’ said he, ‘if I, who am known to be poor, should suddenly become rich, my secret will be guessed, and I shall be seized and tortured till I reveal it. Now, if you possessed it, there could be no such danger. So I will trust you with my discovery; and if you are satisfied, after repeated experiments, that I have told the truth, you can give me a small portion of the wealth you must acquire, and I will go and end my days in devotion at the shrine of the holy Ali; for, that being under the Turkish government, I shall be safe from the danger to which my good fortune continually exposes me.’ The whole statement appeared so reasonable, that the hearer granted a ready belief. He was made acquainted with all the materials put into the

* “The fate of Gotham is memorable. I left him at Cornwood in attendance on Mr. Grayburn as usual, but indisputably the greatest invalid of the two. He continued at intervals to press his dismissal; but was invariably answered—‘Now really, Gotham, when you know my constitution so well,—when you possess such a thorough and intimate acquaintance with my peculiar malady, a proposition of this nature is cruel. My end cannot be distant. It is well worth your while to await it. Still, if your determination is inflexible, take the consequences.’ Mr. Grayburn died at last, without warning, suddenly, and alone. The expectations held out by him to his medical attendant were not falsified. He bequeathed Gotham five hundred a year, which he enjoyed exactly nine weeks!”

crucibles except one, termed 'the earth of Bâdeos': but this, his instructor assured him, was not only obtained at the mountain of Alvand, but in several other parts of Persia, and, being useful for many purposes, was to be found in most markets. He was, however, requested to send his servants to inquire into the correctness of this statement. They went, and brought back some of the earth, having purchased it at a very moderate rate. When every thing was ready, the experiment was made, and gold was produced. The merchant was rejoiced; but, to prevent deception, it was repeated, and with the same result. All doubts were removed; and he was only anxious to pay the purchase-money, and get rid of his partner. The man was contented with two thousand tomâns, and proceeded to the Turkish province of Bagdad. The merchant, after he was gone, determined to begin making more gold; but the shopkeepers, who had sold the earth of Bâdeos, were gone. He thought it possible, however, that, though that essential ingredient was not in Hamadan, it might be found, as his friend had told him, in other cities. His correspondents at Shiraz, at Teheran, and Isfahan, received letter after letter, desiring them to discover and purchase all the Khâk-e-Bâdeos they could. No person had ever heard of its name. The rage of the merchant soon led to a detection of the fraud. The cunning fellow who had duped him, had filed down thirty or forty pieces of gold into some baskets of earth, which he had dignified with a fine name, and given to some accomplices to sell. He was, however, beyond the reach of justice; and the merchant, in addition to his pecuniary loss, had to bear the ridicule of every one acquainted with the story.

"In the winter of 1800 almost every person in our mission became blind, from the glare of the snow. The recovery was certain, but tedious: so when blind myself, I listened with delight to a message from the lady of a chief in whose house I was a guest, that she knew a certain and speedy remedy, provided I would permit her servants to apply it. I expressed my readiness to do so: a large vessel full of snow was put before me, and I was desired to place my face near it; a red-hot stone was then thrown into the vessel, and the sudden dissolution of the snow caused a very great perspiration, which was increased by a cloak being pulled at the same moment over my head. This remedy (which was administered twice), though very disagreeable, proved efficacious, and my sight was completely restored."

"When the British mission, some years ago, was in Irak, they saw a few pieces of bread, covered with oil, which were laid upon a rock, as an offering to a saint; and were told that these pieces of bread might enable them to ascertain the number of the sick in the black tents that were pitched near; as this offering was the usual, and almost the only, effort made to get rid of any disease that attacked them."

"The chiefs of a tribe among the mountains between Persia and the pachalic of Bagdad, assert that they possess a power, descended through many generations, of curing the ague, a common complaint in that country, by beating the patient in a very unmerciful manner. Their success is said to be great. Those who are skilled in medicine must determine how far this rude treatment can have the effects ascribed to it."

"I visited Kerrund twice: in 1800 and 1810. The first time, the chief of that place, Hedâyet Kooli Khan, saw one of the gentlemen of the mission lying in the tent, ill

of a quartan ague: he begged I would allow him to cure him; and, being asked what was his remedy, said he would beat him with sticks till he was well. The invalid declined the experiment; at which the chief was not a little offended, and brought a number of his followers to swear that they had been recovered by his blows. When I last visited this place, Hedâyet Kooli was dead. He had left ten sons; the eldest, Mahomed Ali Khan, was chief of the tribe. I asked him if he had inherited his father's knowledge of medicine. 'My practice,' he said, 'is equally successful. I tie them up by the heels when the cold fit is on, and bastinado them most severely, scolding them at the same time, so as to produce heat and terror, instead of a cold fit.' 'And you succeed?' 'Always.' 'Have you any patients but your own followers?' 'A few: those in the neighbourhood who have any sense, come to me when they are ill of the ague.' 'Can any of your brothers cure fevers?' 'No, no!' replied he, quickly; 'that is a gift or privilege confined exclusively to the head of the family.'

"There is, perhaps, no country where the inhabitants live so much upon sweetmeats as in Persia. The finest is the guzangabeen, made of the honey of the guz, or tamarisk tree, mixed with some flour and sugar. This honey is produced by an insect or small worm, which resembles a white thread. It lies on the leaf of the tree, and appears inert. During forty days in summer the insects are brushed off the leaves every three days, and they always collect again in astonishing numbers. The guzangabeen is chiefly found in Irak. I received the above description of it from an English gentleman, who saw the insect on the tree when travelling through that province."

"On my return from Teheran in 1800, I fell into company with an astrologer, who insisted upon my taking my horoscope, and foretelling my destiny. After the usual forms and calculations, he told me, that on my voyage to India I should meet with a violent storm; and after escaping it, should be made a prisoner. I observed, it was fortunate I had no belief in his skill; otherwise I should be unhappy in looking forward to misfortunes, from which I concluded there was no escape. There I was mistaken, he said; and, to satisfy me of the manner in which misfortune was to be averted, he would tell me a story: 'When Jesus was sitting at the gate of Jerusalem, he saw a wood-cutter pass out of the city, carolling as he went along. 'How ignorant man is of his destiny!' said the Son of Mary to his disciples. 'That poor fellow, who appears now so happy, will to-day perish in the wood.' When evening came, however, the man returned, singing louder than before. The disciples looked at each other and at their master. Jesus, reading their thoughts, said, 'O ye of little faith! you doubt my knowledge; but know, that the man whom you see carried only one small loaf of bread for his dinner; and when entreated by a person in distress to relieve him, he gave him half his loaf. God was pleased with this act, and saved his life. But go, and examine his bundle of wood, and you will find there the very snake which was appointed to cause his death.' They went, and saw the snake as Jesus had told them. 'You see,' said the astrologer, 'how it is possible to avert the decrees of the stars.' I could not refuse that trifling reward to his ingenuity which I had been prepared to deny to his pretended skill."

"A poet, who came fifty miles from Shiraz to welcome me with a complimentary ode, beau-

tifully written upon ornamented paper, was told that the person he had so praised could hardly comprehend his lines, and had no taste for such compositions. 'I must tell him a story, then,' said he, 'which will shew him how unnecessary the knowledge and taste he wants is to the fulfilment of my object. Some years ago, when the Affghans had possession of Persia, a rude chief of that nation was governor of Shiraz. A poet composed a panegyric upon his wisdom, valour, and virtues. As he was taking it to the palace, he met a friend at the outer gate, who inquired where he was going. He told him his purpose. His friend asked if he was insane, to offer an ode to a barbarian, who hardly understood a word of Persian.' 'All that you say may be true,' said he; 'but I am starving, and have no means of livelihood but making verses. So I must proceed.' He went and stood before the governor with the ode in his hand. 'Who is that fellow?' exclaimed the Affghan; 'and what is that paper which he holds?' 'I am a poet,' replied the man; 'and the paper contains some poetry.' 'What is the use of poetry?' said the chief. 'To render great men, like you, immortal,' he replied, making a very profound bow. 'Let us hear some of it.' The poet began to read his composition aloud; but he had not finished the second stanza, when he was interrupted. 'Enough!' exclaimed the governor; 'I understand it all. Give the poor man some money; that is what he wants.' The poet received his present, and retired quite delighted. He met his friend at the door, who accosted him again. 'You are, no doubt, now convinced of the folly of carrying odes to a man who does not understand a word of them.' 'Not understand!' he replied; 'you are quite mistaken. He has, beyond all men I ever met, the quickest apprehension of a poet's meaning.'

"The art of printing is unknown in Persia; beautiful writing, therefore, is considered a high accomplishment. It is carefully taught in the schools, and those who excel in it are almost classed with literary men. They are employed to copy books; and some have attained to such eminence in this art, that a few lines by one of these celebrated penmen are often sold for a considerable sum."

"The Persians have always been famed for their hospitality to strangers; but the chiefs of the warlike tribes are beyond all others remarkable for it. The khan of the tribe of Karagozooloo had prepared for the British mission his own house in the town, and removed to a country-seat at some distance. To this he one day invited the whole party; and, at his particular desire, every person, from the highest to the lowest, went. The train of the English envoy was increased by that of a Persian ambassador and his suite, who were proceeding to India. The cavalcade reached the khan's abode at an early hour, and stayed till near midnight. Nothing could exceed the magnificence of the entertainment. They were not, however, aware, till they had taken leave, of the extent of the attention they had been treated with. When they mounted to return home, they were informed, that while they had been at dinner, a sudden and severe frost having come on, every horse and mule of the party, amounting to nearly two hundred, had been rough shod, to prevent any accident occurring to the guests of the khan."

"I have known seven pounds given for four lines written by Derveish Muejed, a celebrated penman, who has been dead some time, and whose beautiful specimens of writing are now scarce."

The following is a singular custom at the weddings among the tribes:—

"On the morning that the bride is to be conveyed to the house or tent of the bridegroom, her friends assemble. If she is the daughter of a chief or of an elder, she is accompanied by all the horsemen whose attendance he can command: the party proceed, accompanied by dancers and music; and if the place of their destination is near, they take a circuitous road to it, that this part of the ceremony may be prolonged. When they appear at a distance, the bridegroom mounts his horse, and, attended by his friends, proceeds to meet the cavalcade. He holds an apple or an orange in his hand, and when sufficiently near to be certain of his aim, he throws it at her with considerable force, it being deemed fortunate to do so. All is silent attention from the time that the parties come near each other till this act, which is the signal for general uproar and confusion. The bridegroom wheels his horse round, and rides at full speed to his place of abode. Every horseman of the bride's party endeavours to seize him; and he that succeeds, has his horse, saddle, and clothes, as a reward. This, however, is only the case where the party is wealthy: among the poorer a few pieces of silver are paid as a fine to the successful pursuer. The bridegroom, however, is not often taken; for, as it is a point of honour to escape, he rides the fleetest horse of his tribe, and his friends endeavour by every means to favour his retreat."

We find we must yet defer till our next a sketch of how the King of Persia passes his time, with which we will really conclude our extracts from this amusing work.

Burckhardt's Travels in Arabia.

WE had concluded all we intended to do by way of illustrating this volume, though greatly tempted to accompany the author to Medina and Yembo, when our notice was attracted by the following singular statement, No. II. of the Appendix, which speaks of customs so extraordinary that we cannot refuse it a place.

"The route of the Kabsy pilgrims lies wholly along the mountains of the Hedjaz and Yemen, having the Eastern plain on one side, and Tehama, or the sea-coast, on the other. The road often leads through difficult passes on the very summit of the mountains. Water abounds in wells, springs, and rivulets: the entire tract of country is well peopled, although not every where cultivated, enclosed fields and trees being only found in the vicinity of water. There is a village at every station of the Hadj: most of these villages are built of stone, and inhabited by Arab tribes, originally of these mountains, and now spread over the adjoining plains. Some are very considerable tribes, such as Zohran, Ghamed, Shomran, Asyr, and Abyda, of whom each can muster from six to eight thousand firelocks: their principal strength consists in matchlocks. Horses are but few in these mountains; yet the Kahtan, Refeydha, and Abyda tribes, who likewise spread over the plain, possess the good Koheyl breed. This country produces not only enough for the inhabitants, but enables them to export great quantities of coffee-beans, corn, beans, raisins, almonds, dried apricots, &c."

Most of the Arab tribes south of Zohran belong to the sect of Zeyd: they live in villages, and are chiefly what the Arabs call Hadhar, or settlers, not Bedouins; but as they keep large herds of cattle, they descend, in time of rain, into the Eastern plain, which affords rich pasturage for cows, camels, and sheep."

Before the Wahabys taught them the true Mohammedan doctrines, they knew nothing more of their religion than the creed, *La ilaha illa Allah, wa Mohammed rasoul Allah* (there is no God but God, and Mohammed is the prophet of God); nor did they ever perform the prescribed rites. The El Merekede, a branch of the great Asyr tribe, indulged in an ancient custom of their forefathers, by assigning to the stranger who alighted at their tents or houses, some female of the family to be his companion during the night, most commonly the host's own wife; but to this barbarous system of hospitality young virgins were never sacrificed. If the stranger rendered himself agreeable to his fair partner, he was treated next morning with the utmost attention by his host, and furnished, on parting, with provisions sufficient for the remainder of his journey: but if, unfortunately, he did not please the lady, his cloak was found next day to want a piece, cut off by her as a signal of contempt. This circumstance being known, the unlucky traveller was driven away with disgrace by all the women and children of the village or encampment. It was not without much difficulty that the Wahabys forced them to renounce this custom; and as there was a scarcity of rain for two years after, the Merekedes regarded this misfortune as a punishment for having abandoned the laudable rites of hospitality practised during so many centuries by their ancestors. That this extraordinary custom prevailed in the Merekede tribe, I had often heard during my travels among the Syrian Bedouins, but could not readily believe a report so inconsistent with our established notions of the respect in which female honour is held by the Arabs; but I can no longer entertain a doubt on the subject, having received, both at Mekka and Tayf, from various persons who had actually witnessed the fact, most unequivocal evidence in confirmation of the statement. Before the Wahaby conquest, it was a custom among the Asyr Arabs, to take their marriageable daughters, attired in their best clothes, to the public market, and there, walking before them, to cry out, *Men yashkery el aadara*? "Who will buy the virgin?" The match, sometimes previously settled, was always concluded in the market-place; and no girl was permitted to marry in any other manner."

Constable's Miscellany, Vols. XXXI. XXXII.

History of the Rebellions in Scotland, under the Marquess of Montrose and others, from 1638 till 1686. By Robert Chambers, author of the "History of the Rebellion in 1745." Edinburgh, Constable and Co.; London, Hurst, Chance, and Co.

WE know not how these very interesting volumes have lain so long neglected: if acknowledgment will amend the fault, we frankly make it, and do advise our readers to be less dilatory than we have been,—for amply do these pages repay the perusal. They contain a most animated picture of those strange times when political and religious fanaticism went hand in hand, and when it is difficult to say whether Covenanters or Royalist were the greater enthusiasts. Mr. Chambers has preserved throughout a strict impartiality of detail; but we think all his readers will unite in his sympathy for the brave but most ill-fated Montrose, whose whole history is very beautifully told. As the general outline of events is well known, we shall endeavour rather to make our review a gleanings of the many curious anecdotes here collected.

It is singular how very zealous the fair sex seem to have been when the new Liturgy was

attempted to be introduced. "The most outrageous were observed to be women, and these chiefly serving-maids, who were then in the custom of bringing movable seats, and keeping them for their masters and mistresses. Some cried, 'Wo, wo! for this doleful day that they are bringing in popery among us!' Others, less delicate, called out to the dean, in allusion to some unrecorded circumstance of his life,—'Ill-hanged thief! gif at that time when thou wastest to court, thou hadst been well-hanged as thou wast ill-hanged, thou hadst not been here, to be a pest to God's church this day!' And he was also saluted with the title of 'a devil's gett (child), and one of a witch's breeding.' After a great deal of abusive language had been expended, an old woman, Janet Geddes by name, hearing the bishop call upon the dean to proceed with the collect of the day, exclaimed, in a voice loud enough to be heard above the hubbub,—'Deil coo! the wame o' ye!' and aimed at the head of the dean the small movable stool on which she sat. A shower of clasp Bibles followed, to the amount, says one chronicler, of 'whole pock-fulls.' Providentially, Mrs. Geddes's 'rickest of remembrance,' as a merry annalist of the period terms it, did not take effect, the dean having the wisdom 'to jouk,' that is, to crouch, before it reached him, so that it passed over his head.

"A circumstance took place at this time within the church, which is so characteristic, that it can upon no account be omitted. An old woman, who had endeavoured to get out with the rest of the non-conformists, but without succeeding, took up her station in a remote corner of the cathedral, where she began to read her Bible, and endeavoured to stop her ears against the polluting sounds of the Service Book. As she was thus engaged, a young man, who sat behind her, happened to pronounce the word *amen* so audibly at the close of one of the prayers, as to disturb the strain of her devotions. Quite enraged at the near presence of what she esteemed so vile an abomination, she started up from her seat, gave the offender a severe blow with both her hands on the face, and thundered into his astounded ears, 'Fausse thief, is there nae other part o' the kirk where ye may say your mass, but ye maun say't at my lag (ear)!'"

"The Archbishop of Glasgow, at the convocation of his synod, in the end of August, caused one of his clergy to preach in favour of the Service Book, with the view of mollifying the people; but it was found that in that city the new doctrines had made no better progress than in Edinburgh. The preacher, Mr. William Annon, on his leaving the church was assailed with the most violent reproaches by a numerous band of devout females; and in the evening he met with a still more unequivocal manifestation of popular disapprobation. About nine o'clock, after supper, on his stepping out into the street with three or four ministers, with the intention of visiting the archbishop, he was no sooner observed, than he was surrounded by a multitude of the same viragoes, who proceeded, in the first place, to batter him with their fists, with sticks, and with pieces of peat; then rent off his cloak, hat, and ruff, and finally gave him what may be called in vulgar phrase a sound beating. The poor man roared lustily, which soon brought a number of the neighbours to their windows with lights; and the street being thus illuminated, the fair assaulters quitted their victim, for fear of their faces being recognised. No inquiry could be made into this riot, be-

case it was feared that the better orders of the people were chiefly concerned in it. * * *

"The mob of Edinburgh one day observing each pass down their principal street, which they supposed to contain the Viscount Aboyne, and conceiving that that young nobleman took this method of openly expressing his contempt for them, attacked the vehicle, stopped, overturned, and finally broke it. It happened, instead of the person they expected, to contain the Earl of Traquair, with some other officers of state. However, as they bore no good will to that nobleman, on account of his present open adherence to the king, they proceeded to bestow the abuse upon him which they had intended for another. He was violently hauled forth from the coach, beat almost to death by the fists of the 'devout women,' and, finally, as a mark of condign ignominy, they broke the white wand of office which was carried before him by his servant. On getting himself extricated from their hands, he applied to the magistrates of the city for redress; but the only solatium he got from that quarter was a present of a new white stick; which occasioned the cavalier wits to remark, that they seemed to value the affront put upon majesty in Traquair's person at only sixpence. * * *

"Amidst the multitude which flocked down from the city to Leith, there was an individual whose appearance excited unparalleled surprise, and perhaps scarcely less unparalleled ardour.—this was the dowager Marchioness of Hamilton, mother of the commander of the fleet, a stern old dame, who derived her predilections in favour of Presbytery from no less pure a source than her father, the celebrated Earl of Glencairn, who had been one of the chief Lords of the Congregation. Mounted on horseback, and with two pistols at her saddle-bow, this venerable lady rode down to Leith, like another Elizabeth at Tilbury Port, declaring to the crowd around her, that she would be the first to fire at her son, if he dared to set an inimical foot upon his native country."

We beg leave to say we quote as

"To all an example, to no one a pattern."

Our next selection will be from the many singular facts illustrative of Montrose's campaigns.

Military Directions.—"To a great body of Highlanders, who had no weapons at all, he gave these orders: 'Gentlemen,' said he, 'it is true you have no arms; your enemies, however, to all appearance, have plenty. My advice therefore is, that as there happens to be a great abundance of stones upon this moor, every man should provide himself, in the first place, with as stout a one as he can well manage, rush up to the first Covenanter he meets, beat out his brains, take his sword, and then, I believe, he will be at no loss how to proceed.' * * * Their victory was complete."

Speaking of the Irish who accompanied him:—"An anecdote has been preserved regarding one of these gallant fellows, which is at once valuable as shewing their spirit on the present occasion, and curious as a proof that the Irish national character was then precisely the same as at the present day. A cannon ball having shot off the leg of this brave man, so as only to leave it attached by a small piece of flesh or skin, and he perceiving that his comrades were somewhat affected at the sight, instead of

showing the slightest symptom of vexation or pain himself, he cried out—'Never mind, my lads; if I can serve no more on foot, my lord marquis must just put me among the horse;' and deliberately pulling out a clasp-knife, he cut the limb fairly off, and handed it to a comrade 'for burial with the rest of the dead.'"

The march to Inverlochry is thus described:

"The tracks he pointed out had hitherto been traversed almost exclusively by the wild deer, or by the scarcely less wild adventurers who hunted them. The heights which it skirted or overpassed were as desert and lonely as the peaks of primeval chaos. The vast convulsed face of the country was as white and still as death, or only darkened in narrow black streaks by the irregular and far-extending lines of the marching soldiery. It must have been a scene of the greatest sublimity, to see these lonely human beings, so diminutive when compared to the wildernesses around them, hurrying and struggling on through hill and vale, and bank and pass; their arms either glancing fitfully and flickeringly under the low winter sun, or their persons obscured to a visionary and uncertain semblance by the snow-storm or the twilight; and all the while, the bloody purpose which animated them, and which gleamed in every face and eye, contrasting so strangely, in its transitory and unimportant nature, with the majestic and eternal solemnity of the mighty scene around them."

Some extraordinary personal feats are recorded.

"It happened that Deans or George Mac-Alaster, the brave man who had commenced the battle, was also the last to give up the chase. He was toiling up a steep hill-side, in pursuit of two recreant Campbells, when they, observing that he had left his fellows far behind, took heart of grace, and resolved to rush back upon and despatch him. His situation being thus all at once changed from that of a triumphant pursuer to the condition of an over-matched antagonist, he seemed to be in such danger, that a companion who was straining a good way behind him, could not help exclaiming, as he rushed forward to his rescue, 'Oh! the brave man is lost! the brave man is lost!' George, however, who had already killed no fewer than twenty-one of the enemy in active conflict, with his own hand, was not destined to fall a sacrifice at last to a pair of craven fugitives. Long before his friend came up, he had killed his opponents with two successive blows of his sword; though such was his excessive fatigue, or such the anxiety of his mind on the occasion, that he dropped down in a swoon almost at the same moment with the last of his antagonists. When the chase was over, and all the men had returned to the camp, it became necessary that they should look about for the means of solacing themselves with the breakfast for which they might then be supposed to have acquired so good an appetite. Having accordingly got a certain quantity of food scraped together, and being provided with a few pots from the neighbouring hamlet, they were all busily engaged in cookery, a small party seated in expectation around every separate fire, when a man came up, and, addressing one of these parties, preferred a request that they would resign their pot in favour of Major-General Alaster Mac-Col, who, it appeared, had somehow failed to procure one of these indispensable articles, though he was quite as anxious for his breakfast as any individual in the army. The men naturally demurred at a request which threat-

ened them with the loss of their much-wished-for meal; yet, as they entertained the warmest respect for Mac-Col, and were afraid, moreover, to disoblige a man so high in command, they were on the point of yielding up their pot. There was, however, one person in the party who had the hardihood to oppose so mean a concession. This was a man of the name of Robertson, of the family of Calvine in Athole, and by trade a blacksmith; a man of singularly athletic powers, a first-rate swordman, and one who could use his weapons with prodigious effect; who, it also afterwards appeared, carried, under a boisterous external manner, a soul of the greatest and most genuine modesty. Robertson exclaimed loudly against the proposal to surrender the pot, and even vowed that he would keep it in spite of both his companions and Mac-Col. 'Tell the general,' he cried, addressing the messenger, 'that it was I who prevented you from getting the pot. What!' he added, turning in jest to his companions, 'if he killed twenty men to-day, I killed nineteen. If two more had come in my way, I believe I would have beat him. As it is, I think I am very nearly as good as he.'

"The reader will scarcely fail to be surprised when he is thus informed that three individual soldiers in Montrose's army slew sixty men in battle with their own hands. But when the prodigious strength and spirit of these men is seriously considered, and in contrast with the irresolution of the Campbells, his wonder will in a great measure cease. To convince him of the credibility of the fact, it may be mentioned, as a well-remembered peculiarity of Mac-Col in particular, that he never required to strike an enemy twice. He always fought with an immense two-handed sword; and such were the skill and strength with which he wielded his weapon, that one blow was quite sufficient to bring down any ordinary man. Upon the principle of '*exceptio firmat regulam*,' it may even be recorded, that there is one instance known by Highland tradition, of his favouring an enemy with a second stroke, and that was at this very battle, in the case of a peculiarly strong Macgregor, who had happened to espouse the Argyle interest. If one stroke, however, failed in this particular case, tradition has been careful to observe, that the second proved far more than sufficient."

"Mac-Col had been originally induced to command the Marquis of Antrim's men in Scotland, mainly by a desire of avenging by their means certain injuries which his family and himself had sustained at the hands of the Campbells. The feeling of hostility which he bore to that tribe had been rather increased than diminished since his arrival in Scotland; for, to mark their indignation at his conduct under Montrose, a party of them had seized his nurse, at her house in the Western Islands, and, with peculiar brutality, cut off one of her breasts, telling her that such was no more than she deserved, for having suckled so infamous a traitor. By their means, moreover, his father, Col Keitoch, and two junior brothers, were, at this very moment on their way to Edinburgh from the Hebrides, to be delivered up to the mercy of the Scottish Estates. It seems to have been under the influence of an intense feeling of revenge, consequent upon these atrocities, that he charged with such inconsiderate enthusiasm, and fought with such deadly effect, on the day of Inverlochry; and it will be seen from a deed which he committed after the heat of battle was passed, and which remains to be

* * * It was reported at the time, and the report is not improbable, that she had provided herself with a couple of gold bullets for this purpose, perhaps thinking that the premier nobleman of Scotland, and the representative, pro tempore, of majesty, was entitled to be shot with a better metal than ordinary lead."

recorded, that this dreadful passion was not stilled in his bosom by all the carnage he had that day achieved and witnessed. Soon after the close of the fight, a party of men who had pursued the chase for a considerable distance, brought up before their major-general a prisoner of no less distinction than Campbell of Auchinbreck, the experienced old soldier whom Argyle had called over from Ireland to take a part in the war, and to whom he had that day committed the command of his men, when he himself retired on board the galley. The unfortunate gentleman, on being brought into the presence of MacCol, thought proper to address him in a soothing strain, and mentioned in particular the degree of relationship in which they stood in regard to each other, hoping, it would appear, by leading the conversation into that channel, always so agreeable to a Highlander, to divert his captor's thoughts from any recollection of their former differences, and, as a matter of course, to procure the better treatment from him in his present unhappy circumstances. MacCol, who at once saw his drift, and resolved not to be carried away by it, replied to Auchinbreck's genealogical references, that, if they had time, he doubted not they might find a great deal to say upon that subject, and to some purpose too. 'In the meantime,' he added, 'as I know you to be a gentleman, both by family and profession—*Tigharm* [laid or proprietor] of Auchinbreck in Scotland, and of Dunlir in Ireland—I mean to confer a compliment upon you.' Auchinbreck uttered a profusion of acknowledgements, and eagerly inquired in what that compliment was to consist. 'Co dhìu's far lat d'chroche no n'chur dhìot?' thundered out MacCol. 'Which of the two will you prefer—to be hanged, or to have your head cut off?' 'Alas!' answered the unfortunate Campbell, 'Dà dhìu, gun a'n noen.' 'Two bads, without one choice;—a saying which has continued ever since proverbial in the Highlands. The words were scarcely uttered, when Alaster MacCol, with one sweep of his huge sword, sheared off the whole of his prisoner's head above the ears, and Auchinbreck lay a lifeless corpse upon the ground. It is invariably added by tradition, that Auchinbreck had, by his previous conduct towards MacCol, justified this violent and dreadful act of revenge, so far as such an act may be esteemed capable of justification."

The narrative of Montrose's death, however touchingly depicted, is beyond our limits. We must choose one from among his gallant companions in arms:—

"When brought to the scaffold, young Murray, malignant as he was, gained a higher degree of esteem among the spectators by his intrepid conduct, than Tulliebardine had done by the Roman virtue which he had just exerted in their own behalf. There was something in his last speech which even touched the hearts of that rude and stern multitude. 'I hope, my countrymen!' he exclaimed, 'you will reckon that the house of Tulliebardine, and the whole family of Murray, have this day acquired a new and no small addition of honour, inasmuch as a young man, descended of that ancient race, has, though innocent and in the flower of his age, with the greatest readiness and cheerfulness, delivered up his life for his king, the father of his people, and the most munificent patron and benefactor of that family from which he is sprung. Let not my honoured mother, my dearest sisters, my kindred, nor my friends, lament the shortness of my life, seeing that it is so abundantly recom-

pensed by the honour of my death. Pray for my soul, and God be with you!'"

The following letter of Oliver Cromwell to his wife must have a place:—

"Dunbar, 4th September, 1650.

"My Dearest,—I have not leisure to write much, but I could chide thee, that in many of thy letters thou writest to me, that I should not be unmindful of thee and my little ones. Truly, if I love you not too well, I think I err not on the other hand much. Thou art dearer to me than any creature; let that suffice. The Lord hath shewed us an exceeding mercy. Who can tell how great it is? My weak faith hath been upheld. I have been in my inward man miraculously supported. I assure thee I grow an old man, and feel infirmities of age marvellously stealing upon me. Would my corruptions did as fast decrease! Pray on my behalf in the latter respect. The particulars of our late success, Henry Vane or Gil. Pickering will impart to thee. My love to all our dear friends.—Thine, O. CROMWELL."

We must also mention a curious item in the accounts of the English commissioners, that during the short stay of the Scottish army they consumed 80,000*l.* worth of cabbage.

We most cordially recommend not only these volumes, but the whole Miscellany of which they form an interesting part. Prettily got up, neatly printed, and very moderate in price, we know of no literary collection more worthy of public patronage.

Liber Scholasticus; or, an Account of the Fellowships, Scholarships, and Exhibitions, at the Universities of Oxford and Cambridge; by whom founded, and whether open to Natives of England and Wales, or restricted to particular Places and Persons; also of such Colleges, Public Schools, Endowed Grammar Schools, Chartered Companies of the City of London, Corporate Bodies, Trustees, &c., as have University Advantages attached to them, or in their Patronage. With appropriate Indexes and References. London, 1829. Rivingtons. 12mo, pp. 500.

We have copied this title-page at full length, because it helps us to indicate the design of one of the most useful works of its class, to which the industry of our time has been turned. A guide-book, of so much interest to parents looking forward to the successful education of their children, cannot be put into their hands; and, with regard to local rights and endowments, it is of the utmost value. The thousand corruptions* which the lapse of years has introduced into many beneficial provisions for the instruction of designated parties (thence well devised to spread through a people) are beginning to be exposed, and we trust removed; but, not to look at this part of the subject at all, the utility of this publication is great, simply in pointing out where privileges exist, and the means of acquiring them. Every county has its bequests and endowments; and who is there in the middle ranks of life who would not desire to know, that by placing his son at A. instead of B., he affords him a good chance of that sort of education, which not only enlarges the mind, but offers the noblest objects of ambition as prizes to the emulous and enlightened? The "*Liber*" sets out with the University of Oxford, its Colleges, and their

* All the deviations from original intents are not, however, corrupt. Heirs, and the representatives of heirs, fall before the aithe of death; corporations, religious institutions, and other seemingly everlasting bodies, cease to exist; and even the objects specified become impossible. In all such cases there ought to be a rational adjustment agreeable to the spirit of the age, and not a perversion.

several scholarships; Cambridge follows in the same way; and we have next similar details respecting public schools, such as Eton, Westminster, &c. The succeeding division is worthy of much attention: it states the endowed grammar-schools, arranged by counties, which have University advantages attached to them; and this is followed by an equally desirable description of the fellowships, exhibitions, &c. in the patronage of London and other corporate bodies, trustees, &c. throughout the kingdom. An ample index concludes the whole, and renders the work, for reference, still more valuable. Altogether, it supplies an important desideratum in our literary and scholastic records; and we trust to see many future editions of it, improved, enlarged, more explanatory, and no less judiciously compiled.

SIGHTS OF BOOKS.

The Flowers of Anecdote, Wit, Humour, Gaiety, and Genius. With Etchings by T. Landseer. London, 1829. Tilt.

A COLLECTION from hundreds of publications, so as to make a very fair modern Joe Miller, though with more of anecdote and story, and, of course, less of wit, than its immortal prototype. It is, however, taken altogether, one of the best things of its class with which we have met,—various, brief, entertaining, and unsoiled by any taint of ribaldry. We cordially recommend it to the lovers of jokes at the same time piquant and inoffensive. It is ornamented by some smart etchings by T. Landseer.

NIEBUHR, the well-known historian, has lately brought out the first volume of his historical and philological works, which, as a collection of most valuable detached pieces, chiefly on classical literature, will, no doubt, be a welcome present to European scholars. The lovers of the curious and paradoxical will find in it a sufficient portion of both; but few will, perhaps, agree with the author, that Plato was not a good citizen, and that Xenophon was a radical (*ein grundscholechter bürger*). There are, of general interest, in this volume: 1. An excellent biography of his father, Carsten Niebuhr, the oriental traveller. 2. An introduction to his lectures on Roman history. 3. General view of Roman historiography, together with the character of the Roman people and state. 4. The history of the rise and decline of the ancient city of Rome, and the restoration of the modern city. 5. The earliest state and condition of the streets in Rome.

ORIGINAL CORRESPONDENCE.

GEOLOGY: FRANCE.

To the Editor, &c.

SIR,—In turning over some numbers of the *Literary Gazette* for the year 1827, I met, under the date of August 8th of that year, a review of the Geology, &c. of the Central Parts of France. It states, that "the central provinces of that kingdom were known to have been the theatre of very extensive volcanic agency at some distant era, yet comparatively recent with regard to the formation even of the upper series, which constitutes the present crust of the earth." It also states, "that as yet those matters have only been partially noticed, in different unconnected publications, either by French or by English geologists."

Now, sir, with respect to the first quotation from Mr. Scrope, it is known that there is extant a document which proves the date of great volcanic agency in the fifth century. This document consists of a letter from Sidonius Apollinaris, who was Bishop of Cler-

mont in Auvergne, sometime in the fifth century (for he was born in 430, and died in 487), to Mamertus, Bishop of Vienne in Dauphiné, requesting from him a copy of the form of rogations used by the latter on the irruption of the northern hordes, who entered France by that route, to avert the evils of that event; "for a more dreadful calamity had befallen parts of his diocese, from the breaking out of a creeping fire, which was consuming the surface of a considerable district in those parts, particularly in Velay and in Vivarais." This letter is preserved in one of the public libraries at Rome; but the circumstance itself is ascertained by Dupin, in his Ecclesiastical History of the Fifth Century. It is curious that this is the only record of so important and so recent an event in the volcanic history of Europe.

With respect to the second point, there is in existence, in the library of a gentleman in this county (Down, Ireland), a folio work, with very fine engravings, brought over by the Earl of Bristol when Bishop of Derry, *sur les Volcans éteints du Vivarais*, by a M. Faujas de St. Fond; which treats very extensively upon that subject—containing views and sections of a great variety of volcanic remains, as well as of several ranges of basaltic columns. This copy is, I should suppose, the only one in Great Britain or Ireland. As it is so scarce, then, it is not surprising that it should have escaped Mr. Scrope's notice.

Being in possession of these facts, I thought it but proper to communicate them through the medium of the *Literary Gazette*, which has afforded me so much information and amusement. I remain, sir, &c. C. D.—s.

M. Faujas de St. Fond is mentioned in the *Bacon de Grimm's* Memoirs, as a scientific man, and having written an excellent Natural History of the Mountains of Vivarais.*

ARTS AND SCIENCES.

ROYAL INSTITUTION.

Friday Evening, Feb. 6.

MR. B. R. GREEN "on the Study of Ancient Coins in connexion with History."

The lecturer, in his exordium, pointed out some of the reasons which he conceived had retarded the cultivation of this study; these he stated to be—the difficulty of obtaining coins, the engravings in the early medallic works being calculated to misguide the student, unnecessary fear of pedantry, and the deficiency of works in which the system has been methodised. After enumerating a few of the advantages to be derived from a cultivation of numismatics, and its sources of amusement, he exhibited the gradual progress of the art, by a representation of the early coins on a diagram board: he then pointed out the importance of chronology in the study of history, and the great assistance afforded by historical charts. The lecturer concluded by directing the attention of his auditors to the coins of the Greek kings, comprehending those of Macedon, Sicily, Asia Minor, Egypt, Syria, Parthia, &c. Mr. Green retired amidst considerable approbation.

On the library-table for the evening were the cosmopheres and cosmographically mounted plates of Major Muller. The inventor was present, and explained the facility with which problems can be resolved by these globes: he also pointed out the number of questions they were capable of answering, beyond those to

which the globe mounted in its ordinary manner is applicable.

The exceedingly delicate galvanometer constructed by M. Nobili was also upon the table. Several hundred turns of the multiplying wire are, in this instrument, made to act at one time upon the needles, so that the weakest current of electricity passing through them is at once rendered evident. It was with this instrument that M. Nobili was able to demonstrate the current of electricity passing between the nerve and muscle of a frog. Those who examined it on the table could also discern another great proof of its delicacy, in the deflection of the needles by the silver multiplying wire alone. It is uncertain whether this effect, first discovered by M. Nobili, is due to the possession of magnetic power by the silver itself, or to a minute quantity of iron in it or upon its surface. Several other interesting subjects and presents were upon the table.

SOCIETY OF ARTS—SECOND MEETING—NEW SERIES.

ON Tuesday the second meeting of the new series was held; Sir P. Duckett, Bart. V.P., in the chair. The subject of this evening's illustration was the manufacture of fayence, porcelain, and the finer kinds of ornamental and table earthenware.

The secretary, Mr. Aikin, commenced his discourse by stating that the ancient Greeks and Romans appear to have been unacquainted with vitreous glazes for pottery; and that the invention of such glazes, whether opaque or transparent, seems to have originated in China. The invasion and conquest of this empire by Zenghis Khan, in 1212, was probably the event that made known to the rest of Asia, and to Europe, the art of glazing earthenware. Lacked tiles were employed in the internal decoration of some of the apartments of the Alhambra, built by one of the Moorish sovereigns of Granada, in 1280; and, nearly about the same time, in the external decorations of the tomb of Sultan Mohamed Khoda-Bendeh, at Sultanieh, in Persia. In the fifteenth century, the same species of ornament was employed in the construction of the painted mosque in the now ruined city of Gour in India; specimens of which, from the East India Museum, were laid before the meeting.

The Secretary then proceeded to the subject of fayence, which he defined to be a body of common earthenware, covered by an opaque vitreous glaze, and ornamented by designs in enamel colours. He gave an historical sketch of this art, as practised in Italy from the time of Lucadella Robbia, at the end of the fourteenth century; and exhibited an extremely fine series of plates of fayence, containing designs from Raffaello, from the collection R. H. Solly, Esq.; and two interesting specimens, the one of painted, and the other of embossed fayence, belonging to F. Winders, Esq. He then traced the progress of this art to the Netherlands, where it assumed the name of delft-ware; and from which country it passed into England, about two hundred years ago, in consequence of a small colony of Dutch potters having settled at Lambeth. Within the last fifty years, however, the potters, at this latter place, have substituted the manufacture of stone-ware for delft, being beat out of the market by the far superior earthenware, for table use, now made in Staffordshire. The process of the manufacture of delft-ware, as carried on by Mr. Wiaker, the only Lambeth potter at present engaged in it, was described and illustrated by specimens.

The Secretary next entered on the subject of porcelain. He discussed the opinion first professed by Joseph Scaliger, whether the Murine cups, which were first seen at Rome in the triumph of Pompey over Asia and Pontus, were Chinese porcelain. He then noticed the importation of porcelain from China by the Portuguese, in the latter half of the sixteenth century—described the process of the manufacture as carried on in China, from the memoir of the Père d'Entrecolles, and other authorities; and illustrated this part of the subject by the exhibition of various splendid and curious specimens, furnished by H. R. H. the Duke of Sussex, President of the Society—by D. Pollock, Esq., one of the Vice-presidents,—and by C. Copland, R. C. Sidney, M. H. Solly, and W. Brockedon, Esqrs. He then treated of the porcelains in imitation of the oriental ones made at Dresden, at Paris, at Berlin, and in England; and exhibited characteristic specimens of each, furnished by the gentlemen above mentioned, by J. Yatea, Esq., A. Barry, Esq., Mr. Lemann, and J. Morrison, Esq.; by Messrs. Pellatt and Co., More and Co., and Davenport and Co. He also shewed several very fine specimens of transparencies executed in porcelain biscuit, sent by Mr. Brady.

The ornamental and table earthenware of Staffordshire, and other parts of England, were last treated of. The Secretary began by a review of the immense improvements made in this art by the late Mr. Wedgwood, and illustrated them by the exhibition of specimens furnished by J. Wedgwood, Esq., and by a perfect copy of the Portland Vase, executed in black and white by Mr. Wedgwood, now in the collection of Mr. Pellatt. He then gave a summary detail of the various processes of the manufacture; and illustrated the several varieties by a very fine and instructive series, sent by Messrs. Davenport and by Mr. Pellatt.

At the usual meeting of the Society on Wednesday evening, the minutes of a former meeting—discontinuing the use of the King's Theatre for the annual distribution of prizes, and of returning to the Society's house—were confirmed.

COLLEGE OF PHYSICIANS.

ON Monday evening, the first meeting or conversazione for the season was held in the spacious hall of the College in Pall Mall East. In the absence of Sir Henry Hallford, Bart., the president, the chair was filled by Dr. Maton.

Two papers were read by Dr. Macmichael; one of the late Dr. Baillie, containing some additional observations of that eminent physician upon a peculiar form of palsy; the other was the Report, drawn up by Dr. Gregory, of the experience of the Small-Pox Hospital for the last year. Notwithstanding the number of cases of small-pox admitted into that hospital during the past year, and some reported cases of failure of vaccination, it was very gratifying to hear that not one of these cases of failure could, in any instance, be traced to the national vaccine establishments; it is, therefore, to be presumed, that the apparent want of protection was caused, in many cases, by some imperfection of the mode in which vaccination had been performed.

After Dr. Macmichael had left the rostrum, the refreshment-rooms were thrown open. The company, which comprised almost every person of eminence connected with the medical and scientific circles now in town, did not separate till past eleven o'clock.

* Though our literary interest in the subject illustrated in this letter is some months in the wane, it throws so much light upon a remarkable phenomenon, that we cannot resist the temptation to publish it, and shall (as we now) be glad to see it in the hands of the writer whenever convenient.

FRENCH SCIENTIFIC EXPEDITION IN EGYPT.

ANOTHER letter from M. Lenormand, dated from the Nile, near Syout, November 8, 1828, has just been received in Paris. M. Lenormand announces that he has prepared a full description of the grottos of Beni-Hassan; and that on examining them, he was much struck with the painting, which appears to him to have been executed in the ninth century, before our era, at which time the art of painting in Egypt had arrived at about the same degree of power as painting in France in the middle age, just before the time of John Cousin. Whilst the painters and draftsmen attached to the expedition were busy in the grottos, M. Lenormand made several excursions in the vicinity. After a few days fruitlessly employed, he discovered a large ravine, which appears to have afforded him ample scope for observation. He says, "A number of little rooms were cut in its sides. My heart began to beat at seeing several doors architecturally decorated. I first entered a tomb, the paintings on which were unfortunately effaced; and then a suite of apartments, on the door of which I recognised Alexander's cartouche, but I did not at first understand its destination; at last I reached a façade, composed of eight enormous pillars, on two lines. The large religious bas-reliefs which I saw upon the wall, plainly indicated that it was a subterranean temple, dedicated by King Maudonée, one of the ancestors of Sesostris, to Bubastis, the goddess of cats. Bubastis was to the Greeks the same as Diana; and the place adjoining the temple is called in the itineraries the grottos of Diana. What is more, the Egyptian name of this place, which is found in the inscriptions of the temple, was Abennu; whence it follows, that the modern name of Beni-Hassan, in spite of its Arabian construction, is, like almost all those of Egypt, nothing but an ancient Egyptian name corrupted. I understood next day, from the calmacan of Beni-Hassan, that many mummies of cats were found in the environs; and this was an additional motive for me to put myself in activity. To my great astonishment, the calmacan first conducted me into the midst of the sandy plain which separates the Nile from the mountain; and, instead of a sort of museum, where I thought I should find the cats properly classified, shewed me a large hole, shaped like a funnel, and the bones of the cats were to be taken from the earth by raking it with the hands. We then directed our steps towards the mountain, and though we did not go the same way as on the preceding evening, I discovered that the route led to the temple. We soon reached the door ornamented with Alexander's cartouche, and our men began to rake up the ground with their hands and take out the cats. These animals were wrapped up by dozens in pieces of embalmed linen, and placed upon clean matting; but they were very much reduced in size. The dogs were not less numerous than the cats; and I recognised amongst them several heads of that beautiful species of greyhound, the representation of which I had admired in the most remarkable tombs of Beni-Hassan. When the light pierced through the suite of rooms, whose destination I could not understand the previous evening, I saw an enormous quantity of cats' bones piled upon the earth, which left no doubt that this was the last resting-place of cats of high life. I also took up a bone, which, at my return, the naturalist of the Tuscan expedition said he thought had belonged to a

lion or a tiger; in fact, Bubastis, whose temple is in the vicinity, and who is well known to be the goddess of cats, is represented in his temple, and on the door of the subterranean edifice, with the head of a lioness or tigress. It appears from this, that, by a feeling in conformity with scientific information, the ancient Egyptians confounded all animals of the feline race. I afterwards discovered, that the pits which I had remarked in the plain were destined, as Herodotus has stated, to the purpose of macerating all the animals together, so that they should not occupy so much room in the lower sepulture at the feet of the aristocratic *Mnemonium*."

M. Lenormand then proceeds to describe the village of Beni-Hassan and its inhabitants. This village he states to be surrounded by a plantation of date-trees, each of which is taxed at rather more than sixpence English. Besides this tax, the cultivator is compelled to dispose of his dried dates at an arbitrary price fixed by the pasha, and upon that the calmacan takes a profit for his own benefit. The distress and misery of these poor inhabitants is feelingly described by M. Lenormand. The letter then goes on to say—"We had the pain of finding Antinoë razed to the ground, and Achmounin, Antaeopolis, and Elephantine, destroyed to procure lime. *Lousgor* is sold to a salt-petre manufacturer. The theatre, the two large streets with porticoes, and the triumphal arch of Antinoë, have disappeared. The colossal portico of Achmounin has been transformed into the locks of a canal and a sugar-refinery. You may judge of the impression which our visit to Antinoë made upon us. As to Achmounin, we would not even descend there; for we were too sure of the irreparable loss which archeology and the arts had suffered. But God had reserved a consolation to us for the evening. There exists on the right bank of the Nile, about two leagues to the south of Antinoë, a Pharaonic city, whose streets, houses, and edifices, are quite entire: its inhabitants abandoned it for an unknown reason. This city, like the whole of ancient and modern Egypt, is built upon a uniform system, with plain bricks dried in the sun, but whose antiquity is discoverable from the dimension, and the care taken in the formation, of every piece. With such fragile matter the Egyptians, favoured by their climate, have constructed immense and indestructible monuments, such as the sacred enclosure of Sals, which we saw at Cairo. There is also at Painsaula (the ancient name of the Egyptian Pompeii) an enclosure of bricks, where there was a temple, which has been entirely destroyed. What seemed most curious, and deeply attracted my antiquarian attention, were the remains of the interior ornaments of several houses, and particularly the traces of painting round several rooms, as fresh as if it had just been traced. These walls, of dried bricks, were merely washed with lime, in the Arabian manner. The painting was traced upon this plaster rather thickly, and has remained entire. They form a sort of tasty Greek fringe, which looks well, in spite of the smallness of the enclosures which they were intended to decorate."

We are glad to state that M. Lenormand gives a most satisfactory account of the state of health of all the members of the expedition.

Paris, February 6.

LETTERS of a recent date were received yesterday from the French literati and artists now in Egypt. Those of M. Champollion, jun. are dated from Thebes, Nov. 24, 1828.

They contain highly interesting details relative to the antiquities of Beni-Hassan, Antinoë, Lycopolis, Antaeopolis, Saeopolis, Protomais, Dendera, Coptos, Apolinopolis, Parva, and Thebes. We shall immediately publish extracts from these letters. All the travellers were in perfect health, and on their way to Syene and Nubia.

Paris, 30th January.

M. H. VIDAL, late secretary and chief interpreter to the French consulate at Bagdad, and now attached in the same capacity to that at Alexandria, has just arrived at Paris. This learned traveller has traversed several times, and in various directions, Mesopotamia, Armenia, Babylonia, Arabia Deserta, Persia, Kourdistan, &c. The Geographical and Asiatic Societies expect with impatience the valuable information which M. Vidal has been so kind as to promise to communicate to them. It relates chiefly to Ecbatana and the Aqueduct of Semiramis. These documents are extremely interesting, and we hope that we shall shortly be able to lay them before our readers.

AFRICA, EGYPT, NUBIA: TRAVELS OF M. RIFFAULT.

M. JOMARD has communicated to the Geographical Society a letter which he has received from M. Tordouzan, at Marseilles, recommending to him M. Riffault, a traveller in Egypt and Nubia, who, after having stopped for a year at Marseilles, has now arrived at Paris. M. Jomard, on presenting M. Riffault to the Society, announced that he had brought with him an immense number of drawings, and that he thinks the Society will be interested in the examination of those performances.

M. G. Barbié du Bocage said, that M. Riffault had brought to their meeting a part of his collection of drawings as a specimen: he read the following sketch of the results of M. R.'s travels:—

"M. Riffault, he said, whose return to Europe has been announced by several journals, left France in 1807. He has passed twenty years in visiting Spain, the islands in the Mediterranean, Turkey, Egypt, and Nubia: he has formed numerous collections in all the branches of natural history, of antiquities, arts, and manufactures, and taken a multitude of notes during his travels. During thirteen years he has been constantly engaged in travelling, exploring, and excavating the soil of Egypt and Nubia. The number of drawings which he has brought home may be stated at 6,000. The cases containing his collections will be shortly at Paris.

"This collection of drawings consists of 500 plants, coloured, with all the details of their flowers and fructification; many hundred drawings of fish, shells, and insects, with the figure of the skeletons of the former; 1000 drawings of quadrupeds, birds, reptiles, and insects, of Egypt and Nubia; likewise with drawings of the skeletons: the drawings of antiquities also are innumerable, and executed with the most minute attention. We are indebted to M. Riffault for the discovery of seventy statues, several of which now adorn the museums of Tunis, Rome, Florence, London, Munich, &c. He has also discovered and cleared six temples and monuments at Thebes. Two hundred and sixty Greek, Latin, and hieroglyphic inscriptions have been copied and transcribed by himself. The geography and topography of those countries are enriched by maps, plans, and views, also taken by him. Seventy drawings represent the ornaments of female dress. There are

the drawings of 230 surgical instruments used in these countries. Agriculture and the instruments it employs, meteorology, music, art, and manufactures, all have a place in this rich collection.

"All these are accompanied with more or less extensive notes, which alone fill fourteen volumes. We have only to regret, that the traveller has not been able by astronomical, geological, and trigonometrical observations, to connect his own geographical and topographical remarks with the great works already mentioned."

SUGAR FROM BEET-ROOT.

THE French appear to be very sanguine of complete success in the production of sugar from beet-root, so as to do without foreign sugar altogether. It is stated in a French paper, upon the authority of the evidence given before the Commercial Commission of Inquiry, that there are now in France nearly a hundred manufactories for the fabrication of sugar from beet-root; and that it is calculated that in the course of the present year the quantity of raw sugar made from this root will be at least 4,000,000 kilogrammes (rather more than 10,000,000 pounds), which is double the quantity of last year. It is believed, says the French journalist, that at no very distant period the production of sugar in France will equal the consumption, and that the competition which will arise out of this circumstance, added to the perfection introduced into the mode of fabrication, will undoubtedly contribute towards a considerable fall in the price.

NEW PUBLICATIONS.

Half's New General Atlas. Part XII.

Longman and Co.

EXCELLENT maps of Africa, so interesting to modern geography; of Egypt; and of Chile, La Plata, Bolivia, and Upper Peru, are the contents of this Part; of which we need only say, that it is as ably and handsomely executed as any of its predecessors.

LITERARY AND LEARNED.

Oxford, Feb. 7.—On Thursday last the following degrees were conferred:—

Bachelors of Arts.—G. Dawson, Fellow of Exeter College; Rev. F. Drake, Worcester College.

Bachelors of Arts.—J. J. Scott, Exeter College, Grand Compendium; H. Vaughan, Scholar, W. N. Snowe, Worcester College; T. Page, Magdalen Hall; F. Powell, Christ Church; W. P. Vyner, University College; C. Whist, Wadham College.

CAMBRIDGE, Feb. 6.—The late Dr. Smith's annual prize of £25 each, to the two best professors in mathematics and natural philosophy among the commanding Bachelors of Arts, were on Friday last adjudged to Mr. Cornish, of Trinity College, and Mr. Philpott, of Catherine Hall, the second and first Wranglers.

ROYAL SOCIETY.

NOVEMBER 27th, 1828.—A paper was read entitled, "on the Stability of Canoes," by W. Walker, Master R.N.; communicated by the president.

The author having, in a former paper, endeavoured to shew that the longitudinal axis of a ship rolls, by the force of the wind on her sails, does not pass through the common centre of gravity, but always coincides with the plane of flotation, proceeds, in the present memoir, to the demonstration of his second proposition, namely, that the stability of a floating body is a maximum when the part immersed in the fluid is equal to half its magnitude; or, which is the same thing, when its total weight is half that of the fluid which it would displace by complete submersion. For this purpose he investigates the case of a canoe, supposed to

have no stability in itself, and connected by an outrigger with a balance-boat at a certain distance; and shews that the power of such a boat in preventing the oversteering of the canoe, by the action of a horizontal force applied to the sails, is greatest when its weight is exactly the half of that of an equal volume of the fluid. Boats with outriggers, he observes, are admirably adapted for velocity, for they are enabled to carry a press of sail without ballast; they displace little water, and they move near the surface, where the resistance is less than at a greater depth. The application of a ballast-boat by an outrigger has, however, the disadvantage of tending to turn the prow of the canoe towards the wind; an inconvenience which the experienced Indian obviates by constructing his canoe with one side nearly a plane, so that the oblique influence of the fluid on the prow is balanced by the resistance of the boat; and the flat side of the canoe being always turned to leeward, presents great resistance to lee-way, and very little to going a-head.

The author then notices the case of a double canoe, or one composed of two equal and similar canoes joined together by one common deck; and shews that the same general proposition respecting the conditions of the maximum of stability applies to the double as well as to the single canoe.

ROYAL SOCIETY OF LITERATURE.

THE meetings of January 21 and February 4 were not very numerously attended, and no papers were read. On Wednesday (4th) the president, the Bishop of Salisbury, was in the chair, and the business consisted chiefly in the reception of books, &c. presented, the ballot for members, and the proposition of others.

ROYAL ASIATIC SOCIETY.

Saturday, Feb. 7.

THE president, the Right Hon. C. W. W. Wynn, in the chair. A paper was read, entitled, "an account of the Cave Temples of Adjutah in Berar;" by Lieut. Alexander, of the 16th Lancers, M.R.A.S.

The first ballot for the admission of a member of the Bombay Literary Society into the Asiatic took place, and terminated in the unanimous election of the party. Professor Adeling, of the Oriental Institute of St. Petersburg; Professor Schmidt, of the same city; Professor Grotefend, of Hanover; and Père L'Amiot, one of the Catholic missionaries in China—were severally balloted for, and elected foreign members.

Sir Alexander Johnston and others made several donations to the Society. An original portrait of the late Col. M'Kenzie, surveyor-general of India, attended by two Brahmins who had acted as *aides-de-camp* to the colonel, was presented by Sir Alexander Johnston, and was much admired for the fidelity with which it was executed.

NUMISMATICS.

THE rich collection of Greek medals formed in the Levant, and with long researches in Europe, by the late Allier de Hauteroche, has acquired great and merited celebrity in the learned world. The heirs of that distinguished antiquary have resolved to offer it for sale; and the description of this cabinet has just been published, at Paris, by M. Dumersan (employed in the cabinet of medals of the King's Library), in one vol. 4to., with sixteen plates. We find, from this catalogue, that the number of medals, in all kinds of metal, amounts to more than 5,000; none of these are of lower value than eight or ten francs; at least a third are valued

at fifty or sixty francs each: among the others are found the rarest medals, the prices of which exceeding 200 francs, is for some of them 1,000, 1,500, 2,000, and 2,500 francs. These two last prices are those of the Ptolemy Evergetes I., and of the Berenice, in gold. We observe nearly forty cities new to numismatical geography; and the number of inedited medals belonging to known cities constitutes nearly one third of the collection. The rarest of them are represented on beautiful plates. The uncommon merit of this cabinet recommends it to the learned of all countries, and to governments which patronise the historical sciences. The complete description affords ample information.

FINE ARTS.

BRITISH GALLERY.

No. 10. *Highlanders returning from Deer-stalking*. E. Landseer, A.R.A.—An improvement even upon the very fine picture of the same subject which we noticed last year.

No. 39. *Village near a River; Showery Weather*. J. Linnel—Admirable. We question if the figures in the foreground are not injurious.

No. 41. *Sunshine; Storm coming on*. R. Farrier.—A pictorial pan! The sunshine is the innocent dalliance of a loving young couple; and the storm coming on is the threatening gesture of a crabbed old mother, just making her appearance.

No. 173. *The Deserter*. R. Farrier.—Evidently a companion to "Who'll serve the King?" of last year. The reduplication of the subject in the background is well imagined.

No. 29. *The Dead Bird*. No. 43. *The Mask*. W. Gill.—Mr. Gill has adopted a style of singular sweetness and delicacy. These are delightful specimens of it.

No. 56. *Moors rising over a wild mountainous Country*. No. 67. *Sunset*. F. Danby, A.R.A.—Highly poetical works. We prefer the former.

No. 104. *Fruit*. G. Lance.—At this season of the year, when gratification is impossible, it is hardly fair in Mr. Lance to make our mouths water with such a delicious assemblage. As a work of art, nothing can surpass it.

No. 155. *A Native of Missolonghi, painted at Rome*. T. Hollins.—Highly creditable to Mr. Hollins's talents. It is curious to remark the approximation in hue of most of the pictures recently painted in Italy by English artists. Is it, among other things, attributable to the use of some peculiar pigment?

No. 180. *The Combat*. J. Perez.—Composed with great skill, and highly picturesque.

No. 181. *Waiting for an Answer*. P. C. Wonder.—Although perhaps deficient in some respects, Mr. Wonder views nature with a feeling very similar to that of De Hooze. He has imparted great character to his figures.

No. 208. *The Tea-cup*. T. Clater.—A medical cynic might say of this subject, which is fortune-telling by the grounds of tea, "Is it not enough that this vile herb is to debilitate the physical system of our women, but must it also weaken their minds by leading to a miserable superstition?" The picture is, however, cleverly painted. The contrast between the credulous young female and the artful old crone is well maintained; and the execution of the accessories is very creditable to Mr. Clater's talents.

No. 255. *A Dutch Girl*. G. S. Newton, A.R.A.—If this graceful and lovely gem of the mantle has been really painted from a Dutch girl, we think that the females of Holland are

much indebted to Mr. Newton for rescuing the character of their beauty from the graphic aspersions of their countrymen, Rembrandt, Teniers, Jan Steen, Ostade, &c.

No. 256. *The poor Dog*. E. Landseer, A.R.A.—Few historical painters can infuse so much of character and sentiment into their works as Mr. Landseer imparts to his pictures of animal life. What can be more affecting than this representation of a faithful and heart-broken creature, contemplating the grave of his beloved master? The subject must have been suggested by kindly feelings, and genius alone could have invested it with the solemnity of effect so accordant with the occurrence.

No. 223. *Securing a Deserter*. H. P. Parker.—Whatever skill may be displayed in the composition, expression, and execution of a work of art, if the subject of it be so treated by the artist as to violate the feelings of a good member of society, and to excite sympathy for an offender, and aversion towards those by whom offence is justly punished, it appears to us that his powers are misapplied.

No. 355. *The Chapel of the Virgin Church of St. Pierre, at Caen*. D. Roberts.—We have always recognised qualities of a very superior order in the works of this able artist; but, whether it proceeds principally from the magical management of the light, the rich splendour of the colouring, or the singular facility of the handling, we know not, there appears to us to be in this interior a union of excellences surpassing that in any of his former productions. We would express the same opinion of No. 160, *Utrecht*; by G. Jones, R.A.

No. 222. *A Public Breakfast*. E. T. Parris.—This is the first time that any of the enamel-works of this artist have been so placed as to give an opportunity for a fair inspection of them; and we are happy in being enabled to speak as highly of his talents when the exhibition of them is thus confined within the compass of an ordinary-sized picture, as we lately did when we described their display over whole acres of canvass, at the Colosseum. In addition to his other qualities, Mr. Parris seems to possess as rich a vein of humour as we have observed since the days of Hogarth. This is a production which shews the singular versatility of his powers; and it must place him high in the estimation of those who can enjoy a graphic joke, and the true delineation of character in the humbler classes of society.

No. 232. *A Subject from Ovid's Metamorphoses*. W. Etty, R.A.—The subjects on which Mr. Etty usually exercises his talents require grace of form and beauty of colouring; and he is eminently successful in the production of those qualities. He also avails himself very judiciously of the beau ideal to be found in the antique gems and statues; and, like the artists of the olden time, evidently considers his draperies as intended for show rather than for use.

No. 233. *The Ruse*. J. Inskip.—What kind of stratagem it may be which this pretty, arch-looking creature is meditating, we know not—but we are sure that she is no true woman if she does not succeed in it.

No. 340. *The Happy Man*. G. Clint.—A quiet, domestic scene, forming an admirable contrast to No. 365, *The Drunkard*, by the same artist, which called forth our praises in the last Exhibition at Somerset House. Pictures like these speak volumes.

No. 338. *Landscape*. Mrs. Terry.—This lady's performances are attractive, not from any garish and strongly-opposed display of colours, but from the simplicity which prevails through-

out them; a simplicity, however, which is far from excluding adequate variety. The style she has adopted in No. 45, *View near St. Boswell's Green*, resembles the silvery tone of the pencil of Teniers, in some of his most valued works.

No. 275. *The young Prisoner*. T. Uwins.—A more striking contrast cannot be conceived than is afforded by Mr. Uwins's *Love at Naples*, and his *Young Prisoner*; the former containing all that it is delightful, the latter all that it is fearful, to contemplate. The innocence of the sleeping infant, the pity of the bandit's wife, and the gloomy scowl and blood-stained knife of the bandit himself, furnish materials of interest, of which the artist has availed himself with great success.

No. 328. *Yea or Nay*. L. Cosé.—Yea, "for a ducat;" if there is any meaning in female blushes. The subject, a proposal of marriage from one "friend" to another, has been treated by Mr. Cosé in perfect accordance with the primitive simplicity of the sect. There is little or no display of the picturesque, little or no decoration of any kind; it is plain-dealing throughout. Our curiosity is excited to ascertain whether or not this little picture will find a purchaser among those whose appearance and manners it so faithfully represents. We have before had occasion to remark, that the "friends" are frequent visitors of our Exhibitions. An excellent opportunity is here afforded them of shewing their friendship for the arts in a more substantial shape.

(To be continued.)

NEW PUBLICATIONS.

View of the Palais Royal, drawn in October 1827. View of the Palais Royal, as it will appear after the Completion of the Improvements. Drawn and engraved by W. Daniell, Esq. R.A. Moon, Boys, and Graves.

Knows one who has visited Paris—and who has not?—is well acquainted with the extraordinary and splendid concentration of business and dissipation known by the name of the Palais Royal. These two fine prints, which are of considerable size, and which are executed in aquatinta with such facility and looseness of handling, and coloured with such skill and taste, that they have all the effect of productions of the pencil, convey an excellent idea of that once royal residence. They are dedicated to the Duke of Orleans, in whose family the property of the building is vested, and whose approbation of the original drawings, we believe, induced Mr. Daniell to transfer them to copper.

Select Views of Windsor Castle and the adjacent Scenery. Drawn and engraved by W. Daniell, Esq. R.A. Moon, Boys, and Graves.

THIS is a still more interesting publication than the one which we have just noticed. As the prospectus justly observes, "the royal and chivalric recollections which even a distant view of Windsor Castle immediately revives, the venerable regal college of Eton, the peculiar beauty of the surrounding woodlands, with the rich and varied scenery of the Thames, are too well known and admired to need any description." It appears that it was at the suggestion of one of the canons of Windsor that Mr. Daniell undertook the publication of a series of views which should be illustrative of this majestic castle and its magnificent domains, on such a scale as the interest and importance of the various objects demanded. When completed, the series will consist of twelve plates. Eight have already appeared, viz. "Windsor

Castle, from near the Brocas Meadow;" "Windsor Castle, from the S.E.;" "Windsor Castle, from Eton;" "View from the Round Tower, Windsor Castle;" "Glen in Windsor Park, near Bishopsgate;" "The Long Walk, Windsor Park;" "Eton College;" and "Scene on the Virginia Water." They are all beautiful; and the Views of Windsor Castle from Eton, and near the Brocas Meadow, the Long Walk in Windsor Park, and the Scene on the Virginia Water, transcendently so. The style of execution is similar to that of the "Views of the Palais Royal;" and the remark which we made on those views, namely, that they had all the effect of drawings, is still more applicable to the "Views of Windsor Castle." We understand that the four remaining plates will be published in March.

London Characters. By George Cruikshank. Joseph Robins.

If we may say of characters too apt to be suspicious (i. e. suspected) and bad, that they are good, we may say so of these representations of coachmen, watchmen, dustmen, chimney-sweepers, &c. &c. by Cruikshank. They originally appeared in the "Album" 1827; and are now (a dozen of them) published without letter-press. They are very clever, and deserve the portfolio as much as in their pristine form they lent credit to the literary melange which they adorned.

The Inconstant. A Chasing in Silver: from the Design of Stephanoff. Widowson, goldsmith, Fleet Street.

THE publication of this gem-like performance has for its object the revival and preservation of a character of art formerly in great request, particularly for ornamenting and embellishing snuff-boxes, watch-cases, and other trinkets formed of the precious metals. The art of chasing, like that of painting, appears to have reached its highest excellence in Italy, as may be seen in the works of Benvenuto Cellini, many of which are preserved in the cabinets of the curious, and form a no less valuable than interesting part of their collections. The liability to injury by friction of the above-mentioned costly ornaments, soon divested them of the sharpness and beauty of their execution; and but for the casts which remain of some of them, scarcely any idea would be acquired of their truly exquisite finish. Fortunately, we have now before us casts from chasings by the hands of the late Moser, Paye, Gomme, &c. (artists of our own country) that may vie in execution with some of the finest antique cameos, and which enable us to speak in terms of unmeasured panegyric of the talents and skill employed in this way more than fifty years ago. The specimen now under notice is not only a pleasing and elegant production of art, but the means of its preservation; for it is so managed as to be framed and glazed like a picture for a chimney ornament. Yet here we must observe, that instead of copying from painting or drawing, originality of subject or design ought rather to be added to the merit of the performance, to give it full claim to the attention of the artist and the amateur.

WE have great satisfaction in recording another instance of his Majesty's enlightened patronage of the fine arts, and of individual merit. "The King has been graciously pleased to nominate and appoint Samuel Prout, esq. to be Painter in Water-Colours in ordinary to his Majesty." When we consider that painting in water-colours is almost exclusively an English art, and remember how much Mr. Prout has

sketch it by his pencil, we feel the more gratified by this mark of royal distinction and honour, not only as it regards the individual, but as it encourages the school.

PICTURE-PRICES.

THE splendid cabinet of paintings of M. Dantot, of Brussels, was, a few days ago, sold by auction in that city. The sale was numerously attended by amateurs and connoisseurs, among whom were several Englishmen. Many of the paintings brought high prices. A small marine subject, only fourteen inches by twelve, by Claude Lorrain, was sold for 13,500 florins. The celebrated picture by Teniers, of Bow-shooting, but generally known among connoisseurs as the *Diamond*, fetched 10,200 florins. A cabinet picture, by Paul Veronese, 4,500 florins. Murillo's Beggar-Boy, 3,500 florins. A beautiful portrait of Rembrandt, painted by himself, 9,500 florins. The Rape of the Salmes and its companion, 14,000 florins. The Flight into Egypt, by the same painter, 8,200 florins. A large Landscape by Teniers, 4,000 florins; and a small picture by William Van de Velde, 4,000 florins. The total amount of the sale was 136,600 florins. Most of the valuable pictures were obtained by Englishmen; and it was stated in the sale-room, that the beautiful *bijou* by Claude Lorrain was purchased on account of Mr. Peel, the Home Secretary.

HERCULANEUM.

THE excavations now in progress at Herculaneum and Pompeii daily lead to the most important results, and authorise the most brilliant hopes. The workmen are engaged in uncovering a magnificent dwelling-house at Herculaneum, the garden of which, surrounded with colonnades, is the largest that has yet been discovered. Among other mythological subjects are the following:—Perseus killing Medusa, by the aid of Minerva; Mercury drawing Argus into a sleep, in order to carry off from him the beautiful Io (a subject which is exceedingly rare in the monuments of art); Jason, the Dragons, and the three Hesperides. But the greatest curiosities in this house are some bas-reliefs of silver, fixed on elliptical tablets of bronze, representing Apollo and Diana. A vast number of other articles, furniture, utensils, &c. of the most exquisite workmanship, add to the interest which the discovery of this rich and beautiful mansion is well calculated to excite.

ORIGINAL POETRY.

LINES ON NEWTON'S PICTURE OF THE DISCONSOLATE.

The present is the painter's—never words
Could be so eloquent of wretchedness
As are that bowed-down form, that hidden face,
Which bent to look on file the eyes with tears:
But in the past the poet has his part,
For memory is the music of the lute.
What is thy history, lady?—may I give
Thy sorrow language?

THE room was hung with pictures, and the tints
Of a rich sunset touched them as with life;
The crimson varied o'er each cheek—the light
Was tremulous within the azure eyes—
The tumbled auburn hair was waved with gold—
And she who gazed looked not more actual life
Than did her pictured likeness; only tears
Revealed the sadness of reality.

There were six paintings; all were very fair,
And of resembling beauty—chestnut curls,
A sunny autumn on the brow of youth,
But of that blue which lights the violet
When rain-drops hang upon it, and each cheek
Was as a rose-leaf crushed on ivory.

The maiden paced the gallery, and wept;
She thought how each familiar voice was mute,
How she had watched, day after day, the rose
Wasting its colours in a hectic flush,
Till it grew pale for ever—how those eyes,
The blue, the bright, were closed in their long sleep.

Of those sweet sisters she was now the last.
She thought o'er instances of daily love,
That rise so bitterly to memory
When the dark grave has shut out all return
Of hopes which they had mingled,—tears they shed,

But pleasant ones, together—laughing schemes
Of festival, snatches of favourite songs
Now never sung.—“There surely is a curse
Upon our house, that thus the young should die—

Alas, my sisters!”—Heavily the tears
Fell from the desolate girl: she turned to where
The open casement brought the summer wind,
As if to soothe her:—green the park beneath
Girdled its own bright river, and the deer
Had gathered on its banks—the ancient oaks
Waved their Ionian foliage.—In each copse
The hawthorn was in blossom—and the limes,
Hung with pale yellow flowers, filled the air
As if with incense. Suddenly a horn
Rung from the old dark avenue of beech—
A white steed came in sight—it cleared the lawn
As if its speed were in its rider's will—
That graceful rider—o'er his glossy hair
The white plumes waved, like his own spirit's light;

The falcon on his wrist had not an eye
More flashing in its brightness:—as he past,
He plucked a handful of the hawthorn flowers,
And flung them to his sister. “Emily,
Come, for my hunter's toil is done, and now
I'll play the poet with thy lute and thee;
Come, for already has the young pale moon
Risen, though colourless, by yon bright west;
Come, for I must not have one fall of dew
Unloose thy curls.” A pang shot through her heart:

His eyes how very bright! and on his cheek
There burnt too clear a red for exercise.

—That night beheld her at the Virgin's feet,
That night was witness to her vow; no more
The lady Emily joined in the dance,
Or wreathed white pearls around her whiter brow;

No more she waked the lute;—and on the day,
The last worst day, her youngest sister died,
She knelt before her father, and implored
A blessing on his consecrated child,
And said the cloister was her destiny.
In vain were prayers, reproaches,—forth she went;

Her heart had dwelt upon this sacrifice
Until it seemed accepted; and her tears,
Her vigils, at the lonely midnight hour,
Her youth resigning even its sweet self,
Would surely plead with Heaven, and win its boon,
And that dear brother would be spared to make
His aged father happy. And this hope
Haunted her prayers until it grew to faith.

A year had passed since last her auburn hair
Was loosed to catch the sunbeams and the breeze;—

A year had passed since in that lonely cell
Her knees had worn away the cold, dark stone:
Austerity and anxious orisons
Had made the paleness of her cheek more clear;
Her face was even as an angel's face—
Eyes that have looked to heaven till they are filled

With light, the element of those pure skies;—

Still she was well and happy. Oh! the heart
Makes its own happiness, perchance the best,
When consecrate to one engrossing love!

Two years had past away;—but once again
She is to stand within her father's hall;
Her vows dispensed with just for one brief day,
Her brother had besought so earnestly
Her presence when he wed the Lady Blanche.
He said no other hand but hers should give
The bride her orange flowers; for Emily
Would bring a blessing with her.

'Twas early morning when that youthful nun
Gazed once again on her forgotten face.
How strange the mirror seemed! Again her hair

Was gathered up with pearls on each dark
Once more the silken robe, the silver veil,
Beseeemed the Baron's daughter:—but she turned

From the fair glass, and knelt with lifted hands
Before the Virgin's image; while her eyes
Swam with sweet tears of earnest gratitude.
She thought upon her brother and his bride—
Of her old father's joy;—and if one thought
Had crossed her when she saw her own sweet face—

How fair the world she had for aye resigned—
That thought had past like some unholy thing,
Which found her heart too pure a resting-place;
And tenderest hopes, and gentle thankfulness,
And self-forgetfulness, filled up the soul,
Whose earthly love but bore it on to heaven.

The shade fell darker from the clustering vine,
Whose green boughs twined the lattice like a wreath;
The lark had ceased the musical glad laugh
With which he hails the morning; note by note

The matin song had died upon the wind;
The dew which hung upon the cypresses
Had turned to sunshine on the waving leaves;—
Yea, came her father not for Emily.—
How vain it is to say we reckon time
By hours or minutes! Time is in the mind,
And counted but by the events it brings:
Its length is in our feelings. Heavily
It past to her whose hopes were on the wing.

At length a step sounds in the corridor—
It is a letter—but her eye has caught
The dark seal on it, and the hand is strange.
She dropped the scroll—it told her brother's death!

“My God! my sacrifice has been in vain—
My father desolate in his old age!”

L. E. L.

SKETCHES OF SOCIETY.

PECULIAR NOTICE.

ADMIRERS as we are of the fine arts,—lovers
Of the sciences,—adorers of genius,—devotees
To literature,—friends of talent,—allies of every
kind of improvement, be it in metaphysics,
aerostatics, education, mechanics, transcendental philosophy, pneumatics, medicine, architecture, ship-building, hydraulics, hydrostatics, arithmetic, statistics, political economy, gastronomy, gymnastics, phrenology, the march of intellect, the spread of knowledge, or the spirit of the age,—we are yet at a loss under what denomination we ought to review a publication which has recently been sent to us for notice in the *Literary Gazette*.

That it belongs to literature, the fine arts, the elegancies and refinements of life, we see from the volumes announced, and from an accompanying plate; and that it is equally dear to the sciences, we have no reason to doubt.

It is, in short, "the Report of the present Fashion, as communicated by E. Minister, Inventor and Teacher of the Art of Cutting," i. e. of cutting clothes, not persons; which latter was a few years ago the subject of a separate treatise in one volume, by another, and—alas, for the fame of authorship!—now forgotten hand.

There is a very silly saying, that it takes nine tailors to make a man; whereas the truth is, that one first-rate tailor* not only makes many men, but, what is more essential, many fashionable men! Were it not for Creators of this class, what a set of nincompoops would the present race of dandies be! Strip them of their clothes, and they are mere nothings; grubs, destitute of the pith, sense, and other qualities of humanity. But view them in their perfect or butterfly state; how beautiful the insects are, fluttering about full of animation and life, admiring themselves and admired of others,—displaying their exquisite forms and splendid tints, till we are apt to exclaim with Shakespeare, "What a piece of work is man!"

From ancient to modern times, from the date of the fig-leaf to our days, the science of clothing has justly occupied the largest share of the attention of the human kind. The purple garments of Tyre, the coat-armour of chivalrous ages, the importance of the clothiers of England at a later era, and now this *magnum opus* of Mr. Minister, are but periodical glimpses of a subject which has engrossed the universal energies of the world throughout all ages. Ignorance may confound or confuse us in tracing these circumstances, but it is impossible to shut our eyes to the general truth. What was Solomon in all his glory, but a *fashionable Jew* monarch? What were knights and warriors, but persons rendered stout-hearted and gallant by wearing coats of mail? What is the church, be it of Rome or of the Reformation, but a class of individuals known as members of the cloth? though the satirical Dean of St. Patrick's says—

Men of their cloth should be minding their prayers,
And not among ladies to give themselves airs.

But the love of dress is still more—it is the first great inherent principle in our natures, the only certain innate idea implanted in our bosoms. Not to speak of Misses with their earliest fine shoes or frocks, look at the boy first breeched. Does not that event constitute the proudest moment of his life? far prouder than is boasted by orator when his health is drank or he receives a vote of thanks, and, forgetful of the truly proudest epoch in his existence, idly and erroneously attributes it to a later glory. Nay, is it not a longing and unconquerable desire in the softer sex to wear this honoured garment which leads to that eternal struggle and competition that fills up the measure of life? And the satisfaction, the exultation, with which, when it is won, it is worn! The world holds no higher felicity.

The effects of dress upon the mind are no less obvious and important than they are upon the body; the whole being is altered by the mere outward habiliments. Observe a fellow with coat of antique cut, unbrushed, slovenly; the knot on his cravat not to be called a tie; his waistcoat not only possessing a bottom button and button-hole, but absolutely buttoned all the way down; his pantaloons more or less than an inch and a half above the

ankle;—he has no manners, no gentility,—he is regardless of himself and of those around him; his voice is loud, his language is coarse, his carriage is unseemly,—and he neither looks, walks, stands, nor sits, like a creature endowed with the divine image on earth. Much of the rudeness and vulgarity which now prevail in places of public resort, and even in private companies, is to be attributed to laxity in point of apparelling. Men in boots or gaiters do what men in pumps and silk stockings would be utterly ashamed of; and coloured neckcloths, we have no doubt, have led the way to so many atrocities, (gradually descending in the scale from carelessness to ill-breeding, from ill-breeding to vice, and from vice to crime), that the halter has often been the consequence of the flash Belcher or sporting stock.

Seeing, on these grounds, that prodigious social and moral evils result from inattention to dress with all its niceties, and that it is the grand distinction between civilisation and savage life; it follows that it ought to be the chief, and, as it is among the superior orders to which we have alluded, almost the only concern of rational creatures.

So far, therefore, from our author being thought a mere "Minister" to the vanities of man and coxcomb, we must consider him as a distinguished philanthropist and reformer. Without such tailors to invigorate and maintain our national character, make us respectable and respect ourselves, as fit to be seen as well-dressed subjects of a well-dressed king, George IV., whom Heaven bless!—how soon might we exclaim, literally, metaphorically, and politically, with Henry VI.,

"Of England's coat one half is cut away!"

Deeply as we have devoted ourselves to the study of this all-interesting subject, it would, perhaps, be tedious to some, were we to enter upon all the minutiae of the evening dress coat, the waistcoat, the pantaloons, the trowser, the breeches, the frock coat, the morning lapel coat, the riding coat, the shooting jacket, the driving coat, the cloak, the gaiter, and all the varieties of length, breadth, angle, square, colour, pattern, button, binding, lining, skirt, flap, turn, fall down, edge, pocket, welt, garter, cape, collar, cuff, sleeve, frog, tassel, gather, &c. &c. &c. For these particulars we had better refer to our author, in whose various works they will be found accurately detailed and amply described.*

It strikes us, that the *arbitri elegantiarum* of former days would cut but a poor figure by the side of an author of this eminence, and an artist who measures men, as if he were a geographer and astronomer, by quadrants, sextants, theodolites, and other complex instruments, but all simple to his superabundant ingenuity. It is with infinite regret we have to confess that our means do not enable us to afford our readers any idea of the pictures which illustrate Mr. Minister's labours, nor of the patterns in cloth, silk, satin, and velvet, which

accompany them. In the former, the individuals are distinguished for correctness of costume, untroubled with a crease or wrinkle: none of Nature's journeymen could make such matchless creatures. A fool-dressed exquisite in silk hose and shorts, seated on a chair, is complacently contemplated by an equally glorious being, who happens to be standing up. And there is a cloaked gentleman, very like an Irish fortune-hunter; and a great-coated gentleman, very like a flash thief, or ditto thief-taker. Two little boys are inconceivably genteel; and more easy personages, with guns, whips, and switches, display the wonderful variety and sublime beauties of our species—when dressed *comme il faut*. We gaze at the production with intense admiration; we pause, and a sigh, almost a groan, escapes us, when we reflect how few of the great race of mankind, as it covers the surface of our globe, can, by possibility, be thus adorned! Alas, we say, as if apostrophising the want of education, ignorance, slavery,—alas, that some grand and powerful institution were but formed to promote the spread of well-cut clothes among the dark and hapless nations of the universe; that missionaries, properly instructed by Mr. Minister, might go forth to Africa, and India, and Australia, and the distant islands, to new-rig the ill-dressed, and cover the nakedness of the savage! What renown would it not be to Britain, thus to eclipse the chief and ancient fame of France, as the fountain of taste and fashion! We implore our ministers to think of it: when Catholic Emancipation is completed, they will have little else to do,—and where could they direct their mighty intelligence and stupendous energies to a cause so vitally and immortally connected as this with the improvement of mankind? We speak with no disrespect of other associations, for comparisons are odious; but a glance (and neither reasoning nor reason are here required) will demonstrate the incomparable superiority of an undertaking such as that which we now, with all due humility, venture to recommend.

DRAMA.

DRURY LANE.

MR. PEAKE's new farce, *Master's Rival, or a Day at Boulogne*, was produced on Thursday last, too late in the week for us to enter into criticism or a detail of the plot, which turns mainly on the rogueries of two brothers, *Peter* and *Paul Shack*, (Messrs. Jones and Liston,) whose schemes are frustrated by an adroit chambermaid, enacted with her usual talent by Mrs. Orger. All the performers, indeed, evinced great zeal. Mr. Liston, in particular, towards the close of the piece, was remarked, notwithstanding his late accident, to be playing with almost too much spirit. It was given out for repetition amid considerable, if not unmingled, applause.

Farces seldom take full possession of the public on their first representations.

ADELPHI.

We are delighted to have it once more in our power to bestow unqualified praise upon a new dramatic production; and our gratification is any thing but lessened by the said production's having appeared at this our favourite little theatre. Mr. Ball, the author of the *Flying Dutchman*, and the adapter of the *Pilot*, has succeeded very happily in transferring the most effective situations in Mr. Cooper's novel of the *Red Rover* to the stage of the Adelphi; and his efforts have been admirably seconded by the capital company (we were about to write crew) of this

* Not one of those bungling rascals of whom the poet says,

"Give him a single coat to make, he'd do't;
A vest or breeches, singly; but the brute
Could never contrive all three, to make a suit."

* These works are: Treatises on the Art of Cutting, viz. a New and entirely Original System of Cutting Coats, price 10s. 6d.; a New and Improved System of Cutting Breeches, Pantaloons, and Trowsers, price 5s. 6d.; a New and Improved System of Cutting Waistcoats, price 5s. 6d.; a New and Complete System of Cutting Ladies' Habits and Pelisses, price 10s. 6d.; or in one complete work. Also his first publication on the Art of Cutting Coats, on a half-inch scale, two very large copperplate engravings, and three hundred and one calculations on the proportionate parts; price two guineas. Two very large copperplate engravings, with seventeen patterns, and equally adapted for Coats, Waistcoats, Jackets, Spencers, &c. price one guinea and a half. The whole cost of these invaluable works is, therefore, only five pounds five shillings and sixpence.

establishment. Yates's *Red Rover* is a very spirited performance; indeed the best original character in which we have seen him. T. P. Cooke's *Fid* rivals his *Long Tom Coffin*. Greater praise cannot be bestowed upon any acting. Mr. Hemmings renders *Wilder* a more important personage than the author could have anticipated; and Paulo, the best clown in London, proves that, like his great prototype Grimaldi, he can wring from our eye tears of sympathy as well as tears of laughter. His "Guinea nigger" is a most interesting and natural picture of "God's image cut in ebony." The ladies, Mrs. Edwin and Mrs. Hughes, have but little to do,—but they do that little well; and the same may be said of Mr. Saunders, the two Smiths, and all the rest of the *dramatis personæ*. We had almost forgotten Wilkinson, the most fearful and funny of all Yankee tailors; and we should never have forgiven ourselves such a piece of injustice. The nautical scenery and machinery is, as usual here, perfect. The last scene of the first act, particularly, is as real a picture of a vessel getting under weigh, as the stage is capable, we should imagine, of producing. We wish the proprietors joy of the success of this their "annual nautical," as Yates called it; and have no doubt but *Monsieur Mallet* and the *Red Rover* will cram the house to the end of the season.

RIGHTS OF DRAMATIC AUTHORS.—It is stated in a French paper, that the sum received by M. Scribe, the French dramatic writer, for performance of pieces written by him, amounted, during the year 1828, to 122,000 francs (rather more than 5000*l.* sterling). In France, the author of a dramatic production receives, in addition to the sum which is, in the first instance, paid to him by the manager of the theatre at which his piece is brought out, and the amount for which he may dispose of the copyright to a bookseller, a fixed sum for every night on which it may be played in any part of France; so that at the end of ten years, as well as during the novelty of the production, it may yield a handsome sum to the author. The managers of country theatres are bound to pay into an office established for the purpose, the amount of the sums so due; and they are afterwards paid over to the author, who, from day to day, can examine the books, and ascertain the extent of his profits. [This example ought to be followed in England.]

THE Chester committee are already making great exertions towards the arrangements for the grand musical festival which is to take place in September. Braham, H. Phillips, and Miss Paton, are engaged. The latter lady has been singing at the Chester theatre with her usual eclat, since her return from a very lucrative engagement at Dublin. During the present week she has performed at Liverpool to crowded houses, and is expected in town about the middle of the next; soon after which, she will make her appearance at Covent Garden, as *Adelice*, in Rossini's new opera, *Normans and Saracens*. The story of the piece is taken from Sir W. Scott's novel of *Ivanhoe*, in which Phillips is to take the part of the Jew of York.

F. RES.—The long-expected opera of this well-known musician, called *Die Räuberbraut* (the Robber's Bride), was performed at Frankfort-on-the-Main, in October last. Nearly every piece of the opera, say the German papers, was received with the most flattering applause; and after the first act the composer

was called. Notwithstanding this, the opera has never been given since; from which it is obvious, that in the German theatres, as in the English, cabal and intrigue are not altogether strangers.

FRAULEIN MARIANE BERNER.—The hitherto unsurpassed violin-player Paganini, has found, as appears from a Leipzig journal and a letter from Carlsbad, a potent rival—in a young (at least unmarried) lady of the above name, a native of Mitau, in Courland. The editor of *Die Elegante Welt* calls her "the most finished violinist of the present time;" and for particulars as to her style, he refers to a poem of Rudolph, written in compliment of her extraordinary talent.

VARIETIES.

Monkeys.—A paper on the anatomical structure of the American monkeys has been presented to the French Academy by M. Saint Hilaire. Among other things, this paper contains a description of a new race, exhibiting certain characters which have hitherto been supposed to belong exclusively to the monkeys of the old continent.

Remarkable Echo.—A person standing against the houses on the north side of Tavistock Square when the bell of St. Pancras Church is tolling, will hear the sounds reverberated from the houses on the south side of the square, in tones more loud and distinct than those immediately from the bell. This delusion of sound excites more surprise when the same person walks to the corner of Upper Woburn Place, where the direct sound from the bell comes full and clear, and the echo is lost.

Prussia.—A Mr. von Zedlitz, in his latest statistical account of the Prussian monarchy (Berlin, 1828), not only gives the average state of the population, viz. 2,435 to a German square mile, the number of villages and market-places (60,000), of towns, &c., but goes so far as to state the number of buildings in the whole monarchy to be 3,267,000. In 1825 the number of schools in Prussia was estimated at 21,623, with 22,261 school-masters and mistresses.

Berlin.—According to Gädicke's newest guide through this capital, it contains 294 streets, 32 open places, 7330 houses, and 220,000 inhabitants. The garrison is calculated to be rather less than 12,000 men. Every house where a great man has died is specially mentioned.

Sound Navigation.—The number of vessels which passed the Sound in 1826, was 11,065; and in 1827, 13,006. Among these were, in 1826, English ships 3,730, Prussian 2,621, American 158; and in 1827, English ships 5199, Prussian 2035, American 192. There was no Spanish vessel in either year. Of these 13,006 vessels, 6537 were from the German Ocean, and 6465 from the Baltic.

Musical and Dancing Education.—A new vocal and dramatic institution, for instruction in singing, combining the dramatic requisites to qualify for the orchestra and theatre, with an exclusive department to accomplish for the ballet, similar to the foreign conservatories, has been projected. It is proposed that the vocal department shall consist of two hundred pupils or more, under the superintendence of eminent professors; to be scientifically educated in singing in the Italian and English styles, and instructed in the English and Italian languages, elocution, dramatic action (with theatrical practice), and the necessary accomplishments of dancing, fencing, exercises, &c.;

and that the age of admission shall be, males, seventeen years (if voice is set) and upwards; females, fifteen years and upwards. To pay a premium, and to be articulated generally for seven years. The pupils to fulfil all engagements made for them by the institution, in the United Kingdom, whether as principals or otherwise; and the institution to receive one-third of the profits of every engagement of the pupils during their articles.

Frosts.—In 1709, the frost in Paris endured 37 days in succession, and the thermometer fell to 18½ degrees (Réaumur). In 1783, there were 69 days frost; in 1795, 42 days. In 1776, the thermometer fell below 15 degrees; the sea between Caen and La Hève was frozen, and although the mouth of the Seine is about 9,000 yards in breadth, it was covered with ice from one side to the other. In 1433, a frost began at Paris on the 31st of December, and lasted three months, wanting nine days; it recommenced towards the end of March, and lasted till the 17th of April. In 1607, the Port of Marseilles was completely frozen over. From the end of November 1670 to the end of February 1671, the frost was so severe, that the rivers of Provence and Languedoc were covered with ice of such thickness that waggons heavily loaded passed along them.

New Gas.—A company has been formed at Berlin of chemists and capitalists, to supply that city with gas procured from the excremental matters of every description, which are now taken to the environs and used as manure. The government have not yet given their permission for the commencement of the undertaking; but they have promised to do so, on the company being answerable that no offensive smell shall be allowed to escape from their gas-pipes.

Population.—A German paper (*Gemeinsame deutsche zeitschrift für Geburtskunde*) contains an account of a birth of five twin children, three boys and two girls, all of whom were born alive, but died within three days. They were from fifteen to seventeen inches in length, and weighed little more than half the weight of healthy new-born children. The mother did not suffer much during her pregnancy, and recovered rapidly after delivery.

A Shetland Boat.—"It was a small boat, or canoe, pointed at each extremity, similarly to the 'cazy boats' that ply round the Greenland vessels in the Sound; but it bore an aspect of ruder workmanship, mouldered by the lapse of years, and quaintly repaired with strange adaptations of mechanism and materials. The hands that first wrought this simple structure had evidently long ceased to toil; for their work bore witness that it had lived through many courses of mortality, and the successive traces of many generations were left in the patches that shewed where time and service had made breaches in its original frame. Even the short paddles, which enabled it to skim the wild lake with which it seemed coeval, were composed of several pieces; but the most peculiar and the most picturesque of its accompaniments were, a number of living plants springing from the interstices between its ribs and the planks that sheathed them, and spreading their blossoms to the sun. These flowers belonged (as well as I remember, for I forgot, or rather hesitated, to gather specimens,) to a species of *arenaria*, probably the 'rubra,' and their tiny red petals, blushing amidst their pale-green slender stalks and leaves, gave a charm to the antiquated and patchwork skiff which no gorgeous decoration could have be-

stowed."—*Tales of a Voyage to the Arctic Ocean.*

Bull.—A writer in a northern provincial paper charges the Catholic Association with having cruelly drained the *pockets* of their unfed and unclothed countrymen!

ROYAL SOCIETY.

Thursday, 12th Feb.

THE President in the chair. A paper was read, entitled, "on the Reflection and Decomposition of Light, at the separating Surfaces of Media of the same and of different Refractive Powers," by Dr. Brewster, F.R.S. &c.—George Evelyn, Esq. of Wootton Park, a lineal descendant of John Evelyn, one of the earliest members, if not one of the founders, of the Royal Society, was elected a Fellow. The Rev. H. Coddington, author of several works on optics, was also elected. On the library-table lay a curious ancient eastern astrolabe, purchased by the late Major Hutchinson from Syed Housain, accompanied by an oriental descriptive MS. Amongst the donations, the first part of Robinson's *Vitruvian Britannicus*, containing an account of Woburn Abbey, with engravings by Le Keux, in imperial folio, was much admired. Several other presents lay on the table.

SOCIETY OF ANTIQUARIES.

THURSDAY, 12 February, 1829. Hudson Gurney, esq. M.P., in the chair.—A communication was read from Mr. James Logan, addressed to the Earl of Aberdeen, president, relative to the origin of ancient coat-armour. From various researches made by Mr. Logan, he gave strong reasons for believing that coat-armour, badges, and banners, were derived from the ancient Celts. An extract from the Harleian papers was also read, relative to the wardrobes of King Henry VIII. in his various palaces; together with a catalogue of about 150 pictures, or, as they were then styled, tables, belonging to Henry, and a number of maps, chiefly upon stained linen cloth.

On Thursday the 5th:—The translation of an Italian letter was read, dated from Constantinople the last day of February 1596, from Mahomet III. to Queen Elizabeth. The letter commenced with an endless string of compliments to her Majesty, couched in a style of hyperbolic bombast, so ridiculous to our modern ears, that even the gravity of president, secretary, and members, was disturbed, and downright hearty laughter produced, such as, we fear, in the olden time, would have been thought insulting the Porte. The purport of the letter was relative to the siege of Agra, in which the Turk boasts of having slain 120,000 *infidels*, having caused the river to run blood three days,—of the difficulties he had overcome, as a swamp lay between the armies, such as that which separates heaven from paradise, &c. Mahomet hoped and expected the queen would order the guns to be fired throughout her empire, in honour of his success. The letter concluded with his hearty congratulations for the great victory which her Majesty's troops had achieved in Spain.

Mr. P. F. Robinson's magnificent folio, entitled *Vitruvian Britannicus*, was presented to the Society by the author; as also several other interesting publications.

LITERARY NOVELTIES.

SIR WALTER SCOTT.—Whenever the great Wizard of the North is known to be at work, public curiosity is excited to learn what he is about; and we are always glad when we can gratify that popular feeling. *Impressio*, there is forthcoming a great edition of the *Waverley*

Novels, in monthly volumes, which series is to commence in the ensuing summer (the Prospectus states June 1st). In this revised edition we are to have copious notes and introductions by the author—a rare occurrence, for we do not remember an example in literature of so voluminous a writer living to explain and illustrate his own productions. We observe from the Prospectus, of which a copy has reached us, that the work is inscribed, by permission, to the King, and is to be embellished with frontispieces and vignette titles, from designs by distinguished artists: (indeed, we have seen or heard of some by Wilkie [a portrait], Leslie, Newton, Kidd, Landseer, J. Burnet, and others, of which we will make mention in our next). After noticing the nature of the alterations he has made and is making,* Sir Walter informs us, "The general Preface to the new edition, and the introductory notices to each separate work, will contain an account of such circumstances attending the first publication of the Novels and Tales, as may appear interesting in themselves, or proper to be communicated to the public. The author also proposes to publish, on this occasion, the various legends, family traditions, or obscure historical facts, which have formed the groundwork of these novels, and to give some account of the places where the scenes are laid, when these are altogether incidents founded on fact; together with a more copious glossary, and notes explanatory of the ancient customs and popular superstitions referred to in the *Romances*." This, we think, must be extremely interesting, especially as we understand that the preface to *Waverley* will be, in fact, an autobiography of the author, so far as regards these celebrated novels, and will have appended to it some of his early productions in prose, now for the first time given to the public. We are also told, that the notes to *Waverley* are very curious in a historical point of view; while the introduction to *Guy Rannier* furnishes a sketch of the story as originally planned, but which was changed as the writer proceeded. The Antiquary is enriched with a striking account of the *Blue-gowns* or *Bede-men*, on whom the character of Edie Ochilstone is founded. Upon the whole, we look forward with high expectations to this publication, and shall rejoice to add to our collection a handsome two-volume *Waverley*, with all this new matter and four charming engravings, for ten shillings; and to follow it up by *Manning* and the rest.

Anne of Guirstein, the new Chronicle of the Canonage, will, we believe, be out next month, or early in April. The subject is entirely novel.—So that, altogether, our literary friends in Edinburgh are not so idle as we surmised in our *Gazette* of the 7th.

Interesting Manuscripts.—The Chelmsford Chronicle states that a parcel of manuscripts has come into the possession of Dr. Forster, of Boreham, including the original MS. of Locke's Essay concerning Human Understanding, with numerous corrections and emasures; Original Letters from Locke (partly dated from Amsterdam, during his exile), on various political, religious, and miscellaneous subjects; some original familiar letters of Algernon Sydney, Lord Shaftesbury, and others; correspondence of Toupe, author of *Emendations in Suidas*; of the late Mr. Richard Gough, the antiquary; a curious MS. work on colms, by Stukely; some critiques of the history of Sir John Hawkwood, of Sible Hedingham, by Gough;—and a large correspondence between the Hon. Thomas Pitt, first Lord Camelford, from Naples, and the late Benjamin Forster, resident at Broomfield, in Chelmsford. There is also a MS. relating to the origin of the Abbey of St. Neots in Cornwall; a Syriac MS.; and other miscellaneous papers. But what is most remarkable is, that it seems evident from a passage in one of Locke's letters, that he has somewhere left an unpublished metaphysical work on Cause and Effect, entitled, "On Perceiving all Things in God," which has either been lost or suppressed.

Walter Scott in Denmark.—His writings are read, and translated, and admired, in every corner of the civilised world; but there is no race of readers or admirers among whom his muse has become the object of such fervent idolatry as our neighbours of Denmark. One single Number of the Address Avis contains three several advertisements of three several translations of one of his works; and it will scarcely be credited that a professor of divinity even goes so far as to recommend his pupils to study the *Waverley Novels*, as the surest path to the acquisition of that sublimity of knowledge with which no clerical wanderer can dispense. And to this exhortation succeeds an appeal to the study of the Holy Scriptures, with the exception of the Apocalypse! Little did our worthy countryman dream that his Discourses of a *Legman* would raise him to such eminence in the temple of theological fame; and it is probable that were the biographer of Napoleon to gladden his Danish followers with his goodly presence, he would scarcely fail to receive their homage as a second Odin! Imitators and plagiarists abound among them; but as to *riquiry*, he may leave his apprehensions behind him at Abbotford. To facilitate the reading of his novels in the original, a dictionary of the Scottish idiom, by Motherby, has been published at Königsberg, in Prussia.

* "These consist in occasional pruning where the language is redundant, compression where the style is loose, infusion of vigour where it is languid, the exchange of less forcible for more appropriate epithets—slight alterations; in short, like the last touches of an artist, they contribute to heighten and finish the picture, though an inexperienced eye can hardly detect in what they consist."

Captain Hall's Travels in the United States is in the press, and is expected about May.

Mr. Butler is about to publish an entirely New Set of Coloured Maps, as an accompaniment to the Geographical and Biographical Exercises of his late father, Mr. William Butler.

In the last session of the Academy of Sciences at Petersburg, 10,000 rubles were granted for the first year, to defray the expenses of an archaeological journey through Russia; to commence the beginning of this year, under the chief direction of Counsellor Strojew.—*Halleische Zeitung.*

Of the eighty periodicals which are published at present in Denmark, seventy are in the Danish, six in the German, and two in the Icelandic language. The liberty of the press is maintained to be as great as in England.

Mr. Kendall is engaged upon a full and general History of America, from the landing of Columbus to the present time. The work embraces the particular histories of all the Settlements and States in North and South America and the West Indies; and also a preliminary discourse upon the name, discovery, geography, natural history, aborigines, and antiquities of the Western Continent and its Islands.

Italian Literature.—M. Panisai, as we see from a prospectus, commences his lectures on Italian literature, at the University of London, on Tuesday next. In this course, the Professor, whose taste and talents are so highly esteemed, is to give a short historical review of the ages of chivalry, tracing some of the various stories of the Romanesque poets to their first sources.

The first monthly No. of a work, to be entitled, *The Gardens and Menagerie of the Zoological Society delineated; being Descriptions and Figures in illustration of the Natural History of the living Animals in the Society's collection*,—is announced to be published with the authority of the Council, under the superintendence of the Secretary and Vice Secretary of the Society. The work is to be printed by Whittingham; and the numerous engravings executed in wood by Branson and Wright, from drawings by Harvey.

In the Press.—The second and concluding Part of Cressy and Taylor's Illustrations of the Architecture of the Middle Ages at Pisa, accompanied by Historical Accounts, &c., and determining the much-controverted question, to what period the ornaments in the pointed style, attached to the Baptistry and Campo Santo, are to be assigned.—Margaret Coryton, a novel, by Leigh Cliffe, Esq. author of the *Knights of Ritsberg*.—*Pargana*, the Bride of the Sea, &c.—*A Companion to the Theatre*, and *Manual of the British Drama*.

TO CORRESPONDENTS.

✉ We have this day the pleasure of carrying into effect the first proof of our promise respecting our occasional enlargement of the *Literary Gazette* during the season when much of interesting matter pressed for insertion. We are thus enabled to bring up all arrears, and to start again with greater novelty and spirit, as we trust our succeeding Numbers will show. The importance of our reports of all the great National Institutions must be felt as an increased recommendation of the *Gazette* to every member of the great republic of letters; especially as they have rendered these expensive additions necessary, in order not to confine our page in its other general and approved features. That we offer this gratuitously to our readers, is not by way of boast; but to show that we are resolved to maintain that character which has obtained for us the most extensive favour ever enjoyed by a literary and scientific Journal.

Owing to their arriving late, the Reports of the last Proceedings of the Royal Society and Society of Antiquaries are out of their proper place, towards the end of our sheet.

We cannot enter upon W. H.'s paper to prove Lord Byron not an infidel.

His poem is too long for us: he will find it under c e at our office.

ADVERTISEMENT

Connected with Literature and the Arts.

PATENT for COSMOSPHERES, a part of which is to be Sold, the Patentee being obliged to make Abroad.

The Cosmophere is an instrument which forms, in every respect, a substitute for an Armillary Sphere, an Orrery, a Planetarium, a Tellurian, a Lunarium, a celestial and terrestrial globe. For teaching Geography, Astronomy, Navigation, and other sciences, it is of the greatest service; in Schools, in Families, and for self-instruction; and it is of importance to Navigators in verifying their Calculations in Latitude and Longitude at Sea, as it is clearly proved in the Treatise on the subject.

Cosmopheres and cosmopherically suspended Globes may be seen at the Manufactory of Messrs. Johnstone, Brookes, and Bates, New Street Square, Fetter Lane.

The Specifications of the Patent, and particulars of Terms for the Sale of the Patent, may be inspected at Mr. J. M. Richardson, 23, Cornhill; from whom the "Treatise on the Cosmophere and on Cosmopherically mounted Globes," with an Appendix to verify Latitude and Longitude at Sea, may be obtained.

Order for the Patent to be addressed to W. Muller, care of Mr. Richardson, 23, Cornhill.

MUSIC.

The Nightingale. New Song, set to Music. In a large vol. 6s. 6d. each, with a fine Frontispiece, price 4s. 6d. in boards.

Just published, by J. M. Richardson, 23, Cornhill,

A TREATISE ON THE COSMOSPHERE;

an instrument which forms a substitute for an Orrery, a Planetarium, an Armillary Sphere, a Tellurian, a Lunarium, a Celestial and a Terrestrial Globe. And

A Treatise on Cosmopherically-mounted

Globes, with an Appendix, containing the Use of the said Instruments, and of a Lunodromograph, and a Spherometer, for calculating Latitude and Longitude at Sea.

THE MAGAZINE OF NATURAL HIS-

TORY. Conducted by J. C. LOUDON, F.L.S. G.S. &c.

Vol. I. 8vo. pp. 504, with upwards of 200 Engravings, price 18s. boards.

Printed for Longman, Rees, Orme, Brown, and Green.

The main object of this Work is to diffuse a knowledge of Natural History among general readers; and a second object is to collect isolated facts that might otherwise be lost, or long withheld from science. Vol. I. contains the contributions of upwards of One Hundred Writers, illustrated by above Two Hundred Engravings: these contributions, which embrace every part of Natural History, are by writers of various degrees of information, from the inquiring novice to the accomplished amateur and man of scientific research; and the volume, in consequence, will be found not less instructive than varied and entertaining. No work can be better calculated for giving a favourable direction to the tastes and pursuits of youth of both sexes, and especially of youth in the country.

No. VI. of the Magazine of Natural History, price 2s. 6d. will appear on the 1st of March next.

Geography, with Atlas, on an entirely New Plan.

In royal 18mo. price 3s. 6d. neatly bound and lettered, embellished with numerous Engravings, illustrating Manners, Customs, and Curiosities.

RUDIMENTS of GEOGRAPHY, on a NEW PLAN, designed to assist the Memory by Comparison and Classification.

By W. C. WOODBRIDGE, A.M.

The Geography is accompanied by an Atlas, exhibiting, in connection with the Outlines of Countries, the prevailing Religions, forms of Government, degrees of Civilisation, the comparative size of Towns, Rivers, and Mountains, and the Climate and Productions of the Earth, in royal 4to. coloured, price 8s. half-bound.

This Atlas has been compiled from the best authorities, and contains all the late Discoveries of Parry, Weddell, Denham, and Clapperton. But its principal claim to attention is founded on the entire novelty of the plan: each Map presents, not only the geographical outlines of countries, but a series of Numbers affixed to the Mountains, Rivers, and Cities, which indicate their comparative rank, and enables the Student, by reference to the table of Classification, to discover their actual magnitude.

The Isothermal Chart exhibits the Climate of different Regions, as determined by thermometer observation, with their most important productions, and presents a striking illustration of the diversity existing in the same latitude, according to the situation of countries.

In the Moral and Political Chart the outlines of each country contain a number, shewing its Population, and several emblems indicating its Government, Religion, and State of Civilisation, and forms, in effect, a Moral Picture of the World.

Printed for Whittaker, Treacher, and Arnot, Ave Maria Lane.

Of whom may be had, gratis,

A System of Universal Geography, by M. Malte Brun, Editor of the "Annales des Voyages," &c. Vol. VII. Part I. price 7s. 6d.

"M. Malte Brun is probably known to most of our readers as the author of a systematic work on geography; he is, besides, the editor of a periodical digest, under the title of 'Nouvelles Annales des Voyages de la Géographie, et de l'Histoire': the first is as much superior to the compilations of our Guthrie and Pinkerton, as the other is to the garbled productions of our Truellers and Mavor."—*Quarterly Review*, No. 52.

The Annual Biography and Obituary for the Year 1829, containing Memoirs of celebrated Persons who died in 1828. 2s.

Contents: The Queen Dowager of Wirtemberg—Archbishop Sutton—Lord Liverpool—Dugald Stewart, Esq.—Sir J. E. Smith—Bishop Tomline—Sir T. B. Thompson—Sir R. J. Strahan—Dean Hood—Capt. Clapperton—Archdeacon Coxe—Sir H. Torrington—Sir Neil Campbell—Dr. Mason Good—Admiral Nowell, &c. &c.

Also may be had,

The preceding Twelve Volumes, 15s. each.

A New System of Treating the Human Teeth, from Infancy to Age, illustrated by Cases; to which is added, some Account of the Anodyne Cement for the Cure of Toothach and The Douloureux, invented by the Author, and successfully practised by him since the Year 1825, together with the curious Mistakes and pretended Remedies to which it has been subjected. By J. Paterson Clark, M.A. Dentist. In 8vo. price 5s. bds.

Two Supplementary Volumes, forming Vols. V. and VI. of Lectures on Comparative Anatomy, by Sir Everard Home, Bart. V.P.R.S. F.R.S. &c. In 4to. with numerous Engravings, price 4l. 4s. boards.

These volumes contain a general explanatory Index, by which means the separate investigations are connected, the different lectures brought into one regular course, and the plates form one regular series, in which every representation is brought into its proper place.

A few Copies are printed on large paper, price 6l. 6s. boards.

Also may be had,

Vols. I. to IV. with numerous Plates, price 14l. 14s.; or on large paper, 21l.

* One half of this great Work being now printed, the Proprietors have the satisfaction of being able to announce what has been especially desired by many, a republication in perfect volumes. To those persons who have not become subscribers to this Encyclopædia, nor made themselves acquainted with its peculiar and original plan, it may be necessary to state, that it will ultimately form three grand divisions, viz. 1. Treatise in every department of Agriculture and Art, (including in two Subdivisions of Pure Science and Mixed and Applied Science); 2. History, with Biography intermixed;—3. Miscellaneous, arranged alphabetically, and comprising a Technical Dictionary, a Glossary, and an Etymological Lexicon of the English Language. In every Part, as hitherto published, a portion of each of these Divisions has been given, and the Reader has had the advantage of enjoying, in every new fasciculus presented to him, all the distinct features of the Work. Still, however satisfactory this plan has been to many, others have been desirous of having perfect volumes; and this wish is now attainable by the completion of the First Volume of the Work, comprising Grammar, Logic, Rhetoric, and a large portion of Mathematics. Price 2l. 2s.; or on royal paper, with proof-plates, 3l. 12s.

A SERMON preached Dec. 21, 1826, in the Chapel of Farnham Castle, at an Ordination held by the Lord Bishop of Winchester.

DR. GRANVILLE'S TRAVELS to St. PETERSBURGH.

"Dr. Granville's skill we have heard, and believe to be considerable. He is a man of the world, and we have a high opinion of his sagacity. Petersburg is the theatre for the display of Dr. Granville's descriptive powers and graphical illustrations; and we do not hesitate to say that his picture of Petersburg contains the most copious and detailed description of the gigantic edifices of this extraordinary city, which has hitherto been laid before the public."—Quarterly Review.
Printed for Henry Colburn, 8, New Burlington Street.

In 1 vol. 4to. with numerous Engravings, price 2l. 12s. 6d.

THE FOREIGN REVIEW.

Price Six Shillings.
No. V.
London: Black, Young, and Young, 2, Tavistock Street, Covent Garden; Bossange, Barthe, and Lowell, Great Marlborough Street.

No. VI. will be published in March.
Rich as this country is in periodicals of all classes, shapes, and characters, there is not one to which we give a preference over the "Foreign Review." It commands the "first literary talent which this country can boast—it has its established agents over the whole Continent of Europe."
"The present Number contains ten full articles, and literary notices of about forty or fifty of the recent publications of France, Italy, Sweden, Denmark, Russia, Germany, and Spain. The whole is excellent in kind, and admirable in arrangement."
—*Dublin Morning Post*.

Just published by Henry Colburn, 8, New Burlington Street.
SAILORS AND SAINTS.

A Novel.
By the Authors of the "Naval Sketch Book."
In 3 vols. post 8vo. 31s. 6d.
"While reading 'Sailors and Saints' the floor of our room has seemed to reel; we have fancied we have felt the salt spray of the sea on our face—so completely have we been absorbed in the graphic descriptions and living presentations before us."—*United Service Journal*.

2. **Tales of Passion**, by the Author of "Gilbert Earle." In 3 vols. post 8vo.

3. **Rank and Talent.** A Novel, in 3 vols. post 8vo.

4. **The Disowned.** By the Author of "Pelham." 3d edition, in 3 vols. post 8vo. 31s. 6d.

"If 'Pelham' justly raised for its author a very high character, the 'Disowned' will raise it far higher."—*Literary Gazette*.

5. **The Anglo-Irish; or, Love and Politics.** A Tale of the Nineteenth Century. In 3 vols. post 8vo. 31s. 6d.

"It would do no discredit to the romantic genius of the author of 'Waverley.' We can confidently recommend the 'Anglo-Irish' as a work of wit, interest, and instruction."—*Examiner*.

6. **The Castilian.** A Spanish Tale. In 3 vols. post 8vo. 31s. 6d.

"The incidents are rich in interest, the story well managed, and the characters well drawn."—*Times*.

7. **Zillah; a Tale of the Holy City.** By the Author of "Brambletye House," the "Tor Hill," and "Kauben Apeley." 3d edition, in 3 vols. post 8vo. 31s. 6d.

"The attractions of this work are uncommon and manifold."—*Athenaeum*.

8. **Tales of the Great St. Bernard.** 2d edit. 3 vols. post 8vo. 31s. 6d.

9. **The Man of Two Lives.** A Narrative. Written by Himself. 2 vols. post 8vo. 18s.

10. **Tales of Woman; or, Illustrations of the Female Character.** In 2 vols. post 8vo. 18s.

11. **The Ball; or, a Glance at Almack's.** In 1 vol. post 8vo. 7s. 6d.

Also, nearly ready,
12. **Traits of Travel; or, Tales of Men and Cities.** By the Author of "Highways and Byways." In 3 vols. post 8vo.

13. **Stratton Hill; a Tale of the Civil Wars.** By the Author of "Letters from the East," "Tales of the West of England," &c. In 3 vols. post 8vo.

14. **Ecarté; or, The Salons of Paris.** In 3 vols. post 8vo.

15. **Tales of a Voyager to the Arctic Ocean.** Second Series. In 3 vols. post 8vo.

THE OMNIPRESENCE OF THE DEITY.

A Poem.
By ROBERT MONTGOMERY.
Dedicated, by permission, to His Grace the Archbishop of Canterbury.

Also, by the same Author, printed uniform with the above, the 3d edition, price 7s. 6d. of

A Universal Prayer; Death; a Vision of Heaven; and a Vision of Hell.

Printed for Samuel Maunders, 10, Newgate Street.

Of whom may be had,
A Portrait of R. Montgomery, Esq. painted by Hobday, engraved by Thomson, price 3s. 6d.

SERMONS PREACHED IN ENGLAND.

By the late Right Rev. REGINALD HEBER, D.D. Lord Bishop of Calcutta, formerly Rector of Hoxnett, Salep, Prebendary of St. Asaph, and Preacher of Lincoln's Inn. John Murray, Albemarle Street.

In 8vo. price 7s. 6d. boards,
CHRISTIANITY, PROTESTANTISM, and POPERY, COMPARED and CONTRASTED; showing the Whole Doctrine of the Romish Church, as taught at the present day, and the Scriptural Authority to which it is opposed; also, the Origin of every Invention of that Church which Popery has introduced, with the Means employed at the Reformation to establish the Protestant Religion on the first basis of Primitive Christianity. Dedicated to the Reformed and Romish Church and Laity of the United Kingdom.

"A very judicious antidote to the mischievous and destructive tenets of the most apostate and corrupt church upon earth."—*Christian Recorder*.

Samuel Maunders, 10, Newgate Street.

LETTERS FROM LORD REDESDALE TO LORD COLCHESTER, on the CATHOLIC QUESTION. Letter I. price 2s. 6d.

Letters II., III., IV., V., VI., price 1s. 6d.

Printed for J. Hatchard and Son, 17, Piccadilly.

A Seventh Letter will appear shortly.

RESTALRIC; or, the Forfeiture.

In 2 vols. post 8vo. price 21s.
By the Author of "St. Johnston."
"The people suffer when the price of the book is so high."
Printed for Macmillan and Stewart, Edinburgh; and Simpkin and Marshall, London.

Of whom may be had, by the same Author,
St. Johnston; or, John, Earl of Gowrie.

3 vols. 12mo. price 21s.

Just published by Henry Colburn, 8, New Burlington Street.
MEMOIRS of the WAR in SPAIN.

By MARSHAL SUCHET, Duke d'Albafra.
In 2 vols. 8vo. French, 31s.

N.B. The Translation will be ready in a few days.

2. **Travels in Arabia**, comprehending the Hedjaz, or Holy Land of the Mussulmans. By the late John Lewis Burckhardt. In 1 vol. 4to. Published by Authority of the African Association.

3. **Twelve Years' Military Adventure** in Three Quarters of the Globe; or, Memoirs of an Officer who served in the Armies of His Majesty and of the East India Company, between the Years 1808 and 1814, in which are contained, the Campaigns of the Duke of Wellington in India, and his last in Spain and the South of France. In 2 vols. 8vo. 34s.

4. **An Octavo Edition of the Marquess of Londonderry's Narrative of the late War in the Peninsula.** Dedicated to the King, and comprising the Correspondence of many distinguished Officers with the Author. 3 vols. with Map and Plans, 31s. 6d.

5. **The Ellis Correspondence**, comprising many Particulars of the Revolution, and Anecdotes Illustrative of the History and Manners of those Times. Edited from the Originals, with Notes and a Preface, by the Hon. George Agar Ellis. In 2 vols. 8vo. with a Portrait, 32s.

6. **Buckingham's Travels in Assyria, Media, and Persia.** In 4to. with Engravings, 21. 12s. 6d.

7. **Letters from the Ægean**, by James Emerson, Esq. Containing, among other interesting Narratives, the singular History of Crevelier the Pirate, the original of Lord Byron's Corsair. In 2 vols. post 8vo.

8. **The Living and the Dead**, Second Series, in 2 vols. 8vo. 10s. 6d.

Contents: Reginald Heber—A Country Curate's Pilgrimage—Lord Llanberis—The Modern Moloch—My Predecessors—Ashbourn—Dr. Hawker, a Sketch, &c. &c.

Second Volume of the

9. **Memoirs of the late Empress Josephine**, by Mademoiselle Ducrest. Comprising some highly curious Extracts from the private Correspondence of the Empress, now first published. In 8vo. 10s. 6d.; French, 8s.

10. **A Second Judgment of Babylon** the Great; or, More Men and Things in the British Capital. By the Author of "Babylon the Great."

3d edition, revised and enlarged, price 8s. 6d.

A TREATISE ON INDIGESTION; illustrating the Symptoms, Varieties, Causes, and Treatment of the prevailing Disorders of the Stomach and Liver, with Practical Observations on some Painful Complaints originating in these Disorders; as Tic Douloureux, Gout, Flatness of Blood in the Head, &c.

By T. J. GRAHAM, M.D. &c.
"We sincerely recommend it, and have long been convinced that such a work was imperatively called for."—*London Medical Journal*.

London: Published by W. Joy, 66, Paul's Churchyard; sold by all Booksellers.

Also, by the same Author,
Modern Domestic Medicine: a popular Treatise, forming a comprehensive Medical Guide for the Clergy, Families, and Invalids. 3d edition, 8vo. price 18s.

"We conscientiously recommend it."—*Literary Chronicle*.

"It is, altogether, deserving of permanent popularity."—*London Weekly Review*.

In 12mo. price 10s. 6d. boards,
A SPINSTER'S TOUR in FRANCE, the STATES of GENOA, &c. during the Year 1837.

"Our fair spinster has laid down the little volume, which does credit to feminine taste and talent."—*Literary Gazette*, Aug. 2, 1838.

Printed for Longman, Rees, Orme, Brown, and Green.

In 8vo. 10s. 6d. boards,
ON the NATURE and TREATMENT of the SPINE and the BONES of the CHEST are subject; with an Inquiry into the Merits of the several Modes of Practice that have been hitherto followed in the Treatment of these Diseases.

By JOHN SHAW, Surgeon of the Middlesex Hospital, and formerly Lecturer on Anatomy.

Also,
Engravings, in folio, illustrative of the above Work, 11. 11s. 6d. boards.

By the same Author,
Further Observations on the Lateral or Serpentine Curvature of the Spine, &c. In 8vo. 7s. boards.

Observations on the Causes and early Symptoms of Defects in the Form of the Spine, &c. 8vo. 8s. boards.

Printed for Longman, Rees, Orme, Brown, and Green.

Sir W. Scott's Poetical Works.

In 10 vols. 12mo. with Twenty Engravings, after Smirke, &c. price 34. 3s. boards.

THE POETICAL WORKS OF SIR WALTER SCOTT, Bart.

Also,
An Edition in 10 vols. 8vo. including the Ministry of the Scottish Border and Sir Tristram. With Twenty Engravings after Smirke and Nasmyth. Price 6d. bds.

"The Ministry of the Scottish Border, Sir Tristram, or any other of Sir Walter Scott's Poems, may be had separately, in single volumes, 8vo.; also, in folio, 8vo. the Lady of the Lake, price 9s.; Marmion, 9s.; and Lay of the Last Minstrel, 8s.

Printed for Longman, Rees, Orme, Brown, and Green.

Conservations on Political Economy, &c. &c.
In 12mo. 6th edition, price 8s. boards.
CONSERVATIONS ON POLITICAL ECONOMY, in which the Elements of that Science are familiarly explained.

Printed for Longman, Rees, Orme, Brown, and Green,
Of whom may be had, by the same Author,
Conservations on Chemistry, illustrated by Experiments. In 2 vols. 12mo. with Plates by Lowry. The 11th edition, enlarged, 14s. boards.

Conservations on Natural Philosophy. 5th edition, 10s. 6d. boards, with 88 Engravings by Lowry.

With a Frontispiece, and 30 other Engravings, price 5s. in cloth, the

ARCANA of SCIENCE, and ANNUAL REGISTER of the USEFUL ARTS. Abridged from the Transactions of Public Societies, and Scientific Journals of the past year.

Mechanical, 100 Improvements and Discoveries—Chemical, 70—Natural History, 135—Astronomical and Meteorological, 35—Agriculture, Gardening, and Rural Economy, 100—Domestic Economy, 56—Useful and Fine Arts, 70—With a Miscellaneous Register of Sciences and Arts.

We hope the editor will publish a similar volume annually."

—*Gardener's Magazine*.

Printed for John Limbird, 145, Strand.

Of whom may be had,
The Arcana of Science for 1828. 4s. 6d.

In 2 vols. with new Plates of the Arms, beautifully engraved, price 8s.

THE ANNUAL PEERAGE for 1839.

Printed under the sanction, and from the Communications of the Nobility, with the Baronetage and new Plates of the Arms; those of the House of England revised and corrected by Edmund Lodge, Esq. Norroy King of Arms, &c.

Printed for Saunders and Otley, British and Foreign Public Library, Conduit Street.

BOOKS IN THE PRESS.

PRICE 8d.

REVIEW OF NEW BOOKS.

The Journal of a Naturalist. 12mo. pp. 403. London, 1829. J. Murray.

THE study of nature is ever pleasing to the human race: to the most informed it opens never-ending sources of pleasant emotions; and the most unthinking being that walks the face of the earth is unconsciously gratified by its mere external, but always varying features. Grandeur, beauty, motion, change, are ingredients in this innocent Circe's cup, whose exquisite intoxication is as harmless as its slightest sip. At a moment like the present, too, of great and stormy political agitation, it has seemed to us even more than usually grateful, to lose ourselves in the quiet contemplations which a literary production belonging to this class is sure to afford. Gilbert White's *Natural History of Selborne*, and other works, appears to have awakened similar feelings in the present author; and we cordially recognise in him a worthy successor of that intelligent and amiable writer. His *Journal*, indeed, contains much entertaining and interesting matter, and in a form which cannot fail to be agreeable to readers: and our task is simply to offer a few selections, as specimens to demonstrate this truth.

Our naturalist describes himself as the resident of a village on the ancient road from Bristol to Gloucester; and he gives a general picture of the broad estuary of the Severn, and of the great lime-stone ridge which here crosses the country, respecting a portion of which he tells the following anecdote:—

"I may here mention an incident that occurred a few years past at one of our lime-kilns, because it manifests how perfectly insensible the human frame may be to pains and afflictions in peculiar circumstances; and that which would be torture if endured in general, may be experienced at other times without any sense of suffering. A travelling man one winter's evening laid himself down upon the platform of a lime-kiln, placing his feet, probably numbed with cold, upon the heap of stones newly put on to burn through the night. Sleep overcame him in this situation; the fire gradually rising and increasing until it ignited the stones upon which his feet were placed. Lulled by the warmth, he still slept; and though the fire increased until it burned one foot (which probably was extended over a vent hole) and part of the leg, above the ankle, entirely off, consuming that part so effectually, that no fragment of it was ever discovered, the wretched being slept on! and in this state was found by the kiln-man in the morning. Insensible to any pain, and ignorant of his misfortune, he attempted to rise and pursue his journey, but missing his shoe, requested to have it found; and when he was raised, putting his burnt limb to the ground to support his body, the extremity of his leg-bone, the skin, crumbled into fragments, having been charred into lime. Still he expressed no sense of pain, and probably experienced none, from

the gradual operation of the fire and his own torpidity during the hours his foot was consuming. This poor drover survived his misfortunes in the hospital about a fortnight; but the fire having extended to other parts of his body, recovery was hopeless."

Speaking of the cultivation of his happy village, where there is abundant employment and consequent comfort for the poor, he observes—

"We find here, as is usual with other vegetable varieties, that after a few years' cultivation, the sorts lose their original characters, or, as the men say, 'the land gets sick of them,' and they cease to produce as at first, and new sets are resorted to."

This is the case with all kinds of corn, and we believe fruits brought into a country to be naturalised, if we may use the term;—they invariably undergo great alterations in the course of a few years. But our author, in continuation, gives us a curious and extremely interesting history of the potato itself. "A summary of the perusal of multitudes of volumes, papers, treatises! The sweet Spanish potato (*convolvulus batatas*), a native of the East, was very early dispersed throughout the continent of Europe; and all the ancient accounts, in which the name of potato is mentioned, relate exclusively to this plant, a *convolvulus*: but our inquiry at present regards that root now in such extensive cultivation with us, which is an American plant (*solanum tuberosum*). Perhaps the first mention that is known concerning the root is that of the great German botanist Clusius, in 1588, who received a present of two of the tubers in that year from Flanders; and there is a plate of it among his rare plants. The first certain account which I know of by any English writer is in Gerard, who mentions, in his herbal, receiving some roots from Virginia, and planting them in his garden near London as a curiosity, in the year 1597. All the multifarious tales which we have of its introduction by Hawkins, shipwrecked vessels, Raleigh, and his boiling the apples instead of the roots, are merely traditional fancies, or modern inventions, with little or no probability for support. There is some possibility that Sir Walter Raleigh might have introduced the potato into Ireland from America, when he returned in 1584, or rather after his last voyage, eleven years later; but if so, it was much confined in its culture, and slowly acquired estimation, even in that island; for Dr. Campbell does not admit that it was known there before the year 1610, fifteen years after Sir Walter's final return. In England it seems to have been yet more tardy in obtaining notice; for the first mention which I can find, wherein this tuber is regarded as possessing any virtue, is by that great man Sir Francis Bacon, who investigated nature from the 'cedar that is in Lebanon, even unto the hyssop that springeth out of the wall: he spake also of beasts, and of fowls, and of fishes, and of creeping things,' in his history of 'Life and Death,' written, probably in retirement after his disgrace. He observes, that 'if ale was

brewed with one-fourth part of some fat root, such as the potato, to three-fourths of grain, it would be more conducive to longevity than with grain alone.' It was thus full twenty-four years after its being planted by Gerard, that the nutritive virtues of this root appear to have been understood: but with us there seems to have been almost an antipathy against this root as an article of food, which can scarcely excite surprise, when we consider what a wretched sort must have been grown, which one writer tells us was very near the nature of Jerusalem artichokes, but not so good or wholesome; and that they were to be roasted and sliced, and eaten with a sauce composed of wine and sugar! Even Philip Miller, who wrote his account not quite seventy years ago, says, 'they were despised by the rich, and deemed only proper food for the meaner sorts of persons;' and this at a time when that sorry root the underground or Jerusalem artichoke (*helianthus tuberosus*) was in great esteem, and extensively cultivated. And we must bear in mind the disinclination, the prejudice, I might almost call it, that this root manifests to particular soils. Most of our esculent vegetables thrive better—are better flavoured, when growing in certain soils, and under different influences; but the potato becomes actually deteriorated in some land. And every cultivator knows from experience that the much-admired product of some friend's domain, or garden, becomes, when introduced into his own, a very inferior, or even an unpalatable root. Potatoes will grow in certain parishes and districts, and even remain unvisited; but the product will be scanty, as if they tolerated the culture only, and produced by favour; whereas in an adjoining station, possessing some different admixture of soil, some change of aspect, the crop will be highly remunerative. These circumstances, in earlier days, when their value, and the necessity of possessing them, were not felt, counteracted any attempt for extensive cultivation, or probably influenced the dislike to their use. However locally this *solanum* might have been planted, yet it appears, after consulting a variety of agricultural reports, garden books, husbandmen's directions, &c., down to the statements of Arthur Young, that the potato has not been grown in gardens in England more than one hundred and seventy years; or to any extent in the field above seventy-five. At length, however, as better sorts were introduced, and better modes of dressing found out, it became esteemed; and the value of this most inestimable root was so rapidly manifested, and the demand for it so great, that we find by a survey made about thirty years ago, that the county of Essex alone cultivated about seven-tenth hundred acres for the London market. I know not the extent of land now required for the supply of our metropolis, but it must be prodigious. Amidst the numerous remarkable productions ushered into the old continent from the new world, there are two which stand

pre-eminently conspicuous from their general adoption; unlike in their natures, both have been received as extensive blessings—the one by its nutritive powers tends to support, the other by its narcotic virtues to soothe and comfort, the human frame—the potato and tobacco; but very different was the favour with which these plants were viewed: the one, long rejected by the slow operation of time, and perhaps of necessity, was at length cherished, and has become the support of millions; but nearly one hundred and twenty years passed away before even a trial of its merits was attempted: whereas the tobacco from Yucatan, in less than seventy years after the discovery, appears to have been extensively cultivated in Portugal, and is, perhaps, the most generally adopted superfluous vegetable product known; for sugar and opium are not in such common use. Luxuries, usually, are expensive pleasures, and hence confined to few: but this sedative herb, from its cheapness, is accessible to almost every one, and is the favourite indulgence of a large portion of mankind. Food and rest are the great requirements of mortal life: the potato, by its starch, satisfies the demands of hunger; the tobacco, by its morphine, calms the turbulence of the mind: the former becomes a necessity required; the latter a gratification sought for. Many as the uses are to which this root is applicable—and it will be annually applied to more; if we consider it merely as an article of food, though subject to occasional partial failures, yet, exempted from the blights, the mildews, the wire-worms, the germinations of corn, which have often filled our land with wailings and with death, we will hail the individual, whoever he might be, who brought it to us, as one of the greatest benefactors to the human race, and with grateful hearts thank the bountiful Giver of all good things for this most extensive blessing."

The account of the teasel is also, to us, novel and striking:—

"Our second crop (continues the author) which some years we grow largely, is the teasel (*dipsacus fullonum*), a plant which is probably not native of this country, but like woad, canary-grass, &c., originally introduced by some of the numerous foreign artisans who have at various times sought refuge here, or been encouraged to settle in England. Our woollen manufactory could hardly have made any progress without this plant: the constant continental wars in the earlier part of our monarchy, and the rival jealousies of foreign nations, would have impeded, or prohibited, the necessary supply of teasels, and thus rendered the domestic cultivation of this indispensable plant a primary object. The manufactory of cloth was certainly carried on in England during the reign of Richard I., perhaps in his father's reign; but it was probably not until after the tenth of Edward III. that the teasel was cultivated to any extent with us; for about that time the exportation of English wool was prohibited, and the wearing of foreign cloth opposed by government. Flemish artisans were encouraged to settle in this country, and carry on their trade, with every liberty and protection; a regular mart was established, and the tuckers, or woollen weavers, became an incorporated body; particular towns began to furnish peculiar colours—Kendal its green, Coventry its blue, Bristol its red, &c.; and from this period, I think, we may date the cultivation of the teasel in England. Hudson, in considering this species as indigenous, directs us to hedges for our specimens; but though the teasel is certainly found

a wilding in some places astray from cultivation, yet it is singular, that with us it does not wander from culture: though the seeds are scattered about and swept from the barns where the heads are dried into the yard, and vegetate in profusion on the dung-heaps and the by-ways where dropped, yet I have never observed it growing in the surrounding hedges. Teasels are cultivated in some of the strong clay lands of Wilts, Essex, Gloucester, and Somerset. The latter county is supposed to have grown them earliest. The manufacturers rather give the preference to those of Gloucester, as lands repeatedly cropped are thought not to produce them so good in some respects. Strong land, thrown up as for wheat, and kept dry, affords the best teasels. Weeding, draining, and other requisites, demand a constant labour through great part of the year; and hence a certain expense is incurred; but remuneration, loss, or great profit, circumstances must determine; nor, perhaps, is there any article grown more precarious or mutable in its returns. The teasel throws up its heads in July and August; and these are cut from the plant by hand, with a knife particularly formed, and then fastened to poles for drying: the terminating heads are ready first, and called 'kings': they are larger and coarser than the others, and fitted only for the strongest kinds of cloth, and are about half the value of the best. The collateral heads then succeed, and receive the name of 'middlings,' and are the prime teasels. Should the season prove moist, great injury ensues; but exposure to wet for any length of time ruins the head, which, by its peculiar construction, retains the moisture, and it decays. We cannot stack them like corn, as pressure destroys the spines, and a free circulation of air is required to dry them thoroughly; and we seek for barns, sheds, and shelter of any kind, crowd the very bed-rooms of our cottages with them in dripping seasons, and bask them in every sunny gleam that breaks out: this is attended with infinite trouble; and as few farmers, who have so many other concerns on their hands, like to encounter it, they become the speculation of the most opulent class of cottagers. When dry, they are picked and sorted into bundles for sale, ten thousand best and small middlings making a pack; nine thousand constitute the pack of kings. If there be a stock on hand, and the season favourable, there is a sufficiency for the demand, and the price low: if adverse weather ensue, the price becomes greatly advanced, and we have known them in the course of a few months vary from 4*l.* to 22*l.* the pack! but from 8*l.* to 7*l.* is perhaps the average price of this article. This variation in value affords the growers a subject for constant speculation—a source of rapid wealth to some, and injury to others;—and we most emphatically call teasels a 'casualty crop.' Our manufacturers occasionally import teasels from Holland and France, when the price is high in England: this they can do when the home price exceeds 8*l.*

"This plant seems to be known in many countries by a name expressive of its use. Old Gerard has recorded several of these names. Its old English name was the carding teasel; the Latin name, *carduus veneris*; the French call it, *chardon de foulon*; the Danes and Swedes, *karde tidsel*; the Flemings, *karden distel*; the Hollanders, *kaarden*; Italy and Portugal, *cardo*; the Spaniards, *cardencha*, &c. I believe that the teasel affords a solitary instance of a natural production being applied to mechanical purposes in the state

in which it is produced. It appears, from many attempts, that the object designed to be effected by the teasel cannot be supplied by any contrivance—successive inventions having been abandoned as defective or injurious. The use of the teasel is to draw out the ends of the wool from the manufactured cloth, so as to bring a regular pile or nap upon the surface, free from twistings and knottings, and to comb off the coarse and loose parts of the wool. The head of the true teasel is composed of incorporated flowers, each separated by a long, rigid, chaffy substance, the terminating point of which is furnished with a fine hook. Many of these heads are fixed in a frame; and with this, the surface of the cloth is teased, or brushed, until all the ends are drawn out, the loose parts combed off, and the cloth ceases to yield impediments to the free passage of the wheel or frame of teasels. Should the hook of the chaff, when in use, become fixed in a knot, or find sufficient resistance, it breaks, without injuring or contending with the cloth; and care is taken by successive applications to draw the impediment out; but all mechanical inventions hitherto made use of offer resistance to the knot; and, instead of yielding and breaking, as the teasel does, resist and tear it out, making a hole, or injuring the surface. The dressing of a piece of cloth consumes a great multitude of teasels—it requiring from 1500 to 2000 heads to accomplish the work properly. They are used repeatedly in the different stages of the process; but a piece of fine cloth generally breaks this number before it is finished, or we may say that there is a consumption answering to the proposed fineness—pieces of the best kinds requiring one hundred and fifty or two hundred runnings up, according to circumstances."

Trees next occupy the attention of the writer; and his descriptions of a large oak and a wych elm are extremely agreeable; but we pass to some rather philosophical remarks.

"Trees in full foliage have long been noted as great attractors of humidity, and a young wych elm in full leaf affords a good example of this supposed power; but in the winter of the year, when trees are perfectly denuded, this faculty of creating moisture about them is equally obvious, though not so profusely. A strongly marked instance of this was witnessed by me, when ascending a hill in the month of March. The weather had previously been very fine and dry, and the road in a dusty state; but a fog coming on, an ash-tree hanging over the road was dripping with water so copiously, that the road beneath was in a puddle, when the other parts continued dry, and manifested no appearance of humidity. That leaves imbibe moisture by one set of vessels and discharge it by another, is well known; but these imbibings are never discharged in falling drops: the real mystery was, the fog in its progress was impeded by the boughs of the tree, and gradually collected on the exposed side of them, until it became drops of water; whereas the surrounding country had only a mist flying over it. Thus, in fact, the tree was no attractor, but a condenser; the gate of a field will in the same manner run down with water on the one side, and be dry on the other; as will a stick, or a post, from the same cause. It is upon this principle that currents of air will be found under trees in summer, when little is perceived in open places; and the under-leaves and sprays will be curled and scorched at times, when the parts above are uninjured. The air in its passage being stopped and condensed against

the foliage of the tree, it accordingly descends along its surface or front, and escapes at the bottom, where there are no branches or leaves to interrupt its progress. In winter there is little to impede the breeze in its course, and it passes through; consequently, at this season the air under a tree is scarcely more sensibly felt than in the adjoining field. It may be observed, that in the spring of the year the herbage under trees is generally more vivid and luxuriant than that which is beyond the spread of the branches: this may be occasioned, in some instances, by cattle having harboured there, and the ground becoming in consequence more manured; but it will be found likewise manifestly verdant and flourishing where no such accessory could have enriched it, and is, I apprehend, in general chiefly owing to the effects of the driving fogs and mists, which cause a frequent drip beneath the tree, not experienced in other places, and thus in a manner keep up a perpetual irrigation and refreshment of the soil.*

The observations on the love of flowers are beautiful, and at this season peculiarly appropriate.

"The love of flowers seems a naturally implanted passion, without any alloy or debasing object as a motive: the cottage has its pink, its rose, its polyanthus; the villa its geranium, its dahlia, and its clematis; we cherish them in youth, we admire them in declining days; but, perhaps, it is the early flowers of spring that always bring with them the greatest degree of pleasure, and our affections seem immediately to expand at the sight of the first opening blossom under the sunny wall or sheltered bank, however humble its race may be. In the long and sombre months of winter our love of nature, like the buds of vegetation, seems closed and torpid; but, like them, it unfolds and reanimates with the opening year, and we welcome our long-lost associates with a cordiality that no other season can excite, as friends in a foreign clime. The violet of autumn is greeted with none of the love with which we hail the violet of spring; it is unreasonable; perhaps it brings with it rather a thought of melancholy than of joy; we view it with curiosity, not affection: and thus the late is not like the early rose. It is not intrinsic beauty or splendour that so charms us; for the fair maids of spring cannot compete with the grander matrons of the advanced year; they would be unheeded, perhaps lost, in the rosy bowers of summer and of autumn: so; it is our first meeting with a long-lost friend, the reviving glow of a natural affection, that so warms us at this season: to maturity they give pleasure, as a harbinger of the renewal of life, a signal of awakening nature, or of a higher promise; to youth, they are expanding being, opening years, hilarity, and joy; and the child, let loose from the home, riots in the flowery mead, and is

* Monarch of all he surveys.

There is not a prettier emblem of spring than an infant sporting in the sunny field, with its over-basket wreathed with butter-cups, orchids, and daisies. With summer flowers we seem to live as with our neighbours—in harmony and good-will; but spring flowers are cherished in private friendships.

The continuation is reserved for our next Number.

Lays of Leisure Hours. By Maria Jane Jewsbury, author of "Letters to the Young." 12mo. pp. 189. London, 1829. Hatchard and Son.

THE production of elegant and cultivated taste, rather than of original genius, these *Lays* shew at least that leisure so employed both refines and elevates the mind; and we recommend this little volume cordially to our readers, as awakening serious thought and gentle feeling, for a spring morning's companion, associating somewhat of sad but pleasant reflection with every leaf and flower around. We like the following much:—

"I am come back to my bower,
But it is not as of yore,—
Withered every glowing flower,
And the leaves are green no more;
Winter winds are sighing
Where summer breezes strayed;
Winter mists are lying
Where the sunbeams played;
Hope, the spirit that gladdens,
Flees upon the blast;
Memory, that but saddens,
Lingers to the last.
Telling of the roses,
Telling of the joys,
That life in spring discloses,
Its waning time destroys.
I am come back to my bower,
'Tis precious as of yore,
Though withered every flower,
And the leaves are green no more;
Though mute the lark and linnet,
And still the humming bee,
Affection dwell within it,
A summer world to me;
Though leaf and blossom perish,
And zephyrs pass away,
The glory that I cherish
Will never so decay:—
Hearts to whom no weather
Change or blight can bring,
These love on together,
In winter as in spring."

Poetical Portraits.

"Being of beauty and of grief!
Thy portraiture should be
Written in burning words and brief—
Tears, tears for thee!
A rose that by a lonely tomb,
Hangs whitening in the sun,
The phantom of its former bloom
Yet lingering on:—
A rill once by a mountain side,
Companion blithe and boon,
Till scorching suns its sweet depths dried,
And quenched its tune:—
A violet that no sheltering leaf
Hides from the strong rain's swell:—
Being of beauty and of grief,
These thy fate tell!
Desolate in each place of trust,
Thy bright soul dimmed with care,
To the land where is found no trace of dust,
Oh! look thou there!"

There are some sacred poems which deserve commendation; and altogether this is a most pleasing collection.

The London Review. Edited by the Rev. Blanco White. No. I. Saunders and Otley.

"AND they said: This one fellow came in to sojourn, and he will needs be a judge!" Such was the text which involuntarily occurred to us when we heard under whose auspices the *London Review* was to be conducted. And the more we reflect on the subject, the more strange does it appear. Who could have thought it possible that a foreigner could be competent to sit in judgment on the idiomatic delicacies of English composition; that a Spaniard, the native of perhaps the least advanced country of Christian Europe, could be deeply versed in English literature; that an ecclesiastic, bred up among the prejudices and the *difficiles nugæ* by which the faculties of a Catholic priest are both confined and wasted, could be able, not merely to survey the whole field of human knowledge, but to supply the omissions, and

rectify the errors, and clear away the prejudices, of writers who have enjoyed a British education? Those, however, who are acquainted with the writings of the eminent person to whom we are alluding, who have observed the simplicity and vigorous warmth of his style, the quiet humour with which he has painted the foibles of mankind, and the eloquent indignation which he has poured out on their impostures and oppressions, and the variety of the sources whence he has drawn his arguments and his illustrations, must be aware that, so far as knowledge and talent are concerned, few men can be more fit to fill the highest seat in a literary tribunal.

We turn, however, from the editor to the Review, of which the first No. has just appeared; and it is our practice to hail the *début* of any new and important contemporary in the pleasant and useful, though laborious and uncertain, walk of periodical literature. The first article, if it can be called an article, for it is rather a preface, contains a parallel between ancient and modern periodical literature, and proclaims the principles on which it is proposed to conduct the *London Review*, which are moderate and safe in the middle course. The next paper reviews eight of Sir Walter Scott's novels, from *Peveril of the Peak* to the second series of the *Chronicles of the Canongate*, inclusive. This is, perhaps, an encroachment on our peculiar province. Our readers, unless they have the wisdom to confine their reading to our pages, must be aware that the *soi-disant* reviews have long ceased to review. They are amusing collections, of often able essays, but have abandoned to us and to our imitators the task of stating the contents, and appreciating the merits and defects, of the books which they use as their "pegs." In this undignified situation they have placed even Sir Walter Scott. The article which we are now considering is, strictly speaking, a review, and contains less episodic matter than is usually seen in a composition of such length. The third article is on pamphlet-writers on church reform. But we have no desire to go through a Review as if it were an original volume; and we have said enough to introduce our new-born brother (a fine, stout child!) to the acquaintance of the public.*

A Treatise on the Laws of Literary Property.

By Robert Maugham, Secretary to the Law Institution, &c. 8vo. pp. 246. London, 1828. Longman and Co.

THE subject of this book is one of great importance; and to ourselves, who necessarily feel a deep interest in every thing that concerns the interests of literature, it is more particularly so. The work proceeds from the pen of a gentleman in that class of life wherein, generally speaking, little leisure is found from the active exertions of business for the pursuits of science and letters; and it is on that account the more valuable. He is, we understand, an eminent solicitor, and he comes prepared to his task, doubly armed with the powers of a lawyer and a gentleman of literary attainments; and with these he seems to combine a love of the subject on which he treats.

* The remaining nine reviews are on the *Palace Anecdotes of Napoleon*, by De Baumes, from 1805 to 1814; on our *Criminal Laws*, and the *Colony of New South Wales*; on *Diet* (Dr. Paris); on the *Greek Theatre*; on the *Comparative View of Social Life in England and France*; on *Insanity* (Dr. Burrows and others); on the *Com Law* (Mr. Jacob's Second Report); on *Pollak's Course of Time*; and on the *Police Reports of England*, and *Code Criminelle of France*. Of these, all we can observe is, that they contain much sterling matter and much sound criticism.

It will not, therefore, be surprising that with such qualifications he has produced a work delightful and useful, as well to the scholar as to the lawyer; and we would fain express a hope that these pages may meet the eye and excite the attention of some of our legislators able and willing to assert the rights of literature, and to obtain for it the full and fair justice to which it is entitled.

The Treatise has two great divisions: in the first, the history and the law of copyright is discussed; in the second, the library tax, or the claim of the British Museum, Universities, &c. to copies, is canvassed.

The right of an author to the proprietorship of his own works seems, on the bare mention of it, to be so well founded in justice, in equity, and in common sense, — so self-evident to every one, — that it cannot but appear a strange anomaly to those not previously conversant with the matter, to be informed of the fetters and restrictions imposed upon it by act of parliament.

“Not only is its duration limited to the short period of twenty-eight years, but it is taxed for the benefit of wealthy corporations to an amount always burdensome, and frequently destructive of all the remuneration it would otherwise afford. Indeed, the impolicy, as well as the injustice, of the existing laws, must be admitted by every one who is in the least degree acquainted with the subject, and possessed of the smallest share of impartiality. Even the Universities acknowledge (as well they may) that the limitation of the term is grossly unjust; and all classes must pronounce the imposition of eleven copies of all kinds of publications, to be contrary to every principle of equity.”

Our author shews incontestably that by the common law the copyright of a work ought to be, and actually was, vested in the author; and he then traces down its history through the various rescripts and decisions which he cites, to the passing of the act of parliament of the 8th of Queen Anne, cap. 19, by which the first restriction as to the term for which an author should enjoy his copyright is enacted. But even subsequent to the passing of this statute, several decisions took place in which this restriction was disregarded; and it was only in the year 1774 that the full effects of the unjust clause were first discovered and acted upon.

In 1769 the subject matter was argued with regard to Thomson's Seasons, in the celebrated cause of Millar v. Taylor: there was then a difference of opinion: Lord Mansfield and Judges Aston and Willis were in favour of the plaintiff's copyright, and Judge Yates alone was against it. On the 9th of February, 1774, this cause came by appeal before the House of Lords, and it was ordered that the judges should be directed to deliver their opinions upon the following questions: —

“1. Whether at common law an author of any book or literary composition had the sole right of first printing and publishing the same for sale, and might bring an action against any person who printed, published, and sold the same, without his consent? — Of eleven judges, there were eight to three in favour of the right at common law.

“2. If the author had such right originally, did the law take it away upon his printing and publishing such book or literary composition; and might any person afterwards reprint and sell for his own benefit such book or literary composition, against the will of the author? — There were seven to four of the

judges who held that the printing and publishing did not deprive the author of the right.

“3. If such action would have lain at common law, is it taken away by the statute of 8th Anne? And is an author by the said statute precluded from every remedy, except on the foundation of the said statute, and on the terms and conditions prescribed thereby? — On this question there were only five judges who were of opinion that the action at common law was not taken away by the statute, and there were six of the opposite opinion. It was well known that Lord Mansfield adhered to his opinion, and therefore concurred with the eight upon the first question, with the seven upon the second, and with the five upon the third (which in the latter case would have made the votes equal). But it being very unusual, from reasons of delicacy, for a peer to support his own judgment upon an appeal to the House of Lords, he did not speak. It was finally decided, that an action could not be maintained for pirating a copyright after the expiration of the time mentioned in the statute.”

From the date of this decision, therefore, an author ceased to have that property and estate in his written and printed works which he may have in nearly every thing else that can be called property. In July 1814 was passed the act by which the law of copyright, as it stands at present, is principally regulated, and by its provisions an author has twenty-eight years of copyright; and if he should be living at the expiration of such term, then it is confirmed to him for his life.

The *Literary Gazette* is not a work accustomed to enter into controversial disquisitions; but the real hardship of the case upon English authors is so great, and is so universally and justly complained of, that we cannot refrain from giving a few of the arguments adduced by Mr. Maugham in support of the right of copy. The work abounds with them, and we almost extract at random.

“It will not be necessary to enter into any elaborate consideration of the arguments on the origin of property. There seems no rational ground for creating a distinction between literary and any other species of property. The rights of each are equally entitled to protection. Such a distinction cannot be founded upon the degree of labour bestowed in the acquisition of other objects of property. Even the right to the possession of land has been acquired as often by good fortune as by merit, and is frequently retained without the bestowment of labour. The property in a literary work may be acquired in the same way. The first thought may have been accidental, which labour has enlarged and improved. The descendants of those who have produced intellectual treasures are as well entitled to inherit them as the posterity of the accumulators of land or money. To say, that the definition of property in the old legal authorities does not include the property in question, can be nothing to the purposes of justice. If it does not include it, the definition is a bad one, because it is not sufficiently comprehensive. Besides, if literary works possess none of the usual characteristics of property, according to its present technical description, let them form a class of themselves. Injustice should not be done for the sake of preserving consistency in verbal or metaphysical distinctions, which have nothing but their antiquity to support them. It is held by all the law authorities, that an author possesses a strictly legal property in his literary labours, whilst they remain in manuscript. There can

be no real distinction in the nature of the property, in the sentiments or ideas and language, before and after publication. The law which prohibits the publication of his manuscript without his consent, should also protect the printed copy, and prevent the appropriation of the profit of publication by any other person than the author.”

Mr. Maugham discusses with great acumen, and, we think, with great fairness and impartiality, the various objections to a perpetuity of copyright: the principal are reduced to seven heads. 1. That although the invention and labour by which literary compositions are produced, entitle the author to the exclusive use of his manuscript, the right cannot be extended to ideas, because they are not objects of property. 2. That every monopoly, trenching on man's lawful employment, is a restraint upon the liberty of the subject. 3. That as others may arrive at similar conclusions, it would be difficult to ascertain the right owner, and inconveniently increase litigation. 4. The composition is the property of the writer, whilst in MS.; but the act of publishing gives it to the world. 5. The patentees of mechanical inventions possess but a limited term. 6. That it would prolong the power of the owner to deal with the public as he chose; and that he might either suppress a valuable work, or put an exorbitant price upon it. 7. The advocates of limited copyright farther contend that glory is the reward of science; and those who deserve it, scorn all meaner views.

To these, we think, might fairly be added the inconvenience which in many cases might arise to the world, from the impossibility, after the lapse of a series of years, of discovering the actual proprietors of some valuable work which required reprinting for the public, — the descendants from the author could not, perhaps, be traced; yet a fear that such exist, would deter a new publisher from the venture. Provisions might, however, be made by law to obviate this.

It would be impossible for us, in the limited extent of our weekly sheet, to do full justice to the several arguments by which the foregoing seven objections are ably and successfully combated. We can do no more than refer our readers to the work itself, as a production obtaining that celebrity to which the value of the subject and its own intrinsic merits so justly entitle it. We trust we have said enough to call the general attention to the book and to the hardships which it discusses; and we close our account with hearty commendations, and a wish that the author may enjoy his copyright for the eight and twenty years now allowed by law, and then live to see his hopes gratified by the alterations in that law which he so ably advocates.

The Italian Confectioner; a complete Economy of Desserts, according to the most modern and approved Practice. By G. A. Jarrin. 4th edition, with Bills of Fare for the Dessert, and other additions. Ebers and Co.

THE absurd price set upon this volume seems hitherto to have prevented its enjoying the extensive circulation to which it was entitled as being an excellent work, and the only one of authenticity extant on the fruitful subject of which it treats. The present publishers have, we are glad to see, reduced it greatly both in size and cost, so as to make it a comely and not immoderate book; and as, from the circumstances we have mentioned, this treatise is not so generally known as it should be, we shall

permit Mr. Jarrin himself to inform our readers what he has done for their delectation.

"This work treats of sugar, of the numerous candies and bon-bons, as they are made in France; of the imitation of vegetables, fruits, and other natural objects, in sugar, and of a great variety of drops, prawnings, &c. &c.; of the best mode of preparing chocolate and cocoa; of syrups, marmalades, jellies, fruit, and other pastes, and of preserved fruits, including directions for preserving fruit without sugar, according to the method of M. Appert; with hints respecting the construction of ovens and stoves, and a table of the various degrees of heat adapted to the different articles of confectionery. It will also be found to contain receipts to make tablets and rock sugar; the various compotes; the French method of preparing comfits; the best manner of making creams and ices, with some important hints respecting the latter, upon which their excellence entirely depends; how to preserve fruits in brandy; to make and arrange pièces montées, confectionery paste, and the mode of producing picturesque scenery, with trees, lakes, rocks, &c.; lozenges and jellies; cool drinks for balls and routes; cakes, wafers, biscuits (particularly those of Italy), rich cakes, biscotini, macaroons, &c. &c."

Besides the above, the important subjects of distillation, modelling, and moulding, have each their respective sections, worthy of all elegant housewife attention. We shall conclude with Mr. Jarrin's observations on ice-wells, which are exceedingly to the purpose.

"To obtain a good ice-well, you should choose a spot looking towards the north, the soil either sand, gravel, or chalk, wherein you can easily build a well which will drain itself, the water soaking into the soil by a waste well made under the other. An ice-well should be larger round than it is deep, for it is a common error to imagine that the deeper a well is, the better; on the contrary, we know that the water naturally runs toward the depth, and, drawing towards the wells, penetrates through the brick-work, and produces a humidity that melts the ice. To avoid this, a good well should be built with double walls, at the distance of eighteen inches or two feet apart, and the interval between filled up with ashes, or any other matter of an absorbent quality. The well must be built with a domed top (like a wasp-tureen), and a hole in the centre left to receive the ice. Over the dome of brick-work there should be a covering of earth, at least six feet in thickness, upon which a plantation may be formed, to keep off the sun's rays: the hole in the centre of the dome should have a neck (like a large chimney-pot), secured with a strong cover of iron, running up through the superincumbent earth three or four feet, and should be kept always well covered with soil, and turfed over, as soon as the well is filled, to prevent any access of air in that direction. At the side of the well, upon a line with the bottom of the dome, an entrance must be made to take out the ice: it should consist of a porch with double doors, the outer of which must be covered with straw, or thatched, and every crevice in both doors stopped up and made as air-tight as possible. A dry time ought to be chosen for filling the well; the ice should be broken as small as possible, in order that it may reunite in the interior; and three or four men should be employed in levelling and pounding it, till the well is filled to the very top: if a long frost ensues, it should be filled up from time to time, as the ice first introduced will diminish considerably in bulk as it forms itself

into a compact mass, by freezing in the well. When the ice is taken out, every precaution should be adopted to prevent the rush of a volume of air into the well upon the opening of the doors. At first the ice must be taken out as it comes to hand, until the mass sinks to a level with the door; but afterwards, by means of a ladder, it must be taken from the sides of the well, all round quite down to the bottom, leaving the centre to the last, which will be found solid and compact even in the midst of summer: if, on the contrary, the ice is first taken away from the middle, you disturb the body, and the air which introduces itself will destroy more than you consume. The first object, it must be always recollected, in preserving the ice in a well, is to keep it dry; and if unfortunately the well is placed in a soil that will not permit it to drain itself, a pump must be fixed on the outside to draw off the water accumulated in the waste well."

We ought to add, that this edition, besides other additions, contains, as the title announces, several new bills of fare for the dessert.

Sir J. Malcolm's History of Persia: concluded.

In our last we promised to finish this (for us) long review, of a very interesting and standard work, with a sketch of the royal method of killing time in Persia. Who would not be a despotic king?

"His religious duties, which no king of Persia can openly neglect, require him to rise early. As he sleeps in the interior apartments, which no male is allowed to approach, his attendants are either females or eunuchs. After he is dressed with their aid, he sits for an hour or two in the hall of the haram, where his levees are conducted with the same ceremony as in his outer apartments. Female officers arrange the crowd of his wives and slaves with the strictest attention to the order of precedence. After hearing the reports of the persons intrusted with the internal government of the haram, and consulting with his principal wives, who are generally seated, the monarch leaves the interior apartments. The moment he comes out, he is met by officers in waiting, and proceeds to one of his private halls, where he is immediately joined by some of his principal favourites, and enters into familiar conversation with them: all the young princes of the blood attend this morning levee, to pay their respects. After this is over, he calls for breakfast. The preparing his meals is superintended by the nazir, or chief steward of the household. The viands are put into dishes of fine china, with silver covers, and placed in a close tray, which is locked and sealed by the steward. This tray is covered with a rich shawl, and carried to the king, when the steward breaks the seal, and places the dishes before him. Some of the infant princes are generally present, and partake in this repast. The chief physician is invariably in attendance at every meal. His presence is deemed necessary, the courtiers say, that he may prescribe an instant remedy, if any thing should disagree with the monarch: but this precaution, no doubt, owes its origin to that suspicion which is continually haunting the minds of such as exercise despotic power. When his public duties are performed, he usually retires to the haram, where he sometimes indulges in a short repose. Some time before sunset he always makes his appearance in the outer apartments, and either again attends to public business or takes a ride. His dinner is brought between eight and nine, with the same precautions and cere-

monies as at breakfast. He eats, like his subjects, seated upon a carpet, and the dishes are placed on a rich embroidered cloth spread for the occasion. Some of the former kings used to indulge openly in drinking wine; but none of the reigning family have yet outraged the religious feelings of their subjects by so flagrant a violation of the laws of Mahomed. Bowls filled with sherbet, made of every species of fruit, furnish the beverage of the royal meals; and there are few countries where more pains are bestowed to gratify the palate with the most delicious viands. After dinner, the king retires to the interior apartments, where it is said that he is often amused till a late hour by the singers and dancers of his haram. It is impossible, however, to speak of his occupations after he passes the threshold of his inner palace. He is there surrounded by a scene calculated, beyond all others, to debase and degrade the human character. He sees only emasculated guards, and their fair prisoners. He hears nothing but the language of submission or of complaint. Love cannot exist between beings so unequal as the monarch and his slave; and vanity must have overcome reason, before the fulsome adulation of pretended fondness can be mistaken for the spontaneous effusions of real affection. The harams are governed by the strictest discipline; and this must be necessary to preserve the peace of a community, where the arrogance of power, the pride of birth, the ties of kindred, the intrigues of art, and the pretensions of beauty, are in constant collision. The usual routine of the king's life is often interrupted by urgent public affairs, and sometimes by amusement. The reigning family has hitherto disdained those enervating and luxurious habits which led the last Seffavean monarchs to confine themselves to their harams. They not only attend personally to public business, but are continually practising manly exercises, and engage in field-sports with all the ardour of a race who cherish the habits of their Tartar ancestors. The present king is an expert marksmen and an excellent horseman: few weeks pass without his partaking in the pleasures of the chase. The king has always a historiographer and a chief poet. The one writes the annals of his reign; the other, who has a high rank at court, composes odes in his praise, and, with grateful ardour, celebrates the munificence of his patron. A giant and a dwarf were at one period of the present reign part of the royal establishment; and it is never without a jester, who enjoys an extraordinary latitude of speech, and, both in his dress and manner, assumes the habit and appearance of folly. It is usual to laugh at the vitiations of these jesters, even when they are the most severe; and the sovereign himself respects their privilege. The tribe to which Kerrem Khan belonged, speak a language which, from its rudeness, is denominated 'the barbarous dialect.' As this prince was one day sitting in public, he commanded his jester to go and bring him word what a dog, that was barking very loud, wanted. The courtiers smiled at this sally of their monarch. The jester went, and, after appearing to listen for some time with profound attention, returned, and said with a grave air, 'Your majesty must send one of the chief officers of your own family to report what that gentleman says: he speaks no language except 'the barbarous dialect,' with which they are familiar, but of which I do not understand one word.' The good-humoured monarch laughed heartily at this jest,

and gave the wit a present. This anecdote, to which many similar might be added, shews that there is little difference between the office of jester at the modern court of Persia, and that which some centuries ago existed at every court in Europe. A resemblance even in trifling forms merits attention, as it may lead to conclusions on the progress of knowledge and the condition of society; and, from the character of their amusements, we may perhaps judge as correctly as from their more serious occupations, of the degree of civilisation which a people has attained. In the court there is always a person who bears the name of 'story-teller to his majesty;' and the duties of his office require a man of no mean acquirements. Though passionately fond of public exhibitions, the Persians have none that deserve the name of theatrical entertainments: but, though strangers to the regular drama, their stories are often dramatic; and those whose occupation is to tell them, sometimes display so extraordinary a skill, and such varied powers, that we can hardly believe, while we look on their altered countenances and listen to their changed tones, that it is the same person, who at one moment tells a plain narrative in his natural voice, then, speaks in the hoarse and angry tone of offended authority, and next subdues the passions he has excited by the softest sounds of feminine tenderness. The art of relating stories is attended both with profit and reputation. Great numbers attempt it, but few succeed. It requires considerable talents and great study. None can arrive at eminence except men of cultivated taste and retentive memory. They must not only be acquainted with the best ancient and modern stories, but be able to vary them by introducing new incidents, which they have heard or invented. They must also recollect the finest passages of the most popular poets, to add the impression of the narrative by appropriate quotations. The person whose office it is to amuse his majesty with these stories is always in attendance. It is equally his duty to beguile the fatigue of a long march, and to soothe the mind when disturbed by the toils of public affairs; and his tales are artfully made to suit the disposition and momentary humour of the monarch. Sometimes he recites a story of the genii; at others he speaks of the warlike deeds of former sovereigns, or of the love of some wandering prince. Often the story is of coarser materials, and the king is entertained with low and obscene adventures. In no court is more rigid attention paid to ceremony. Looks, words, the motions of the body, are all regulated by the strictest forms. When the king is seated in public, his sons, ministers, and courtiers, stand erect, with their hands crossed, and in the exact place belonging to their rank. They watch his looks, and a glance is a command. If he speaks to them, you hear a voice reply, and see the lips move, but not a motion or gesture betrays that there is animation in any other part of the frame. The monarch often speaks in the third person: 'The king is pleased,' 'The king commands.' His ministers usually style him 'The object of the world's regard.' They are as particular in forms of speech as in other ceremonies; and superiority and inferiority of rank, in all their gradations, are implied by the terms used in the commonest conversations."

SIGHTS OF BOOKS.

A Grammar of General Geography. For the Use of Schools and Young Persons: with Maps and Engravings. Corrected and modernised by the Rev. J. Goldsmith. 18mo. pp. 191. London, 1829. Longman and Co.

Geography illustrated on a popular Plan, &c.; with thirty-five Engravings. 12mo. pp. 740. Same Publishers.

WE have given just and ample praise to a number of works devised at this time of extraordinary exertion to render the best instruction easy and permanent for the youthful mind. The ingenuity and knowledge which have been directed to this important object could not escape a tribute from the *Literary Gazette*, whose own great end and purpose was, and is, to diffuse a love for information, and to make intellectual enjoyments a want to the many, through the initiatory means of the entertaining and interesting. And in this view we can safely say that no two books have ever afforded us greater satisfaction than this Grammar and Popular Geography. We really are not aware of any thing that a first-rate geographical scholar could tell us which is not clearly expounded in their pages. For education in this branch of science, it is impossible, we think, to improve upon them; for they embrace every thing essential to be understood and remembered. It is almost a hardship to be obliged to confess, that, what cost us years to learn, may here be acquired (by the aid of system and intelligence) in less than an equal number of months; but such is the truth. The advantages of the rising race of students are, indeed, real miles gained on the march of intellect; and we could almost envy the facilities. These volumes are treasures; and as handsomely illustrated as they are in themselves excellent. We have forgotten who it is that now occupies the popular name of Goldsmith; but whoever he is, his plans, his carefulness, and his abilities, render him a worthy successor to the highest name, and a great benefactor to every young person in the British empire.

Restalrig; or, the Forfeiture. By the Author of "St. Johnstown, or John Earl of Gowrie." 2 vols. 12mo. Edinburgh, 1829, MacLachlan and Stewart: London, Simpkin and Marshall.

THIS work by no means fulfils the promise of its predecessor. The plot has too many improbabilities, and too little interest. The historical personages introduced, appear to be introduced merely because they are historical; and, in short, as a tale of the Waverley school, it is a plaster cast, without the life and spirit of the original.

The Olio. Vol. II. from July to December 1828, and Nos. for January and February 1829. J. Shackell.

THIS is one of the healthy and growing literary shrubs which vegetate weekly, makes a nice monthly bouquet, and are at last gathered into annual wreaths, much to the credit of their cultivators, and much to the edification and amusement of the public. The *Olio* is a various and entertaining miscellany, adorned with clever wood-cuts (one for every week)—so clever indeed that nothing but a large sale could tempt the proprietors to disburse the attendant expense. The selection is made judiciously, and it is hardly possible to dip anywhere without being attracted by the matter to read on. This is exactly the character which such a work ought to possess.

Memoirs of Vidocq. Written by Himself: Paris. Translated in 2 vols. 12mo. London, 1829. Hunt and Clarke.

THIS life of a French rogue, but now, according to his own account, a respectable man, furnishes some curious details of the modes of swindling, robbing, prison-breaking, galley-slavery, and other circumstances, as they are endured or practised among our neighbours across the Channel. Like all great autobiographers, M. Vidocq is a perfect hero, the object of plots and conspiracies; but his adventures are amusing, without being more coarse than was to be expected from the nature of his career; and the French language is happily adapted to soften even these impurities. There is, besides, a good deal of piquancy and spirit in the narrative. The English version seems to be very well executed, considering the number of flash words and phrases, and of difficult allusions in the original.

Constable's Miscellany. Volumes XXXIII., XXXIV., and XXXV. Edinburgh, Constable and Co.; London, Hurst and Co.

HAVING in our last No. noticed at length the preceding volumes of this publication, we shall only say of these three volumes, that the *Revolutions in Europe* form an interesting sequel to the *Rebellions in Scotland*. The narratives are very various, and the whole collection well made. Vol. XXXVI., which has just appeared, is the first of *Cochrane's remarkable Travels*.

An Attempt to remodel the Art of Stenography on new and more primitive Principles than the Systems now in use. By Charles Latham. London, 1828. Hessey.

Brevi esse laboro, seems to be the studied maxim of the ingenious author of this little book; and its syllogistic form for instructing the pupil in stenography, is admirably calculated to imprint the lesson on his memory, and by its simplicity to keep it there. Indeed, the plainness of the characters and rules evince that kind of mind in the author best fitted for the study of the grammar of any language, even for that of symbolic grammar. Since 1602 (the first year when any work on the subject of this essay made its appearance), nearly 100 printed treatises have been published; and yet, hitherto, the systems are as diverse as the publications are numerous. This is more owing, we think, to the want of concert among the teachers of stenography, than to any serious difficulty in the way of a more fixed and general system. Each master has exhibited his caprice by a change of character; or, too confident of his own, has declined to consult the opinion of others. The consequence is, that the popularity of the art has been checked, its improvement retarded; and the student, like the religionist, out of a number of creeds, has been at a loss for some settled principles to guide him.

Of late years, however, these defects have been felt by the most eminent judges of stenography, and there has been some approximation to a more uniform system; but it has been chiefly among themselves—so that to all visible improvement the science has remained fixed and stationary. We think that Mr. Latham, as far as he has gone, has done much to remedy these imperfections; and he is certainly entitled to much credit both for the neatness of his signs (or characters), and the grammatical accuracy of his arrangements.

Sermons preached in England. By the late Bishop Heber, &c. 8vo. pp. 392. London, 1829. Murray.

SIXTEEN sermons, with the popular name of Bishop Heber to them, need no reviewers' commendation to insure them a favourable public reception. We have therefore only to say of this volume, that it breathes the pious feelings and kindly humanity of its departed author; and that its editor, his widow, promises at some future period a selection of sermons preached in India, and of earlier parochial sermons preached at Hodnett, of which Dr. Heber was rector.

ORIGINAL CORRESPONDENCE.

Paris, February 7.

THE Opera balls commenced on Saturday, to the infinite pleasure of all classes and all ages. Ladies, in particular, enjoy these amusements, as it is only *sous masque* they ever dare to speak truth, or discover to you their *façon de penser*. The rôle of gentlemen at these reunions is not quite so agreeable; for as the anecdotes they hear of themselves seldom tend much to their honour, many of them try to shield their *amour propre* from the coups de lancettes of disguised nymphs by pasteboard noses highly varnished. A *ci-devant jeune homme* adopted this mode of defence the other night, taking also the further precaution of mounding a light curly wig: but neither of these deceptions were sufficient to screen the wearer from the scrutinising regards of his last discarded love. She recognised the "gay deceiver's" false teeth and painted eye-brows (which it seems had left indelible impressions on her memory); and, enraged at his late desertion of her, she tore away his borrowed feature and fair locks; so that he who but a few moments before swagged with all the pretensions of one-and-twenty, "stood confessed" an old marquis of sixty-seven: a riot would have ensued had not the despoiled gentleman made his exit. Formerly, what are termed *des dames* came *à fast* never honoured these balls by their presence, fearing the contamination of plebeian society; but English ladies, who, *dit-on*, inherit a larger portion of the original sin than those of other nations, made the *premier pas*, and were quickly followed by *les Parisiennes*, who were jealous of being out-done even in curiosity. According to the opinion *à-la-mode*, these Opera balls are *charmant*! and *est* it said to be right and left. Hitherto, however, its flight has been too rapid for my weak perception; and though there may be much amusement in walking to and fro for five or six hours, swallowing a volume of dust, being *coudoyé* by a thousand elbows, and assailed by hundreds of looks, yet I could not discover it; nor can I imagine even the luxury of telling truth sufficient to indemnify for the numerous evils one must encounter on the occasion.

The Académie Française assembled yesterday for the purpose of choosing a successor to the late M. Picard. The votes decided in favour of M. Arnaultpère. M. Augur's disappearance (for it seems he is not dead) leaves also a place of honour vacant; but the Academy must wait five years ere they elect a successor to him. I suppose, should his wife not hear tidings of him during the same space of time, she will be allowed to engage herself in new chains—at least this seems but just.

The first edition of the *Dernier Jour d'un Condamné*, by the celebrated Victor Hugo, was entirely sold in two days: it is a *chef-d'œuvre*. The second edition of *Orientales*, by the same

author, appeared to-day. This latter work is severely criticised.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

Friday, Feb. 13.

THE subject for this evening was "an account of Mr. Brown's discovery of active molecules existing in solid bodies, either organic or inorganic;" delivered by Mr. Faraday.

The lecturer, by the aid of drawings and specimens, traced the progress of Mr. Brown's investigations since their commencement in June 1827, to the present period. The object of these investigations was to ascertain the mode of action of the pollen of phænogamous plants upon the pistillum in the impregnation of the ovula; and whilst looking for a pollen whose particles having a determinate shape might be traced through their course, Mr. Brown found them to have peculiar motions when placed in contact with water, and examined by a powerful microscope, the motion consisting both in change of place and in a quick, short vibration. Following up the views which successively arose in his mind, Mr. Brown was led to believe that living and dead, animal and vegetable substances, metal, rocks, and all solid bodies, in turn produced particles capable of similar motion. The particles generally appear round, but angular ones have been seen in motion, their size varying from the $\frac{1}{1000}$ to the $\frac{1}{100}$ of an inch in diameter, and very probably to still smaller dimensions, but it is difficult to perceive them!

Mr. Faraday, in a very able and perspicuous manner, commented upon the vague opinions that had gone abroad relative to Mr. Brown's meaning; and stated the reasons why no satisfactory account of the motion as produced by known causes had been given: he also pointed out the manner in which these newly discovered facts as regarded inorganic matter, nullified the large portion of physiological reasoning which had been put forth at various times, relative to the impregnation of the vegetable ovulum, and the existence of organic molecules in the structure of plants. He also touched upon the supposed connexion of the subject with molecular or atomic philosophy in general, and recommended great reserve and caution in this branch of the inquiry, seeing that some gross and ludicrous blunders had already crept into what is considered the philosophy of atoms, from hasty conclusions, and the use of terms and names not in exact accordance with their received and acknowledged import. It is unnecessary to add, that Mr. Faraday's observations drew forth frequent and hearty marks of approbation.

In the library was an ancient British torque of pure gold, weighing between five and six ounces, worn in former times by the chief of the Britons only. It was found in a turf-bog in Merionethshire. Also, views in China, painted in oil by the natives, containing very good effect and perspective, both architectural and aerial. There were also paintings in water-colours of the trades and costumes of the Chinese, executed by native artists: together with various specimens of Singalese fire-arms, mechanical contrivances, and presents of books.

LINNEAN SOCIETY.

Tuesday evening.

THE president, Lord Stanley, in the chair:—A continuation of Mr. Don's interesting paper on the new genera and species of the class Composita, belonging to the Floras of Peru, Chili, and Mexico, was read. Several new

members were balloted for and elected. The secretary announced to the meeting that the Society had agreed to purchase the collection and library of Linnaeus, together with those of Sir J. E. Smith, its late revered president, for the sum of three thousand guineas.

The Bishop of Bath and Wells, and several other distinguished Fellows of the Society, were present.

ASTRONOMICAL SOCIETY.

ON Friday week the anniversary meeting of this Institution took place, at the Society's house, in Lincoln's Inn Fields; Mr. Herschel, the President, in the chair. The gold medal was presented to the Rev. W. Pearson, for his work entitled, "an Introduction to Practical Astronomy." Another gold medal was presented to Professor Bessel, for his "Zone Observations," made at the Royal Observatory of Königsberg. A third was presented to Professor Schumacher, for important services rendered by him, both to practical and historical astronomy, by the publication of his various astronomical tables.

COLLEGE OF SURGEONS.

ON Saturday last the 10th Hunterian Oration was delivered in the Hall of the College, Lincoln's Inn Fields, by Mr. J. P. Vincent. Mr. Thomas, sen. Vice-President, took the chair, in the absence of Sir Anthony Carlisle, the President. The hall was crowded to excess. Amongst the distinguished persons who sat near the chairman, were the Presidents of the College of Physicians and Royal Society; several M.P.'s were also present.

INSTITUTION OF CIVIL ENGINEERS.

FEBRUARY 3d.—The question, "on the best method of preventing rust in iron," was resumed; and the minutes of former conversations relative to the subject were read by the secretary. Mr. Simpson stated a method of preventing the oxidation of iron water-pipes, when in constant use, by the application of lime: the discoloration and unpleasant odour contracted by water in its passage from the reservoir, are thus effectually obviated. The results of an experiment, on coating the mould of a casting, were communicated, and appear to open a new and productive field for philosophical research. Many instances were adduced, in the conversation, of the rapid decomposition of iron subjected to the joint action of the atmosphere and moisture, particularly the more exposed machinery of steam-boats;—all tending to prove, that efficacious protectors of such inestimable importance to the arts are still among the desiderata of science.*

At the close of the discussion, Mr. Jopling explained the properties of an instrument which he considers newly invented, or at least revived. This instrument describes the true Ionic spiral of the elliptic character, and, by a separate adjustment, the wave between the spirals, exactly accordant with all the specimens of Grecian Ionic capitals to which Mr. Jopling has had access in this country.

February 10th.—Mr. Turrel read a paper, proposing to the Institution a full consideration of the methods of obtaining, forging, and manufacturing iron. The subsequent discussion principally related to the properties of steel. Mr. Maudeley gave an account of certain experiments, made by order of the East India Company, to ascertain the capability of

* We have seen it stated that hamlock prevents the oxidation of iron, even under water. Some experiments on this (if true) might lead to useful results.—Ed.

forging and manufacturing the steel termed wootz, and in which he perfectly succeeded.

The death of Mr. Tredgold, communicated to the Institution by his friend Mr. Donkin, is an event deeply to be regretted, both on account of his professional celebrity as an author, and of the anticipations indulged by the members of the Institution, whose secretary he had been appointed. The numerous and excellent publications of Mr. Tredgold will long hold the first place among the elementary compendiums of civil engineering, and must ever ensure him the lively gratitude of the cultivators of general knowledge.

ANCIENT AND MODERN EGYPT.

Fifth and Sixth Letters (incorporated) from M. Champollion.

Beni-Hassan, 5th, and Montfaucon, 8th Nov. 1828.

I HAD reckoned upon being at Thebes on the 1st of Nov. This is the 5th, and I am still at Beni-Hassan. This is, in some measure, the fault of those who have already described the hypogeums of this neighbourhood, and have given so mean an idea of them. I thought to have done with these grottos in one day: they have taken fifteen, which I do not regret. But I must resume my narrative a little further back.

My last was dated from the great pyramids, where I remained encamped three days; not for the sake of those enormous masses, which produce so little effect when close to them, but to examine the sepulchral grottos in the vicinity. One of them, that of a certain Eimai, furnished us with a series of bas-reliefs, very interesting for the knowledge of arts and trades of ancient Egypt; and I shall take particular pains in searching for monuments of this kind, which are as much parts of history as the great paintings of battles in the palaces of Thebes. I have found about the pyramids several tombs of princes (kings' sons) and great men; but very few inscriptions of any particular interest.

I left the pyramids on the 11th of October, to return across the desert to our old encampment at Sakkarah, and then to our fleet, which lay at anchor at Bedrechein. We set sail for Upper Egypt; and on the 20th reached Minieh; whence we immediately set out again, after visiting the manufactory of cotton-yarn, in which European machinery is employed, and purchasing some necessary provisions. We then steered towards Saouadeh to visit a hypogeum of the Greek-Doric order, which has been already described. Hence we sailed towards Zaouyet-el-Maïetin, which we reached on the 20th, in the evening. There are here some hypogeums, adorned with bas-reliefs relating to civil and domestic life. I had copies taken of every thing interesting; and we did not leave it till the evening of the 23d, to proceed to Beni-Hassan, which a brisk gale enabled us to reach before midnight the same day.

At break of day, some of our young men having been to visit the neighbouring grottos, brought word that little was to be done there, because the paintings were almost effaced. I, however, went at sunrise to visit these hypogeums, and was agreeably surprised on finding a wonderful series of paintings, perfectly visible, even in the minutest details, on being damped with a sponge, and removing the fine dust which covered them, and which had deceived my companions. We immediately set to work, and, by means of our ladders and sponges, gradually discovered the most ancient series of paintings in the world, all relating to civil life, the arts and trades, and, what was quite new, to the military caste. I have made

an immense harvest in the first two hypogeums; yet a still richer one awaited us in the two more distant tombs towards the north. These two hypogeums have the peculiarity (as well as some small tombs in the neighbourhood), that the entrance is preceded by an open portico, hewn in the rock, and forming columns which closely resemble at first sight the Greek-Doric of Sicily and Italy: they are fluted, with round bases, and nearly all of beautiful proportions. The interior of the last two hypogeums was, or still is, supported by similar columns. We all recognised in them the true type of the ancient Greek-Doric; and I affirm this without fearing to found my opinion on the Roman times; for these two hypogeums, which are the finest of all, bear the date and belong to the reign of Osortasen, second king of the 23d dynasty, and consequently are as old as the 9th century before Christ. I will add, that the most beautiful portico, yet untouched, that of the hypogeum of a chief governor of the eastern districts of the Heptanomide, called *Nehothph*,—is composed of these Doric columns, without a base, as at Pæstum and in all the finest Greek-Doric temples. The paintings of the tomb of *Nehothph* are real water-coloured drawings, of remarkable delicacy and beauty of design.—I have not yet seen any thing in Egypt to equal them: the animals, quadrupeds, birds, and fish, are painted with so much elegance and truth, that the coloured copies which I had taken of them resemble the tinted engravings of our finest works of natural history. We shall need the testimony of the fourteen witnesses who have seen them, to induce people in Europe to believe in the fidelity of our drawings, which are perfectly correct. In this hypogeum I found a most interesting picture: it represents fifteen prisoners, men, women, and children, taken by one of the sons of *Nehothph*, and presented to this chief by a royal scribe, who offers at the same time a roll of papyrus, on which is written the date of the capture and the number of prisoners, which was thirty-seven. These captives, who are tall, and of a very peculiar physiognomy, most of them with an aquiline nose, were fair compared to the Egyptians, since the flesh has been painted with yellowish red, to imitate what we call flesh-colour. The men and women are clothed in very rich stuffs, painted (especially those of the women) like the tunics of the females of the Greek vases in the antique style. The head-dress and sandals of the female captives resemble those of the Greeks of the old vases; and I discovered on the robe of one of them the twisted ornament so well known by the name of *Grecque*, painted in red, blue, and black, and traced vertically. These details will excite the curiosity and awaken the interest of our archaeologists, especially that of our friend M. Dubois, whom I regret here more than ever not to have by my side, because our opinion on the progress of the arts in Egypt here finds *archi-authentic* proofs. The male captives, with pointed beards, are armed with bows and arrows, and one of them holds in his hand a Greek lyre in the antique style. Are they Greeks? I firmly believe they are; that is, Ionian Greeks, or some people of Asia Minor living near the Ionian colonies, and participating in their manners and customs. It would certainly be very curious to have Greeks of the ninth century before Christ, accurately painted by Egyptian artists. I have had this long picture copied in colours: there is not a stroke of the pencil which is not in the original.

The fifteen days spent at Beni-Hassan have been monotonous, but productive: at sunrise we went to the hypogeums, to draw, to colour, and to write; allowing an hour, at the most, to a frugal repast which was brought to us from the boats. Sunset, which is beautiful in this country, gave the signal for retreat: we returned to the bark to sup, lie down, and begin again the next day.

This abode among the tombs has produced a portfolio of drawings, perfectly executed, strictly accurate, and which already exceed 300 in number. I venture to say, that with these acquisitions alone my journey to Egypt would have already attained its object,—except with regard to architecture, which I attend to only in places not hitherto visited or known. The following is a sketch of them:—

1. *Agriculture*.—Drawings representing tilling the ground with oxen or by hand; sowing; treading the ground by rams, and not by hogs, as Herodotus says; five sorts of ploughs; the use of the pick-axe; the reaping of wheat, the gathering of flax, the putting these two kinds of plants into sheaves, the carrying to the mill, the threshing, measuring, storing in the granaries; two drawings of large granaries on different plans; the flax carried by asses; a number of other agricultural operations, among them, the gathering of the lotus, the culture of the vine, the vintage, its carrying home; two presses, one worked by the hand, and the other by mechanism; the putting the wine into bottles, or jars, carrying it to the cellar, &c. &c. Horticulture, the gathering of figs, &c. cultivation of the onion, irrigation, &c.; the whole, as in the following pictures, with explanatory hieroglyphic inscriptions: also the intendant of the country house, the secretaries, &c.

2. *Arts and trades*.—A collection of pictures, for the most part coloured, in order to determine the nature of the objects, and representing the sculptor in stone, the carver in wood, the painter of statues, the painter of architecture, furniture, and cabinet-work of all kinds; the painter with his easel, painting a picture; scribes and clerks of all descriptions; masons conveying blocks of stone; the art of pottery, with all the operations; the cutting of wood; makers of oars, carpenters, cabinet-makers, sawyers, carriers; the staining of common leather and morocco; the shoe-maker; spinning; weaving; the glass-worker and all his operations; the goldsmith, jeweller, smith, &c.

3. *The military caste*.—The education of the military caste and all their gymnastic exercises, represented in above 200 pictures, shewing all the positions and attitudes of two skilful wrestlers attacking, defending, retreating, advancing, standing, thrown down, &c. You will see by these whether the Egyptian artists were contented with figures in profile, the legs joined, and the arms pinioned against the side. I have copied the whole of this series of soldiers wrestling together, and also sixty figures representing soldiers of all arms, a siege, the *tortoise*, the *ram*, the military punishments, a field of battle, and the preparations for a military repast; lastly, the manufacture of lances, bows, arrows, clubs, battle-axes, &c.

4. *Singing, music, and dancing*.—A picture representing a concert of vocal and instrumental music: a singer, accompanied by a musician on the harp, is supported by two choruses, one of four men, the other of five women, the latter heating time with their hands. It is a complete opera; players on the harp, of both sexes;

players on the German flute, flageolet, on a sort of shell, &c.; dancers, forming various figures with the names of the steps which they dance. Lastly, a very curious collection of drawings representing the female dancers of ancient Egypt, dancing, singing, playing at tennis, and performing various feats of strength and address.

5. A considerable number of drawings representing the rearing of cattle, the herdsmen, all kinds of oxen, cows, calves, milking, the manufacture of cheese, butter—goatherds, ass-drivers, shepherds with their sheep, scenes relative to the veterinary art; lastly, the poultry-yard, containing numerous species of geese and ducks, and a kind of swan which was domestic in ancient Egypt.

6. The foundation of the Ichnographic collection, containing the portraits of the Egyptian kings and great men. This collection will be completed in the Thebaïd.

7. Drawings relative to games, exercises, and diversions. Among them are the *Mora*; the drawing straws; a kind of hot cockles; the mall; the game of piquets planted in the ground; the hunting of the fallow-deer, a picture representing a grand chase in the desert, in which are depicted between fifteen and twenty species of quadrupeds; pictures of the return from the sport—the game is carried dead, or led alive; several pictures of catching birds with nets—one of these drawings, which is of a large size, is tinted with all the colours, and in the same manner, as the original; lastly, drawings, on a large scale, of the several snares for catching birds: these instruments of the chase are painted separately in some hypogeums; several drawings relative to fishing—as with the angling-rod, with the trident or bident, with nets; likewise the preparation of fish, &c.

8. Domestic justice.—I have collected under this head fifteen drawings of bas-reliefs, representing offences committed by servants—the arrest of the offender, his accusation, defence, his trial by the intendants of the household, his sentence, and the execution, which is confined to the bastinado, the account of which is delivered with the documents of the proceedings into the hands of the master by the intendants of the household.

9. The household.—I have collected in this series, which is very numerous, every thing that relates to domestic or private life. These drawings, which are very curious, represent, 1. several Egyptian houses, more or less sumptuous; 2. vases of different forms, utensils, and movables, all coloured, because the colours invariably indicate the materials of which they are composed; 3. a superb palanquin; 4. a kind of room with folding-doors, carried on a sledge, which served the great men of Egypt, in former days, for carriages; 5. the monkeys, cats, and dogs, which formed part of the domestic establishment, as well as the dwarfs and other deformed individuals, who fifteen hundred years, and more, before the Christian era served to dispel the spleen of the Egyptian noblemen, as well as they did that of our old barons of Europe fifteen hundred years after the Christian era; 6. the officers of a great household, intendants, secretaries, &c.; 7. the servants, carrying provisions of all kinds, and servant-girls, likewise carrying provisions; 8. the manner of killing oxen, and of cutting them up for the use of the family; 9. a series of designs, representing cooks preparing various kinds of provisions; 10. the servants carrying the dressed meat to the master's table.

10. Historical monuments.—This collection

contains all those inscriptions, bas-reliefs, and monuments of every kind, that I have hitherto seen, bearing royal legends, with a date expressed.

11. Religious monuments.—All the images of the various divinities, drawn on a large scale, and coloured after the most beautiful bas-reliefs. This collection will be prodigiously increased in proportion as I advance in the Thebaïd.

12. Navigation.—A collection of designs representing the building of vessels and barks of various kinds, and the games of the mariners, which exactly resemble those that take place on the Seine on great holidays.

13. Lastly, zoology.—A series of quadrupeds, birds, insects, reptiles, and fish, designed and coloured with entire fidelity, after painted bas-reliefs, or pictures in the best preservation. This collection, which already amounts to above two hundred specimens, is extremely interesting: the birds are splendid—the fish painted with extreme perfection; and these will give an idea of what a handsome Egyptian hypogeum was. We have already collected drawings of above fourteen different species of dogs—house dogs, hounds, &c., from the harrier to the spaniel. I hope that Messrs. Cuvier and Geoffroy St. Hilaire will thank me for bringing them the natural history of Egypt in such good order.

I hope to complete and to extend in a proper manner these series, since I have not yet seen, as I may say, any Egyptian monuments. The great edifices begin, in fact, at Abydos, where I shall not be in less than ten days from this time.—[After reading these details, may not we well exclaim with the wisest of men, "There is nothing new under the sun!"—Ed. L. G.]

I passed, with grief of heart, opposite to Asch-Mounen, regretting its magnificent portico, which has been very recently destroyed. Yesterday Antinoë presented us only a heap of ruins; all its edifices have been demolished; nothing remains but a few granite columns, which could not be moved.

I was comforted a little for the loss of these monuments by discovering a very interesting one, which nobody has hitherto mentioned. We found, in a desert valley of the Arab mountain opposite to Beni-Hassan, El Aamar, a little temple excavated in a rock; the decoration of which, begun by Toutmôsis IV., was continued by Mandonê, of the eighteenth dynasty. This temple, ornamented with beautiful bas-reliefs, is dedicated to the goddess Pascht or Pepsascht, who is the Bubastis of the Greeks, and the Diana of the Romans. Geographers generally place at Beni-Hassan the position named Speos Artemidos (the grotto of Diana); and they are in the right, since I have just discovered the temple, excavated in the rock (the speos of the goddess); and this monument, which represents only images of Bubastis, the Egyptian Diana, is surrounded by several hypogeums of the sacred cats, the animal of Bubastis; some excavated in the rock; one, among others, erected in the reign of Alexander, son of Alexander the Great. Before the temple, under the sand, is a great bank of mummies of cats, wrapped up in mats, together with some dogs. Further on, between the valley and the Nile in the desert, there are two great dépôts of mummies of cats in packets, two feet below the sand.

Seventh Letter from M. Champollion.

Thebes, Nov. 24, 1828.

It was on the 10th of November that I

* How did these cats become dogs to the later Diana?!

quitted Es Siout, after having visited its hypogeums, which are accurately described by Messrs. Jollois and Devilliers, of whose extreme correctness I have daily proofs at Thebes.

On the 11th, in the morning, we passed before Can-el-Rebir (Anateopolis), and my bark passed full sail over the site of the temple which the Nile has swallowed up, without leaving the slightest trace of it.

I visited on the 12th some ruins at Ekehmin, and was so fortunate as to discover a sculptured block, from which I learned the date of the temple, which is of the time of Ptolemy Philopator; and obtained the image of the god Pan, who is no other, as I had already shewn, than the Ammon generator, of my pantheon.

We set out on the 13th, and at noon passed Ptolemais, where there is now nothing remarkable. At four o'clock, passing along the Djebel-el-Assefat, we perceived the first crocodiles. There were four of them lying on a sandy islet, and great numbers of birds were flying about them. Soon after, we landed at Girgeh. On the 15th the wind was faint, and we made but little progress; but our new companions, the crocodiles, seemed disposed to indemnify us. I counted twenty-one of them together upon one islet; and a discharge of muskets loaded with ball, fired pretty close to them, had no other effect than to break up this assembly. They threw themselves into the Nile, and we lost a quarter of an hour in getting our boat afloat; for it had gone too near the island.

At length, on the evening of the 16th, we arrived at Dendera. The moon shone with unclouded splendour, and we were only a league from the temples. How could we resist the temptation? We took a hasty supper, and set out. At length we came in sight of the temples; and I shall not attempt to describe the impression made upon us by the grand propylæum, and, above all, by the portico of the great temple: one may measure it, indeed; but to give an idea of it is impossible: it is grace and majesty combined in the highest degree. We passed two hours there in ecstasy, traversing the great halls, and endeavouring to read the external inscriptions by the light of the moon. We did not return to the boat till three o'clock in the morning, to go back to the temple at seven, where we passed the whole of the 17th. What was magnificent by moonlight, was still more so when the beams of the sun enabled us to distinguish all the details. I immediately perceived that I had before me a master-piece of architecture, covered with sculptures in the very worst style. Be it said without offence to any one, the bas-reliefs of Dendera are detestable; and this could hardly be otherwise; for they are of an age when the art was in its decline. Sculpture had already degenerated; whereas architecture, less subject to vary, had remained worthy of the gods of Egypt, and of the admiration of all ages.

The following are the dates of the several parts. The most ancient is the outer wall, at the extremity of the temple, on which are represented, of colossal size, Cleopatra and her son Ptolemy Caesar. The upper bas-reliefs are of the time of the emperor Augustus, as well as the external lateral walls of the naos, with the exception of some small portions which are of the age of Nero. The pronaos is entirely covered with imperial legends of Tiberius, Caius, and Nero; but in the whole of the interior of the nave, as well as in the chambers and in the edifices erected on the terrace of the

According to Rudbeck, the cat was sacred to Frey, the Diana of the northern mythology.—Ed. L. G.

temple, there is not a single sculptured cartouche. They are all empty, and nothing has been effaced: but all the sculptures of these apartments, as well as those of the whole interior of the temple, are in the worst style, and cannot be older than the time of Trajan or Antoninus. They resemble those of the propyleum of the south-west (*quere*—of the south east?), which is of the reign of this last emperor, and which, being dedicated to Isis, led to the temple of that goddess, placed behind the great temple, which is certainly that of Athor (Venus), as is proved by the thousand dedications with which it is covered; and not that of Isis, as the commission of Egypt has believed. The great propyleum is covered with images of the emperors Demitian and Trajan. As for the typhonium, it was decorated under Trajan, Adrian, and Antoninus Pius.

[We are sorry to postpone any portion of these very interesting communications; but the length of them leaves us no alternative.]

LITERARY AND LEARNED.

Oxford, Feb. 14.—On Thursday last the following degrees were conferred:—

Masters of Arts.—T. S. Salmon, Brasenose College, Grand Compounder; R. Pocklington, Rev. J. Day, Exeter College.

Bachelors of Arts.—J. Johns, Brasenose College, Grand Compounder; J. Mills, H. Roberts, C. Elliott, St. Edmund Hall; J. Hill, Brasenose College; J. Phelps, Jesus College; T. Shann, Scholar of University College; H. C. Morrell, Christ Church; R. S. Holford, Oriel College.

Cambridge, Feb. 14.—At the congregation on Wednesday last the following degrees were conferred:—
Doctor in Divinity (by royal mandate).—Rev. W. H. Mill, M.A. Trinity College, Principal of Bishop's College, at Calcutta.

Honorary Master of Arts.—Hon. J. C. Dundas, Trinity College.

Masters of Arts.—G. Coster, Archdeacon of Newthunderland, F. Grant, W. H. R. Bayley, St. John's College; E. O. Martin, Fellow of Calus College; J. Streetfield, Christ College.

Bachelor of Arts.—J. Mainwaring, Cates College.
At the same congregation, Philip Whitcombe, B.A. of Brasenose College, Oxford, was admitted *ad eundem* of this University.

ROYAL SOCIETY.

5th Feb. 1829.

A PAPER was read, entitled, "on a Differential Barometer," by the late William Hyde Wollaston, M.D. F.R.S. Communicated by Mr. Warburton.—The instrument described in this paper is capable of measuring, with considerable accuracy, extremely small differences of barometric pressure. It was originally contrived with the view of determining the force of ascent of heated air in chimneys of different kinds; but as its construction admits of any assignable degree of sensibility being given to it, it is susceptible of application to many other purposes of more extensive utility. A glass tube, of which the internal diameter is at least a quarter of an inch, being bent in the middle into the form of an inverted syphon, with the legs parallel to each other, is cemented at each of its open extremities into the bottom of a separate cistern, about two inches in diameter. One of these cisterns is closed on all sides, excepting where a small horizontal pipe opens from it laterally at its upper part; while the other cistern remains open. The lower portion of the glass tube is filled with water or other fluid, to the height of two or three inches; while the remaining parts of the tube, together with the cistern, to the depth of about half an inch, are filled with oil; care being taken to bring the surfaces of water in both legs to the same level, by equalising the pressure of the incumbent columns of oil. If the horizontal pipe be applied to the key-hole of a door, or any similar perforation in a partition between portions of the atmosphere in which the pressures are unequal,

the fluid in the corresponding half of the instrument will be depressed, while it is raised in the opposite one, until the excess of weight in the column that is elevated will just balance the external force resulting from the inequality of atmospheric pressures upon the surface of oil in both cisterns. This, however, is equal only to the difference between the weight of the column of water pressing on one side, and that of an equal column of oil which occupies the same length of tube on the other side: this difference, depending upon the relative specific gravities of the two fluids, will, in the case of olive oil and water, be about one-eleventh of the weight of the column of water elevated. But the sensibility of the instrument might be increased at pleasure, by mixing with the water a greater or less quantity of alcohol, by which the excess of its specific gravity over that of the oil may be reduced to one-twentieth, one-thirtieth, or any other assignable proportion. The instrument may be converted into an areometer, by closing both the cisterns, and by applying to the upper part of each a trumpet-monthed aperture, opening laterally.

Feb. 19. The President in the chair.—A paper was read, entitled, "Considerations of the objections raised against the geometrical representation of the square roots of negative quantities," by the Rev. J. Warren, M.A. of Jesus College, Cambridge; communicated by Doctor Young. Charles Tennyson, Esq. M.P., was balloted for and elected a fellow. Some interesting presents were made to the Society.

SOCIETY OF ANTIQUARIES.

Thursday, Feb. 19.

HUDSON GURNEY, Esq., M.P. V.P., in the chair.—A communication was read respecting two documents among the Lansdowne MSS. The first, a petition from "three or four thousand poor persons in Cardiganshire" against the cess levied by the ragier of Cardigan, which had occasioned a suit in the Court of Exchequer. The paper was endorsed by Lord Burleigh.—The second, a certificate relative to the repairs of Dover Castle in July 1578. Among the items were estimates for repairing—

The Armory Tower	£	s.	d.
The Duke of Suffolk's Tower	28	13	4
The Monk's Tower	53	6	8
The dry ladder	20	0	0
Four watchmen's houses upon the walls	34	0	0
The scutery	10	0	0
The lodgings in Arthur's Hall	16	13	4
The most bulwark under the cliff	8	13	4
To put the Queen's lodgings in reasonable good case, about	11	6	8
	400	0	0

Auditors were named for auditing the accounts to December 31st: we wish to see these published, with a statement of the income and expenditure: where there can be nothing to conceal, we can see no reason why the members should be kept in the dark, when all are equally interested. Notice was given that the ballot will take place next Thursday for Christian Jorgenson Thomson, Secretary for the preservation of Antiquities, Copenhagen; and C. C. Rafen, Professor of Philosophy in the Royal Society of Northern Antiquities, Copenhagen.

ROYAL SOCIETY OF LITERATURE.

The President, Bishop of Salisbury, in the chair.—On Wednesday, after receiving presents of works, and communications from Professor Von Hammer and other distinguished literati, a paper on Ancient Cycles was read, of which we purpose to give an epitome in a future No.

WESTERN LITERARY INSTITUTION.

A CONVERSAZIONE was held at this Institution on Saturday evening, the 14th instant, and was numerously attended. Among other curiosities, were exhibited two mummies of the Guanche species,* in excellent preservation; and in the course of the evening, a short but ingenious lecture on Phrenology was delivered by Mr. De Ville.—*Anonymous Correspondent.*

FINE ARTS.

BRITISH GALLERY.

No. 230. *Hamoaze, from Tor-point, near Mount Edgcumbe.* P. H. Rogers.—If a picture of perfect calm can produce a correspondent effect on the mind, it is this skilfully executed performance.

No. 320. *Boulevard Italien, from the Rue de la Paix, Paris.* O. R. Stanley.—In a similar way is this gay and lively scene calculated to raise ideas of a pleasurable kind. Those who have visited Paris, and those who have not, must take an interest in its sunshine and mirth.

No. 330. *The Sceptic.* J. Inskipp.—Carrying on the train of ideas connected with the effect of works of art on the imagination, what can we say of this figurative representation, this thing of partial light and deep gloom, but that, although an ingenious mode of embodying the conception of doubt and desolation of mind, it is, nevertheless, a subject of painful contemplation.

No. 283. *Christ and the Women of Samaria.* J. Linnell.—This performance is one of those striking examples of chiaroscuro and colour in which the character of the subject is for the most part lost in the more prevailing qualities of the picture.

No. 301. *Deer drinking.* H. Briggs.—Of the last-mentioned property of art this is also an excellent specimen.

Near this place hang several of the beautiful cabinet pictures painted for the Annals by Stephanoff, Leslie, and Cooper; prints from which have already come under our notice. We are happy to have an opportunity of observing the entire justice generally done by the engravers to their admirable prototypes.

No. 395. *The Mountain-Glen.* J. A. O'Connor.—A romantic scene, well calculated to figure in description, as preparatory to the introduction of some wild character, some spectral figure, or savage robber.

No. 397. *Mathematical Abstraction.* T. Lane.—A piece of graphic wit by the lamented artist, which claims the meed of praise, if not for its execution, for its thought and character. It is a fit companion for his "Enthusiast."

No. 427. *Psyche enamoured of Cupid.* J. Wood.—Mr. Wood has introduced his forms of grace and beauty in a style worthy of the classical character of his subject. Colouring and effect are happily brought in aid, to render the performance in every way deserving of attention.

No. 435. *The Trial of King Charles the First in Westminster Hall.* J. Ramsay.—Beside being the trial of Charles, this is a trial of skill in the historical department of art; and, with the exception of a few passages, which are rather monotonous and bare, its general character entitles the painter to a most honourable judgment.

No. 450. *Entrance of Fecamp Harbour, Normandy.* J. Wilson.—We consider this as one of the most successful of Mr. Wilson's very clever

* We dare say those of which we gave a description in the *Literary Gazette* about two years ago, when they arrived from Teneriffe.—Ed.

productions. Whether in respect to the character of the agitated water, the gleamy light, or the deep and portentous gloom which pervades the distance, it is altogether worthy of the pencil of any master in that class of art to which it belongs.—[To be continued.]

ROYAL ACADEMY.

On Monday evening Mr. Westmacott delivered his first lecture on Sculpture.

At the outset of the lecture, he strongly enjoined the study of the antique, without paying, however, an indiscriminate attention to every thing Greek. A constant communication with nature, as forming the basis of the immortal works of the ancients, was then inculcated, by which might be drawn forth and nurtured that faculty of seeing and attaching his mind, not by mere imitation, but with lofty conception and appropriation of affinities. The elementary principles of sculpture and painting, said Mr. Westmacott, are the same; the application of these principles, however, is materially different. The sculptor cannot imbue his mind too strongly with the antique; it is equally necessary for the painter to retain and recur to its forms, but he must forget the statue. The powers of the sculptor, again, are limited; of the painter, indefinite. He may indulge in all the luxury of invention, call in all the machinery of perspective, chiaro-scuro, or colour; he may, indeed, employ every vehicle within his grasp to assist in the great object of his endeavour,—which is illusion. The sculptor, on the other hand, is circumscribed by his material; few accessories are allowed him; his art is positive and determinate: even in basso-relievo, the greatest license which can be permitted in sculpture, the attempt at two planes has never been satisfactorily accomplished. Illusion is not, however, wholly beyond the reach of the sculptor; the charm of harmony acts so powerfully on the mind, that by the concentrated unity of the parts or elements of his composition, by creative fancy and judicious concealment of the mechanism of his art, he may not only make the spectator yield to its influence,—he may rouse his sympathies, excite his admiration, or even his ambition; he may fire his imagination, bid work upon his passions, until he forgets the marble.

The lecturer then cautioned the students against "mannerism;" described style as opposed to fit, and observed that style pervades works of opposite characters, as in the Discobolus of Myron, the fighting and dying gladiators, fauns, heroes, Mercury and his class, Hercules, and the Apollo: most of these are distinct, as far as style of school is considered, though each possesses qualities common to all in belonging to a class. Mannerism, said the lecturer, arose from a distorted view of nature; the result of a defect, or too often the absence, of education. Imitation was equally to be guarded against, as a vice even of a worse character. Mr. Westmacott illustrated this position by reference to the ridiculous fashion of Berni and his followers, in the seventeenth century, which, with the exceptions of Rysbrack and Roubiliac, formed the prevailing taste of the French school. In conclusion, he followed up his subject with a succinct and comprehensive history of his art, since the earliest period, (about 1500 years B.C.), and illustrated it by models and drawings of rare specimens: copies, in particular, of two Indian dancing girls, in their costume, made at the Mauritius, from original drawings, by an officer, (son to the lecturer,

we believe), afforded a striking accordance of lines with the early Greek compositions. The lecture was received with merited approbation. Sir Thomas Lawrence, the President, was in the chair; and several other distinguished R.A.'s were present during its delivery.

NEW PUBLICATIONS.

Portrait of the King: Engraved by Finden, from a painting by Sir Thomas Lawrence, P.R.A. Moon, Boys, and Graves.

FREQUENTLY as works of the first quality in art come under our notice, we have seldom seen any to which the term "magnificent" can be more justly applied than to the one which gives the title to our present article. It is also magnificence of the best and truest kind. It does not arise from gorgeous costume or splendid decorations. Our gracious and beloved Sovereign is not represented with all the emblems of regal dignity; but meets our view in the familiar and condescending habits of his ordinary life; and yet, such is the majesty of his natural deportment, and such is the happiness with which it has been depicted by the elegant pencil of the President, that no one who looks at this fine print but must immediately feel that the illustrious original is

"—every inch a King."

In the engraving we recognise all the properties which belong to the perfection of the burin: the care and finish of an Edelink and a Wilke, without the metallic glitter and hardness which sometimes injure the effect of their works. It is with engraving as with painting—a style is required appropriate to the character of the object represented. For instance, much as we admire the excellent qualities displayed in the engravings of Gerard Audran, Jackimo Frey, Nicholas Dorigni, Wagner, and Bartolozzi, we by no means think them suitable to the character of portrait; while, on the contrary, the works of Strange, Ryland, Sharp, and James Heath, present the finest and purest examples in that class of art. It is this variety which constitutes one of the great charms in an extensive collection of prints. The noble size of the engraving of which we are now speaking is likewise a strong recommendation of it. Exquisitely delicate and beautiful as are many of the gem-like embellishments in our Annuals, the scale on which they are executed will not always admit, without crowding, or other injury to the effect, all that may be found in the original, whether painting or drawing; and, though as book-prints nothing can exceed them, yet it is not to be denied, that to performances of greater magnitude must be intrusted the proud duty of endeavouring to maintain the national superiority of the British school of engravers. In this point of view we are looking forward with confident expectation and hope to the series of line engravings about to be produced from the pictures in the National Gallery.

We repeat, that we consider this portrait of his Majesty, from its subject, and from the manner in which that subject has been treated, both by Sir Thomas Lawrence and by Mr. Finden, as one of the most superb prints which have appeared in our time; and as highly deserving a place in the portfolio of every loyal Englishman, and every lover of the fine arts.

The Raising of Lazarus. Engraved by John Vendramini, from the celebrated painting by Sebastian del Piombo, in the National Gallery.

THE character of this highly esteemed picture,

which has long been considered by the best judges, artists as well as amateurs, as among the most distinguished even of its class in the world, is too well known to render it necessary for us to speak in detail of its excellences. The subject has exercised the powers of the greatest painters, ancient and modern, as being one admirably calculated to combine exalted expression with the representation of the deepest and most pathetic emotions. Of Sebastian del Piombo's production it ought not to be forgotten that it was executed at a period when the talents and fame of Raphael and Michael Angelo (to the latter of whom Sebastian is said to have been somewhat indebted) were at their meridian; and when, by the genius and skill of her artists, Italy was placed in the foremost rank among the nations of Europe. M. Vendramini has more than faithfully transmitted the qualities of this admirable performance to copper; and his work holds a distinguished place among the few historical prints of the present day. The style of execution is open and free; and brings to our recollection that of N. Dorigni, whose engraving from Raphael's Transfiguration stands more highly in the estimation of the collector than any other from that celebrated picture. Indeed, so few engravings in this highest branch of the art, and upon so large and striking a scale, have been produced in England, that we must look upon the present as almost an epoch, lifting us out of the usual run of portrait and familiar life. And when we have used the terms that the engraver has "more than faithfully" performed his task, we should point out what we desire to be understood by this praise. In the picture, time appears to us to have wrought considerable changes, and among these the obvious one of imbrowning the brightest tints throughout the foreground, even on the countenances of the principal figures; so that the priest's head-gear in the distance has at length become, contrary to all rules of colour and perspective, the whitest spot on the canvass. M. Vendramini has shewn great skill and judgment in restoring that to its place which the painting has failed to preserve—a just distribution of the lights. By a careful examination and copy of the parts, he has discovered where the pigments had lost their brilliancy; and thus, we are free to express our opinion, by following what the picture was, rather than what it is, produced a print in many respects superior to the grand effort whence it is taken. In short, considered altogether, we look upon this performance to be an honour to our national school, and a very distinguished honour to the hand by which it has been executed, with great labour and industry, as well as with great taste, ability, and talent.*

FINE ARTS IN SCOTLAND.

OUR last No. of the *Edinburgh Evening Post* and *Scottish Literary Gazette*, contains an account of the annual opening of the Royal Institution for the Encouragement of the Fine Arts in Scotland, and of its rival (for we are sorry to say a rather bitter rivalry does exist

* It is worthy of a note to mention, that the group on the right, including Lazarus and the men who are releasing him from his death-bindings, is given out to be (as we think it is) the work of Michael Angelo, in whose noblest style it is conceived. It is also deserving of record, that being injured on its way from France, Mr. West (the late president) repainted the body and nearly all the limbs of Lazarus,—a fact so little understood, that Fuseli, in one of his academical lectures, unluckily fixed upon this very part as an illustration of the force of the ancient master's colouring!

† We do not speak, however, very advisedly on this point; but merely as we gather the fact from the first Report of the Council of the Academy, recently sent to

in the Northern Athens,) the Scottish Academy. To the former his Majesty has graciously sent Wilkie's Penny Wedding; and Allan, Colvin Smith, Graham, Watson Gordon, Thomson, J. F. Williams, Simson, Duncan, Lander, Geikie, Fairman, J. B. Fraser, Gibb, and the Nasmyth family, are all mentioned as contributors of great merit and promise. In sculpture, Gott, A. Fletcher, and Macdonald, are also named with praise.

The Academy is adorned by Etty's grand picture of Holofernes; and Martin's Deluge is promised. The elder and younger Watsons, Shiels, Nicholson, Syme, H. Pidding, Joseph, and A. Fletcher, are spoken of as the chief supporters of this exhibition.

ORIGINAL POETRY.

THE CLOUDS.

"Clouds—now softly sailing
Along the deep blue sky—now fixed and still."
Miss Mitford.

THE clouds, the clouds! they are beautiful
When they sleep on the soft spring sky,
As if the sun to rest could lull
Their snowy company;
And as the wind springs up, they start
And career o'er the azure plain;
And before the course of the breezes dart,
To scatter their balmy rain.

The clouds, the clouds! how change their forms

With every passing breath,—
And now a glancing sunbeam warms,
And now they look cold as death.
Oh! often and often have I escaped
From the stir of the noisy crowd,
And a thousand fanciful visions shaped
On the face of a passing cloud!

The clouds, the clouds! round the sun at night

They come like a band of slaves,
Who are only bright in their master's light,
And each in his glory laves.
Oh, they are lovely—lovely, then!
Whilst the heaven around them glows;
Now touched with a purple or amber stain,
And now with the hue of a rose.

The clouds, the clouds! in the star-lit sky,
How they fly on the light wind's wings!
Now resting an instant, then glancing by,
In their fickle wanderings:
Now they hide the deep blue firmament,
Now it shows their folds between,
As if a silver veil were rent
From the jewell'd brow of a queen.

The clouds, the clouds! they are as the lid
To the lightning's flashing eye;
And in their fleecy rolls lies hid
The thunder's majesty.
Oh! how their warring is proclaimed
By the shrill blast's battle song;
And the tempest's deadliest shafts are aimed
From the midst of the dark clouds' throng.

The clouds, the clouds!—My childish days
Are past—my heart is old;
But here and there a feeling stays
That never will grow cold:

And the love of nature is one of these
That Time's wave never shrouds,
And oft and oft doth my soul find peace
In watching the passing clouds.

Worton Lodge,
near Isleworth.

MARY ANN BROWNE.

SIGHTS OF LONDON.

THE MARCH OF INTELLECT: LEARNED CATS.

In preceding and darker ages, ponies, pigs, sparrows, and dogs, have had their day of fame, elephants have displayed considerable wisdom, monkeys happy talents in the arts, and mice ingenuity in mechanics: but never till now have we witnessed "the greatest wonder in England" of them all—the exploits of "learned cats"—not blues of the tabby kind, but real, genuine pussys of the feline genus. We have always entertained a feeling of regard for these useful and abused animals, and have valued their nine lives as if they had been but one. It is therefore a pleasure to us to see them raised in the scale of intellect, and again placed, by their cultivated abilities, in that station of respect which they seem not to have enjoyed since they were worshipped in ancient Egypt, or were, owing to their sagacity, the sworn companions of old witches in our own country. Their restoration to rational functions is the best proof we have yet met with of the progress of education and the march of mind.

The schoolmaster who has come from abroad with the cats whose feats give rise to these remarks, is a Signor Capelli; and on Monday he introduces his pupils to the public, at their academy in Regent Street, next door to the Argyll Rooms: as patrons of literature and talents* of every kind, we have been indulged with a private interview.

The *corps dramatique* whom we saw yesterday, consists of four red-and-white cats, mother, sons, and daughter; and one lady of colour, namely, a jet-black and maternal-looking negress. Of the former, three are French by birth, and one Italian: the latter is French. The mamma of the party-coloured family is of the mature age of six years and a half: her eldest offspring and heir-apparent is about half the age of his venerable parent. Much as we were, naturally, interested in their rehearsal—for they had not performed for some weeks, and were, consequently, a little in want of prompting—we had only time to witness a few instances of their intelligence and abilities, such as ringing bells, working a machine to grind rice, hammering on an anvil, and drawing a bucket up and down from a well, which last is amazingly well done. But the most remarkable part of the exhibition is the conduct of the animals; their attention and apparent consideration of the word of command, before they work, stop, resume, and retire, &c. Upon the whole, there was much of novelty in their instruction and manœuvres; and if they can be taught music, we think they will become powerful rivals to their neighbours, the *genuine* Bohemian Brothers. As food for zoological speculation, and even for parallel reasoning concerning the human species, we are sorry to have to record that our black friend neither possesses the intellect, sensibility, nor disposition to labour, of her red-and-white associates.

LADIES' ORNAMENTS: NEW FASHION.

We have been much pleased with the ingenuity of a foreign artist, a Sicilian, of the name of

* *Quere, talons?—Printer's Diabolus.*

Coniglio, (now residing at No. 27, Duke Street, Piccadilly,) who has devised the production of bracelets, rings, boxes, necklaces, brooches, &c. from a material hitherto unemployed in that way, and yet possessing several qualities well calculated to recommend it. We allude to the *Coquilla* nut, which is not only everlastingly durable, but, whether of the brown or black shell, rich in colour and effect. Out of these our artist carves the articles we have enumerated, in a variety of devices; and we have no doubt, but when this description of ornament is generally seen, it will obtain friends among our fair lovers of the novel and the curious.

MUSIC.

NEW PUBLICATIONS.

Discovery of a Theory of Music, susceptible of rigid Mathematical Demonstration. By D. C. Hewitt. London. Schwabe.

It has ever been lamented, by those who have studied most to make themselves acquainted with the principles and laws of musical harmony, and who, in consequence, have become best qualified to judge of the true state of that science, that all the theories yet advanced are either built upon mere hypothesis, or else, where an attempt is made to deduce them from certain demonstrable facts, the inferences drawn from those facts, as well as the cases applied to them, are so forced and unnatural, as to render the whole system utterly destitute of that satisfactory and indubitable kind of evidence which has been deemed requisite for the establishment of the principles of other sciences.

We therefore hail with pleasure the publication of a work in London, entitled *New Analysis of Music*, &c. written by Mr. D. C. Hewitt, wherein the theory of music is established upon purely scientific principles, susceptible of rigid mathematical demonstration, ultimately resting for its basis upon certain incontrovertible, though hitherto unknown, facts, and in universal accordance with the practice of the greatest masters:—and the more so, since there can be no question but that the difficulties and obscurities so much complained of in the study of harmony and modulation, are in a great measure to be ascribed to the assumption of *false* principles, adopted upon partial views, during the infancy of the art, and supported by improper modes of induction. In page 5 of Mr. Hewitt's work we perceive that he has discovered a *third* "MODE" in music, which, in contradistinction to those of the major and minor, he has very properly denominated the "PATHETIC." Mr. H. has given some very beautiful illustrations of this newly-discovered mode, both from ancient and modern masters, although themselves evidently unconscious of its existence. But the work is altogether of too abstruse and scientific a nature to be understood without reference to scales, plates, illustrations, &c.;—we must therefore content ourselves with indicating its existence, and referring the inquisitive to it for information.

The Alpine Bride. Sung by Miss H. Phillips; the Poetry by Miss Landon. Composed by C. T. Martyn. Callcott.

THIS is a very sweet composition, and displays great taste. It is almost the only one of L. E. L.'s lyrics which we have yet seen well set to music. The accompaniment is pretty, and the symphony would almost form a little rondo of itself.

us from Edinburgh. Hence we learn that the council having applied to Mr. Peel for a charter of incorporation, were refused, on the ground that the Royal Institution rendered such a measure uncalled for; and consequently that they were much displeased with the lord advocate for opposing them, and not quite delighted with the institution for having anticipated them in regard to chartered privileges. The pamphlet is, it should be stated, written temperately, and in respectful language.

The Sylphs of the Flowers. By F. E. Lacy. Luff.

Extremely pleasing and light-strained ballad; the music at once sweet and lively, and the words as good as the generality of songs, with this advantage—that they express a new and pretty poetical idea.

The Elf King, a Glee. By G. Hargreaves. Callcott.

THIS trio deserves great praise, for it is very beautifully composed; and what is rather uncommon in a glee, the poetry is excellent to the end.

Ah! Fly me not, a Song. By José Melchor Gomis; the words by the Author of "Gomez Ariza," &c.

SIGNOR GOMIS is a professor of singing, and, to judge by this song, a very able and captivating master. The music, with the Italian words particularly, has great charms for our ear. They have more tender pathos than the English or Spanish; but nevertheless the air is good with any language.

DRAMA.

KING'S THEATRE: SATURDAY.

PISARONI continues to delight the musical world. She is really a wonderful woman. Naturally repulsive in person, she contrives, despite of the eye, to enchant the ear, and make us forget her physical defects. The bursts of *bravos* (the English-Italian mode of cheering a lady!) she occasionally elicits from the pit, materially tend to remove the libel on the land, that the English "hear with their eyes," and look for an accomplished singer only in the face. Indeed, such demonstrations of delight must be highly gratifying to the lady herself, who has "neither shape nor feature" to help her to a "hand." To contrast her with Pasta, would be like drawing a comparison between Kean and Kemble: the parallel cannot be preserved. The one is "every inch" a queen; the other is "curtailed of her fair proportion." Pasta may be said to be the Lady Macbeth of music; Pisaroni the crook-back Richard. The lower tones of this lady are superior to those of Pasta, they are less veiled; but the upper notes of the latter are not only infinitely fuller than those of the former, but are consequently more susceptible of producing that light and shade which the Italians justly denominate "colouring of tone." Pasta, on the whole, has more volume of voice, and, throughout her compass, possesses more equality of tone; but in skill and science as a vocalist she must yield to Pisaroni. The latter, like Velluti, in concerted pieces, appears to guide and govern the whole; yet not to consider solely her own powers, but the best mode of producing the general effect. Not so with Pasta: in part music she is frequently astray; nor does she sufficiently modulate her voice to harmonize it with those of a thinner and weaker quality. This is always injudicious, and we fear, too often proceeds from a selfish desire of personal display. Again, Pisaroni never risks a *roulade* which she cannot accomplish with the nicest precision; nor can the most delicate ear detect any thing bordering upon false intonation. From these defects Pasta is not always free. In recitative Pisaroni is unrivalled: her energetic enunciation in this species of musical oratory (if we may so phrase it) is perfection itself; and it is saying no little in this lady's praise, that in declamation we think she even surpasses Pasta. With the exception of these two great and gifted

vocalists, we know no artist, male or female, on the Italian stage, whose recitative is worthy of any other denomination than that which has been jocosely termed *wretched declamation*. The more we hear Donzelli, the more we like him.

We are glad to perceive Dragonetti in his place, and that Mori considers it not a degradation to serve under Spagnoletti. We have also to congratulate the manager on the return of the two Gambati.

As no fewer than three performers were on the sick-list this evening, viz. Monticelli, Castelli, and De Angeli, (for all of whom printed excuses were made), we had Miss Bellchambers, and a gentleman unknown, to supply the places of two of the invalids, while the part of the third, Castelli, was dispensed with altogether, and what is extraordinary, in the opera was never missed. We had only, therefore, to lament the "spasmodic pain in her stomach" as it affected the individual, and not as a public disappointment. Of Miss Bellchambers we would say little, as she was suddenly called upon, and was evidently unprepared, if not unfit, for the task assigned to her. As for the gentleman unknown, speaking according to his inches (about eighty, we guess, French measure), though evidently cut out for a long part, it is quite clear he never could do justice to a short one of any kind, either as actor or singer.

On Tuesday evening, Rossini's comic opera of *L'Italiana in Algeri*, was revived at this theatre; the parts of *Mustapha*, *Isabella*, and *Linder*, being respectively filled by Signor V. Galli, Madame Pisaroni, and Donzelli. Perhaps never was the power of dress more completely exemplified than on this occasion: Madame Pisaroni, by the aid of a plain brown silk frock and a fashionable white hat, looked, — in comparison with her appearance in *Malcolm Grange*, — literally, almost handsome; at least not so plain as to bring the taste of the admiring *Mustapha* into complete disgrace. Her singing was delightful, and her acting full of animation. In the scene where she at first fails to cajole the Turk *Mustapha*, to give her command over her own lover *Linder*, her sudden transition from conciliation to ungovernable rage, was very amusing, and she thundered out the *Andate dunque al diavolo!* with great humour and effect. Her most successful air was *Qual piacer*, which was enthusiastically encored. Galli has a tolerable bass, with a good commanding eye; and, by comparison with his predecessors in his line of parts, an excellent person. In some of his scenes, particularly in that where, *Thadeo* being *un de trop*, he tries to sneeze him off, he was very effective. His defect is monotony. Donzelli is excellent in every thing he undertakes; but, perhaps, the present part does not afford so much scope for the variety of his talents as some that might, and no doubt will, be selected. He, however, fully confirmed our first high impression in his favour.

Some portion of the audience did not seem to be particularly well pleased with the efforts of Signor de Angeli, in the part of *Thadeo*; and seemed to be mentally instituting comparisons between him and his predecessor, De Begnis: but the manner of the Signor plainly implying that the part was not assumed by him in compliance with his own wishes, but with the necessities of the management, might have deprecated censure, and awakened a more generous sentiment. To us he appeared much above mediocrity.

The pit was uncommonly full, and the boxes very good. The ballet of the *Somnambule* fol-

lowed: — none but those who have seen her performance can have any idea of the excellence of that beautiful creature *Pauline*, in the part of the *Sleep-walker*. Dancers, in general, are a cold, factitious race; but, *rara avis in terris*, here is one at last that can express the very intensity of feeling and passion. It is the perfection of ballet-acting, and a treat that every one should go and see.

Camporese is about to return to this country; and we hear that Laporte has it in contemplation to engage her, as well as the celebrated Blasia. Velluti is also expected in England about the middle of March.

ADELPHI.

BUMPER houses to *Mallet*, and an overflow every night to the *Red Rover*, is all we have to record of this most attractive little theatre.

VARIETIES.

Caduceus. — A bronze caduceus, in perfect preservation, has been discovered at Chambéry. It is supposed to belong to a statue of Mercury, which there are hopes of finding.

Mr. H. Dunnage. — On the 1st of January died, at Palermo, that promising young architect, Henry Dunnage, author of a recent work on the Palace at Eltham. He had completed very accurate measurements of the buildings in Sicily, and was taken ill whilst employed with his fellow-traveller, Charles Laver, at Segesta. We have only to add, that there were few such indefatigable labourers for the profession, and that much was expected from his journey, thus so fatally terminated.

Ancient Circus. — M. Mongez lately read to the French Academy a lecture, entitled, "Inquiries with respect to the animals exhibited or killed in the circuses of ancient nations." The learned author entered into some curious details with respect to the various methods resorted to by the ancients to take the most savage animals without destroying them. He adverted to the skill of the men who were known by the name of *manseuarii*, in taming the wildest animals to such a degree as to succeed in making them go through certain exercises, with a docility which appears incredible in the present day. In the circuses of Rome, elephants frequently traced letters with their trunks, danced the *pyrrhica*, and even walked on the tight rope.

Fossil Bones. — In a cave situated at the western extremity of the department of Gard, in the South of France, a number of the bones of antediluvian mammiferous animals have recently been discovered, bearing a great analogy to those of the celebrated cavern of Gay-leureuth, in Germany. Some of them have been submitted to the inspection of M. Cuvier, who, on the first examination, recognised several bones belonging to a lost species of bear.

At the sitting of the Academy of Sciences in Paris, on the 9th inst. an account was given of the discovery of a cave in the small town of Bire, in the department of the Landes, containing the remains of antediluvian human and animal bones. The cave is situated in one of the calcareous Jura Mountains. The fossil bones were found both in a stony concretion, and in the black lemon-tree. Those found in the black lemon-tree differ essentially from the fossils observed in the caves of Germany, England, Lunel Viel, in the alluvial territory of Val d'Arno, the mountains of Perrier, Pezenas, and others of the same kind. What is very remarkable is, that human bones were found buried both in the midst of the bones of

extinct animals, which are to be met with in the lemon-tree, and among those which, by their mixture with the beds of calcareous concretions, constitute an actual osseous deposit. Some remains of earthenware, and terrestrial shell animals which no longer exist in the country, and some shell-fish, were also found.—At the same sitting, an account was given of the discovery, near Bogota, in Colombia, of a species of tapir hitherto supposed to have been extinct. At Suma Paz, in a situation of great elevation, two tapirs were killed, which were found to be of the same species as that described by the old writers.

Sulphuric Acid.—The committee of the Académie des Sciences, to which the paper of M. Sarullas on "the action of sulphuric acid on alcohol, and the products resulting from it," was referred, have made a very favourable report upon its merits, and ascribe considerable importance to its details.

Ingenious Test in Manufactures.—An experiment to ascertain the presence of cotton in woollen stuffs was lately described to the Academy of Sciences at Metz; and consists of boiling the cloth for two hours in a solution of one ounce of pure alkali in half a pound of water. The caustic entirely dissolves the animal substance, wool, but acts only partially on the vegetable substance, cotton; so that by the residuum the fact is readily ascertained.

York Minister.—In clearing away the rubbish of the late fire, a number of curious coins have been found imbedded in sand and oak saw-dust, under the seats of the choir. Some thimbles and pieces of glass have also been buried.

The Art of Flying.—A correspondent of the *Mechanic's Magazine*, in the paper of last Saturday, states, that he has perfected an apparatus "far excelling in the requisite qualities of strength and lightness, any thing produced by nature," and with which it is possible for men to sustain and move themselves in the air. He offers a fourth part of the honours and emoluments of his discovery to any person who will advance 1500*l*.

Irish Rhetoric.—The resolution for putting an end to the Catholic Association is worthy of the land of bulls, it being resolved, "That the Catholic Association, at its rising this day, do stand totally dissolved!"

LITERARY NOVELTIES.

SIR WALTER SCOTT.—In our last No. we gave a sketch of the forthcoming novelties from the pen of Sir W. Scott; upon which subject the little further information we promised (not having time, then, to put it together), will, we are sure, be agreeable to our readers. As a specimen of the notes in the new edition of the novels, we may quote one on "the Kind Gallows of Crief," mentioned in *Waverley*. "This celebrated gibbet was, in the memory of the last generation, still standing at the western end of the town of Crief, in Perthshire. Why it was called the kind gallows, we are unable to inform the reader with certainty; but it is alleged that the Highlanders used to touch their bonnets as they passed a place which had been fatal to many of their countrymen, with the ejaculation:—'God bless her main sell, and the Tell tamn you!' It may therefore have been called kind, as being a sort of native or kindred place of doom to those who suffered there, as in fulfillment of a natural destiny."

With regard to the embellishments, we believe their management has been intrusted to Mr. H. Graves (of the house of Moon, Boys, and Graves); and certainly the taste and skill exercised on those we have seen of them (finished or in a state of progress), reflect great credit on his judgment. To set out with *Waverley*, we have a picture, by Stephano, engraved by Robert Graves, of Flora Melver and Waverley. It is a spirited and graceful composition: she is striking the harp with enthusiasm, while he listens with wonder and admiration. Two female figures in the background, and a landscape, complete this group. Our next sketch is from the feeling pencil of Newton, and engraved by C. Rolls. It represents the Baron of Bradwardine reading the church service to his soldiers, and Sanders Sanderson, with the colours in his hand, acting as clerk: it is happily serious, with the slightest

tinge of the comic, from the costume and spectated nose of the hardy baron. Edwin Landseer furnishes a vignette, engraved by W. Radford; Davis Gellishy, with the "two dogs," Ban and Buscar—horsemen, &c. in the far distance;—a very clever composition. The introduction of Waverley to Bradwardine is the other vignette: it is by Stephano, and R. Graves; characteristic, and picturesque as the gateway to the castle could make it.

We now come to Guy Mannering, where we find Donnie Sampson *solus* among his books, but "prodigious" from the easel of Leslie, and the burin of A. Duncan. W. Kidd, who supplies two of the other illustrations to this justly popular tale, has done more than sustain his rising fame by a superb representation of High Jinks (engraved by J. Mitchell), where the jovial convives are in various attitudes of social fun. His other performance is a vignette of Jock Jabs lighting Mannering on horseback—a free and excellent sketch. The last of the Mannering four we have not seen in any state—it relates to the deaths of Dirk Hatterick and Gilbert Glosin, by Cooper, who also contributes a capital vignette, for the Antiquary, of Little Davie run away with by the pony, engraved by A. Warren, which we have seen and admired; and further our ocular inspection goeth not. We may, nevertheless, mention the embellishments which are in progress to complete the series, from the commencement of which we have derived so much pleasure. For the Antiquary, Stephano is engaged on a picture, the subject, to us, unknown; and for the same, Stanfield has produced old Mucklebackit mending his boat after the death of Steinnie, now engraving by Phelps; and E. Landseer is doing a vignette.

Rob Roy has enlisted Leslie (and Ambrose Warren engraver) to Die Vernon leaning on the arm of Sir Richard Vernon, as she appeared to Frank Osbaldistone in the library;—Chalon (Shenton engraver) to a vignette of Frank leaving the account of his ancestry;—Kidd (Davenport engraver) to Rob in Glasgow gaol, discovered by Baillie Nicol Jarvie; and Cooper, to the said baillie hanging, *Ake the golden fleece*, by the skirts of his coat, and engraved by Radford.

For Old Mortality we imagine Wilkie's head of its immortal author will be the frontispiece; and we hear that this great artist has promised a vignette for the same admirable novel. Here Cooper, too, is at home in the encounter between Bothwell and Burley on horseback—a subject which has often warmed his fancy. A vignette from the veteran Stothard, when, we rejoice to hear, has begun a second and a vigorous youth in the arts, will complete these illustrations.

On the Heart of Mid Lothian, Kidd, Fraser, Burnet, and Farrier, are employed: we have only seen a charming sketch, by Burnet, of old Deans and his daughter Jeanie in their utmost distress. The Bride of Lammermuir (in our opinion the most imaginatively beautiful and deeply touching of all Sir Walter's works) engages Richter, Stephano, and other eminent artists. On the whole, we have to repeat, we anticipate much gratification from this new edition, which, in a letter to one of the painters requested to adorn it, the second author compares, in his own delightfully colloquial way, (but untruly!) to an elderly beauty, who requires the aid of painting and art to make her as passable in society as she was in her youthful prime.

University of Leipzig.—From the official "Notice of the Lectures to be delivered during the winter session 1828-9," we observe that in Philology and Languages there will be given 24 distinct courses; in History, 12; in Philosophy, 84; in Statistics, 10; in Mathematics and Astronomy, 7; in Natural Science, 11; in Agricultural Science, 5; in Theology, 53; in Jurisprudence, 68; and in Medicine and Surgery, 60. One portion of the two last consists of lectures, and the other of what are termed *exercitiae*, examinations, and controversial exercises.

A proposal is in circulation for erecting a monument to the memory of the celebrated Italian letterato and poet, Vincenzo Monti, in one of the most conspicuous parts of the city of Milan, the place of his residence for thirty years, to the time of his death.

The second No. of Dr. Thompson's Zoological Researches and Illustrations is nearly ready for publication. It will contain a Memoir on the Luminosity of the Ocean, with descriptions, illustrated by four plates of some remarkable species of luminous animals (*Pyrosoma pigmaea*, and *Sapphirina indicata*), and particularly of the four new genera, *Noctiluca*, *Cynthia*, *Lucifer*, and *Podopis*, of the *Shizopoda*.

The prospectus of an Oxford Literary Gazette, in 8vo., has been sent to us. It, like many others, promises more than can by possibility be performed, were it to publish three sheets a week: instead of one—being, as we have found, insufficient for the due record of the living literature of the day, and quite incapable of containing also long essays, common-place criticisms, and retrospective dissertations. Still, however, there is much of good in the Oxford plan (though inconsistent with the promised "critical examination of all works of interest and merit as they issue from the press"—this, alone, being more than any weekly journal can accomplish); and we, from long experience, recommend to the projectors to stick more closely to "the department of retrospective reviewing, which opens so extensive a field to the curious inquirer," and to the "classical occasional notices of book rarities, as well manuscript as printed, of which Oxford possesses rich and hitherto unexplored treasures." "The most simple and accurate university intelligence" is also another feature which might greatly recommend such a publication.

A volume of tales, under the title of *Sketches of Irish Character*, from the pen of Mrs. E. C. Hall, the editor of

the *Juvenile Forget-Me-Not*, is announced for publication in April.

Mr. W. Carpenter, author of the *Scientia Biblica*, &c., has in the press *Popular Lectures on Biblical Criticism and Interpretation*.

Mrs. Hegdland, late Isabella Kelly, the author of many popular novels, (and her daughter,) have in the press an *Epitome of General Knowledge*, with Derivations, Illustrations, and Historical Extracts; compiling instruction with amusement. This work, in two volumes, is to be published by subscription; and we are sure we need hardly enforce the claim of so old a public favourite.

Mr. W. Jones, author of the *History of the Waldenses*, &c., has in the press a *Christian Biographical Dictionary*, comprising the lives of such persons in every country, and in every age, since the revival of literature, as have distinguished themselves by their talents, their sufferings, or their virtues.

British Museum: Libri Desiderati.—Within these few days back a parchment book has been most properly introduced to the reading-rooms of the Museum, for the purpose of receiving the titles of any literary productions not already contained in the library. In order, no doubt, that the want may be supplied; to this book all the students or persons having the entry to the reading-rooms, have access: its contents already fairly warrant the conclusion, that those persons who have written in it entertained rather too poor an estimate of the noble collection of books in the Museum; for against three of every four entries of works supposed by the *ante* writers to be wanting, the officer has written, in characters laughably legible—"in the library." Persons writing in this book ought to sign their names.

In the Press.—He is Misen; an *Easter ode*, inscribed to the Governors and Masters of Christ's Hospital.—The *Votive Wreath*, and other Poems, by Samuel Walter Burgess.—A third edition of *Dr. Mead's Good on the Study of Medicine*.

Notice.—The notice of Dr. Foster's work is an advertisement; and we can admit seriously of that kind under this head, which is truly, not only, and impartially, devoted to the mass of literary and scientific news which is likely to interest the public. What is individual, individuals must advertise in the usual manner: our part is to collect diligently and amply for general information.

LIST OF NEW BOOKS.

Kirby and Spencer's *Entomology*, 2d edition, 4 vols. 8vo. 4*l*. 6*s*.—Pearson's *Astronomy*, Vol. II. royal 4to. 3*l*. 13*s*. 6*d*.—Warren on Disorders of the Head, 8vo. 5*s*. 6*d*.—Morgan and Addison on Poisons, 8vo. 5*s*.—Cullen's *Practice of Physic*, new edition, 2 vols. 8vo. 1*l*. 4*s*.—Atkinson on Conveyancing, 2 vols. 8vo. 2*l*. 5*s*.—Burckhardt's *Travels in Arabia*, with Map and Plans, 4to. 8*l*. 12*s*. 6*d*.—*Tales of a Voyager*, Second Series, 3 vols. port. 8vo. 1*l*. 11*s*. 6*d*.—Suchet's *Mémoires*, French, Vol. II. 8vo. 10*s*. 6*d*.—Wilber's *Reference Testament*, 12mo. 3*s*. 6*d*.—Shuttleworth's *Apostolical Epistles*, 8vo. 12*s*.—Climo's *Last Hours of Eminent Christians*, 8vo. 12*s*.—Hutton's (George) *Theory and Practice of Arithmetic*, 12mo. 3*s*.—*Abridged for Ladies*, 18mo. 2*s*.—Pinnock's *Geography made Easy*, 18mo. 1*s*. 3*d*.—Wentworth's *Executors*, by Jeremy, 8vo. 16*s*.—*Conversations on Intellectual Philosophy*, 2 vols. 12mo. 16*s*.—*Manual* (the) for Invalids, 12mo. 9*s*.—Restaur, or the Fortitude, 2 vols. port. 8vo. 1*l*. 1*s*.—Johnston's *Public Charities of France*, 8vo. 15*s*.—Christian (J. TO CORRESPONDENTS.

The extraordinary interest attached to M. Champollion's letters from Egypt, and the want of any extraordinary interest in the new publications of the week, has encouraged one portion of our Journal at the expense of Review.

Our time forbids compliance with the wish expressed by J. H. G.

ERRATA.—Page 110, col. 2, line 3, for "his," read "her;" p. 111, col. 3, line 4, for "Erangelica," read "Erangelica."

Connected with Literature and the Arts.

EAST INDIA AND CHINA MONOPOLY.

Mr. BUCKINGHAM takes the present mode of announcing to the Country generally, that in consequence of the powerful impression made on the public mind by his lectures recently delivered at Liverpool and Manchester, the cordial surprise he has thus experienced at Birmingham and Leeds, and the invitations he is now constantly receiving from other parts of the Country, he is confirmed in his original intention of extending his Tour through all the Mercantile and Manufacturing Districts of Great Britain and Ireland.

In the meantime, he begs to state, that full and faithful Reports of all the Public Proceedings on this subject will be found in the "Oriental Herald," a Work uniformly devoted to a condensed exposure of the innumerable evils inflicted upon all classes of people in this community by the Monopoly of the East India Company; and, on that ground, claiming the support of every individual who wishes to see a Free Trade to India and China speedily opened for the relief of our unemployed Shipping and over-crowded Manufactures.

As the most effectual means of preparing the inhabitants of the different places he intends to visit, and of informing even them which he may not be able to include in his Tour, by showing from the scenes, plans, and object of these lectures, Mr. Buckingham has condensed into a small pamphlet the details of the whole Company, and of his Life, Travels, and Writings, price 1s. The "Oriental Herald" will be found to add to these more ample details, as a Number of this Work appears on the first of every Month, price 6s.; forming an 8vo. of 36 pages, and containing such matter as either of the Quarterly Reviewers, *Edinburgh*, or *Edinburgh*, may be obtained through any Bookseller; and it is believed that, at the present important crisis, there is no Work which has stronger claims than this upon general attention, or which would furnish more beneficial instruction to every Member of the Legislature, every Merchant, every Ship-owner, and every Manufacturer in the Kingdom.

Copies of Provisional Papers, containing any Articles on the East India Company's Monopoly, or Private Communications, addressed to Mr. Buckingham, at his Town Residence, 25, Tavistock Square, London, will be forwarded to him from thence without delay, and will always receive his best attention.

In 4to. 8s. with a Portrait of the Author,
JOURNAL OF AN EXPEDITION OF DISCOVERY INTO THE INTERIOR OF AFRICA.
By the late CAPTAIN CLAPPERTON, R.N.
With the Journal of RICHARD LANDER, his faithful Servant.
John Murray, Albemarle Street.

Diseases of India.
The 8d edition, with large Additions, in 8vo. with coloured Plates, price 18s. boards.
SKETCHES OF THE MOST PREVALENT DISEASES OF INDIA, comprising a Treatise on the Epidemic Cholera of the East; embracing also the Annual Rate of Mortality, &c. of European Troops, and Practical Observations on the Effects of Cholera on the Alimentary Canal. Illustrated by Tables and Plates.
By JAMES ANNESLEY, Esq. Madras Medical Establishment.
Printed for Thomas and George Underwood, 25, Fleet Street.

In 8vo. 8s. 6d.
SERMONS PREACHED IN ENGLAND.
By the late Right Rev. MEGILLAN HEBBER, D.D.
Lord Bishop of Calcutta, formerly Rector of Hoxton, Salop, Prebendary of St. Asaph, and Preacher of Lincoln's Inn.
John Murray, Albemarle Street.

Mavor's Eton Latin Grammar, with the Accents and Quantity marked.
Price 2s. 6d. a new and greatly improved edition, being the 10th of
DR. MAJOR'S ETON LATIN GRAMMAR; with Explanatory Notes, and useful Additions to assist the Learner. This edition has been most carefully revised, and the Accents and Quantity marked.
By Dr. CAREY.

The sale of Twelve very large editions, within a few years, is the best evidence of the value and estimation in which the notes of Dr. Mavor are held; and the passage so liberally given has induced the proprietors to spare no expense in rendering this edition in every way worthy of their support.

London: Printed for Harding and Lepard; Longman, Rees, Orme, Brown, and Green; Baldwin and Cradock; Whittaker, Treacher, and Arnold; J. Richardson; T. Boney and Son; Simpkin and Marshall; J. Duncan; Hamilton, Adams, and Co.; E. Williams; Harvey and Darton; Poole and Edwards; Baker and Fletcher; Hurst, Gassiot, and Co.; Cowie and Co.; Sustenance and Street; J. Collingwood; and C. and J. Rivington.

Of whom may be had,
Perrin's French Spelling. The 21st edition.
Edited by C. Gros. Price 2s.

Glasgow Statistics.
THE STATISTICAL WORKS OF JAMES CLELAND, LL.D.

1. Statistic and Population Tables relative to the City of Glasgow. 3d edition, 8vo. price 6s. 6d. With an Appendix, containing the Verdicts of Juries respecting the conversion of Weights and Measures, for the Counties of Edinburgh, Lanark, Renfrew, Dumfries, Ayr, Bute, Stirling, and Perth. A considerable part of this edition has been translated into the French and German languages. A very flattering description of it appeared in the "Revue Encyclopédique."

2. Enumeration of the Inhabitants of Scotland, exhibiting the amount of Population in each Parish; details respecting the Population of England, Ireland, and Wales; and containing Mortality Bills for the City of Glasgow, from 1820 to 1828, &c. 8vo. price 8s.

3. First Classified Enumeration of the Inhabitants of Glasgow; and Population and Statistical Tables till 1820. Published by desire of the Public Bodies. Folio, price 15s.

4. Annals of Glasgow. 2d edition, 8vo. price 10s. 6d.

5. Rise and Progress of the City of Glasgow; containing an Account of its Public Buildings, Charitable Institutions, &c. 3d edition, 8vo. price 7s. 6d. A favourable account of this work appeared in the "Edinburgh Review."

Sold by John Smith and Son, and the other Booksellers, Glasgow; Oliver and Boyd, Edinburgh; and Longman, Rees, Orme, Brown, and Green, London.

In 1 vol. 8vo. 5th edit. (comprising the 3 vols.), carefully revised and corrected, with several new Plates and Woodcuts, 18s. 6d.

THE FIRST LINES OF THE PRACTICE OF SURGERY; designed as an Introduction for Students, and a complete Book of Reference for Practitioners.

By SAMUEL COOPER, Surgeon to the Forces, Member of the Royal College of Surgeons, London, &c. &c.

Le Tarentella, ditto, from ditto, 3s.

All composed for the Piano-forte, by HENRI HERZ.

And, price 1s.
The Musical Bijou for 1829; an Annual of

Song, Romps, and Froese, with embellishments.
—Containing 60 Illustrations, 20, Soho Square.

BOOKS PUBLISHED THIS DAY.

French Language.—Price 2s. the 1st edition of
A NEW and EASY METHOD OF

LEARNING the SPELLING and PRONUNCIATION OF FRENCH LANGUAGE.

By JOHN PERMIN.

Carefully revised by C. GROS.

Printed for Harding and Lepard; Longman, Rees, Orme, Brown, and Green; Baldwin and Cradock; T. Boney and Son; Simpkin and Marshall; J. H. Baily; Burgess and Hill; T. and G. Underwood, London; and Adam Black; Stirling and Kenney; J. Fairbairn; Macclachlan and Stewart; and P. Brown, Edinburgh.

Of whom may be had, the new edition of
Dr. Mavor's Eton Latin Grammar, with the

Notes and Quantity marked, by Dr. Carey, price 2s. 6d.

THE FOREIGN REVIEW.

Price Six Shillings.
No. V.
"The first article, on the 'Expulsion of the Moors from Spain,' is from the pen of Southey, and evinces all that intimate knowledge and research which the Post-Laureate has ever displayed when touching upon the affairs of the Peninsula. If the article by Southey instructed us, we know not when we were more highly amused than with the very clever and sparkling paper entitled 'German Playwrights.' A few lines soon convinced us that it was the production of Mr. Carlyle, the author of the two papers on Goethe in the former number of this periodical, and of the luminous critique on the character and writings of Burns in the last number of the Edinburgh Review. We must honestly say, that this number of the Foreign Review is much superior to its forerunners; an opinion which we suspect few will controvert, when they are told that the talents of Southey, Carlyle, Brewster, Irving, Panizzi, Müllers, Keats, &c. are all therein concentrated."—*Scots Times*.
London: Black, Young, and Young, 3, Tavistock Street, Covent Garden; Messange, Barthès, and Lowell, Great Marlborough Street.

AN INTRODUCTION TO PRACTICAL ASTRONOMY.

By the Rev. J. HARRISON, LL.D. F.R.S. &c.
Rector of South Kilworth in Leicestershire, and Treasurer to the Astronomical Society of London.
London: Published, for the Author, by Messrs. Longman and Co. Paternoster Row.

The First Volume contains all the Tables necessary for facilitating the Reduction of Celestial Observations, constructed from approved Methods, with a popular Explanation of their Construction and Use; and the Second describes the various Instruments that have been usefully employed in determining the apparent places of the Heavenly Bodies; with an account of the Methods of adjusting and using them, illustrated by suitable Examples from data derived, in every instance, from actual observations.

As a greater number of Copies of the First Volume have been printed than of the Second, on account of its being a volume of constant reference, any time may be obtained separately, at one half of the price of the two; which cannot be the case with the Second Volume and Plates, except when a purchaser who has already obtained the First Volume and its Appendix wishes to add the Second, to render the Work complete, and gives proof of his having already obtained the First Volume.

PORTUGAL ILLUSTRATED.

By the Rev. W. M. KINSEY, B.D.
Fellow of Trinity College, Oxford, and Chaplain to the Right Hon. Lord Auckland.

Embellished with a Map, Plates of Coins, Vignettes, and various Engravings of Costume, Landscape Scenery, &c. forming, in the whole, a Series of more than Fifty Engravings, illustrative of the manners and general aspect of the Country.

This 2d edition, besides undergoing a sedulous revision, includes additional specimens of the national music of Portugal, and the following new illustrations, executed by the first Artists in the most finished style: 1. Belém Castle, on the Tagus.—2. The Aqueduct and City of Lisbon.—3. The Moorish Palace at Cintra.—4. The Cork Convent, near Celorico.—5. The Fortifications of Alhandra on the Tagus, which formed the extreme right of the lines of Torres Vedras.—6 and 7. Festivals of Camões and of Inês de Castro; and several Vignettes by Messrs. Brooks and Harvey.—The additional matter, extending to 180 pages, comprises a brief Historical Review of the State of Literature, Arts, and Sciences, in Portugal, from the earliest period to the present time.

A few Copies are taken-off with Impressions of the Plates on India paper, 5s. 10s. boards.
Published, for the Author, by Trevellick and Wirtz, Trevellick, Jun. and Richter, Foreign Bookellers to the King, 20, Noble Square.

Published by Joseph Robins, Eldon Court, Bridge Street, price 12s.

HEAVEN OPENED; or, the Word of God: being the Twelve Visions of Nebuchadnezzar, Daniel, and St. John, Explained.

By ALFRED ADDIS, B.A.
"Here is wisdom—here is the mind which hath wisdom."
Rev. xliii. 10. rev. i. 2.

By the discovery of the Name, and the number of the Name, of the Apocalyptic Sea-beast, which has defeated the ingenuity of near eighteen centuries, the author has found the master-key to most of the difficulties of the Prophecies; and what are not solved by it are solved by other methods equally new and satisfactory. The Symbols are detected by comparison of Text with Text and the event; and the Dates are settled from the internal structure of the Prophecies themselves, from the Author's new discovery, and from their positive fulfilment. A new translation and Illustration also given of the Seventy Weeks' Prophecy; and a new method of reconciling the different plantings of the Abomination of Desolation, foretold in Daniel, indicated by some hitherto but indifferently noticed phenomena exhibited in that Prophet and St. John. The results of preceding commentators, many instances are rendered more accurate by a more critical examination of the Prophetic Language; what was before vague being now presented in a precise and determinate manner. In fine, the Author holds forth his Exposition as a convincing proof of the fore-knowledge of God, and of the truth of Christianity.

M'CULLOCH'S PRINCIPLES OF POLITICAL ECONOMY, 8vo. 12s.

His edition.

Smith's Wealth of Nations, 4 vols.—8vo. 2s. 12s. 6d.

Hume's Philosophical Works, 4 vols.—8vo. 2s. 6s.

Wat's Bibliotheca Britannica, (111. 11s.) only 6s. 6d.

Dupin's Mathematics, by Birkbeck, 8vo. Plates, 10s. 6d.

Printed for William Tait, Edinburgh, and Longman and Co. London.

THE MISCELLANEOUS PROSE WORKS OF SIR WALTER SCOTT, Bart. now first collected.

Printed for Longman, Rees, Orme, Brown, and Green, London; and Cadell and Co. Edinburgh.

Of whom may be had, by the same Author,
The Life of Napoleon Buonaparte, Emperor of the French, with a Preliminary View of the French Revolution. The 1st edition, in 9 vols. post 8vo. 4s. 6d. boards.

Tales and Romances of the Author of Waverley, with Frontispiece, 4 Volumes, 12s. uniform with, and in continuation of, the Novels, Tales, and Romances, in 25 vols. 8vo. In 7 vols. 8vo. price 4s. 6d. boards.

Also in 8 vols. 12mo. 3s. 7s. 6d. bds. printed uniformly with, and in continuation of, the former Series, in 25 vols. 12mo.

The same in 7 vols. 18mo. to match the former Series.—Waverley to Quentin Durward. 2d edit. 2s. 6s.

In 12mo. 6s. boards,
SERMONS, Plain, Brief, and Explanatory, on the Lord's Prayer and Ten Commandments.

By JOHN NANCE, D.D.
Printed for J. Hatchard and Son, 167, Piccadilly.

In 1 large vol. 8vo. 16s. boards, with short Notes and Maps.
A NEW TRANSLATION of the HISTORY of HERODOTUS, intended for the Use of general Readers.

By ISAAC TAYLOR, Jun.
This translation has been executed with the strictest regard to fidelity, from the text of Schweighauser, and revised by that of Professor Delafosse.

Printed for Holdsworth and Ball, 18, St. Paul's Churchyard, London.

Price 1s. Part XV. of the highly popular work, entitled
THE OILIO, embellished with Four finely executed Engravings from original Designs, containing, among nearly 100 Articles, the major part of which are original, the Will—the Students of Alcazar—Will of the Will—the Student of the Will—Andrew Vail Woodin—the Murder Hole: Interesting Tales. An Account of the Colosseum—the Times Newspaper; or, a new Picture for Haydon—Picture of Canton, in China—the History of the Nightingale—Account of several curious Customs—Articles on Hanners, and the Antiquity of Records—Original Poems. A Day Dream—Biographical Tables of Sir William Curtis—Poetry—Tom Stump, a Street Circular, with a numerous Collection of Miscellaneous connected with History, Literature, and Science; embracing Anecdotes of distinguished Individuals, Sen's Desprit, &c. &c. with a useful Diary and Anniversary Chronology for each Day.

The "Oilio" is the cheapest and most elegant Work of its kind extant. The extensive sale, and likewise the high encomiums bestowed upon it by the public journals, have been unprecedented. Each No. and Part is hot-pressed, and embellished with splendid and original Engravings. The Part contains 64 closely-printed pages, being 126 double Columns, 8vo.

Published by J. Whittell, No. 2, Bartlett's Passage, Fetter Lane; and sold by all Booksellers throughout the United Kingdom.

Several letters have been sent to the Publisher, stating that this Work cannot be procured in many parts of the Country. The writers of them are informed, that all respectable Country Booksellers can procure it through their London Agents.

Goldsmith's Grammar of Geography improved.
A new edition, improved and modernized, illustrated with Views of the principal Capitals of the World, a variety of Maps, &c. 2s. 6d. boards.

A GRAMMAR OF GENERAL GEOGRAPHY, for the Use of Schools and Young Persons.

By the Rev. J. GOLDSMITH.
By the same Author.

Geography on a Popular Plan, for the Use of Schools and Young Persons, calculated to convey Instruction by means of the striking and pleasing Associations produced by the peculiar Manners, Customs, and Characters of all Nations. A new edition, improved, with beautiful Engravings, Maps, &c. 14s. boards.

Published by Longman, Rees, Orme, Brown, and Green.

Of whom may be had,
Mavor's Spelling-Book, 1s. 6d.
Blair's Reading Exercises, 2s. bound.
Blair's Class-Book, 5s. bound.

Poetry for Children at an early Age. By Miss Altin. A new edition, price 2s. half-bound.
Mavor's Selection of Classical English Poetry, forming a Volume of the choicest Productions in the Language. For the Use of Schools, &c. 6d. bound.

Mavor's British Nepos, 5s. bound.
Mavor's Natural History, 7s. 6d. bound.
Mavor's Abridgment of Plutarch, 5s. 6d. bd.
Mavor's Universal Short Hand, 6s. boards.
Joyce's Arithmetic, 3s. bound.

Key to ditto, 3s. bound.
Barrow's Fifty-two School Sermons, 7s. bd.
A General Commercial Dictionary, comprehending Trade, Manufactures, and Navigation; with brief Abstracts of the Laws relating to the Regulation and Protection of Trade and Trade-men. By T. Mortimer, Esq. With considerable Alterations and Additions, by W. Dickenson, Esq. A new edition, in 1 large vol. 8vo. 12s. 6d. boards.

Morrison's Elements of Book-Keeping, by Single and Double Entry. 8vo. 2s. half-bound.
Crocker's Elements of Land-Surveying, in all its Branches, with Copper-plates and Woodcuts, 6s. bound.

The Universal Biographical Dictionary; or, an Historical Account of the Lives, Characters, and Works of the most eminent Persons of every Age and Nation. By John Watkins, LL.D. A new edition, corrected to the present time, in 25s. boards.

COLLECTANEA LATINA; or, Select Extracts from such Latin Authors as are usually read in Schools before Virgil and Horace. With Notes, Grammatical and Explanatory, in which the difficulties in Parsing, Scanning, and Proving, are resolved, with References to the Best Latin Grammar; and a Vocabulary.

By THOMAS QUIN.
Second edition, enlarged.
Printed for George Cowie, 51, Poultry.

In 2 vols. 4to. price 4s. 6d. boards, illustrated with 21 Copper-plates and 73 Woodcuts; or with Proof Impressions of the Copper-plates on India paper, at 5s. 6d.

LETTERS of an ARCHITECT, from France, Italy, and Greece.

By JOSEPH WOODS, F.L.S. F.G.S. &c.
Printed for John and Arthur Arch, Cornhill.

Books in the Press.

Early in March will be published, the Twelfth and concluding Part of
SELECT VIEWS in GREECE, engraved in the best Line Manner, from Drawings by H. W. WILLIAMS, Esq. Edinburgh. Containing—

1. Restoration of the City of Athens, drawn by C. R. Cockrell, Esq.
2. Fish of Orchoemenos, from Livadia.
3. Nymphaea, from a Sketch by C. R. Cockrell, Esq.
4. Argos, from a Sketch by C. R. Cockrell, Esq.
5. Grecian Ruins.

At the same time, the Work may be had complete, in 2 vols. Imperial 8vo. nearly half-bound, price 7s. 10s. or French, royal 4to. on India paper, 12s. 12s.

Printed for Longman, Rees, Orme, Brown, and Green, London; and Adam Black, Edinburgh.

Next week will be published, in 1 vol. 8vo. illustrated by numerous Engravings,
A NEW SYSTEM of GEOLOGY, in which the great Revolutions of the Earth and Animated Nature are reconciled at once to Modern Science and to Sacred History.

By ANDREW URE, M.D. F.R.S.
Member of the Geological and Astronomical Societies of London, &c. &c.

Also, in a few days,
The Second Volume of Dr. Arnott's Elements of Physics, or Natural Philosophy Explained.

Printing for Longman, Rees, Orme, Brown, and Green.

New Work, by the Author of the Sketch Book.
In a few days, in 2 vols. 8vo.
A CHRONICLE of the CONQUEST of GRANADA, from the MSS. of Fray Antonio Agapida.

By WASHINGTON IRVING.
John Murray, Albemarle Street.

Speedily will be published, in 2 vols. 4to. with Fourteen Super Original Paintings in the possession of His Grace the Duke of Devonshire.

MEMOIRS of the ADMINISTRATION of the Right Hon. HENRY PELHAM, chiefly drawn from Family Documents, and illustrated with Original Correspondence, never before published.

By the Rev. A. ECHDEACON COKE.
Printed for Longman, Rees, Orme, Brown, and Green.

Of whom may be had, by the same Author,
Memoirs of John Duke of Marlborough; with his Original Correspondence, collected from the Family Records at Blenheim, and other Authentic Sources. In 6 vols. 8vo. with an Atlas, 5s. 6s.

The Private and Confidential Correspondence of Charles Talbot, Duke of Shrewsbury, principal Minister to King William. 4to. with Portrait, 2s. 3s.

History of the House of Austria, from the Foundation of the Monarchy in 1516 to 1718. 5 vols. 8vo. price 5s. 12s. 6d.

Memoirs of the Kings of Spain of the House of Bourbon, from the Accession of Philip the Fifth to the Death of Charles the Third, 1700-1788. 5 vols. 8vo. 2s.

Memoirs of Horatio Lord Walpole. 2 vols. 8vo. 12s. 6d. boards, the 2d edition.

In a few days, 2 vols. small 8vo.
BERTHA'S VISIT to HER UNCLE in ENGLAND; comprising a Variety of interesting Information for Young Persons.

John Murray, Albemarle Street.

In the course of the month will be published, in 2 vols. 8vo.
HISTORY of RUSSIA, and of PETER the GREAT.

By General Count PHILIP DE SEGUI.
An edition in French will be published at the same time. Printing for Trevellick and Wirtz, Trevellick, Jun. and Richter, 20, Noble Square, London.

Of whom may be had, lately published,
The 5th edition, in 2 vols. post 8vo. price 12s. or in 2 vols. demy 8vo. price One Guinea in boards, of

Count Segur's History of Napoleon's Expedition to Russia, in 1812.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 632.

SATURDAY, FEBRUARY 28, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

A New System of Geology; in which the great Revolutions of the Earth and Animated Nature are reconciled at once to Modern Science and Sacred History. By Andrew Ure, M.D., F.R.S., M.G.A.S.L., &c. &c. 8vo. pp. 680. London, 1829. Longman and Co.

THE author of this work—very favourably known in the scientific world by many original researches published in the Philosophical Transactions and the Journals of Science, but particularly by his Dictionary of Chemistry—has now commenced a higher career, having undertaken to solve the problem, equally interesting and intricate, of the mighty revolutions which the earth and its organic beings have anciently undergone. And whatever modifications future discovery may make on his geological views, there can be no doubt that he has thrown a new light on the former constitution of the globe; and has very happily applied his skill in chemical physics to explain the crisis of our climates in those antediluvian eras.

In studying the writings of the English geologists, Dr. Ure seems to have imbibed the temperate spirit characteristic of their school; and is therefore neither dogmatic nor visionary. His principles and methods of research lead spontaneously to a development of the phenomena, in accordance with the Mosaic narrative of the Creation and Deluge. Every thing falls naturally into its historical place, without any appearance of art or effort; and indeed his simple exposition leaves nothing for theologians to wish for in reconciling sacred history and geology: or rather, we should say, in dispelling certain bugbears which hypothesis had conjured up between them. He has also condescended to give a kind of dramatic interest and historical unity to his descriptions of secondary formations, by running a parallel between geological epochs and the actual lapse of time. The book becomes in this way much more available than one could have conceived of a treatise of geology, without, however, losing any of its philosophical precision, since the author is at all times careful to distinguish hypothesis from induction.

We shall now present a general outline of the system, with such specimens, indiscriminately taken, as may enable the public to judge of its execution.

In the first two sentences of his brief preface, Dr. Ure candidly avows what his readers may expect: "The author does not profess, in the following pages, to furnish the geological student with descriptions of new forms of granitic rock or mineral superposition; nor, if he possessed any such store of original observation, would he have deemed this the fitting occasion to display it. His leading object has been to distribute the most interesting and well-established truths illustrative of the structure and revolutions of the earth, in the order of their physical connexions and causes, whence certain general inductions might be legitimately

The Introduction occupies nearly fifty pages, printed in a somewhat smaller type than the body of the work. Here he comments with merited severity on the false methods of research pursued by ancient and modern cosmogonists; and he traces the rise of a right spirit of inquiry to the beginning of the present century, when the labours of Mr. William Smith and the Geological Society of London first gave a truly practical form to this branch of natural science. The systems of Hutton and Werner are reviewed with a philosophical eye; and, without entering into technical details, he shews their absurdity on general principles, which are presented in a lively and conclusive manner. He gives a short analysis of the volcanic school of Buffon and Cordier, and adduces a few facts demonstrative of its idealism.

"Two motives," says the author, "have engaged me to undertake the present work. First, a desire to lay before the world a view of certain intrinsic sources of change in the constitution of the earth, which seem to have escaped the observation of philosophers, but which appear to me deducible from modern physical and geological discovery. Second, a wish to lead popular students of philosophy to the moral and religious uses of their knowledge."

After some seasonable remarks relative to the diffusion of science among the people, he proceeds to open up the subject of his work in the following way:—

"Geologists have begun of late years to survey the structure of the earth in more minute and patient detail than their dashing predecessors; to compare, by map and section, its most interesting provinces; to contemplate individual facts directly, and not through the dark and distorting medium of a master's cosmogony; and to examine, with zoological skill, the organic inscriptions of its different strata. In thus studying to decipher the volume of its shelly records, they have explored many mysteries inscrutable by Werner, Hutton, and the early fanatics of their schools, to whom the very alphabet of the language was unknown. In this new field of knowledge the English nation stands pre-eminent; against no mean rivalry, however, of the naturalists of France. Emulation has here produced the happiest effects; for while the mineral superpositions of England have received admirable illustration, from the sagacity of Smith, Greenough, Macculloch, Conybeare, Phillips, Buckland, De la Bèche, Webster, Winch, and several other members of the London Society, Brogniart and Von Buch have revealed many wonders in French, Swiss, and Italian geology; and the two Cuviers, Blainville, Lamarck, and Deffrance, have thrown surprising light on the zoology of fossils. By directing his profound knowledge of comparative anatomy to antediluvian osteology, Sir Everard Home has gathered fresh laurels; nor have the German and Italian mineralogists been forgetful of their fame in this difficult career. The joint labours of all these philosophers have been embodied by a master's hand, along with his own unrivalled

studies, in the *Ossemens Fossiles* of Baron Cuvier—a magnificent production, of which it is difficult to say whether the science, eloquence, or candour, be most worthy of admiration."

Dr. Ure has distributed the exposition of his System into three books; the first, entitled the *Primordial World*, includes five chapters. In chap. 1, we have *general observations on the forms of matter*, where the action of heat on the terrequeous spheroid is described in a striking manner.

"When first the calorific energy was made to actuate the body of the earth, a mighty change would ensue. The central mass, composed most probably of the metallic bases of the earths and alkalies, as volcanic phenomena seem to attest, would fuse; the exterior parts would oxidise into the crust of mineral strata; and the outermost coat of all, the fixed ice, would melt into the movable waters."

Chap. 2. is dedicated to light, and seems to have been elaborately compiled. Dr. Ure adopts the undulatory theory, as recently expounded by Young, Fresnel, and Arago; and we must do him the justice to say, that his is the most intelligible account of the doctrine hitherto offered to English readers. Chap. 3, on the atmosphere, contains a good abstract of meteorology, in reference especially to the modifications of climate ancient and modern. The *primæval separation of the land and waters* occupies his next chapter; including a sketch of the constitution and functions of water. Here the chemical teacher appears to advantage. Chap. 5, on *primæval formations*, is a judicious compend of this department of geology.

Book II. *The Antediluvian Period*, comprehends all secondary formations, or such as contain organic remains, from graywacke to the upper freshwater marls and millstones. In the following introductory remarks to this book our readers will recognise the vein of moral feeling which pervades Dr. Ure's inquiries into the ancient structure of the earth.

"In Book I. we have seen the dry land upheaved out of the circumfluent waters, clothed with vegetation, and stocked with animal life. The primordial mineral strata, which we afterwards considered, are void of organic forms. Those which we now proceed to examine, present distinct remains, more or less abundant, of living beings. Here, therefore, we should pause in solemn meditation, on the most marvellous phenomenon which Nature, full of wonders, can possibly exhibit to the eye of man; the dawn of organization; the mystical transition from the blank of eternity to the fullness of time; from the inertia of the first matter, to the self-movement of life; the first-born of earthly creatures; records of the Creative Spirit, traced in imperishable characters, which every peasant may read, and no sophist can falsify. Here the rudiments of vitality lie embalmed in enduring mausoleums. An ancient catastrophe has rendered these primeval vaults accessible, enabling us to behold the eldest progeny of nature, which display even in their exuvie the perfect

workmanship of the Deity. The infinite void that separates death from life yawns before us, the inscrutable pathway between nonentity and existence, which an Almighty Being alone could traverse. Thus, even these elemental organic forms are infallible documents of that Eternal Wisdom which willed a world into being. The erection of the subaqueous strata into the primitive mountains and plains, was evidently accompanied with universal disruption. Innumerable fragments of both the upborne and uphearing rocks were tossed about, and washed down into the congregated waters, along the precipitous shores, and over the bed of the primeval ocean. These shattered fragments becoming agglutinated by their own pulverulent cement, soon recomposed continuous strata, which bear internal evidence of the violence that gave them birth. Thus were formed the *transition* rocks of geologists, mineral masses which denote the passage between the upright primitive and the horizontal secondary strata, between those of inorganic and organic evidence. These rocks are called conglomerate, or fragmentary, from their aspect and composition. In the course of the consolidation and re-union of their parts, a few of the organic forms with which the sea was beginning to teem, falling into their crevices, became imbedded in their substance. Hence we see how some vestiges of animal existence appear in the oldest conglomerate, or graywacke formation. The convulsions, which after a long interval caused the deluge, have also dislocated many of these conglomerates, so that strata of rounded pebbles assuredly aggregated in a horizontal position, are now found standing in upright walls."

The following are the titles of the chapters of this Book:—1. *General view of secondary rocks.* 2. *Submedial or transition strata.* 3. *Medial or carboniferous strata.* 4. *Supermedial strata, including the chalk.* 5. *Tertiary strata.* In this book, the doctor has fully justified the expectations raised by the preface.

Indeed, as he tells us, he has "diligently availed himself of the ample means accumulated in the Ossements Fossiles of Baron Cuvier, the Philosophical and Geological Transactions, &c. of enlivening the dark catacombs of the earth, by interspersing among his descriptions of its mineral planes, an account of their ancient tenants. By transferring to his pages systematic exemplars of the analytical science displayed by the great naturalist of France, in restoring antediluvian zoology, he expects to make them peculiarly attractive to the English reader."

It is the Third Book, however, entitled *the Deluge*, which will excite most interest, both in the scientific and religious worlds, by the development of his new views concerning the ancient state of our globe, and the causes of the great catastrophes which have remodelled its surface. This book is distributed into seven chapters, which constitute altogether about one-half the reading of the volume. Chapter first, *physical records of a universal deluge, which new-modelled the earth*, describes the universal distribution of diluvial gravel, the operation of streams on the strata, valleys of denudation, &c. The second chapter treats of the *causes of geological catastrophe*, under the two sections of volcanic action and basaltic eruption. Chapter third, entitled, *the constitution of the primeval world*, opens with a brief detail of M. Fourier's conclusions concerning the proper or intrinsic heat of the earth. As our author's plan of procedure is strictly inductive, we find some difficulty in exhibiting, within our limits, such a portion of his chain

as may convey a just view of his argument; but, at all events, must reserve this most important branch of his reasoning till next week.

Narrative of an Official Visit to Guatemala from Mexico. By G. A. Thompson, Esq. &c. &c. 12mo. pp. 528. London, 1829. Murray.

MR. THOMPSON was Secretary to the Mexican Commission of Messrs. Hervey and Ward; and after the treaty between Great Britain and Mexico was concluded, he proceeded, as a commissioner, to Guatemala, in order to report to government the state of that republic. When the capacious mind of Mr. Canning turned towards that mighty measure, the recognition of the New World among the political existences of the earth, it was to be expected, from his prudence and sagacity, that he would seek for information respecting the real condition of the various reorganised parts, from sources on which he might rely; hence the mission of Mr. Thompson, the able translator of Alcedo's Dictionary,* and on that account, no doubt, selected by the pure and patriotic minister—to whom his country's service was ever paramount to all claims of party or interest—to visit the least known of the young transatlantic states, and make its relations the subject of actual inquiry and observation, for his guidance.

We find, accordingly, that the most important portions of this volume are those which unfold the *status quo* of its rulers, its parties, its establishments, its numbers, its public feelings, and its capabilities. Of these we shall, as we proceed, take a concise, but sufficient, notice; and, in the meantime, deem it more consistent with our usual course to accompany the author in his journal, which is slight, sketchy, and amusing; and extract from it such matters as their novelty and character recommend for adoption into our miscellaneous page.

Having left the capital of Mexico (April 21, 1825), Mr. Thompson, with some travelling associates, servants, and an escort of ten soldiers, proceeded to Acapulco, where he embarked in the Tartar frigate, and was conveyed to Sonsonate, a port of Guatemala. Of the over-land part of this journey we shall say little, as we have often had accounts of Mexican travelling, and are more desirous of coming to fresher ground. The following brief passages may, however, be quoted. As they approached the Tierra Caliente, towards the coast, Mr. T. remarks:—

"The first notice I perceived of the change of climate was the effect it had upon our poor animals. The mule I rode was a little thick in the wind, and I believe very old; but she was, nevertheless, a fine animal; and I was surprised to find her, towards three o'clock in the afternoon, after having travelled about twenty miles, come to a stand-still. She was what they here call *soleado*, or sun-stricken. About two leagues further on, we halted. One of the soldiers proposed to bleed her for me; and picking up a bit of stick, he cut it with his sword into a sharp point, and thrust it up the poor animal's nose. A moderate flow of blood from the nostrils, perhaps half a pint, was the consequence. After this, he took a quarter of a pint of brandy and poured it into the animal's ears, which seemed to distress or to please it, I could hardly tell which, exceedingly. He then let go her head, which she stooped and shook violently; and then remarking to me, 'está buena,' she is all right, he was about to

replace the bridle and saddle, which, however, I would not permit, but left her to come on with the baggage, which was behind us a small distance on the road. This animal never suffered any inconvenience during the rest of the journey. The phlebotomy used upon the occasion was, it appears, as efficient as it was calculated for the contingencies which travellers are likely to experience in a country so thinly peopled. The application of the brandy in the ear I was the less surprised at, as it is used in Mexico as a constant, and, I believe, specific remedy for the most violent pains in the head, especially those arising from toothache. In this case it is inserted by a syringe, or more frequently by the mouth of the operator, into the ear opposite to that side of the face where the pain lies, and is suffered to remain in till the pain leaves the patient, which I have always perceived it to do, however violent the attack may have been, in the course of three or four minutes: the whole effect is doubtlessly produced by what is called counteraction."

On reaching a place called Zopilote, we are informed: "Zopilote is the name of a vulture: we saw about 2000 of these dull birds sitting on the trees, as a sort of advanced guard of the place which so properly bears their designation, since they were the only living things that were to be seen in it: like other watchmen, they were, for the most part, fast asleep!"

At Acapulco, it is stated,—"The troops at this station are composed of the most abandoned portion of the Mexican population. Most of those we met with on the road, when the officer was so strenuous in defence of their honour, were convicts, who were coming to replenish the ranks of the hopeful band who were on the parade. There was scarcely a man of them, I was told, who had not committed crimes worthy of death. One of them, a fair, slight-made man, about twenty-three, with light hair, was particularly pointed out to me as known to be one of the greatest desperadoes that ever had human form: he is said to have bragged that he had committed thirteen murders and assassinations, amongst which his father was one of the victims. These are dangerous materials with which to ensure the safety of a town, by intrusting the garrison and all the strong places in their hands."

Here we must also select another local anecdote:—

"Whoever has read Anson's Voyage will remember the delight which his poor sailors experienced when they could, at length, put their foot ashore: they are described as reviving at every step they took upon terra firma. The delight they experienced in leaving the sea for the dry land could not have been greater than that which I felt in leaving the land to plunge into the sea. I never enjoyed a bath so much in my life; but I was, accidentally, inconvenienced in the operation, in a manner which I could not have foreseen. I had hung my shirt on a nopal shrub on the beach, which was in a flowering state, and emitted from its buds myriads of little prickles,

"This cure of toothache is afterwards more particularly described in its human application: 'The patient must lie down, with the head reclined on the side on which the pain is seated: the operator pours a little spirit, rum is the most approved, into the ear which lies uppermost: about a table-spoonful is sufficient, and it must be allowed to remain there till the pain is gone, which is generally the case in the course of three or four minutes. The sensation to the patient is by no means distressing: it resembles the whirling experienced on the immersion of the head under water, but is much more astounding; and I am not quite sure if, upon the only occasion on which I found it necessary to undergo the operation, it was not attended with a slight, though momentary, feeling of syncope: but, be this as it may, it is certainly not dangerous; and those who will submit to it experience infinite relief.'"

* Five vols. 4to.

the whole of which were transferred to my body. My agony, added to the intense heat of the climate, was excruciating; it was in vain to attempt to pick them out, for even if I had had the patience to do so, the thing was impracticable, for they had adhesion enough to keep their hold, whilst the slightest attempt to withdraw them broke them short off on the surface of the skin. This incident, trifling as it may appear, caused the night, which was excessively hot, and the following day, to pass most miserably.

"The *napal*," our readers should be informed, "is a plant consisting of little stem, but expanding itself into wide thick leaves, more or less prickly according to its different kind: one or two of these leaves being set as one plant, at the distance of two or three feet square from each other, are inoculated with the cochineal, which, I scarcely need say, is an insect: it is the same as if you would take the blight off an apple or other common tree, and rub a small portion of it on another tree free from the contagion, when the consequence would be that the tree so inoculated would become covered with the blight: a small quantity of the insects in question is sufficient for each plant, which, in proportion as it increases its leaves, is sure to be covered with the costly parasite. When the plant is perfectly saturated, the cochineal is scraped off with great care. The plants are not very valuable for the first year: it appeared that they might be estimated as yielding after the second year from a dollar to a dollar and a half profit on each plant. Indigo is described as a substance of a deep blue colour, containing about fifty per cent of pure colouring matter: the analysis of indigo, says Brande, in his *Manual of Chemistry*, page 49, where he proposes to ascertain the proportion of colouring matter, which varies much in different samples, may be performed by the successive action of water, alcohol, and muriatic acid. One hundred parts of Guatemalan indigo thus treated, afforded to water twelve parts, to alcohol thirty, to muriatic acid ten, to residue of pure indigo forty-eight. This analysis would seem to prove that the indigo of Guatemala is superior to that of any other country."

We will now go to the latter, and exhibit some other of its most novel features. Acajula is a few miles from Sonsonate:—

"There is a carriage-road the whole way from the port to the town, principally over a fine green sod, and through avenues intersecting a thick wood, which in the summer time is so umbrageous as hardly to leave the route, where the road should be, distinguishable. This wood is infested by a small tiger, which is very fierce, but seldom attacks a man, unless affronted: he does not require the same provocation to assault the herds, especially the calves and young mules. The bulls are so well acquainted with his malicious intentions, that, forgetting their mutual animosities, they sometimes aggregate for the general protection, in which case the tiger frequently gets the worst of the battle. The guaco, with its parasitical tendrils, clinging to the gigantic trees which girt the path, assures us of the presence of the most noxious serpents: for, wherever these are found, the natives tell you that the guaco, the remedial antidote to all their poisons, is also at hand. The root and branches of this plant, which greatly resembles the vine devoid of its foliage, are equally effective; and its power is so instantaneous and astonishing, that, had not the stories of its efficacy been repeated by persons of veracity who have tried

its effect on themselves, I could hardly credit them. Some of the snakes here are so venomous that the person bitten generally dies in the course of twenty minutes: if, however, he be provided with the guaco, he bites a bit, and applies the saliva to the part: he also swallows the saliva arising from the mastication for a few hours, and he need have no further apprehension; he is quite well. A young man of the name of Rascon, who accompanied me to England, and of whom I shall hereafter speak, told me that he has taken up in the palm of his hand that dreadful little viper called the tamaulpas, the bite of which is instant death, and that the reptile became instantly inert and torpid, because he had in his hand a small piece of this wonderful plant. Another person, whose servant had been bitten by the same kind of snake, was dying of a mortification which had taken place in his arm: a strong decoction of the root in brandy was poured down his throat, and also applied to the part affected: he was cured, and never afterwards felt any effect from the wound. Might not this wonderful remedy be applied to cases of hydrophobia? Not to speak of its beneficial qualities in cases of agues, dysentery, fever, and generally all those maladies which are peculiar to the human constitution in the places where it is found, I can answer for its being of a very harmless nature, for I took it by the advice and after the example of the English gentlemen, almost daily, with a view of preventing sickness; and must conclude it had the effect, never having suffered from indisposition whilst residing at Sonsonate, or other places where the climate is considered to be prejudicial to European constitutions."

Travelling on to the capital of Guatemala, we have the following:

"The tree which I had seen in my route to Acapulco, bearing cherries, without leaves, was here very common: my companion informed me that it was called *picara*. How this term applies, which means *rogue*, with all its variety of senses, as applied either to the offender at the Old Bailey, who is sometimes forgiven after the commission of the act, or to the transgressor in the coteries of the *Mesdames Vitula* and *Lubentia*, who feels that he is forgiven whilst he commits it,—I cannot, I confess, conceive: perhaps, however, it meant that the fruit was piquant: in truth, it was very sour. The next natural curiosity we met with was the *xopilote*. About fifty or sixty of these birds were standing in state round a dead mule, whilst one, distinguished by a tuft or civic cap upon his head, was perched upon the carcase, and contemplating it with a hurried air of dignity and satisfaction: he leered into each morsel, first with one eye and then with the other, as a gentleman surveys a well-loaded table with his quizzing-glass. When I last saw a portion of this extraordinary community, they were taking their siesta, or sleeping after dinner; they were now in watchful expectation of the moment when they might commence that repeat. Don Simon told me that the bird who was playing so conspicuous a part was the one who had had the good fortune to find the mule, and was consequently considered the *alcalde*, or lord mayor; whilst the others, who had kindly congregated to help him to eat it, were *senadores*, or common-council-men. Indeed, it looked very like it,—for, after a reverent bow of the head on the part of the *alcalde*, which might be compared to a short grace, this worshipful and worshipping company flew, helter skelter, upon the repeat. We

waited some time to see the end of it—but despairing of doing so, proceeded on our route."

It may be worth observing, that the small black cherry is with us called *piccaroon*; or, as the cockneys say, *biggeroons*. Did they come from America?

The approach to the capital is very picturesque.

May 17th. "The country began, from this place, to take the appearance of some considerable degree of civilisation. Gates and enclosures manifested the division and estimation of property. As we approached still nearer to the city, we passed some small country villas and gardens, with tracts cultivated with cochineal, and surrounded by small dikes or mud walls. It was about four in the evening, the air was fresh and balmy, the climate resembling a bright English day in the beginning of June. The tract over which we passed was varied with hill and dale: the turf, green and tender, seemed sprouting under our feet as we advanced. In the front lay the city, with its white domes and spires glittering in the sun, and appearing larger than it really was by the interspersing of the shade and foliage of the fine trees with which it was on all sides intersected and environed. On the right were shaded groves, and cultivated slopes, and knoll-ed hills, rising upon each other in progressive grandeur, till their summits became, as it were, the base of the tender gray streak which marked the distant outline of the Andes;—whilst on the left the country was a series of table lands and valleys, formed by wide and bold undulations, and terminating with the three mountains, clad with foliage to their summit, and looking like gigantic warriors upon the pigmy multitudes by which they were surrounded. The sight was so beautiful and replete with interest, that I had stopped behind to enjoy the contemplation of it alone and at leisure. As I was taking up my reins to continue my route, I saw a fawn sporting on a rising ground within ten yards of me. It stamped its foot, advanced, stopped short, frisked, then stopped short again, and stared at me. I had, mechanically, drawn one of my pistols from the holsters, and had cocked it whilst I was witnessing these manœuvres. The little animal still stood staring at me with its large black eyes, innocent and unsuspecting, and its little black glossy nose and chin perked out in impudent defiance. It stamped its foot again, as offering wager of battle, gave another frisk, and darted off."

We, too, must follow its example, stamp, frisk, and be off—for a week, at least.

The Collegians. A Second Series of Tales of the Munster Festivals. 3 vols. 12mo. London, 1829. Saunders and Opley.

THE work now before us is one of which a limited review can give little idea; detached portions do but scant justice to a narrative whose fearful interest is gradually worked up to an almost painful degree; and as for anticipating the *dénouement*, it is a literary foretelling which we hold in a degree of dislike that ought to do us no small credit among that class of novel-readers whose usual ejaculation is, "Oh, don't tell me the end, or you'll spoil all my pleasure!" We shall content ourselves with stating, that we have not for some time met with so powerfully written a tale; and rest satisfied with extracts that will illustrate the style rather than the story. The following is the first appearance of the hero:—

"His attitude, as he kept one hand on the

rudder, and his eye fixed upon the foresail, was such as displayed his form to extreme advantage. It was erect, composed, and manly. Every movement seemed to be dictated by a judgment perfectly at ease, and a will that, far from being depressed, had caught a degree of fire and excitement from the imminent dangers with which it had to struggle. The warm and heroic flush upon his cheek could not be discovered in the pale and unequal light that shone upon him; but the settled and steady lustre of his large dark eye, over which not even the slightest contraction of the arched brow could be discerned; the perfect calmness of his manner, and the half-smiling expression of his mouth (that feature which of all others is most traitorous to the dissembling coward), bespoke a mind and heart that were pleased to encounter danger, and well calculated to surmount it. It was such a figure as would have at once awakened associations in the beholder's mind of camps and action, of states confounded in their councils, and nations overrun by sudden conquest. His features were brightened by a lofty and confident enthusiasm, such as the imagination might ascribe to the royal adventurer of Sweden, as he drew his sword on his beleaguers at Belgrade. His forehead was ample and intellectual in its character; his hair 'coal-black' and curling; his complexion of that rich deep gipsy-yellow, which, showing as it did the healthy bloom beneath, was far nobler in its character than the feminine white and red. The lower portion of his physiognomy was finely and delicately turned, and a set of teeth as white as those of a young beagle, gave infinite vivacity to the expression of his lips. The countenance was such a one as men seldom look upon; but when once beheld can never be forgotten. On a seat at the weather side sat a young girl, her slight person wrapped in a blue cloak, while her eyes were raised to the cheerful face of the helmsman, as if from him she derived all her hope and her security. The wind had blown back the hood from her shoulders, and the head and countenance which thus 'unmasked their beauty to the moon' were turned with a sylph-like grace and lightness. The mass of curly hair which was blown over her left temple seemed of a pale gold, that harmonised well with the excellent fairness and purity of her complexion; and the expression of her countenance was tender, affectionate, and confiding.

"Mind your hand, Mr. Hardress," said the boatman, in a careless tone, "we are in the tide." It required the hand of an experienced helmsman to bring the little vessel through the danger which he thus announced. An immense overtopping billow, capped in foam, came thundering downward like an avalanche upon her side. In spite of the precautions of Hardress, and the practised skill with which he timed the motion of the wave, as one would take a ball upon the bound, or a hunter on the rise—the bowsprit dipped, and cracked like a withered sapling, a whole ton of water was flung over the stern, drenching the crew as completely as if they had been drawn through the river. The boat seemed to stagger and lose her way like a stricken hart, and lay for a moment weltering in the gloomy chasm in which the wasted wave had left her. A low and smothered scream was breaking from the female, when her eye again met that of Hardress Cregan; and her lip, though pale and quivering, was silent. "That was right well done, sir," said Danny Mann, as the boat once more cleft the breakers on her landward course. "A minute sooner, or a minute later, up with the

hand, would put it all into her." "A second would have done it," said Hardress, "but all is well now. A charming night this would be," he continued, smiling on the girl, "for beaver and feathers." This jest produced a short hysterical laugh in answer, which was rather startling than agreeable to the person who addressed her. In a few minutes after, and without any more considerable disaster, the vessel dropped her peak, and ran alongside the rocks in safety.

"At the time of Lord Halifax's administration, Lowry Looby, then a very young man, held a spot of ground in the neighbourhood of Limerick, and was well to do in the world; but the scarcity which prevailed in England at the time, and which occasioned a sudden rise in the price of beef, butter, and other produce of grazing land in Ireland, threw all the agriculturists out of their little holdings, and occasioned a general destitution, similar to that produced by the anti-cottier system in the present day. Lowry was among the sufferers. He was saved, however, from the necessity of adopting one of the three ultimates of Irish misery, begging, listing, or emigrating, by the kindness of Mr. Daly, who took him into his service as a kind of runner between his farms,—an office for which Lowry, by his long and muscular legs, and the lightness of the body that encumbered them, was qualified in an eminent degree. His excellent honesty, one of the characteristics of his country, which he was known to possess, rendered him a still more valuable acquisition to the family than had been first anticipated. He had, moreover, the national talent for adroit flattery, a quality which made him more acceptable to his patron than the latter would willingly admit, and every emulation of this kind was applied under the disguise of a simper, which gave it a wonderful efficacy. 'Ha! Lowry,' said Mr. Daly, 'well, have you made your fortune since you have agreed with the post-master?' Lowry put his hands behind his back, looked successively at the four corners of the room, then round the cornice, then cast his eyes down at his feet, turned up the soles a little, and finally straightening his person, and gazing on his master, replied, 'To lose it I did, sir, for a place.' 'To lose what?' 'The place as postman, sir, through the country westwards. Sure there I was a gentleman for life, if it was'n't my luck.' 'I do not understand you, Lowry.' 'I'll tell you how it was, master. After the last postman died, sir, I took your recommendation to the post-master, an' axed him for the place. 'I'm used to thravelling, sir,' says I, 'for Mister Daly, over, and—' 'Ay,' says he, takin' me up short, 'an' you have a good long pair o' legs I see.' 'Middling, sir,' says I, (he's a very pleasant gentleman) 'its equal to me any day, winther or summer, whether I go ten miles or twenty, so as I have the nourishment.' 'T'would be hard if you didn't get that, any way,' says he; 'well, I think I may as well give you the place, for I do'n' know any gentleman that I'd sooner take his recommendation than Mister Daly's, or one that I'd sooner pay him a compliment, if I could.' 'Well, and what was your agreement?' 'Ten pounds a-year, sir,' answered Lowry, opening his eyes, as if he announced something of wonderful importance, and speaking in a loud voice, to suit the magnitude of the sum, 'besides my clothing and shoes throughout the year.' 'T'was very handsome, Lowry.' 'Handsome, master! 'Twas wages for a prince, sir. Sure there I was a made gentleman all my days, if it was'n't my luck, as I

said before.' 'Well, and how did you lose it?' 'I'll tell you, sir,' answered Lowry: 'I was going over to the post-master yesterday, to get the Thrale mail from him, and to start off with myself on my first journey. Well an' good, of all the world, who should I meet, above upon the road, just at the turn down to the post-office, but that red-headed woman that sells the free-stone, in the streets? So I turned back.' 'Turned back, for what?' 'Sure the world knows, master, that it is'n't lucky to meet a red-haired woman an' you going of a journey.' 'And you never went for the mail-bags?' 'Faiks, I'm sure I didn't that day.' 'Well, and the next morning?' 'The next morning, that's this morning, when I went, I found they had engaged another boy in my place.' 'And you lost the situation?' 'For this turn, sir, any way. 'Tis luck that does it all. Sure I thought I was cock-sure of it, an' I having the post-master's word. But, indeed, if I meet that free-stone crathur again, I'll knock her red-head against the wall.' 'Well, Lowry, this ought to shew you the folly of your superstition. If you had not minded that woman when you met her, you might have had your situation now.' 'T'was she was in fault still, begging your pardon, sir,' said Lowry, 'for sure if I didn't meet her at all this would'n't have happened me.' 'Oh,' said Mr. Daly, laughing, 'I see that you are well provided against all argument. I have no more to say, Lowry.'

The Daly household make an exquisite family picture; and the death-scene is as touching as it is natural. The chief fault of the book is, that the principal plot, whose interest is rivetting, is sometimes broken in upon by Irish stories, sketches of character, &c.—good enough of their kind, but still interruptions. This, however, comes of our modern novelists being universalists, and doing statistics, description, anecdotes, &c. all under one head. Yet, there is quite talent enough to justify us in ranking these volumes among some of the best productions of the soil.

The Ruined City: a Poem. By G. P. R. James, Esq. 12mo. pp. 32. London, 1828.

SOME ONE beautifully says of Greece—"her very tombs are altars;" and it is by their side the poet would choose his most efficient stand when he combats the worldly wise, armed with systems and pamphlets, who question the utility of poetry, and would have the world of imagination merged in the active and actual one. Many soils are as much summer's favourites; all her natural advantages, green wood and shining river, are to be found even lovelier in other lands; but what country has a name that at once goes from the ear to the heart, and calls up all that is elevated in our nature—the noble hope of the patriot—the aspiring dream of the bard, who paints earth with the hues of heaven, for he draws from his own consciousness of immortality,—what country has so intellectual a memory as Greece? And to whom does she owe this mental eternity but to her poets? For her historians, her philosophers, were poets too; and every noble thought, every generous deed recorded of the past, stirs the feverish and troubled waves of the present as with an angel's wing, that heals and purifies wherever it touches. Nay, even the dark record of guilt has its benefit, startling our thoughtless to-day, like a warning such as was given by the skeleton at the Egyptian feast—at once sad and fearful. No marvel that a young poet, on visiting such a land, should find his thoughts, like the fountains of the fairy tale, leap forth

in *man*. The author says: "A few years ago, a party of English gentlemen, travelling in the Morea, conceived the idea of visiting some of the ruins of ancient Greece by moonlight. This was executed accordingly, during one of the most splendid nights of eastern summer; and an account of the effect produced, given by one of the travellers to the author, suggested the following little poem." Poetry was the only language which could speak of such scenes; and what praise do we not give Mr. James when we say he was worthy to have seen them? We frankly own we have been delighted with this little poem: the elegant versification, which gives fitting utterance to thoughts touched with the beauty they seek to embody—the melancholy musing—the mingled memory of a glorious past, broken in upon by the striking realities of the present—the vein of half sad and half bitter philosophy,—speak the truly poetic mind—one on whose lips alone should the name of Greece ever rest. But let our readers use their own judgment.

"Parent of contemplation! Night sublime!
Thou equal sharer in the throne of time,
I court thy friendly shade. Let man delight
In glittering sunbeams and in noisily light;
To courts and crowds I willingly resign
The gaudy day: be night's calm alms mine.

Meanwhile, the sun's pale sister calmly shone
On those memorials of the ages gone,
Looking so placid on that soulless scene,
So calmly sweet, so pensively serene,
It seemed as if she mark'd a world's decay,
Not feelingless; but poured her lucid ray
Upon the remnants of the past, and drew
Some comment, sweet and solemn, from the view.
Beneath were columns, sepulchre, and bust,
Prostrate once more in their primeval dust:
The melancholy records left alone
Of thousands honour'd, and of thousands gone.
Before my steps a nation's dwellings lay—
The earth I trod upon, a nation's clay—
And here and there the lettered stone would show
Some long-lived monument of short-lived woe,
Telling how Dion died, how Ulysses wept,
Where Iliad rotted, or where Simo slept;
For the first steps within that city led
Among the mansions of its ancient dead."

How true the next extract!

"We are mad gamblers in this world below,
All hopes on one uncertain die to throw,
How vain is man's pursuit, with passion blind,
To follow that which leaves us still behind!
Go! clasp the shadow, make it all thine own,
Place on the flying breeze thine airy throne;
Wave the thin sunbeams of the morning sky;
Catch the light April clouds before they fly;
Chase the bright sun unto the fading west,
And wake him early from his golden rest;
Seeking th' impossible, let life be past,
But never dream of pleasure that shall last.

"Oh in my infancy, when joys were young,
And Hope! thy siren voice most sweetly sung,
O'er the green meadow and the April plain
I've chased the varied bow of heaven in vain—
Followed its hues, transparent as they shone,
And woo'd its fleeting splendour for mine own.
In after years, when beauty's fairer beam
Rose to my eyes in loveliness supreme,
Beauty I followed, and as fondly too
As e'er I chased yon arch of painted dew.
Next came the love of glory, and the dream
Of winning fame; I felt my bosom teem
With thoughts and feelings deep, and such as lead,
When rightly taught, to honour's shining meed;—
No matter now what might such dream destroy,
Hope! 'twas like all thy gifts, a gilded toy,
Such splendid trifle that thou hang'st in air
As to man's fancy but a glittering snare:
Thyself the Iris of life's changeful skies;
And still man follows where the rainbow flies.
But shall he yet, when often thy deceit
Has taught astray to roam his weary feet,
Believe the lying vision he has proved,
That fix his eyes on things in vain beloved?
Yes, even so! To life's remotest gleam,
The transient still shall chase thy flying beam;
Through the vale of death, in glory bright,
The star of hope be fixed before his sight;
No transient beam, no evanescent ray,
But the full brilliance of eternal day."

Though we do not agree with the following,
We like it.

"Let man's epitaph be writ on hearts;
Let his scutcheon when his soul departs;

The widow's sorrow his emblazonment;
The orphan's woe his funeral monument;
The good man's pity and the poor man's tear
The noblest trophies that adorn his bier.
Oh! when th' inevitable hour be come,
And 'midst past things men delve my latest home,
Let me be mourned by gratitude and worth,
And fond affection lay me in the earth;
Place o'er my lowly grave no haughty pile;
Write on my unstained tomb no flattery vile;
I would not men should come and scoff to read
One doubtful record of my life or deed.
No! rest my name in memory alone,
A purer tablet than the Parian stone.
Let friends remember me! when these are not,
Or I forgotten—let me be forgot!"

We cannot neglect the annexed exquisite sketch.

"Such once I knew; from cold earth past away,
A flower that bloomed and withered in a day;
Her voice was music, and a magic wife,
Born in the sweet persuasion of her smile,
Stole to the heart, like those bright summer beams
That fill the bosom with enchanted dreams;
And as she moved, the graces round her thrown
Might have called blushes from the Phidian stone.
Her eyes, as April's morning skies, were blue,
As soft, as pure, and once as playful too;
Young melody delighted in her sigh;
Her lip was love, her soul was harmony.
Much was her joy to mark the opening spring,
And list while birds its welcoming would sing;
Or wander through the forest's budding shade,
'Midst youthful boughs in tender green arrayed,
What time the young pale flow'rs early bloom,
And rise like spirits from their wintry tomb.
But when the earth upheld the golden sheaf,
She'd mourn to see her much-loved summer leaf
Fall to the autumn ground, and fading flowers
Drop their light honours 'neath the passing hours;
For shadowed forth through nature she would see
Prophectic lines of human destiny.
Yet much delighted she in every shade
By the world's variegated robes displayed;
For infant poetry possessed her heart,
Which scarce herself would own, and knew not to impart.

But yet at times a something more than thought,
Like a dark cloud o'er summer landscape brought,
Would hang upon her; and with silent glance
She'd gaze upon the blue sky's deep expanse.
It seemed as if her soul had taken flight
To wander in its realms of native light;
To sojourn for a space in joy on high,
Then sorrowing leave its dwelling in the sky—
And then a glistening tear, uncalled, would fill her eye.

She was not made for earth, a thing so fair
Seemed formed a higher destiny to share."

It is perhaps a stretch of prerogative to make a work printed for private circulation the subject of public criticism; but we expect from our readers thanks; and to Mr. James we can only say, that poetry, like mercy, "is twice blessed, it blesses him that gives and him that takes." The bard were no true poet who "did but wake his music for himself."

Londiniana; or, Reminiscences of the British Metropolis. &c. &c. By E. W. Brayley, F.S.A. 4 vols. 12mo. London, 1829. Hurst, Chance, and Co.

SELECTIONS and compilations of this kind can hardly fail to be acceptable if put together with any thing like common taste and judgment; and when done with the knowledge, talent, and research, which belong to Mr. Brayley, it may well be believed that such a work must be both entertaining and instructive. His *Londiniana* is indeed a very interesting miscellany, in which the historian, the antiquary, the topographer, and the man of letters, will find ample and various sources to gratify each his peculiar appetite. Many volumes have been ransacked, and some rare tracts sought out, to enrich this new picture of our mighty metropolis, or rather of many of its features—for a full-length would require fifty times as large a publication. What we have is, however, ably executed; and between the literary matter and the illustrations, prints, reprints, plans, fac-similes, &c. &c., we can truly give a high character of Mr. Brayley to our readers. Since Malcolm's very amusing book,

nothing at all to be compared to the present has appeared on the subject; and it is one which deserves to be revived in a new form at least every quarter or half century.

It will readily be apprehended, at the same time, that the immense mass and diversified nature of its contents must render the idea of an adequate review quite futile. We must, therefore, content ourselves with warm general praise, and with very brief quotations to exemplify the editor's good qualities.

The following is striking, as contrasting the old feelings of London on the Catholic question with the present hour.

"*Ceremony of Burning the Pope.*—*The Green Ribbon Club.*—It was mentioned in the preceding volume, that after the discovery of the pretended meal-tub plot, in 1679, the people became so indignant against the Catholics, that the annual solemnity of burning the pope in effigy was celebrated with additional ceremonies of mock grandeur. The proceeding itself arose in Queen Elizabeth's reign, and it was occasionally observed on the anniversary of her birth, (viz. November the 17th,) till after the commencement of the last century, although not always with a similar degree of pomp and uproariousness. In the latter part of Charles the Second's reign, these anti-papistical solemnities were employed as engines to excite 'the popular resentment against the Duke of York and his religion,' and they were performed with great state and expense. The most famous of these processions were those of 1679, 1680, and 1681; to which Dryden thus alludes at the conclusion of his *Epilogue to Cædipus*:

Yet as weak states each other's pow'r assure,
Weak poets by conjunction are secure,
Their treat is what your palates relish most,
Charm! song! and show! a murder and a ghost!
We know not what you can desire or hope,
To please you more, but burning of a pope.

The following account of the tumultuary procession in the year 1679, was extracted (with a few verbal alterations) from a very scarce pamphlet, intitled, 'The Burning of the Pope at Temple-bar, in London,' &c., and an equally rare broad-side, quoted by Sir Walter Scott, in the sixth volume of his edition of Dryden's Works. Upon the 17th of November the bells began to ring about three o'clock in the morning in the city of London, and several honourable and worthy gentlemen, belonging to the Temple as well as to the city, (remembering the burning both of London and the Temple, which was apparently executed by popish villany) were pleased to be at the charge of an extraordinary triumph, in commemoration of that blessed Protestant queen, which was as follows:—In the evening of the said day, all things being prepared, the solemn procession begun from Moorgate, and so to Bishopsgate-street, and down Houndsditch to Aldgate, through Leadenhall-street, Cornhill, by the Royal Exchange, through Cheapside, to Temple-bar, in order following:—1st. Marched six whiffers, to clear the way, in pioneer caps and red waistcoats. 2d. A bellman, ringing his bell, and with a doleful voice, crying all the way, 'Remember Justice Godfrey.' 3d. A dead body representing Justice Godfrey, in the habit he usually wore, (a decent black habit) and the cravat wherewith he was murdered about his neck, with spots of blood on his wrists, breast, and skirt, and white gloves on his hands, his face pale and wan, riding upon a white horse, and one of his murderers behind him, to keep him from falling, in the same manner as he was carried to Primrose-hill. 4th. A priest came next, in

a surplice, and a cope embroidered with dead men's skulls and bones and skeletons, who give out pardons very plentifully to all that would murder Protestants; and proclaiming it meritorious. 5th. Then a priest alone, with a great silver cross. 6th. Four Carmelite friars, in white and black habits. 7th. Four gray friars, in the proper habits of their order. 8th. Six Jesuits, carrying bloody daggers. 9th. Four wind-music, called the waits, playing all the way. 10th. Four bishops, in purple, with lawn sleeves, with golden crosses on their breasts, and croziers in their hands. 11th. Four other bishops, in *pontificalibus*, with surplices and rich embroidered copes, and golden mitres on their heads. 12th. Six cardinals, in scarlet robes and caps. 13th. Then followed the pope's chief physician,* with Jesuit's powder in one hand, and an urinal in the other. 14th. Two priests, in surplices, with two golden crosses. Lastly, the pope himself, in a lofty glorious pageant, representing a chair of state, covered with scarlet, richly embroidered and fringed, and bedecked with golden balls and crosses. At his feet, a cushion on state, and two boys in surplices, with white silk banners painted with red crosses, and bloody consecrated daggers for murdering Protestant kings and princes, with an incense-pot before them, censuring his holiness, who was arrayed in a splendid scarlet gown, lined throughout with ermine, and richly daubed with gold and silver lace: on his head a triple crown of gold, and a glorious collar of gold and precious stones, St. Peter's keys, a number of beads, Agnus Dei's, and other Catholic trumpery. At his back, his holiness's privy-counsellor, the degraded seraphim, (*Angiſe* the devil,) frequently caressing, hugging, and whispering him, and oft times instructing him aloud to destroy his majesty, to forge a Protestant plot, and to fire the city again, to which purpose he held an infernal torch in his hand. The whole procession was attended with 150 flambeaux and lights, by order; but as many more came in volunteers as made up some thousands. Never were the balconies, windows, and houses more numerous lined, or the streets closer thronged with multitudes of people, all expressing their abhorrence of popery, with continual shouts and acclamations; so that 'tis modestly computed that, in the whole progress, there could not be fewer than two hundred thousand spectators. Thus, with a slow and solemn state, they proceeded to Temple Bar, where, with innumerable swarms, the houses seem to be converted into heaps of men and women and children, for whose diversion there were provided great quantities of excellent fire-works. Temple Bar being, since its rebuilding, adorned with four stately statues, viz. those of queen Elizabeth and king James on the inward or eastern side fronting the city, and those of king Charles the 1st, of blessed memory, and our present gracious sovereign, (whom God, in mercy to these nations, long preserve!) on the outside, facing towards Westminster, the statue of queen Elizabeth was, in regard to the day, provided with a crown of gilded laurel, and in her hand a golden shield, with this motto inscribed: '*The Protestant Religion and Magna Charta*,' and flambeaux placed before it. The pope being brought up near there-

unto, the following song, alluding to the posture of those statues, was sung in parts, between one representing the English cardinal,* and others acting the people.

Cardinal Norfolk.
From York to London town we come,
To talk of popish ire,
To reconcile you all to Rome,
And prevent Smithfield fire.

Plebeians.
Cease, cease, thou Norfolk Cardinal,
See, yonder stands Queen Bess,
Who saved our souls from popish thrall:
O Queen Bess, Queen Bess, Queen Bess!
Your popish plot and Smithfield threat
We do not fear at all;
For lo! beneath Queen Bess's feet,
You fall, you fall, you fall!
'Tis true, our King's on t'other side,
A looking towards Whitehall;
But could we bring him round about,
He'd counterplot you all.

Then down with James, and up with Charles
On good Queen Bess's side,
That all true Commons, Lords, and Earls,
May wish him a fruitful bride.†
Now God preserve great Charles our King,
And eke all honest men;
And traitors all to justice bring:—
Amen, Amen, Amen.

Then the thronging spectators were entertained for some time with ingenious fire-works; and a vast fire being prepared, just over against the Inner Temple gate, his holiness, after some compliments and reluctances, was decently topped from all his grandeur into the impartial flames; the crafty devil leaving his infallibility in the lurch, and laughing as heartily at his ignominious end as subtle Jesuits do at the ruin of bigotted lay Catholics, whom themselves have drawn in, or as credulous Coleman's abettors did, when, with pretences of a reprieve at last gasp, they had made him vomit up his soul with a lie, and sealed his dangerous chops with a halter.‡ This [act of] justice was attended with a prodigious shout, that might be heard far beyond Somerset-house,§ and 'twas believed the echo, by continued reverberations, before it ceased, reached Scotland, (the duke was then there) France, and even Rome itself, damping them all with a dreadful astonishment."

Should occasion offer, we shall hereafter transcribe a few of the most striking accounts with which this work is richly endowed: for the nonce, this single extract must of necessity suffice.

NUBIA.]]

From the MS. Journal of G. B. Brocchi.

"AFTER a long and tiresome sojourn of nearly five months at Chartum, I set out for Sennar with that sort of hilarity which a man feels when released from 'durance vile.'

"For nearly eight months of the year the country around Sennar wears an aspect of the most frightful sterility; realising, in every sense, the ideas we are apt to form of the regions of the torrid zone. Immense plains, which extend further than the eye can reach, present an unvarying expanse of arid sands, strewn with withered plants; or, should a scanty vestige of verdure occur, it consists of

* Philip Howard, third son of Henry, Earl of Arundel, and brother to the Duke of Norfolk. He was made a cardinal in 1675.

† The barrenness of Catherine of Braganza, Charles the Second's consort, may be regarded as one of the proximate causes of the revolution of 1688.

‡ Coleman was secretary to the Duke of York, and had been convicted in 1687, for carrying on a traitorous correspondence with Père la Chaise, the French king's confessor.

§ Somerset-house was, at that time, the queen's residence.

|| This paper is gleaned from very long details in two recent Nos. of an Italian Journal.

mere thistles and *oshar*. The forests wear an equally melancholy appearance. In the months of April and May, when our own country is clothed in renovated verdure, it remains dead and lifeless under the sky of these climes; whilst the trees are quite as naked, and their branches quite as leafless, as during the winter season with us, unless, indeed, a solitary leaflet may here and there be seen struggling into existence. No sooner, however, does the rainy season set in, than the scene undergoes a complete metamorphosis; and one or two falls of rain are sufficient to produce it. The sands of the desert, which, to all appearance, were insusceptible of vegetation, smile with their carpets of verdant brilliancy, and are not excelled in beauty by our gayest pastures. The plains are covered with a variety of grasses, which afford an ample and acceptable subsistence to the flocks; the soil, from which every living thing had been banished, is at once instinct with life; the woods array themselves in all their splendour, and afford their refreshing shelter to herds of oxen and camels; the cultivated fields are clothed with crops of grain in every direction.

"The rains of a European summer not only renovate vegetation when sinking under the effects of excessive drought, but impart new life and vigour to the human frame. The fresh and elastic temperature of the air reanimates our bodily and mental faculties; the atmosphere, rich with the perfume of the glade and garden, draws us from our dwellings with its voluptuous breath; the heavens become serener, a fine morning ushers in a more delicious evening, and our whole soul is knit with greater festivity, and energy, and activity. Never do we enjoy existence so thoroughly as at such a moment as this. An effect, the very reverse of this picture, takes place under the Nubian sky. The first impressions which the novelty of the scene has excited are quickly succeeded by indifference and disgust. A damp, oppressive wind blows from the south without cessation, during the rainy season: our appetite fails us, our strength succumbs, and our mind is stultified, as if blasted by its malignant breath. A state of absolute torpor takes possession of our every sense. However heavy may have been the shower, the heavens never entirely recover their serenity, but murky clouds flit across their face, threatening a fresh descent. * * The great variableness of the temperature destroys the equilibrium of health;—the broiling sun of the mid-day is the harbinger of a piercing breeze: the atmosphere, surcharged with moisture, keeps our clothes and furniture in a state of constant humidity; and thence proceed stoppage of the circulation and rheumatic affections.—A thick stratum of viscid mud puts an end to all intercourse with the adjacent parts; and the camel himself, whom nature seems to have created for the peculiar use of these climates, becomes, for the moment, a useless encumbrance, though he is the only beast of burthen. Innumerable swarms of noxious insects—flies of every form and size—gnats and ants of various species, arise, gorged with a green-coloured liquid, from the slime of this universal marsh, as if they had been generated by putrescence; and they cover every hole and corner of the houses. Add to this, the roofs being composed of mud, on the appearance of an impending shower, the whole family is in a state of daily and nightly uproar, in their anxiety to provide against any forcible entry of the descending enemy.—And with all these miseries, the season affords no set-off, like our autumns, of multifarious fruits, smiling and

* "Sir George Wakeman. He was a Catholic, and physician to Charles the Second's queen. Being implicated in the popish plot, he was tried for his life; but the credit of the witnesses was blasted by the dying declarations of those who suffered; and he had the good fortune to be acquitted."

diversified pastures, the varied produce of the vegetable garden, or any of those useful productions, which render a southern autumn so delightfully attractive.

"Being at Sennar at the commencement of the rains, I quitted it to pass the remainder of the season at Chartum. The rains of the former place are heavier, of more frequent occurrence, and of greater duration; and are accompanied by a storm of wind from the south, which drives the rain with prodigious fury before it. So soon as the shower approaches the earth, it is dispersed and rebounds, whilst the wind tosses up the rain-drops, grinding them into such minute particles, that the ground appears covered with a layer of dense fog. These pluvius storms are waited upon by thunder, lightning, and sometimes hail; the latter, however, is a phenomenon unknown at Chartum. The clouds frequently descend and cover the surface of the ground; but at Chartum, which is close upon the skirts of the pluvial zone, the rains are later, nor are they so abundant, or so continued. The first of them fell this year on the 18th of July; and from that time until this day (the 31st of August), the fall of the thermometer remained constantly stationary between the 26° and 28° of Réaumur; nor did it rise, during that space, for more than three days to 30°, nor for more than one single day to 31°. Before the rains came on, and during the preceding months, it had risen every day to 33° and 34°. It must be regarded as a rare occurrence, that when the rainy season is at its height, namely on the 2d of August, the thermometer, as Bruce relates, should rise to 116° of Fahrenheit, which corresponds with 37° of Réaumur. It is remarkable, that at sunrise, and during the rainy season, the thermometer should have maintained nearly the same elevation of 21° and 22°, which it usually maintains in the hottest weather at the same hour. The cause I should assign for this fact, is the calmness which pervades the atmosphere during the night: it was seldom interrupted by the smallest breath of wind.

"Throughout these countries there are not more than three or four species of plants, though the magnificence, brilliancy, and verdure of the carpets with which nature temporarily endows them, would lead the observer to infer that they were the effect of a great variety of species:—these are confined to the *trianthes pendula*, the *boheravia repens*, and the dwarf *compoluvulus*, bearing a little white flower."

SIGHTS OF BOOKS.

A New System of Treating the Human Teeth, &c. &c. By J. Paterson Clark, M.A., Dentist. 8vo. pp. 163. London, 1829. Longman and Co.

It is a strange thing, that the human teeth, apparently the most indestructible organ of our whole frame, should be the cause of more suffering, and perhaps of more mortality, than any other member with which Providence has furnished mankind. The ear, with all its fine mechanism—the eye, with all its fragile delicacy—say, the stomach, with all its complication and heavy business in the economy of life,—none of these give us so much trouble as the hard, compact, and well-guarded teeth. In childhood their growth is often fatal—in infancy their change is painful and disfiguring—in riper years they are almost to every individual sources of accident and agony—and towards the close of our earthly pilgrimage, the miserable skeleton remains of the once well-arranged

corps, continue to annoy the slippered Pantaloon still anxious to preserve a specimen of his useful, though tormenting auxiliaries. Under such circumstances, we turned with much curiosity to Mr. Clark's New System, especially as it professed to develop a discovery made by him of a certain mode of curing that "hell of a' diseases," as Burns calls the toothache, and also that dreadful disorder the *tic douloureux*. We accordingly perused this book with great attention, and we were struck by the absence of all quack pretention, and by the reasonableness of the arguments in support of the new mode of treatment. This was much in favour of its author; but—and there is always a *but*! It has been our principle, since the establishment of the *Literary Gazette*, to take nothing for granted which was susceptible of proof, and consequently to give nothing to the public with the weight of our authority (whatever that might be worth), the truth of which we had not previously ascertained by every, the best, means in our power. On this ground we have acquired that general confidence which we will never abuse; and it may be granted to us that we have not failed in the present instance. We immediately instituted an inquiry into the results of Mr. Clark's practice, and we even sent parties to him in order that we might form our own judgment of the effect of his discovery and mode of practice. It affords us pleasure to say, that the investigation has been perfectly satisfactory; and, in the very worst cases, conviction of the efficacy of both carried home to us in spite of the teeth. The chief secret seems to be the use of a particular cement in stopping decay, before employing gold or other materials as a permanent preservative; and also, another secret, not less sensibly felt by patients, that of easing the pain of toothache generally, in a few minutes—certainly not as done in South America (see our review of Thompson's *Guatemala*). These are great achievements, and well deserve the attention of individuals subject to these racking tortures, which are sufficient to embitter every enjoyment of life. What we farther like in Mr. Clark is, that he is rather prone to retain and not to wrench out the peccant tooth; he tries to make the bad tenant of the mouth a good one, and does not employ force to eject him, which is too frequently done, as we see from the prodigious numbers of deplorable-looking teeth which are usually displayed in the windows of dentists, of which a walk across the courts from St. Martin's Lane to Henrietta Street will afford abundant and disgusting evidence. Altogether, we look upon this as a very important discovery, which medical men will treat with great regard, and the heads of families hail with delight.

Deutsche und Englische Gespräche, &c. German and English Dialogues. By J. F. Reymann. 12mo. pp. 411. London, 1829. Treutzel, Würtz, and Co.; Dulau and Co.; Longman and Co.

THE study of the German language is daily becoming, as it deserves to be, more general in England; and as we are now well awakened to the value of the authors of that country, our sense of its utility is gradually increasing. This work is one of the numerous helps that have lately been put forth to facilitate the acquisition of the German tongue; and we are bound to say that the dialogues are numerous and ample, and comprise a great variety of subjects. The list of idiomatic expressions is also copious; and the whole is well calculated to forward the student in his

pursuit. Having, however, said thus much in just praise of the publication before us, we feel ourselves equally bound in justice to exhibit and reprehend the disingenuous and culpable conduct of its compiler. On looking over M. Reymann's work, it struck us that many parts of it were familiar to our minds; and we turned back to his preface for the acknowledgments which, in candour and honesty, we expected to find respecting the sources whence he had drawn his materials. But "there is no such thing;" and, on the contrary, only a statement that the present work was needed in consequence of the errors, expensiveness, and irregularities of preceding teachers. Now, considering how much M. R. has availed himself of the labours of others, we must say that this is a very unhandsome and unfair proceeding. We remembered, about 1825 or 1826, noticing, with high approbation, *The Linguist*, which appeared in weekly Nos., and was afterwards collected into two 8vo. vols. by Mr. Daniel Borleau, also the author of several other excellent elementary books; and we referred to these for some lights to guide us on the present occasion. Our surprise was certainly great when we discovered to what an extent M. Reymann had plumed himself in borrowed feathers. A more gross instance of barefaced plagiarism and thankless book-making never offended our tribunal. As the master of a "Literary Institution," M. Reymann, it appears to us, ought to have been ashamed to pillage a more modest individual engaged in the private practice of teaching, without paying him that public tribute which was due to his philological abilities; and especially from one so much indebted to them as M. R. has been. It is gratifying for us to render him that justice; and we need scarcely add to its effect, by saying that both parties are alike unknown to us, and equally indifferent, except on the pure score of merit.

It is not our purpose, nor is it called for, to trace M. Reymann throughout his unconfessed borrowings: a short sample will serve for the whole. His introduction sets out verbatim with the words of Borleau's little key, published by Boosey in 1825; and the rest of the sentence is from Borleau's *Linguist*, page 15. The next two periods are entirely from the same *Linguist*, page 8. In short, from the first sixteen 8vo. pages of M. Boileau's *Linguist* we find more than one half torn, to constitute an equal portion of M. Reymann's "Introduction to German Grammar;" which he with jocular truth calls an "*Easy*" Introduction, since, indeed, it must have been wondrous easy to him!

In all grammars and exercises it is evident that the grammatical remarks and the examples must possess a strong resemblance; but M. Reymann has transgressed every legitimate bound in his wholesale mode of plundering. And this is the more amusing to us, as we observe that, among the other peacocks he has stript, he has not spared Wendeborn, whose well-known grammar has run through many editions; and, what augments the humour of the transaction, has the names of Longman and Co., and Black and Co., also upon its title-page, as publishers. We dare say these gentlemen were not aware, when they consented to take a share in Reymann's work, that they were only agreeing to resell good slices of their own property in another shape. *Ex. gr.* from 233 to 256 of the former is, with a few slight interpolations, literatim from the latter.

We have deemed it to be our duty to offer

these remarks, sorry as we are to wound individual feelings; but in literature, as in every thing else, honesty is the only true policy; and we cannot knowingly shrink from reproaching the opposite course when distinctly in proof before us. Anger or ill-nature—the concomitants of disappointment and malice—are no ingredients in the *Literary Gazette*; the principle of which is the kindly encouragement of talent of every description; and it is only when influential individuals take what we consider to be an erroneous course, or when (as in this instance) the path of candour and even-handed justice is forsaken, that we, from the same principle, think it incumbent upon us to expose the offender.

German Poetical Anthology; or, Select Pieces from the principal German Poets: accompanied with Notes for the Use of Students, &c. By A. Bernays. 12mo. pp. 358. London, 1829. Treuttel and Co.

WE have elsewhere had occasion to mention the growing popularity and the high value of German literature in this country; and it gives us much pleasure to have to speak of so excellent an aid to the attainment of the language, and the love of the best authors, as this volume. Preceded by a clever, historical sketch of German poetry, a list of the most distinguished poets, and concise but pointed notes respecting those from whom the selections are made, Mr. Bernays has in every way earned our thanks and approbation. We are not acquainted with so pleasant and useful a book to put into the hands of students, nor a more agreeable miscellany for the advanced scholar.

ORIGINAL CORRESPONDENCE.

Paris.*

IT was with much difficulty that I obtained a ticket for the opening of the Chambers, which is a *coup d'œil* truly imposing and interesting. At one o'clock the firing of cannon announced the approach of his majesty, who ascended the throne amidst acclamations of *Vive le roi!* He was dressed, as is customary, in the full uniform of a general officer. Nothing could be more kingly or graceful than his deportment as he saluted the assembly, which rose on his entry, and remained in a standing position until he invited the peers to resume their seats, which he did in the following words: "*Messrs. les pairs, asseyez-vous.*" The chancellor then gave a similar invitation to the deputies, in the king's name; and, after a pause of a few minutes, his majesty pronounced his discourse, which was frequently interrupted by enthusiastic applauses. The *côté libéral*, in particular, was loud in its marks of approval. The Dauphin and the Duc de Chartres sat on the king's right hand, and on his left the Duke of Orleans, who, *par parenthèse*, looks more like an Englishman than a Frenchman; the Duchesses d'Angoulême, Berri, and Orleans, occupied the tribune of the dauphine; and *les enfans de France* were between their royal aunts and mother. The Duc de Bordeaux wore the uniform of a cuirassier: to be obliged to stay quiet seemed not at all to accord with his lively disposition, for he yawned, whispered to his sister, and appeared more inclined to play than to contemplate the serious physiognomies of *messieurs les députés*. The galleries were chiefly filled with personages of high rank and ladies who were dressed in courtly splendour, which

much enlivened the scene. I observed several English women of extreme beauty, who attracted the regards of grave diplomatists; even Talleyrand now and then turned his eyes towards the fairer part of the audience, and seemed by no means insensible to the pleasure of contemplating their charms. This prince is considered superiorly ugly; yet never was wit so strongly traced on human countenance. The French say, *que c'est l'esprit du diable*: if such be the case, his sulphuric majesty must be a very captivating personage.

The second ball given by the Duchesse de Berri is said to have eclipsed the former one. Her highness was dressed as a sultana, as were also the young Princesses of Orleans; their ladies of honour were the Duchesse de Rauzan, d'Istria, the Countess de Vogüé and d'Avaray, who were in blue and yellow costumes. Dancing continued until five o'clock. Supper was served at midnight; but the ladies only were seated, the gentlemen *debout*. This custom is peculiarly favourable to ambulatory lovers, who have more than one string to their bows; as, instead of stupidly sitting during the whole of the repast by the side of one lady, they may make the tour of the table, and share tender sighings, compliments, and *des belles phrases*, amongst at least half a hundred. Time is precious to Cupid's votaries; and an evening passed at Paris, whether by an English or French fashionable, would be termed lost, if the list of his victims did not swell beyond the decimals!

The English public in Paris, that is to say the lady part of society, are up in arms against a celebrated queen of song, Madame Malibran, who a fortnight since gave a concert, to which none were invited, *dit on*, save those who could boast of having bent the knee before the throne of royalty. With regard, however, to this accusation, the fair melodist is innocent: foreigners of all nations were received at her musical *soirée*, amongst whom were several who had never even breathed courtly air. As for the second offence laid to the charge of Madame Malibran, it is of a graver nature,—*she*, in fact, not to be redeemed or forgiven; for who can pardon ridicule?—and it appears that the imprudent vocalist ventured to play with this weapon, having amused her audience with a burlesque imitation of English singing. This latter crime I fear I can neither refute nor palliate. I understand that a petition is forthwith to be despatched to the manager of the London Opera-house, to entreat, implore, and pray of him to decline for the future all further engagements with the ungrateful Signora.

Yesterday a grand vocal and instrumental concert was given at the Salle de l'Ecole Royale de Musique, in memory of Haydn. Very few attended it, pleasure being too much on the wing at this period of the year to admit of fashionables or fashionableness devoting a couple of hours to the enjoyment of harmony. The music of *Pierre et Catherine*, by Mr. Adam, is much praised by the connoisseurs of song: perhaps it may be very divine, but its beauties were lost on my ear; and had it not been for the noise of the numerous instruments in the band, I should have fallen asleep at the first representation.

Notwithstanding that the tribunal of exquisites or fashionables have decreed it *mauvais ton* to visit the *beaux arts* on Sunday, I went this morning to see the exhibition of paintings at the Luxembourg: the galleries were thronged by the tag-rag and bob-tail classes, consequently the odour of snuff, tobacco, and bad blacking, prevailed over that of *eau de*

Cologne and *otto de rose*. This substitute would have been insupportable, were not English noses corrected of their fastidious sensibility by their sojourn in this capital; but on *s'habitué à tout*.

I observed there were very few paintings added to the former collection: as usual, Cupids and Psyches abounded; Love on canvass, *à ce qui paroit*, indemnified for its absence in the heart; in the same manner as using the word *honneur*, dispenses from the necessity of practising it. The only Psyche which at all realised the idea, was that by M. Gérard: though perfect in form and beauty, it is tame with regard to expression, and the tint of the complexion rather of the jaundice hue. The crowd appeared solely attracted by the dying scene of the Duc de Berri: this subject, however, seemed neither to inspire sympathy for the sufferer nor horror at the criminal. On the contrary, most revolting *plaisanteries* were uttered by some of the spectators. The artist has admirably depicted the feelings of the different personages represented in this picture; the attitude as well as the expression of countenance given to the Duchesse d'Angoulême is most natural; she looks as if every sensation were paralysed, in fact, as though emotion were so powerful that "feeling seemed almost unfeeling."

Tout le monde is preparing for Lent, by laying up a plentiful store of sinning, which are all to be fasted away by devouring turbot, soles, salmon, with every species of exquisite sauce. It would be edifying, as well as amusing, to discover what kind of self-denial is practised by feasting on the luxuries of the ocean, instead of those of the land or air.—The grand mode at present with regard to evening entertainments, is to invite fifteen hundred people, when your apartments can barely contain half the number. A foreigner of some rank and large fortune gave one of those *grandioso* balls a few evenings since; but as the worshippers of pleasure deem every moment lost which is not dedicated to enjoyment, *Monseigneur* dined in town with a party of *bons vivans*, intending to be at home at ten to receive his numerous guests. The rites of Bacchus, however, were not terminated until eleven, when he set out for his hotel; but found it impossible to pass the long file of carriages which were occupied by shivering ladies who waited admittance. In vain the donor of the fête assured the *gendarmes* that he was M. le Comte D—. He was obliged to take his rank according to the law, "first come first served," and only reached his inhospitable door at three o'clock in the morning. There were twelve *couvert*s stolen at this same entertainment, fifteen shawls, ten hats, five mantles, and several ladies lost their bracelets, owing to the squeezing, pressing, and confusion.

Tout est héro, jusqu'aux ânes—for *les Mémoires d'un Âne* is announced as a work replete with interest; and, as biography is the order of the day, no doubt we shall have the whole quadruped race figuring in print.

I believe the law will pass against duelling; if so, what will become of poor honour?

ARTS AND SCIENCES.

ROYAL INSTITUTION.

Friday evening, Feb. 20.

MR. AINGER delivered some observations "on pendulums, and the modes of compensation for temperature."

On the table of the library were specimens of ancient armour; an apparatus for making certain experiments on sound; presents of

* The first portion of this letter has been delayed for several weeks; but as its interest appears to us to be rather more permanent than the fleeting topics of the day, we have decided on inserting it, though late.—Ed.

metals chrome by Signor Nobili; of calcedony or hawk by the Rev. Mr. Cater; and also several contributions in literature.

COLLEGE OF PHYSICIANS.

On Monday evening the second *réunion* for the season took place, Sir H. Halford, Bart. the president, in the chair. A paper was read on sudorific remedies, by Dr. Holland; afterwards the President read a communication which he had received from a medical gentleman (a Mr. Tollidge, if we heard aright) settled in the Azores, on the climate of St. Michael's: in this paper the writer states the superiority of St. Michael's over Madeira as a residence for invalids, on account of its more settled and agreeable temperature (never varying more than four degrees in the course of the twenty-four hours), goodness of roads, locality, &c.

The memoirs read at these assemblies will, in future, not only embrace the observation and experience of eminent physicians settled in our own country; but the contributions of the various members of the profession scattered over the face of the globe will also be received and read, thus making the College of Physicians the centre, as it were, of medical science.

MEDICO-BOTANICAL SOCIETY.

The Bishop of Bath and Wells, V.P., in the chair.—A paper was read "on the *Prunus Cerasifolia*," by Professor Tenoco, of Naples; in which the author states that the plant had been successfully used in the Two Sicilies as a substitute for the Peruvian bark. The right hon. the vice-chancellor was elected a member; certificates in favour of other candidates were read; one in favour of a medical gentleman who had been *black-balled* at a former meeting, was again read, and ordered to be suspended in the meeting-room, previous to a new ballot.

Dr. Churchill, in reference to this certificate, said that the "party" who had *black-balled* the gentleman in whose behalf it was written, had acted in a most disgraceful manner; that party had *black-balled* him merely because—*Cries of order! order!*

The right rev. prelate in the chair, with great composure, quelled the growing disturbance; and as there appeared to be no regular business before the meeting, declared it to be adjourned.

A good deal of acrid dialogue took place after the bishop retired: as it did not occur during the sitting of the meeting, it would be travelling out of the way to notice it farther.

There has been another meeting since, more pacific; of which a report in our next.

CELESTIAL PHENOMENA FOR MARCH.

20th day, 8 hrs. 37 min.—the sun passes from the southern to the northern hemisphere, and in equality of day and night prevails all over the globe,—the commencement of the vernal season to the regions north of the equator, and of the autumnal to those of the south. The sun, as seen from the earth, is in the constellation Pisces; and the earth, as supposed to be seen from the sun, appears between the stars α and β Virginis. 30th day—the earth at its mean distance from the sun.

Lunar Phases and Conjunctions.

• New Moon in Aquarius . . .	D. H. M.	
• First Quarter in Taurus . . .	11 21 49	
• Full Moon in Virgo . . .	30 1 51	
• Last Quarter in Sagittarius . . .	27 19 19	

The moon will be in conjunction with

Venus in Capricornus . . .	D. H. M.	
Mercury in Aquarius . . .	4 10 8	
Mars in Aries . . .	8 17 45	
Jupiter in Cancer . . .	14 30 15	
Saturn in Scorpio . . .	26 3 45	

30th day—the moon will be eclipsed in the left wing of the Virgin, invisible to the British isles. Digits eclipsed $4^{\circ} 29'$.

13th day—Mercury stationary. 19th day—ascending node. 27th day—at its greatest elongation, and visible a short time before sunrise. Venus still continues a morning star. Mars shines with a feeble light in the constellation Aries.

4th day, 9 hrs. 30 min.—Jupiter in quadrature. 31st day—stationary.

Eclipses of the satellites.

First satellite	D. H. M. P.	
	8 16 35 48	
	34 14 51 9	
Second satellite	31 16 44 43	
Emersion	17 8 56	
Immersion	14 17 16 30	
Third satellite	3 15 7 59	
Emersion	3 17 25 55	

The diameter of the first satellite is a little larger than the second, the fourth is next in magnitude to the first, and the third appears under a greater angle than either: the light of the fourth is inferior to the other three, and at times very faint.

28th day—Saturn stationary. It requires an excellent instrument to see all the satellites of Saturn; five may readily be distinguished, the sixth only occasionally; the existence of the seventh has been doubted—great vigilance and an excellent instrument having been insufficient to detect it. The fourth satellite appears as a small disc $3''$ in diameter. When the fifth satellite is at its western elongation it is very bright, but disappears at its eastern elongation. The satellites have been observed as beads on the ring; when the plane has been in the direction of vision, the ring appearing then as a line of light, which beautiful phenomenon is a proof of its thinness, unless it be supposed that there is an atmosphere on its upper and under surface, which, by a double refraction, elevates and depresses the satellites.

Deftford.

J. T. B.

ANCIENT AND MODERN EGYPT.

Mr. Champollion's *Seventeenth Letter*: concluded.

On the 18th, in the morning, I left the boat and hastened to visit the ruins of Keft (Coptos), where there is nothing entire. The temples have been demolished by the Christians, who employed the materials in building a large church, among the ruins of which are found numerous portions of Egyptian bas-reliefs. I found there the royal legends of Nectenebo, Augustus, Claudius, and Trajan; and further on, some stones of a small edifice built under the Ptolomies. Thus, the town of Coptos contained but few monuments of high antiquity, if we may judge by what still remains on the surface of the ground.

The ruins of Kous (Apollinopolis Parva), where I arrived on the next day, the 19th, are much more interesting, though nothing remains of its ancient edifices but the upper part of a propyleum, half buried in the sand. This propyleum is dedicated to the god Arëris, whose images, sculptured on all the sides, were adored on that side which looks towards the Nile—that is to say, on the principal front, the most ancient and sculptured, by Queen Cleopatra Cooce, who assumes the name of the goddess Philometore, and by her son, Ptolemy Soter II., who also takes the title of Philometor. But the back-front of the propyleum, looking towards the temple—which is covered with sculpture, and finished with much care—bears every where the royal legends of Ptolemy Alexander I., written at full length. He, too, takes the surname of Philometor. As for the

Greek inscription, the restitution of $\Sigma\Theta\Upsilon\Phi\epsilon\zeta$ at the commencement of the second line, proposed by M. Letronne, is indisputable; for we still read very distinctly $\Theta\Upsilon\Phi\epsilon\zeta$; and that on the principal front, upon which are the images and inscriptions of Cleopatra Cooce, and of her son Ptolemy Philometor Soter II.

M. Letronne has incorrectly restored $\Sigma\Theta\Upsilon\Phi\epsilon\zeta$, where there should really be $\Lambda\Phi\Theta\Upsilon\Phi\epsilon\zeta$, the exact transcription of the Egyptian name of the god to whom the propyleum is dedicated; for we still read very distinctly in the Greek inscription $\Lambda\Phi\Theta\Upsilon\Phi\epsilon\zeta$. I also found in the ruins of Kous the half of a stela, dated the first of Paoni, and the sixteenth year of the Pharaoh Ramses Meiamoun, and relative to his return from a military expedition. I shall have a good cast of this monument, which is too heavy for me to think of carrying away.

On the morning of the 20th of November the wind allowed us to land at Thebes. This name was very great in my imagination—it has become colossal since I have visited the ruins of the ancient capital, the oldest of all the cities of the world. For four whole days I have been running from one wonder to another. On the first day I visited the palace of Kourna, the colossus of the Memnonium, and the pretended tomb of Osymandias, which bears no other legends than those of Rhamess the Great, and of two of his descendants. The name of this palace is written on all its walls: the Egyptians called it the Ramesseion, as they called the Memnonium the Amennophion, and the palace of Kourna the Mandouëion. The pretended colossus of Osymandias is an excellent colossus of Rhamess the Great. The whole of the second day was passed at Medinet-Abou, an astonishing assemblage of edifices, in which there are propylaea of Antoninus, Adrian, and the Ptolemies; an edifice of Nectanebo, and another of the Ethiopian Tharaca; a small palace of Thoutmes III. (Mœris); and an enormous and massive palace of Rhamess Meiamoun, covered with historical bas-reliefs.

On the third day I went to visit the old Theban kings in their tombs, or rather palaces, excavated in the mountain of Bilan-el-Molouk. There, from morning to evening, by torch-light, I wearied myself in passing through suites of apartments covered with sculpture and paintings, most of which are astonishingly fresh. There I collected facts highly interesting to history; there I saw the tomb of a king defaced with a hammer from one end to the other, excepting those parts on which are sculptured the images of the queen his mother, and of his wife, which have been religiously respected, as well as their legends. This, without doubt, is the tomb of a king condemned by a sentence after death. I have seen a second tomb, that of a Theban king of the most ancient times, which was subsequently usurped

* M. Letronne has already said whence his error arose. In his explanation of the inscriptions in the collection of M. Vieux, pp. 12 and 13, he expresses himself as follows: "As for the name of the divinity (of the temple of Apollinopolis Parva), Mr. Hamilton had read $\Lambda\Phi\Theta\Upsilon\Phi\epsilon\zeta$; but as the drawing by M. Jomard distinctly bears the inscription of $\Sigma\Theta\Upsilon\Phi\epsilon\zeta$, I of course preferred that reading; for how could it be imagined that a person would take the pains to make a minute copy of an inscription, in order to insert a word in it which does not exist! Thus I have again been wrong in preferring M. Jomard's copy to that of Mr. Hamilton. The original, without any doubt, has $\Lambda\Phi\Theta\Upsilon\Phi\epsilon\zeta$. And I must add here, that M. Guignart, who has paid great attention to ancient mythology, has long since expressed to me his doubts on the reading $\Sigma\Theta\Upsilon\Phi\epsilon\zeta$. From the name of Apollinopolis, which the city bears, he did not hesitate to believe that the word was $\Lambda\Phi\Theta\Upsilon\Phi\epsilon\zeta$. The fact has justified his conjecture."—Note by the French Editor.

by a king of the nineteenth dynasty, who has caused the ancient cartouches to be covered with stucco, in order to substitute his own; and thus to appropriate to himself the bas-reliefs and inscriptions intended for his predecessor. I must say, however, that the usurper caused a second funeral-chamber to be excavated to receive his own sarcophagus, in order not to displace that of his predecessor. With the exception of this tomb, all the others belong to kings of the eighteenth, nineteenth, or twentieth dynasties: but we do not find the tomb of Sesostris, nor that of Meris. I say nothing here of a multitude of small temples and edifices scattered among these great things; I shall only mention a little temple of the goddess Athor, dedicated by Ptolemy Epiphanes, and the temple of Thoth near Medinet-Abou, dedicated by Ptolemy Evergetes II. to his two wives. In the bas-reliefs of this temple, the same Ptolemy makes offerings to all his male and female ancestors, Epiphanes and Cleopatra, Philopator and Arsinoë, Evergetes and Berenice, Philadelphus and Arsinoë. All these Lagides are represented on foot, with their Greek surnames, translated into Egyptian, outside of their cartouches. This temple, however, is of very bad workmanship, on account of the era in which it was built.

On the fourth day (yesterday, the 23d) I quitted the left bank of the Nile to visit the eastern part of Thebes. I first saw Luxor, an immense temple, preceded by two obelisks nearly eighty feet high, of rose-coloured granite of the most exquisite workmanship, accompanied by four colossi of the same substance, and about thirty feet high; for they are buried up to the breast in sand. This also is of the time of Rhamses the Great. The other parts of the palace are of the kings Mandouei, Horus, and Amenophis-Memnon: there are also repairs and additions made by Sabaco the Ethiopian, and by some of the Ptolemies, with a sanctuary built entirely under Alexander, the son of the conqueror. I at length went to the palace, or rather the city of monuments, at Karnac: I here beheld all the magnificence of the Pharaohs, the grandest productions ever conceived and executed by man. All that I had seen at Thebes, all that I had admired with enthusiasm on the left bank, appeared miserable in comparison with the gigantic conceptions with which I was surrounded. I shall take care not to attempt to describe any thing; for either my description would not express the thousandth part of what ought to be said when speaking of such objects, or, if I drew a faint sketch of them, I should be taken for an enthusiast, or perhaps for a madman. It will suffice to add, that no people, either ancient or modern, ever conceived the art of architecture on so sublime and so grand a scale as the ancient Egyptians: their conceptions were those of men a hundred feet high; and the imagination which in Europe rises far above our porticoes, sinks abashed at the foot of the hundred and forty columns of the Hypostyle Hall of Karnac.

In this marvellous palace I viewed the portraits of most of the ancient Pharaohs, known by their great actions: and they are *real portraits*, represented a hundred times on the bas-reliefs of the outer and inner walls. Each of them has his peculiar physiognomy, different from that of his predecessors and successors. Thus, in colossal representations, the sculpture of which is lively, grand, and heroic, more perfect than can be believed in Europe,—we see Mandouei combating the nations hostile to Egypt, and returning triumphant to his coun-

try. Farther on, the campaigns of Rhamses Sesostris; elsewhere, Sesonchis (Shishak) dragging to the feet of the Theban trinity, Ammon, Mouth, and Khous, the chiefs of thirty conquered nations, among which I found, as was to be expected, written in letters at full length, Joudahamalek, the kingdom of the Jews, or of Judah. This is a commentary on the fourteenth chapter of the first book of Kings, which relates the arrival of Shishak at Jerusalem, and his success: thus the identity which we have established between the Egyptian Scheschonk, the Sesonchis of Manetho, and the Sesac or Schishak of the Bible, is confirmed in the most satisfactory manner. I found round the palace of Karnac a multitude of edifices of all ages; and when, after my return from the second cataract, for which I set sail to-morrow, I shall come to reside for five or six months at Thebes, I expect an immense harvest of historical facts; since, in running through it, as I have been doing for four days, without seeing even one of the thousands of hypogeums excavated in the Libyan mountain, I have already collected very important documents.

I subjoin the translation of a chronological part of a stele which I saw at Alexandria; it is of great importance for the chronology of the last Saïtes of the twenty-sixth dynasty. I have also copies of hieroglyphic inscriptions engraved upon rocks on the road to Cosséir, which give the express duration of the reigns of the kings of the Persian dynasty. I omit a multitude of other curious results: I must pass my whole time in writing if I would detail all my new observations. I write what I can in the moments when the Egyptian ruins allow me to breathe in the midst of all these labours and of these enjoyments, which would be really too poignant if they were to be repeated elsewhere as at Thebes.

I collected at Beni-Hassan many fossils for M. de Ferrussac: I have also found some very fine ones at Thebes.

LITERARY AND LEARNED.

Oxford, Feb. 21.—On Thursday the following degrees were conferred:—

Masters of Arts.—Rev. H. W. White, Fellow, Jesus College; Rev. W. S. H. Abraham, Lincoln College; R. C. Sewell, Demy, Magdalen College; J. Priestley, Trinity College.

Bachelors of Arts.—Lord H. G. Vane, Oriel College, Grand Compounder; R. Barney, Brasenose College; J. Wilson, H. Dyke, Wadham College; Rev. J. M. Turner, M.A. Christ Church.

ROYAL SOCIETY.

FEB. 5th.—A paper was read, entitled, “on the stability and capacity of rectangular floating bodies,” being a continuation of a former paper, by William Walker, Master R. N., communicated by the president.

The author having shewn in the former part of this paper, that the stability of compound vessels (see *Literary Gazette*, No. 630,) in as far as depends upon their form, is a maximum when the displacement they produce by immersion in a fluid is equal to half their magnitude, purposes in the present communication to prove that the same theory is true of all rectangular vessels, whatever be their dimensions; and also the following proposition, namely, that when either the length or breadth, or the length and depth are given, the maximum of stability takes place when the ratio of the depth to the breadth is as one to two. He enters at some length into the mathematical investigation of both these propositions: he observes, however, that in the actual construction of ships, many considerations should be attended to, independently of the attainment of stability,—such as velocity of motion; to obtain which

condition it is necessary to give the vessel as much stability as possible, consistently with the least displacement, so that the resistance to the direct passage of the vessel through the fluid may be reduced to a minimum. When the quantity of materials for building a ship of a given length are given, the maximum of capacity will be obtained when her breadth is double her depth. When the breadth is given by increasing the relative depth, the ship will, when immersed to half her magnitude, carry less sail at small angles of inclination, and *vice versa*.

SOCIETY OF ANTIQUARIES.

THURSDAY, February 26th.—Hudson Gurney, Esq., M.P., V.P., in the chair.—Mr. Ellis communicated a certificate of decays and repairs of the castle and town of Carlisle, dated 1563, and curious as illustrative of the state and equipments of a frontier castle.

Messrs. Thompson and Rafen, of Copenhagen, were duly elected honorary members of the Society.

ROYAL ASIATIC SOCIETY.

On Saturday last a very interesting meeting of this Society was held, the Right Hon. Sir Gore Ouseley, Bart., V.P., in the chair. Several new members were balloted for and elected; amongst them was Professor J. R. Eerde of Groningen. A paper by Dr. Bernhard Dorn was read: it was a description of the Astronomical Globe in the Society's museum. In his communication the doctor states it to be his opinion, that the Mahomedan Arabs carried the knowledge of the science of astronomy into Persia, whence the Greeks obtained their knowledge of it. Dr. Dorn then observes, that there are only three Mahomedan astronomical globes known to be extant, all manufactured about the same period; the first was made in Egypt, 622 of the Hegira, and is at present in the museum of the late Cardinal Borgia, at Velletri; the second was manufactured at Maragha (the court of Halagun Khan), in A. H. 680, and belongs to the Astronomical Museum at Dresden, where it is deposited; the third was made at Moosul, in A. H. 674, and formed the subject of Dr. Dorn's essay.

Sir Alexander Johnstone presented to the Society a set of forty-eight maps and charts of the island of Ceylon and its coasts; these, together with a number formerly presented by Sir Alexander, form the most complete collection of ancient and modern maps of that island extant. Several literary and other donations were also made. His excellency the American ambassador, and several other distinguished persons, were present.

FINE ARTS.

ROYAL ACADEMY.

On Monday evening Mr. Westmacott delivered his second lecture on sculpture. He began by detailing the early history of Greek sculpture, and alluded to the discoveries of our countrymen Cockerell and Forster at Egina. Speaking of the marbles discovered by these gentlemen, the lecturer said, that whether they were contemplated for the light they throw on the state and style of sculpture at the period they were executed—for the information they afforded, both to sculpture and architecture, on the mode adopted by the Greeks in the decoration of their temples, or to the antiquary,—they must be considered as acquisitions of the highest interest, as supplying the lost link in the chain of art from the Archaic to the Phidias period. The lecturer then referred to the period between the Egina marbles and the age

of Phidias, an example of which may be seen in a statue of Apollo, in the British Museum: this, together with the descriptions left us by Pausanias and others, afford a fair idea of the style of that period. Mr. Westmacott then made an inquiry into what might be defined the essence of the Hellenic art, and into the causes which contributed to, or rather constituted, its charm. He next observed, that although the execution of Greek sculpture be frequently inferior, the whole displayed a grandeur of character which marked even productions of an inferior order;—in the higher examples, the uniting of action to expression, and of form to purpose, was so happily illustrated, that whether it be an Apollo or a Satyr, a Hercules or an Adonis, a Juno or a Venus, a Hebe or a Hebe—the personification is at once allowed as being not only the most agreeable to our conceptions of these poetical deities, but we feel that any other adaptation of form or character would dissolve the illusion. Touching upon the happy study and application of nature by Greek sculptors, the lecturer was peculiarly felicitous:—in the youthful and elegant tenderness, in the soft expression of feature and luxuriance of hair, the sculptor recognised Adonis; in the more vigorous proportions of maturity was found the Theseus; and from the inflexible neck and mighty shoulders of the Pancratiast was formed the Hercules. The image of Diana was seen in the clean limbs and activity of the Spartan girls; the ivy-crowned nymphs of Marathon dancing around the young Iacchus supplied the Bacchantes, whilst in the mysteries of Bacchus themselves were found both ample form and character to supply the god and the ministers of his unbridled orgies. The lecturer concluded by taking a view of metal casting, as practised by the ancients: he also noticed the history of bronze sculpture amongst the Romans. Mr. Westmacott illustrated his subject by drawings taken from the east pediment of the Temple of Egina, a cast of the Colossus of Phidias, also one of the head of the Juno Ludovici, and several others.*

BRITISH GALLERY.

No. 451. *A View of the Islands in the Regent's Park.* Miss H. Gouldsmith.—But half a dozen years ago, who would have imagined that so plain and unornamented a surface would have been thus suddenly converted into gardens and plantations, decorated with splendid villas, watered by extensive lakes, and transformed into every variety of beauty and grandeur which the pencil of the artist could desire? Miss Gouldsmith has here availed herself, with her usual talent, of one of the highly picturesque scenes which the Regent's Park now presents.

No. 484. *A Scene in Devonshire.* F. C. Lewis.—We cannot sufficiently admire this able artist's choice of subjects, or his felicity in the execution of them. His scenes have a grandeur and a solemnity, united with a freshness of tone and a vigour of pencil, which communicate to them great originality. They would impart a valuable variety to any collection into which they might be introduced.

No. 505. *Smugglers at Cards.* H. P. Parker.—At all times, and in all countries, robbers and smugglers have afforded choice materials for the pencil. The banditti of Salvatore take a high ground; they are positively classical, both in character and in costume; and, compared to them, the banditti of modern Italy, with their spoils and trinkets hanging about

them, are no better than so many dandies. Your English smuggler, however, is rugged enough, from stem to stern; and Mr. Parker has availed himself with great skill of the picturesque qualities of this amiable class of persons.

No. 509. *Banditti of Kurdistan assisting Georgians in surprising and carrying off Circassian Women.* G. Hayter, M.A.S.L.—Although by no means advantageously hung, this performance exhibits talents of a very superior order, and is worthy of Mr. Hayter's deservedly high reputation.

No. 513. *Part of a Village in Kent.* F. R. Lee.—There are few subjects more attractive to the artist than the English cottage or farm. We have already spoken of the talents displayed by Mr. Lee in his studies of forest scenery; we here find him exhibiting equal powers in the representation of that of the village.

Two of the small but beautiful pictures by Mr. Webster, which were mentioned in our last notice of the British Gallery, viz. No. 3, *The Prisoner*, and No. 4, *A Foraging Party routed*, were painted expressly for his Majesty; and No. 476, *A Society of Antiquaries*, by the same artist, was painted for the Marquess Conyngham.

We understand that we were misled by the Catalogue of the British Institution, in attributing No. 116, *Jan Steen's Proposal*, to Mr. Wright; for that, instead of being, as we supposed, only a happy imitation of the Flemish school, it is a *bonâ fide* Flemish picture, painted by P. Kremer, an artist now living at Antwerp.

No. 270. *View on the Thames near Putney.* C. Deane.—Although the pencil of this artist has been frequently and successfully employed on subjects of more extensive range, of gayer hues, and of greater variety of incident, this performance shews that he is equally qualified to represent the calmer and less obtrusive scenes of nature.

NEW PUBLICATIONS.

The Princess Victoria. Engraved by T. Woolnoth, from a picture painted by Anthony Stewart. Ackermann.

A COUNTENANCE at once ingenuous and dignified, and in parts strongly reminding us of the late lamented Princess Charlotte. Mr. Anthony Stewart has shewn his usual taste and delicacy in this attractive and interesting little portrait; and it has been sweetly engraved in stipple by Mr. Woolnoth. The print is dedicated, by permission, to H. R. H. the Duchess of Kent.

The Passes of the Alps. No. IX.

By William Brockedon.

THE Passes of the Bernardin and the Splügen furnish the subjects for the illustration of the present Number. The former was begun, and, notwithstanding the interested opposition of the Austrians, completed, by the spirit and activity of the authorities of the canton of the Grisons; and the latter was subsequently executed under the orders of the Austro-Lombard government; so that the canton of the Grisons enjoys the advantages of two great roads across the Alps. "Ten carriage roads," observes Mr. Brockedon, "are now completed across the Alps, and others are in the course of formation; and over those barriers which were formerly considered impassable without danger, are now formed some of the best roads in the world. The Alps are unchanged; but man, by rising above his prejudices, has risen superior to their obstruc-

tions." The plates contained in this Number are: "the Verloren Lock in the Via Mala," "Coire," "the Summit of the Bernardin," "the Fall of the Moesa," "the Castle and Valley of Misocco," "Scene from the Descent of the Splügen," "Lugano," and "Covered Bridge on the Hinter-Rhin at Splügen." They are full of picturesque beauty; and, if need were, would render this excellent work more popular than it is. There is also, as usual, a map of the routes.

England and Wales. From Drawings by J. M. W. Turner, Esq. R.A. With Descriptive and Historic Illustrations by H. E. Lloyd, Esq. No. V. Jemmings.

THE four views which ornament the fifth Number of this national work are, "Entrance to Fowey Harbour," "Okehampton," "Lancaster Sands," and "Knaresborough." They have all the powerful characteristics of Mr. Turner's style, in composition and effect; and are admirably engraved by Messrs. W. R. Smith, J. Willmore, R. Brandard, and T. Jeavons.

Fisher's Illustrations of England, No. I. Fisher's Illustrations of Ireland, Nos. I. and II.

THESE are two more of those pleasing publications which the invention of engraving on steel furnishes the means of bringing out at a very moderate expense. Every Number contains four views; and it is intended that the whole work shall comprise an extensive series of representations of the cities, towns, public buildings, palaces, abbeys, castles, seats of the nobility, sylvan and river scenery, shipping, docks, streets, churches, monuments, &c. of the British empire; accompanied by historical and topographical descriptions. The literary department of the English publication is by W. H. Pyne, Esq.; the drawings are by Messrs. George Pyne, Charles Claude Pyne, Austin, Allom, &c.; the engravings by Mr. Robert Wallis, and under his superintendence. The literary department of the Irish publication is by G. N. Wright, Esq.; the drawings are by George Petrie, Esq., &c.; the engravings under the superintendence of Mr. Edward Goodall. The plates which have already appeared, with one or two exceptions, afford a very satisfactory earnest of the respectability of the work.

ORIGINAL POETRY.

STREET SKETCHES.

No. I.—*The Ballad-Singer.*

"As if the Streets were consecrated ground,
The City one vast Temple—dedicate
To mutual respect in thought and deed."—Wordsworth.

The dewy spirit of a summer rain
Falls not with fresher magic on the flower
Than flows sweet music through the soul of man:

The heavens were hung in melody; the Sea
Weaves music when she rolls her full-voiced waves;

The cloud-born thunders sound an organ-peal;
And every breeze hath music in its breath!
What wonder then, while Nature hymns
around,

That music is a sympathy to souls,
The bloom of exquisite delight?—From lips
Of beauty, like aroma from the mind
Exhaling forth,—or in the hoary aisle
Of dim cathedral dying slow away,—
Or, in some dream-built palace of the night,
Where angel-whispers make the spirit glow,—

* Προῦλὸς τῷ μύτρῳ ἐν Θεῷ ἀρμονία γὰρ τῆς
ἰστίης καὶ τοῦ ἰκονοματοῦ καὶ ἰσχυρίσιν.—Longin. Frag.

* Not being honoured with a card, we were not aware of Mr. Phillips's lecture at the Royal Academy.

How sweet is Music! — with the Light twin-born.

And thy sad voice, poor Minstrel of the street!
Hath sweetness in its sorrow; wild thine air,
And dim the meaning of that mournful eye;
Oh, yes! cold poverty hath made thee droop,
And nipped the health-bloom of thy once-fair cheek;

Pale-lipped thou art, and Charity may read
Upon thy face the story of thy life:
The damp night-gust, the stony bed, the gripe
Of famine, and that fever of a soul
That not a smile hath visited through years
Of deep despair, — hast thou not felt them,
maid

Of many sorrows? yet so sweetly flows
The tide of music in thy homely song
Of tenderness, that when I hear thee sing,
As in a vision, thou art beautified above
Thy lot; and, tripping o'er the green-dewed
hills [morn,

When young birds pipe their anthem to the
Like some bright creature whom the wood-gods
love,

I see thee, in thy youth's elysian prime.

That voice — oh, was it born of Misery?
Or, breathed by Happiness into thy soul,
When, hand in hand, o'er far, remember'd fields,
Down briery lanes, by margins of clear brooks
And chiming streams, she led thee in her love?
Hast thou not hallowed oft with cottage hymn
Some happy evening hour, and flushed the smile
Of holiness upon thy father's cheek,
As flowed his kindled feelings in thy song
Of adoration? — Minstrel of the street!
Whate'er hath been thy lot, thy ballads breathe
Of summer days to me; and from each strain
My heart can gather echoes, which have wings
To bear it downward into years, where lie
The buried joys that will not bloom again!

London, Feb. 14, 1829. R. MONTGOMERY.

SKETCHES OF SOCIETY.

CHEROKEE NEWSPAPER.

WE have now upon our table one of those curiosities of literature, which, though slight in themselves, establish memorable epochs in the history of mankind: it is a copy of a newspaper (No. 34, October 22, 1828) of the nation of *Cherokee Indians* (*Arkansas*). It was but the other day, to speak in familiar terms, that the whole race of red men on the great American continent were illiterate barbarians, in a savage state; and now, within the compass of our own memory, we see a prominent portion of them not only lifted into civilisation, but affording that marked instance of its progress, a love of intelligence and literature—the publication of a newspaper.

Considering this document to be as curious in its way as that first* English journal which contained accounts of the Spanish armada, and was sent forth by the sagacious ministers of Elizabeth, to inform the public mind and allay the public fears, we trust our readers will be interested in a description of its leading features. It is called *Cherokee Phoenix*, edited by Elias Boudinott, and published "for the Cherokee nation" at New Echota. Subscribers who can read only the Cherokee language have the journal at a smaller price than those who can read English: the *Phoenix* is accordingly printed in both languages, and among the agents for the paper at New York, Utica, Poughkeepsie, and elsewhere, is mentioned "Mr. Thos. R. Gold (an itinerant gentleman)."

The first article, after the advertisement

* In the year 1598. We believe this first newspaper is preserved in the British Museum.—*Ed.*

giving these hints, is a Report of the "General Council of the Cherokee Nation," commencing with the "Message of the Principal Chiefs." It opens thus:—

"Fellow Citizens.—In addressing you on this momentous occasion, we cannot, in justice to our feelings, forbear a solemn pause, and with grateful feelings meditate on the many blessings which a kind Providence has conferred on us as a people. Although we have had trials and tribulations to encounter, and in some instances the sad effects of intemperance have been experienced within the circle of our citizens, yet there is every reason to flatter us in the hope, that, under wise and wholesome laws, the preponderating influence of civilisation, morality, and religion, will secure to us and our posterity an ample share of prosperity and happiness. Occupying your seats by the free suffrage of the people, under the privileges guaranteed by the constitution, the various subjects requiring your deliberation the present session will necessarily be important. The organisation of the new government, the revision and amendment of the old laws, so as to make them in unison with the principles of the constitution, will require your attention; and it cannot escape your wisdom that the laws should be short, plain, and suitable to the condition of the people, and so be well executed. The judiciary system demands your serious deliberation, and the mode for conducting suits in courts should be free from all complicated formalities, and no other form should be required than to let both parties know distinctly what is alleged, that a fair trial may be had."

Europe might derive some benefit from attending to similar improvements. We pass over other points in the Message, to observe that it recommends "suitable provision to be made for the erection of a *National Academy* at New Echota!" and fifteen miles square of land is proposed to be leased out, to create a revenue in support of this school-fund! The Message next adverts to some claims of Georgia for the cession of parts of the Cherokee territories, which are indignantly repelled; and we learn that a portion of the Cherokee people have been induced to emigrate and settle on the west of the Mississippi, as colonists of the United States, being bribed by "a rifle-gun, a blanket, a steel trap, a brass kettle, and five pounds of tobacco," each Indian.

On the 13th of October the national committee under the newly organised constitution met, and the members for Chickamauga, Chattooga, Coosawattee, High Tower, Hickory Log, Tahquohee, Aquohee, and A-mo-hee (two for each of the eight districts), proceeded to business. We quote the following as specimens of the rules least resembling those with which we are familiar in legislative assemblies.

"6. When a communication is received by the Committee from the Principal Chiefs or Council, all debate shall be discontinued until the bearer leaves the Committee-room.

"7. Each member that absents himself fifteen minutes after the time appointed (by adjournment) for meeting, shall forfeit twenty-five cents, and for every half-hour thereafter twenty-five cents more, unless a good excuse be made, which shall be adjudged by the Committee."

N.B. The principal chiefs, or council, seem to be equivalent to a House of Peers.

The following are also rather curious examples of the acts of the Cherokee Parliament—*de die in diem*.

"John Ross and George Lowrey were elected Principal Chiefs of the Cherokee Nation for the term of four years."

"A petition from George Candy was read, praying the National Council for a grant of a set of blacksmith tools, in accordance with a provision made Oct. 30th, 1820. Fifty-seven dollars and twenty-five cents was appropriated for the benefit of the petitioner."

"A resolution from the lower House imposing a tax of eight dollars on persons introducing shows in New Echota during the session of the General Council, was laid before the Committee, and adopted."

"On motion it was resolved, that the pay of the Judges of the Supreme Court be four dollars per day, and that their sessions be limited to three weeks in each year."

The National Council was organised October 15th, and *Going Snake* appointed Speaker! The number consists of twenty-four; namely, three for each of the divisions we have already enumerated, and singular to us from the following names of its members being mixed with others common to English and Scottish patronymics,

viz. *Sleeping Rabbit*, *Ten Nung-gee*, *Bark*, *Laughing Mush*, *White Path*, *Da-ye-ake*, *Ne-gah-we*, *Walking Stick*, *Turtle*, *Chuleo*, *Slim Fellow*, *Matoy*, *Cricket*, *Nah-hoo-lah*, *Si-too-wa-gee*, *De-geh-le-luo-gee*, *Robert Musk Rat*, and *Deer-in-the-water*!

Going through the Journal, the leading articles contain a letter from a Captain Rodgers, an address of Washington to the Cherokees in June 1794, extracts (foreign news) from English newspapers of August, and extracts from U. S. Journals relative to Turkey, Greece, literary matters, quotations from books, reviews, &c.; altogether, a very judiciously selected miscellany. Two advertisements close the third page, and the fourth opens with Poets' Corner, the rest being filled with further selections. The paper is about nineteen inches long, and twelve wide; in five columns, and correctly printed in a good type. About a column and a half is in the Cherokee character, of which, as a curiosity, we give a fac-simile, being entirely guiltless of knowing its meaning; so that if it be high treason, we trust to be acquitted on the plea of ignorance.†

MUSIC.

PHILHARMONIC CONCERTS.

THE first of these annual concerts, which have now uninterruptedly existed for nearly twenty years, took place on Monday last, before a crowded assembly of nearly 600 subscribers.‡ Whether conscious of the justness of reproach for last year's neglect, when in the possession of the first talent in the kingdom, and of the means for procuring any performer of eminence from foreign countries, the managers had evidently taken pains to make amends; and the gentlemen composing the orchestra exerted themselves more than on former occasions. The excellent direction of the two Messrs. Cramers also largely contributed to furnish the audience with a great treat.

As for the symphonies,—which, by the by, are always the standard pieces of these performances,—the Philharmonic might as well be called the Concert of Ancient Music; inasmuch as the same symphonies of Mozart, Beethoven, and Haydn, have for many years had almost an exclusive right of being performed here. The symphony in C minor of Beethoven, with which the concert opened, is, for grandeur and effect, especially in the last movement, quite unequalled; and any thing else succeeding this giant, unless it be an exquisite vocal piece, executed in a masterly style, as was the "Ah! si, per voi," by Donzelli, is lost, like a drop in the ocean. A double quartetto, for four violins, two violas, and two violoncellos—an entirely new species of composition by Spohr—did not please; nor would it have done so if the performers, Messrs. Weischel, Watts, Moralt, Lindley, Oury, Griesbach, Lyon, and W. Lindley, had been a little more inspired with it than they were. The accuracy of our former observations, that Spohr's music had better be left in the country whence it comes, was sufficiently proved on this occasion. It is learned and elaborate; but it is sombre, and will never be popular.

* In comparing these names with our own Houses and circumstances, we might suppose *Sleeping Rabbit* and *Deer-in-the-water* to take a strong interest in the discussions on the game laws; *Walking Stick* and *White Path* to be eligible for gold and silver rod; *Bark* to represent an English home county; *Turtle* and *Slim Fellow* to be apt to pair off; and *Musk Rat* to be a little entitled to political confidence as persons we could mention nearest London, with higher names and titles.—*Ed.*

† The example of the type not being ready, we shall give this specimen next week.

‡ The precise number of this year's subscribers is said to be 606, which is six more than the allowed quorum.

her. Respecting the two first violins, Messrs. Weichel and Oury, we might say—the one six years ago, the other as many years hence. Mr. Weichel has been too long out of, and Mr. Oury not long enough in, such first stations. Onslow's overture, "Le colporteur," was deservedly much applauded. Onslow is the only English composer whose works in the higher departments of composition, such as overtures, quintets, quartets, and trios, are highly appreciated in Germany and France, as is proved by the number of publishers who have brought them out. Haydn's symphony T (E flat) being rather antiquated, we pass on to Mozart's cantata, "Non temere," by Madame Stockhausen, accompanied on the piano-forte by Mr. Cramer. Madame Stockhausen is one of those singers who do not spoil any place; yet we like her better in her Swiss airs than in grand cantatas. Mr. Cramer's elegant accompaniment was extremely admired. M. Tolbecq, a French musician, played a concerto on the violin, made up of his own and Kreutzer's ideas, with considerable talent. Good bowing peculiarly belongs to the Parisian school; but their tone has not body enough for our ears. The composition was very uninteresting, and received a great relief from Beethoven's tertetto, "Tremate empj tremate," by Madame Stockhausen, Donzelli, and Philippa. The concert finished with Winter's beautiful overture, "Calypso."

THE MELODISTS' CLUB.

The second meeting of the Melodists' Club on Thursday was fully attended, the singing and music most delightful, and the whole went off with great éclat.

DRAMA.

KING'S THEATRE.

The opera of *Il Itakana in Algieri* was repeated on Tuesday evening: the house was full and fashionably attended; and we were agreeably surprised to see the large assemblage of ladies in the pit. We amused ourselves with counting heads, not hats—for the ladies had the good taste to leave their monstrous umbrellas behind, and we found the majority in favour of the fair.

The beautiful ballet of *La Somnambule* continues to banish ennui from the boxes; the sleep-walker, in fact, keeps every body awake but herself. We think the band would be improved by the addition of two bass viols and two tenor violins; a better flute would also contribute to the general effect. We throw this out merely as a hint to the manager. Indeed, he appears to be deficient in instrumental as well as the vocal bass.

Il Conte Orti, so frequently mentioned in our Parisian correspondence, is announced for today.

DRURY LANE.

A MELO-DRAMA produced in 1808 at the Ambigu Comique, and translations of which have been performed at two of our minor theatres (Sadler's Wells and the Coburg), has suddenly, in consequence of the miserable spirit which characterises modern theatrical management, become the bone of contention between the two royal houses of Bow-street and Brydges-street. We have already so strongly expressed our opinions on this subject, that we shall not trouble our readers with their repetition. Our only consolation, and a melancholy one it is, lies in the conviction that this detestable practice brings with it its own due but certain punishment—ruin! ruin!

ruin! To proceed, therefore, to the play of *Peter the Great*, produced at Drury Lane on Saturday evening last. The above-mentioned melo-drama, *La Bataille de Pultowa*, mingled with another piece (we believe *Pierre le Grand*), has, by the tact and talent of Messrs. Morton and Kenney, two of our best living dramatists, been worked up into a very spirited and entertaining three-act play, which, if divested of all but two of the pieces of music, and some exceedingly gross *doubles ententes*, not at all softened down in their delivery by the fair lady to whose lips they were intrusted,—ought to become popular, and we hope will do so, were it only for the admirable performance of Young as *Peter Alexowitz*: he is "every inch a king," and the king he is intended to represent—bold, jocular, ingenious, violent, noble, and generous,—the monarch, the ship-carpenter, the hero, the architect, and the boon companion! — Like Henry IV. of France,

"Ce diable-à-quatre
A le joli talent
De boire et de battre,
Et d'être un vrai gallant!"

Ay, and to sing a capital song into the bargain, which we could go every night to hear. His bearing amongst the conspirators was extremely fine. His accosting the astonished ringleader,—"Koriat! we have rather a large assemblage of friends here," was enough to have paralysed the boldest rebel, by the quiet decision of the tone, and the eagle-glance that accompanied it. In contradistinction to this, was his good-humoured remark to the master of the dock-yards, in the previous scene,—"Now, don't be obstinate." But, indeed, every part of the character was equally well sustained; and we beg Mr. Young to accept our best thanks for the unmingled gratification his performance afforded us. The part of *Charles XII.* in this play, is neither as prominent nor as characteristic as its predecessor in the drama of that name. The scene in which the rival sovereigns meet, is the only opportunity afforded to Mr. Cooper, and he did as much with it as could be expected of him: Farren delighted us with an admirable portrait of an old faithful soldier; and Liston was as whimsical as usual in the very extravagant part of *Jasper Addlewith*. Miss Tree and Mrs. C. Jones sustained the trifling parts allotted to them with great spirit. Miss Love had little to do, except to sing, and, unfortunately, none of her songs were worth singing: two of them (the "Povera Signora," of Auber, from *Le Concert à la Cour*, and the pretty little air, "Petit Blanc, que j'aime," were entirely spoiled by the arranger. Mr. Vining was a little too noisy, and Mr. Aitkin a little too tame; but they are both sensible actors, and the former particularly useful. Our stage is sadly in want of young men who can be trusted with any thing above the delivery of a letter. The dresses and scenery, though not wholly new, were passably good, and effective. We must except, however, the red table-cloth worn by Mr. Younge, as *Prince Mensikov*, whose whole attire, indeed, was out of all keeping with the rest of the picture. The play was well received throughout, and announced for repetition amidst great and general applause.

The *Battle of Pultowa*, at Covent Garden, is a rather close translation of the aforesaid French melo-drama, got up in great haste, and totally unworthy of the talent which has been pressed into its service. There are, however, strange complaints of treachery. It is said that Morton, with a high salary as reader and judge of pieces presented at Covent Garden, had taken the hint from a piece submitted to

him, and brought out its likeness at the other house. In exposure, the managers at Covent Garden exhibited the naked drama on the night after its production at Drury Lane. With theatrical disputes we take no concern; but wherever treachery is committed, we would put a whip into every honest hand to lash it.

COVENT GARDEN.

THE Queen of Song, Miss Paton, returned to this theatre on Tuesday evening, we are happy to say, in excellent health and voice, and was welcomed with cordial cheering for several minutes by one of the greatest audiences of the season. *Oberon*, the last and finest work of that true musician Weber, was revived for her appearance, and she was admirably supported by Madame Vestris and Mr. Wood. A better *Elf-king* than Mr. Henry, and a livelier *Theramin* than Mr. Russel, are, however, indispensable. Neither of these parts have ever yet found fitting representatives. Mr. Bland was not equal to *Oberon*. Fawcett, the original *Theramin*, acted it, of course, well; but he was too old for the lover of Vestris, and he could not sing the music. Penson did little with it, and Duruset was less effective than Fawcett in the acting, and than Penson in the singing; yet (though it may seem paradoxical) was altogether the best of the three. The characters of *Roshana* and the *Emir of Tunis*, are (and, indeed, were always, except while Cooper was in the latter part) performed in the most slovenly style. These, though subordinate characters, are exceedingly important to the plot of the piece; the interest of the third act entirely hinges upon them: and we take the liberty of hinting to ladies and gentlemen placed in this and similar, it may be unpleasant, but necessary situations, that if it be worth their while to take their salaries every Saturday, it is their duty to execute the parts allotted to them to the best of their abilities. It is not because an author writes a bad or a dull part, that Mr. A. or Mrs. B. are to show that they think it so, or make it worse and duller by their neglect. We have seen the safety of many a fair drama jeopardied, and the effect of hundreds lessened, by the impertinence (for there is no other word for it) of actors or actresses showing the audience that they considered the parts unworthy of their talents.

This week, Mr. William Macready, the celebrated tragedian, has favoured his early friends here with the exhibition of his matured talents. Since his previous appearance at our theatre, he has reaped great fame and profit, both in America and France. On Monday he performed *Macbeth*; and on Wednesday *Virginia*. This evening his engagement closes with *William Tell*. His personification of the tyrant usurper may, perhaps, be equalled; but his representation of the two patriot fathers is unrivalled. The theatre has never been so well attended this season before. Mr. M. performed at Shields on Tuesday and Thursday.—*Newcastle Courant*.

VARIETIES.

Cabriolets have been recently established in Paris, in which the fares are paid at so much per minute; for a quarter of an hour 60 centimes, about 6d. English, are charged; and for every minute over, 2½ centimes, about one farthing. Dials are placed in each cabriolet, to prevent disputes about time.

The Colosseum.—Some great revolutions have taken place in this property, and a crisis in its affairs, which has for some time been

apprehended, in consequence of recent circumstances, has at length arrived. It is now, we believe, in the hands of creditors, to whom it has been assigned; and until projected arrangements are made, legal executions occupy and possess the whole painted capital of England. We are glad, however, to hear that the committee have agreed to finish this extraordinary picture.

A letter from Rome states that M. Chateaubriand is causing excavations to be made in the environs of Torre Vergata, under the direction of the Chevalier Visconti. The remains of an ancient edifice have already been discovered, which, judging from the fragments of marble, porphyry, coloured stuccoes, &c., that have been dug up, seems to have been of extraordinary magnificence. The noble vicount being present on the first day of the excavations, saw a block of fine statuary marble taken up, of which he has given orders for a bust of Poussin to be made, to adorn the monument which he is causing to be erected to the memory of that celebrated artist.

Longevity.—The French papers contain an account of the death, in the hospital at Lausanne, of a widow named Beaucou, aged 115 years. She is stated to have had good health until within a few days of her death, and to have walked about the streets of Lausanne without difficulty. The old lady was married to her late husband in 1814, being then 100 years of age.

Surgical Operations.—*La Clinique* contains an account of more than 400 operations performed by M. Dupuytren, the celebrated French surgeon, in the hospital of l'Hôtel-Dieu, in Paris, during the year 1827.

Theatrical Costume.—In representing *Cain* at the theatre of the Ambigu, the costumes are skins of beasts lined with white silk,—a mode of dress, we should imagine, totally out of character, particularly as the climate of Eden was rather too warm to support furs, and also seeing that, even in Cain's time, men and animals were on tolerable terms.

The *Clinique* recommends a very economical mode of purifying hospitals, prisons, and other places in which the air is infected: instead of using, as hitherto, the chloruret of lime, or soda in solution, it is to be reduced to vapour, with which water is to be saturated. Two pounds of oxide of manganese, and the same quantity of hydrochloric oxide, will, it is said, produce more than fifty gallons of gas, which are sufficient to saturate forty gallons of water. The expense, including fuel and labour, is under three francs.

Population of Russia.—January 1, 1828. The synod has just published the bills of mortality of the Russian empire for the year 1828. (It is to be observed, that these tables include only those who profess the Greek religion, as established in Russia.)

	Males.	Females.	Total.
Births.....	652,673	592,106	1,244,779
Deaths.....	600,162	577,689	1,177,851
Excess of births.	326,511	314,217	640,728
Number of marriages.....			386,377

Among the deaths of men there are the following:—

From 95 to 100	1,644	From 190 to 195	31
100 — 105	904	195 — 200	16
105 — 110	141	200 — 205	4
110 — 115	104	205 — 210	4
115 — 120	46	210 — 215	1

The table of the ages of women has not yet reached us.

The Largest Village in Europe.—In an extensive valley, about eighty miles from Pesth, lies *Czaba*, which, though indisputably the largest village in Europe, has not met with the

attention it deserves at the hands of modern geographers. It dates its origin from the year 1715; and, as John von Agoston, a Hungarian writer, informs us, contained, in the year 1826, the number of 20,187 inhabitants, all of them Slavonians, and, with few exceptions, of the Protestant faith; 1,923 houses, and 620 farms. It comprises a district of more than thirty square miles; its ecclesiastical edifices consist of one Catholic and two Protestant churches; and the majority of its population derive their livelihood from husbandry and breeding cattle.

Sculpture.—Mr. Allan Cunningham, it is stated, has remarked, that if the instrument by which marble busts, &c. are modelled after the clay, be placed in inverse or other positions, it may still be used, and with this advantage,—that it will alter the attitude of the bust or statue, and make it look any way, instead of being always the same in a hundred copies.

LITERARY NOVELTIES.

It is a singular circumstance that at this moment each of the four academies of which the French Institute is composed has a vacancy, and all the academies will have to elect a member at the same time: such an occurrence has not taken place before since the creation of the Institute.

The *Casket*, a Miscellany, consisting of Original Poems, is announced for early appearance. It is to be published by subscription, for the relief of a family that has seen better days; and we are therefore anxious to recommend it to attention. But, indeed, it can hardly fall of great success, as it boasts of contributions of almost every name of note in our poetical sphere; including Joanna Baillie, Bowles, Colman, Crabbe, the Ettrick Shepherd, Hemans, Hook, L. E. L., Milman, Milford, J. Montgomery, Moore, Ople, Præd, Planché, the Porters, the Smiths, Dr. Richards, Rogers, C. Sheridan, Sotheby, C. H. Townshend, Twiss, Wordsworth; and also from unpublished works of Barbauld, Byron, Canzani, Heber, &c. &c.

The first great sale of books for the season is, we observe, announced in our advertising columns to-day. It consists of valuable foreign books and manuscripts, selected from the continental libraries of Mayans, Iriarte, La Serna, &c., and will last for four days. Some of the articles are extremely rare and curious.

Mr. Mill's Analysis of the Phenomena of the Human Mind, on which he has been employed for years, is now nearly ready for the press.

We understand that the Rev. Dr. Wait, of Cambridge, is about to commence a *Repertorium Theologicum*, or Critical Record of Theological Literature; in which dissertations on theological antiquities, the state of the text, and other subjects of necessary inquiry, will be contained; in which, also, foreign works on divinity will be condensed, so as to form a complete work of reference to the biblical scholar.

Dr. Robinson, of St. Croix, announces a Practical Treatise on the Superior Efficacy of the round-leaf Cornel in cases of primary or secondary Debility of the Digestive Organs, and for general Weakness attendant on Age, or from the enervating effects of the too free use of spirituous liquors and a tropical climate, &c.

The *Strasbourg Controversy*.—We understand that the Rev. F. C. Huenbesh, who lately translated the Bishop of Strasbourg's Answer to the Rev. G. S. Faber's Difficulties of Romanism, is on the point of publishing a Reply to that gentleman's Supplement; being a vindication of the Bishop by the Rev. F. C. Huenbesh.

Miss M. A. Browne, the author of *Mont Blanc*, *Ada*, &c. &c. is about to publish a small volume of Sacred Poetry.

Allan Cunningham is, we hear, diligently employed upon Lives of British Artists, Hogarth, Gainsborough, &c. &c.; to appear periodically, like Constable's Miscellany, the *Waverley Novels*, and other works.

The History of the Huguenots during the 16th Century, by W. S. Browning, Esq., is announced for early publication.

Dr. Lempiere has in the press a second edition of his Popular Lectures on Natural History; to which will be added, two Lectures on the Mammiferous Animals.

The system of gaming in the French capital, which has ruined so many English gentlemen, is, we understand, about to be unveiled in a novel announced under the title of *Ecarts*.

The Naval Officer is, we hear, written by a post-captain, and is, if report goes true, tolerably severe in shewing up the author's associates and the service.

In the Press The Protestant's Companion; being a Choice Collection of Preservatives against Popery.—A novel, entitled, the *Sectarian*, or the Church and the Meeting-House.

LIST OF NEW BOOKS.

Lindley's British Flora, 12mo. 10s. 6d. bds.—Picture of London, 1829, with Views, &c. &c. with Maps, 6s. sheep. Longbellow, a Country Tale, 3 vols. post. 8vo. 11. 4s. bds.—Essay on Classical Instruction, 12mo. 2s. 6d. bds.

Prevailing wind N.E.
Generally cloudy, raining on the 21st and 25th, and a little snow on the 25th.

Rain fell, .525 of an inch.

Edmonton.

CHARLES H. ADAMS.

Latitude..... 51° 37' 38" N.

Longitude.... 0 3 51 W. of Greenwich.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the London Meteorological Society. January 1829.

Thermometer—Highest.....	43.00
Lowest.....	8.75
Mean.....	30.36200
Barometer—Highest.....	30.07
Lowest.....	28.75
Mean.....	29.61510

Quantity of rain and melted snow in inches and decimals, 1.08125.

Number of days of rain or snow, 15.
Winds.—1 East—2 West—8 North—11 South—14 North-east—1 South-east—1 South-west—6 North-west.

General Observations.—The month was colder than in 1827 or 1828, and the quantity of rain and melted snow was considerably less than in January 1827, and not a fourth part of that in 1828. The mean of the barometer lower than for the last seven years. Snow fell on six different days: the whole quantity about an inch and three quarters in depth. A beautiful lunar halo observed on the 17th, about 11 p.m. The evaporation 0.06125 of an inch.

TO CORRESPONDENTS.

☞ The overflow of temporary and interesting matter, and a desire not to postpone till they are stale the favours of our advertising friends, induce us, thus early, again to present our readers with an extra half-sheet, *gratis*, on Saturday. Yesterday in Ireland, the *Naturalist's* Diary, *Use's* Geology, Letters from the French Egyptian Expedition, Account of the Sioux Juveniles, with many other new and striking articles, and the reports of the proceedings of ALL the great Public Bodies now actively employed in London, are intended for this enlarged No.

The subject of J. W.'s communication has occupied our attention, and he ought not to be surprised that we have not, at the moment, publicly addressed ourselves to it. To produce a weekly paper of the variety and research of the *Literary Gazette*, is, we speak it humbly, no light task; and when we are called upon to check the declension of English literature, by exposing the manufacturing system of publication and quackery now so injuriously carried on, we think we have a right to time for deliberation before we take up the question. We shall certainly apply ourselves to it strenuously; for the evil is great, and we request the aid of our correspondents, and of others who observe that the taste of the age in literature is undergoing a worse change, in consequence of the rubbish pushed into notice, and the exclusion of what is sterling and valuable, than has been experienced even by the stage. We pledge ourselves to make a stand in the common cause.

The suggestion of a Constant Reader has often been offered to us, and we would cheerfully comply with it; but, in the first place, we are not always aware of the prices of the books we review; and, in the second place, a stamp duty of 7s. would, we believe, be charged on every such statement at the head of our notices. Our weekly lists and advertisements always supply the information.

Blunder!—Had the following happened to say one else, we should have had a laugh: as it is, we can only confess its appearance in our own columns, and hardly cry. A paragraph found its way into our last week's *Varieties*, respecting some fossil remains discovered near Birl, in France; in which, on once meeting the original French account in *Le Globe*, we discover that the following ludicrous error of translation has been committed:—"A *black* nolk, black mud, or slime, is *exactly* rendered, a 'black' nolk tree"—a tree certainly new to us, but which we allowed to pass, not having the original statement before us, and as, perhaps, there might have been such things before the flood!

ADVERTISEMENTS

Connected with Literature and the Arts.

BIBLIOTHECA MAYANSIANA.

MRS. WHEATLEY and ADLARD will sell by Auction, at their Office, 191, Piccadilly, London, on Tuesday, March 16th, 1852, and on following Days, a supplementary Collection of FOREIGN BOOKS and MANUSCRIPTS, received from the Continent; selected from the Libraries of Mayan, Isidoro, La Serna, &c.

First Day.

Manuscripts and Lexicographical, among which will be found, *Arabic*, at the Office of the Editor, 191, Piccadilly, London, on Tuesday, March 16th, 1852, and on following Days, a supplementary Collection of FOREIGN BOOKS and MANUSCRIPTS, received from the Continent; selected from the Libraries of Mayan, Isidoro, La Serna, &c.

Second and Third Day.

Spanish Poetry, among which are, octavo—Padilla Romanos, Madrid, 1808; Tesoro de Varas Fomias, ib. 1807; Romanos de Sepúlveda, ib. 1808; Barbon's Collection of Copies, Madrid, Valadolid, 1808; Cancionero de Montemayor, Madrid, 1808; Oro Arca domado, Madrid, 1808. Quarto: Romanos general, Madrid, 1804, ib.; Segunda Parte, Valladolid, 1803, of the same party; Padilla, Epilogos, Pastoriles, Sevilla, 1803; Poemas de Culla, Madrid, 1803; Barbon's Collection of Copies, Madrid, 1808; Cancionero de Montemayor, Madrid, 1808; Oro Arca domado, Madrid, 1808. Folio: Obras de Ausias March, Valencia, 1808, first edition, of the greatest rarity; Dante, de Villages, Burgos, 1815. Curious Poetical MSS. comprising unpublished Works of celebrated Authors.

Fourth Day.

A Collection of Spanish Dramatic, comprising an unique Set of the Comedias de Lope de Vega, in 20 volumes, Madrid, &c. 1606 to 1647; El Bressi Reduendo, an original unpublished Autograph Comedy, and 18 other Autograph Comedies of Lope de Vega; Comedias de Tirso de Molina, 6 vols. Madrid, &c. 1627-1636; Comedias de los Pastores, 9 vols. Valencia, 1608-1616; Comedias de Calderon, Merito, Rouse, &c.; Comedias Escogidas, &c. 40 vols. Madrid, 1638-1704; all the Works of Quevedo, comprising 140 Articles never printed; Cervantes' Don Quixote, Madrid, 1608-1615; Autograph Letters of Father Isla, Barriel, Barriel, &c.; Escenas Nuevas de Geographia, Sevilla, 1819, the first Book in Spanish which speaks of America; Ordo Conica de la India, Sevilla, 1805; an original Will of Charles V.; a most extraordinary and interesting Volume of Papers relating to English History, including Philip II.'s original Private Instructions to the Duke de Medina Sidonia, when in command of the great Armada; a complete Collection of Documents relating to the projected Marriage of Charles I. with the Spanish Infanta; the Secret Correspondence of the Courts of Rome and Spain, from 1570 to 1585, relating to their Projects to restore Catholicism in England. These documents are of the greatest importance as they contain the secrets of their Authenticity to doubt whether can be raised, being the identical deciphered Copies of the Despatches presented to Philip II., with Remarks in his own Handwriting.

Catalogues will be ready on the 24th of March, and may be had of the place of sale, or of Messrs. Deighton, Cambridge; and of Mr. Tall, Edinburgh.

TO LADIES visiting the Metropolis only

For a short time, and wishing to embrace the advantage of such Lessons in Drawing and Painting (in Oil or Water Colour) as would enable them to continue their Practice in the Country without the Assistance of Masters—a Lady having a few hours unemployed during the week, would be happy to devote them to advancing rapidly as possible the Progress of Pupils. Address, post-paid, R. W. X. A. St. Great Russell Street, Bloomsbury.

Price, 4s. 6d. per Vol. 10s. 6d. per Set. All Bookellers.

Improved Short-Hand.

This day is published, price 5s. 6d.

AN ATTEMPT to REMODEL the ART of STENOGRAPHY, on new and more primitive Principles than the System of SHORTHAND.

By CHARLES LATHAM.

London: Published for the Author, by A. Hooley, Fleet Street. *Exerts* case laborious seems to be the studied maxim of the ingenious author of this little book; and its syllabic form for instructing the pupil in Stenography, is admirably calculated to imprint the lesson on the memory, and, by its simplicity, to keep it there. Indeed, the plainness of the characters and rules evince that kind of mind in the author best fitted for the study of the grammar of any language, even for that of symbolic grammar. It is certainly entitled to much credit, both for the neatness of his signs, (or characters) and the grammatical accuracy of his arrangements. — *Literary Gazette*, Feb. 31st.

MUSIC.

New Music.

By the same Author.

An Analysis of Medical Evidence, 8vo. 12s.

THE MONTHLY MAGAZINE. In the

hands of the present Proprietors, the Monthly Magazine has always been devoted to the Constitution; but with the rise of strong public emergencies, more direct actions are called for. If great political hazards are threatened, they are to be repelled only by increased public vigilance; if the old barriers of the state are shaken by open violence or treacherous friendship, the most secure and legitimate defence is in the press, guided by constitutional knowledge, by zeal for the country, and by that British pride of principle which scorns alike the frowns and the influence of corrupt authority.

Those declarations have been often made before; but the time compels a stern sincerity. Our principles are British, in the strongest sense of the word. We have not adopted them for the reward, nor will we abandon them for the reward. The country at this hour is in imminent danger. A conviction that may crush its whole system is threatened. A new element of discord is about to be introduced into our constitution, and every honest man must be alarmed at the prospect. The most insidious intimidation of the high is at work. Events are ripening with a tremendous rapidity, that nothing can counteract but the boldest resolution, the most extended fellow-feeling, and the most vigorous, straightforward, and faithful fidelity to the constitution.

Let what will come, we shall do our duty as men, while we have the power of speaking to our own fellow-subjects. Chains may be forged for us, we may be tortured and persecuted by triumphant power; but we shall still put our trust in the righteous cause, and still feel that the life of man cannot be more nobly engaged than in the service of freedom.

The March Number will contain, Article I. The Dangers of England and Ireland—II. Specimens of Hottentot Popular Poetry, translated by Peter Borell, Esq. M.P. R.S.T.—III. Events in a recent Journey in South America—IV. Mine Host's Last Days—V. The Northumbrian Plague—Catholic Curia: his Correspondent and Dr. Philpotts—Pantomime Expenses—Sir A. Hart—Indian Bishops—King William's Speech—Dr. Wallaston's Century of Inventions—The Ministers at Drill—Incendiary Martin, &c. &c. Reviews of New Works, &c. &c. Whittaker and Co. London; Curry and Co. Dublin; and Waugh and Innes, Edinburgh; and may be ordered of all the Booksellers in the United Kingdom.

THE LONDON REVIEW. No. I.

Edited by the Rev. BLANCO WHITE. Printed for Saunders and Otley, Conduit Street.

Handsome printed, in 1 vol. Imperial 8vo. price Two Guineas, boards, a 3d edition, with large additional matter, of
PORTUGAL ILLUSTRATED.

By the Rev. W. M. KINSLEY, B.D.
Fellow of Trinity College, Oxford, and Chaplain to the Right Hon. Lord Auckland.

Embellished with a Map, Plates of Coins, Vignettes, and various Engravings of Costumes, Landscape Scenery, &c.; forming, in the whole, a Series of more than Fifty Engravings, illustrative of the manners and general aspect of the Country.

This 3d edition, besides undergoing a sedulous revision, includes additional specimens of the national music of Portugal, and the following new illustrations, executed by the first Artists in the most finished style: 1. Belem Castle, on the Tagus—2. The Aqueduct and city of Lisbon—3. The Moorish Palace at Alentejo—4. The Cork Convent, near Coimbra—5. The Fortifications of Alentejo on the Tagus, which formed the extreme right of the lines of Torres Vedras—6 and 7. Fortresses of Cameroes and of Ignes do Castro; besides several Vignettes by Messrs. Brooks and Harvey. The additional matter, extending to 100 pages, comprises a brief Historical Review of the State of Literature, Arts, and Sciences, in Portugal, from the earliest period to the present time.

A few Copies are taken off with impressions of the Plates on India paper, price 8s. 10s. boards.
Published, for T. Agnew and Sons, and W. R. Trevellick, Jun. and Richter, Foreign Bookellers to the King, 80, Soho Square.

In 4to. 8s. 6d. with a Portrait of the Author,
JOURNAL of an EXPEDITION of DISCOVERY in the INTERIOR of AFRICA.

By the late CAPTAIN CLAPPERTON, R.N.
With the Journal of RICHARD LANDER, faithful Servant. John Murray, Albemarle Street.

In 3 vols. post 8vo.
THE NAVAL OFFICER; or, Scenes and
Adventures in the Life of Frank Midway.

"My muse by no means deals in fiction:
She gathers a repository of facts;
Of course with some error and slight restriction,
But mostly treats of human things and acts."

Love-war—a tempest—surely there's variety;
Also a seasoning slight of lubrication.
A bird's-eye view top of that wild society—
A slight glance thrown on men of every station."

Don Juan.
Printed for Henry Colburn, 5, New Burlington Street.

8 vols. 16s. printed uniformly with Mrs. Markham's Histories of England and France,
A SHORT HISTORY OF SPAIN.

By **MARIA CALCOTT.**
With Wood Engravings.
Printed for John Murray, Albemarle Street.

With Illustrative Engravings, 4to. Part I. 30s.

London: Published by John Sharpe, Piccadilly, and the other Proprietors.

Hughes' South of France.
Uniform with Batty and other European Scenery, published by James Cuthbert, Cockspur Street.

AN ITINERARY of PROVENCE and
the RHONE, made during the Year 1819.
By **JOHN HUGHES, A.M.** of Ortel College, Oxford.

Royal 8vo. 12s. 6d.; in Imperial 8vo. 17s. 6d.
The Illustrations, from the Drawings of De Wint, and engraved by W. B. Cooke, George Cooke, and J. C. Allan. India paper, 8s. 12s. 6d. 11s.

"I informed my friend that I had just received from England a Journal of a Tour made in the South of France, by a young Officer, a friend of mine, a poet, a draughtsman, and a scholar, in which he gives such an animated and interesting description of the Chateau Grignan, the dwelling of Madame de Sevigne's beloved daughter, and frequently the place of her own residence, that no one who ever read the book would be within fifty miles of the same without going a pilgrimage to the spot. The marquis smiled, seemed very much pleased, and asked the title at length of the work in question; and writing down to my dictation, an 'Itinerary of Provence and the Rhone, made during the Year 1819,' by John Hughes, A.M. of Ortel College, Oxford, observed, that he could never purchase so good a book for the children, but would recommend that the Itinerary should be commissioned for the library to which he was attached in the neighbouring town."

—Sir Walter Scott's *Quentin Durward*.

Just published by Henry Colburn, 5, New Burlington Street.
TALES of a VOYAGER to the ARCTIC OCEAN. Second Series. In 3 vols. post 8vo.

2. **Sailors and Saints, a Novel.** By the Authors of the "Naval Sketch Book." 3 vols. post 8vo. 31s. 6d.

"While reading 'Sailors and Saints' the floor of our room has seemed to reel; we have fancied we had fallen the salt spray of the sea on our faces—so completely have we been absorbed in the graphic descriptions and living presentations before us."—*United Service Journal*.

3. **Tales of Passion, by the Author of "Gilbert Raris."** In 3 vols. post 8vo.

4. **Rank and Talent. A Novel, in 3 vols.** post 8vo.

5. **The Anglo-Irish; or, Love and Politics.** A Tale of the Nineteenth Century. In 3 vols. post 8vo. 31s. 6d.

"It would do no discredit to the romantic genius of the author of 'Waverley.' We can confidently recommend the 'Anglo-Irish' as a work of wit, interest, and instruction."—*Reviewers*.

6. **The Castilian. A Spanish Tale.** In 3 vols. post 8vo. 31s. 6d.

"The incidents are rich in interest, the story well managed, and the characters well drawn."—*Times*.

7. **Zillah; a Tale of the Holy City.** By the Author of "Brambletye House," the "Tor Hill," and "Keweenaw Apple." 2d edition, in 3 vols. post 8vo. 31s. 6d.

"The attractions of this work are uncommon and manifold."—*Athenaeum*.

8. **Tales of the Great St. Bernard.** 2d edit. 3 vols. post 8vo. 31s. 6d.

Also, nearly ready,
9. **Traits of Travel; or, Tales of Men and Cities.** By the Author of "Highways and Byways." In 3 vols. post 8vo.

Printing for Whittaker, Treacher, and Arnot, Ave Maria Lane.

New Work, by the Author of the Sketch Book.

In a few days, in 3 vols. 8vo.

A CHRONICLE of the CONQUEST of

GRANADA, from the MSS. of Fray Antonio Aguilera. By **WASHINGTON IRVING.**

John Murray, Albemarle Street.

On Monday, the 2d of March, will be published, in 3 vols. 8vo. price 17l. 18s. the 2d edition of

THE MEMOIRS of GENERAL MILLER.

This work has been greatly augmented, with the additional Portraits of Sir Martin, Belvoir, and O'Higgins.

A Spanish Edition will be published on the 16th of March.

A French Edition of the same.

Printing for Longman, Rees, Orme, Brown, and Green.

LONDON: Published every Saturday, by **W. A. SCRIPPS,** of the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 7, South Molton Street, Oxford Street, by J. Chamberlain, 10, Regent Passage, E. Marlborough, Ave Maria Lane, Ludgate Hill; A. Black, Edinborough, Smith and Son, and Robertson and Atkinson, Glasgow; and J. Cunningham, Dublin.

J. MOYSE, Took's Court, Chancery Lane.

THE LONDON LITERARY GAZETTE;

AND

Journal of Belles Lettres, Arts, Sciences, &c.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 633.

SATURDAY, MARCH 7, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

The Misfortunes of Elphin. By the Author of "Headlong Hall." 12mo. pp. 240. London, 1829. T. Hookham.

THOUGH the author of *Headlong Hall* is an especial favourite with us, we feel particularly obliged to Mr. Hookham for having presented us with his new performance in a single volume; for, with any thing like tolerable management, it might have been stretched into three, if not four, weighty tomes. The writer also merits our thanks for his abstinence from elongation; with the whole Cambrian mythology, romance, and history, or supposed history, at his beck, to have thus limited himself, is a rare example of virtuous self-denial, for which we take upon ourselves, in the name of the public, to express our warmest gratitude. The consequence has been, that instead of a prolix and tiresome compilation from the rubbish of antiquity, patched with the heterogeneous folly of modern invention, we have a playful and satirical *jeu d'esprit*:—a pleasant amusement for two or three hours, instead of a musty and unreadable mass of trash and impertinence.

The story is of the beginning of the sixth century; but its application is to the nineteenth, except where the humour of the author has led him to sketch, in a merry tone, the manners of the ancient Britons at the period of the Round Table. When Uther Pendragon was sovereign of the country, Gwythno was one of its petty monarchs, under the title of King of Caredigion. "The most valuable portion of his dominions was the great plain of Gwaelod, an extensive tract of level land, stretching along that part of the sea-coast which now belongs to the counties of Merioneth and Cardigan. This district was populous and highly cultivated. It contained sixteen fortified towns, superior to all the towns and cities of the Cymry, excepting *Caer Lleon* upon *Usk*; and, like *Caer Lleon*, they bore, in their architecture, their language, and their manners, vestiges of past intercourse with the Roman lords of the world. It contained also one of the three privileged ports of the isle of Britain, which was called the Port of Gwythno. This port, we may believe if we please, had not been unknown to the Phœnicians and Carthaginians, when they visited the island for metal, accommodating the inhabitants, in return, with luxuries which they would not otherwise have dreamed of, and which they could very well have done without: of course, in arranging the exchange of what they denominated equivalents, imposing on their simplicity, and taking advantage of their ignorance, according to the approved practice of civilised nations; which they called imparting the blessings of Phœnician and Carthaginian light.—An embankment of massy stone protected this island country from the sea, which was said, a tradition older than the embankment, to have, in occasional spring tides, paid short but welcome visits to the interior inhabitants,

and to have, by slow aggressions, encroached considerably on the land. To prevent the repetition of the first of these inconveniences, and to check the progress of the second, the people of Gwaelod had built the stony rampart, which had withstood the shock of the waves for centuries, when Gwythno began his reign. Gwythno, like other kings, found the business of governing too light a matter to fill up the vacancy of either his time or his head, and took to the more solid pursuits of harping and singing; not forgetting feasting, in which he was glorious; nor hunting, wherein he was mighty. His several pursuits composed a very harmonious triad. The chase conducted to the good cheer of the feast, and to the good appetite which consumed it; the feast inspired the song; and the song gladdened the feast, and celebrated the chase. Gwythno and his subjects went on together very happily. They had little to do with him but to pay him revenue, and he had little to do with them but to receive it. Now and then they were called on to fight for the protection of his sacred person, and for the privilege of paying revenue to him rather than to any of the kings in his vicinity,—a privilege of which they were particularly tenacious."

While enjoying himself in his palace, the king, who was not fond of the sea, intrusted the charge of his coast to lieutenants; and the hint of our martello towers might have been taken from his policy.

"Watch-towers were erected along the embankment, and watchmen were appointed to guard against the first approaches of damage or decay. The whole of these towers, and their companies of guards, were subordinate to a central castle, which commanded the sea-port already mentioned, and wherein dwelt Prince Seithenyn ap Seithyn Saidi, who held the office of *Arglwyd Gorwarheidwad yr Argae Breninawl*, which signifies, in English, Lord High Commissioner of Royal Embankment; and he executed it as a personage so denominated might be expected to do; he drank the profits, and left the embankment to his deputies, who left it to their assistants, who left it to itself. The condition of the head, in a composite as in a simple body, affects the entire organisation to the extremity of the tail, excepting that, as the tail in the figurative body usually receives the largest share in the distribution of punishment, and the smallest in the distribution of reward, it has the stronger stimulus to ward off evil, and the smaller supply of means to indulge in diversion; and it sometimes happens that one of the least regarded of the component parts of the said tail will, from a pure sense of duty, or an inveterate love of business, or an oppressive sense of ennui, or a development of the organ of order, or some other equally cogent reason, cheerfully undergo all the care and labour, of which the honour and profit will redound to higher quarters. Such a component portion of the Gwaelod high commission of royal embankment was Teithrin ap Tathral, who had the charge of a watch-tower where

the embankment terminated at the point of Mochres, in the high land of Arddidwy. Teithrin kept his portion of the embankment in exemplary condition, and paced with daily care the limits of his charge; but one day, by some accident, he strayed beyond them, and observed symptoms of neglect that filled him with dismay. The circumstance induced him to proceed till his wanderings brought him round to the embankment's southern termination in the high land of Caredigion. He met with abundant hospitality at the towers of his colleagues, and at the castle of Seithenyn; he was supposed to be walking for his amusement; he was asked no questions, and he carefully abstained from asking any. He examined and observed in silence; and when he had completed his observations, he hastened to the palace of Gwythno."

Not obtaining access to the king—a matter difficult at all times—Teithrin sought out his son, Prince Elphin, whose misfortunes confer a title on this work. But, previous to relating their proceedings, we ought to state that both king and prince had been mysteriously warned to "beware of the oppression of *Gwen-hidwy*," i.e. *Gwen-hudw*, the white alluring one—the name of a mermaid, but used figuratively for the elemental power of the sea. This premised, it may be continued that Elphin, informed by Teithrin, thought it expedient to pay a visit of inspection to the worthy lord high commissioner Seithenyn (for brevity's sake we omit the rest of his unpronounceable name). Their reception is a capital display of the character of that exalted and jovial functionary.

"The sun had sunk beneath the waves when they reached the castle of Seithenyn. The sound of the harp and the song saluted them as they approached it. As they entered the great hall, which was already blazing with torchlight, they found his highness, and his highness's household, convincing themselves and each other, with wine and vassal, of the excellence of their system of virtual superintendence; and the following jovial chorus broke on the ears of the visitors:

"The Circling of the Mead-Horns.

Fill the blue horn, the blue buffalo horn:
Natural is mead in the buffalo horn:
As the cuckoo in spring, as the lark in the morn,
So natural is mead in the buffalo horn.

As the cup of the flower to the bee when he sips,
Is the full cup of mead to the true Briton's lips:
From the flower-cups of summer, on field and on tree
Our mead-cups are filled by the vintager bee.

Seithenyn ap Seithyn, the generous, the bold,
Drinks the wine of the stranger from vessels of gold;
But we from the horn, the blue silver-rim'd horn,
Drink the ale and the mead in our fields that were born.

The ale-froth is white, and the mead sparkles bright:
They both smile apart, and with smiles they unite:
The mead from the flower, and the ale from the corn,
Smile, sparkle, and sing, in the buffalo horn.

The horn, the blue horn, cannot stand on its tip:
Its path is right on from the head to the lip:
Though the bowl and the wine-cup our tables adorn,
More natural the draught from the buffalo horn.

But Seithenyn ap Seithyn, the generous, the bold,
Drinks the bright-flowing wine from the far-gleaming gold:
The wine in the bowl by his lip that is worn,
Shall be glorious as mead in the buffalo horn.

Digitized by Google

The horns circle fast, but their fountains will last,
As the stream passes ever, and never is past:
Exhausted so quickly, replenished so soon,
They wax and they wane like the horns of the moon.

Fill high the blue horn, the blue buffalo horn:
Fill high the long silver-rim'd buffalo horn:
While the roof of the hall by our chorus is torn,
Fill, fill to the teems, the deep silver-rim'd horn.

"Elphin and Teithrin stood some time on the floor of the hall before they attracted the attention of Seithenyn, who, during the chorus, was tossing and flourishing his golden goblet. The chorus had scarcely ended when he noticed them, and immediately roared aloud, 'You are welcome, all four.' Elphin answered, 'We thank you: we are but two.' 'Two or four,' said Seithenyn, 'all is one. You are welcome all. When a stranger enters, the custom in other places is to begin by washing his feet. My custom is, to begin by washing his throat. Seithenyn ap Seithyn Saidi bids you welcome.' Elphin, taking the wine-cup, answered, 'Elphin ap Gwythno Garanhir thanks you.' Seithenyn started up. He endeavoured to straighten himself into perpendicularity, and to stand steadily on his legs. He accomplished half his object by stiffening all his joints but those of his ankles, and from these the rest of his body vibrated upwards with the inflexibility of a bar. After thus oscillating for a time, like an inverted pendulum, finding that the attention requisite to preserve his rigidity absorbed all he could collect of his dissipated energies, and that he required a portion of them for the management of his voice, which he felt a dizzy desire to wield with peculiar steadiness in the presence of the son of the king, he suddenly relaxed the muscles that perform the operation of sitting, and dropped into his chair like a plummet. He then, with a gracious gesticulation, invited Prince Elphin to take his seat on his right hand, and proceeded to compose himself into a dignified attitude, throwing his body back into the left corner of his chair, resting his left elbow on its arm, and his left cheek-bone on the middle of the back of his left hand, placing his left foot on a footstool, and stretching out his right leg as straight and as far as his position allowed. He had thus his right hand at liberty, for the ornament of his eloquence and the conduct of his liquor. Elphin seated himself at the right hand of Seithenyn. Teithrin remained at the end of the hall; on which Seithenyn exclaimed, 'Come on, man, come on! What if you be not the son of a king? you are the guest of Seithenyn ap Seithyn Saidi! The most honourable place to the most honourable guest, and the next most honourable place to the next most honourable guest; the least honourable guest above the most honourable inmate; and, where there are but two guests, be the most honourable who he may, the least honourable of the two is next in honour to the most honourable of the two, because they are no more but two; and where there are only two, there can be nothing between: therefore sit, and drink. *Gwin e eir: wine from gold.*"

We cannot quote so eloquent a speech as this, without recommending it to the study of many friends of ours, who are in the habit of emitting similar convivial sallies at taverns; its logic is undeniable, and it may serve as a model: but to our story. The prince having made some remarks on the insufficiency of the embankment, is thus answered by his host; and the application of the satire is too evident to need a comment:—

"Prince Seithenyn," said Elphin, "I have visited you on a subject of deep moment, Re-

ports have been brought to me, that the embankment, which has been so long intrusted to your care, is in a state of dangerous decay.' 'Decay,' said Seithenyn, 'is one thing, and danger is another. Every thing that is old must decay. That the embankment is old, I am free to confess; that it is somewhat rotten in parts, I will not altogether deny; that it is any the worse for that, I do most sturdily gainsay. It does its business well: it works well: it keeps out the water from the land, and it lets in the wine upon the high commission of embankment. Cup-bearer, fill. Our ancestors were wiser than we: they built it in their wisdom; and if we should be so rash as to try to mend it, we should only mar it.' 'The stone-work,' said Teithrin, 'is sapped and mined: the piles are rotten, broken, and dislocated: the floodgates and sluices are leaky and creaky.' 'That is the beauty of it,' said Seithenyn. 'Some parts of it are rotten, and some parts of it are sound.' 'It is well,' said Elphin, 'that some parts are sound; it were better that all were so.' 'So I have heard some people say before,' said Seithenyn; 'perverse people, blind to venerable antiquity: that very unamiable sort of people, who are in the habit of indulging their reason. But I say, the parts that are rotten give elasticity to those that are sound: they give them elasticity, elasticity, elasticity. If it were all sound, it would break by its own obstinate stiffness: the soundness is checked by the rottenness, and the stiffness is balanced by the elasticity. There is nothing so dangerous as innovation. See the waves in the equinoctial storms, dashing and clashing, roaring and pouring, spattering and battering, rattling and battling against it. I would not be so presumptuous as to say I could build any thing that would stand against them half an hour; and here this immortal old work—which God forbid the finger of modern mason should bring into jeopardy!—this immortal work has stood for centuries, and will stand for centuries more, if we let it alone. It is well: it works well: let well alone. Cup-bearer, fill. It was half rotten when I was born, and that is a conclusive reason why it should be three parts rotten when I die.' The whole body of the high commission roared approbation. 'And after all,' said Seithenyn, 'the worst that could happen would be the overflow of a spring-tide, for that was the worst that happened before the embankment was thought of; and, if the high water should come in, as it did before, the low water would go out again, as it did before. We should be no deeper in it than our ancestors were, and we could mend as easily as they could make.' 'The level of the sea,' said Teithrin, 'is materially altered.' 'The level of the sea!' exclaimed Seithenyn. 'Who ever heard of such a thing as altering the level of the sea? Alter the level of that bowl of wine before you, in which, as I sit here, I see a very ugly reflection of your very good-looking face. Alter the level of that: drink up the reflection: let me see the face without the reflection, and leave the sea to level itself.' 'Not to level the embankment,' said Teithrin. 'Good, very good,' said Seithenyn. 'I love a smart saying, though it hits at me. But whether yours is a smart saying or no, I do not very clearly see; and, whether it hits at me or no, I do not very sensibly feel. But all is one. Cupbearer, fill.' 'I think,' pursued Seithenyn, looking as intently as he could at Teithrin ap Tathral, 'I have seen something very like you before. There was a fellow here the other day very like you: he stayed here some time; he would not talk;

he did nothing but drink: he used to drink till he could not stand, and then he went walking about the embankment. I suppose he thought it wanted mending; but he did not say any thing. If he had, I should have told him to embank his own throat, to keep the liquor out of that. That would have posed him: he could not have answered that: he would not have had a word to say for himself after that.' 'He must have been a miraculous person,' said Teithrin, 'to walk when he could not stand.' 'All is one for that,' said Seithenyn. 'Cupbearer, fill.' 'Prince Seithenyn,' said Elphin, 'if I were not aware that wine speaks in the silence of reason, I should be astonished at your strange vindication of your neglect of duty, which I take shame to myself for not having sooner known and remedied. The wise bard has well observed, 'Nothing is done without the eye of the king.' 'I am very sorry,' said Seithenyn, 'that you see things in a wrong light; but we will not quarrel, for three reasons: first, because you are the son of the king, and may do and say what you please, without any one having a right to be displeased; second, because I never quarrel with a guest, even if he grows riotous in his cups; third, because there is nothing to quarrel about; and perhaps that is the best reason of the three; or rather the first is the best, because you are the son of the king; and the third is the second, that is, the second best, because there is nothing to quarrel about; and the second is nothing to the purpose, because, though guests will grow riotous in their cups, in spite of my good orderly example, God forbid I should say that is the case with you. And I completely agree in the truth of your remark, that reason speaks in the silence of wine.'"

In the midst of this discussion, the sea breaks in, the towers fall, the fertile land is inundated, Seithenyn leaps into the flood; while his visitors, his beautiful daughter Angharad, his bard, and some of his household, escape along the ridge of the embankment.

"King Gwythno had feasted joyously, and had sung his new ode to a chosen party of his admiring subjects, amidst their, of course, enthusiastic applause. He heard the storm raging without, as he laid himself down to rest; he thought it a very hard case for those who were out in it, especially on the sea; congratulated himself on his own much more comfortable condition; and went to sleep with a pious reflection on the goodness of Providence to himself. He was roused from a pleasant dream by a confused and tumultuous dissonance, that mingled with the roar of the tempest. Rising with much reluctance, and looking forth from his window, he beheld in the moonlight a half-naked multitude, larger than his palace thrice multiplied could have contained, pressing round the gates, and clamouring for admission and shelter; while beyond them his eye fell on the phenomenon of stormy waters, rolling in the place of the fertile fields from which he derived his revenue. Gwythno, though a king, and his own laureate, was not without sympathy for the people who had the honour and happiness of victualling his royal house; and he issued forth on his balcony full of perplexities and alarms, stunned by the sudden sense of the half-understood calamity, and his head still dizzy from the effects of abruptly-broken sleep, and the vapours of the overnight's glorious festival. Gwythno was altogether a reasonably good sort of person, and a poet of some note. His people were somewhat proud of him on the latter score,

and very fond of him on the former; for even the weak part of those homely virtues that draw the memories of 'husbands kind and fathers dear' in every churchyard, are matters of plebeian admiration in the persons of royalty; and every tangible point in every such virtue so located, becomes a convenient peg for the suspension of love and loyalty. While, therefore, they were unanimous in consigning the soul of Seithenyn to a place that no well-bred divine will name to a polite congregation, they overflowed, in the abundance of their own griefs, with a portion of sympathy for Gwythno, and saluted him, as he issued forth on his balcony, with a hearty *Duw cadw y Brenin*, or God save the King, which he returned with a benevolent wave of the hand; but they followed it up by an intense vociferation for food and lodging, which he received with a painful shake of the head."

Gwythno's kingdom is thus submerged and ruined, and himself and family reduced to a meaner subsistence on the fish of the river, a small mountain track, and the attachment of a few surviving subjects. Elphin, however, espouses Angharad, and they have a lovely daughter: about the same time a male child is found in a coracle in the fishing weir of the river, who turns out to be the famous bard Taliesin. Speaking of him, the author draws a humorous picture of the olden times, contrasting them with our improved and enlightened epoch. We can only select parts.

"As Taliesin grew up, Gwythno instructed him in all the knowledge of the age, which was of course not much, in comparison with ours. The science of political economy was sleeping in the womb of time. The advantage of growing rich by getting into debt and paying interest, was altogether unknown: the safe and economical currency, which is produced by a man writing his name on a bit of paper, for which other men give him their property, and which he is always ready to exchange for another bit of paper, of an equally safe and economical manufacture, being also equally ready to render his own person, at a moment's notice, as impalpable as the metal which he promises to pay—is a stretch of wisdom to which the people of those days had nothing to compare. They had no steam-engines, with fires as eternal as those of the nether world, wherein the squabbling many, from infancy to age, might be turned into component portions of machinery for the benefit of the purple-faced few. They could neither poison the air with gas, nor the waters with its dregs: in short, they made their money of metal, and breathed pure air, and drank pure water, like unscentific barbarians. Of moral science they had little; but metals, without science, they had about the same as we have. They had a number of fine precepts, partly from their religion, partly from their bards, which they remembered in their liquor, and forgot in their business. Political science they had none. . . . Still they want to work politically much as we do. The powerful took all they could get from their subjects and neighbours; and called something or other sacred and glorious when they wanted the people to fight for them. . . .

There was no liberty of the press, because there was no press; but there was liberty of speech in the courts, whose persons were inviolable, and the general motto of their order was *y Gwir ydychyd*—the truth against the world. If any of them, instead of acting up to this splendid profession, chose to advance their personal fortunes by appealing to the selfishness, the passions, and the prejudices, of kings, nobles,

and the rabble, our free-press gentry may afford them a little charity out of the excess of their own virtue.

The laws lay in a small compass; every bard had those of his own community by heart. The king or chief was the judge; the plaintiff and defendant told their own story; and the cause was disposed of in one hearing. We may well boast of the progress of light, when we turn from this picture to the statutes at large, and the Court of Chancery; and we may indulge in a pathetic reflection on our sweet-faced myriads of 'learned friends,' who would be under the unpleasant necessity of suspending themselves by the neck, if this barbaric 'practice of the courts' were suddenly revived.

"As the people did not read the Bible, and had no religious tracts, their religion, it may be assumed, was not very pure. The rabble of Britons must have seen little more than the superficial facts, that the lands, revenues, privileges, and so forth, which once belonged to Druids and so forth, now belonged to abbots, bishops, and so forth, who, like their extruded precursors, walked occasionally in a row, chanting unintelligible words, and never speaking in common language but to exhort the people to fight; having, indeed, better notions than their predecessors of building, apparel, and cookery; and a better knowledge of the means of obtaining good wine, and of the final purpose for which it was made. They were observant of all matters of outward form, and tradition even places among them personages who were worthy to have founded a society for the suppression of vice. It is recorded in the Triads, that 'Gwrgi Gwrlwyd killed a male and female of the Cymry daily, and devoured them; and on the Saturday he killed two of each, that he might not kill on the Sunday!' This can only be a type of some sanctimonious hero, who made a cloak of piety for oppressing the poor.

"When any of the Romans or Saxons, who invaded the island, fell into the hands of the Britons, before the introduction of Christianity, they were handed over to the Druids, who sacrificed them, with pious ceremonies, to their goddess Andraste. These human sacrifices have done much injury to the Druidical character amongst us, who never practise them in the same way. They lacked, it must be confessed, some of our light, and also some of our prisons. They lacked some of our light to enable them to perceive, that the act of coming in great multitudes, with fire and sword, to the remote dwellings of peaceable men, with the premeditated design of cutting their throats, ravishing their wives and daughters, killing their children, and appropriating their worldly goods, belongs not to the department of murder and robbery, but to that of legitimate war, of which all the practitioners are gentlemen, and entitled to be treated like gentlemen."

Shall we be excused, after whetting the appetites of readers with these provoking allusions, if we leave the rest of the banquet to be partaken at the original hostelry? Yes, we must leave many pieces of pleasing poetry suggested by the ancient bards; we must leave the adventures of many British kings; we must leave Arthur and his court; we must leave the feasts of Yule, and other glorious feasting; we must even leave the resuscitated hero of them all, the bibacious Seithenyn, and all the laughable scenes in which he figures supreme,—to be enjoyed over the Misfortunes of Elphin. All that we shall add is, that some sweet, though brief, touches of picturesque description give

variety to one of the most amusing volumes which we have perused for a long, long time.

Yesterday in Ireland. By the Author of "Today in Ireland." 3 vols. 12mo. London, 1829. Colburn.

It is a curious fact, that as history in the present day furnishes materials for the novel, so in a few succeeding years the novel may give many a useful hint for history. This is especially the case with those whose scenes and events are laid in Ireland; and the work before us is acceptable as belonging to this class. It is a clever picture, and we should think as impartially drawn as is possible for one who is himself interested in the subject; but this view of it we leave to the political critic, and content ourselves with doing justice to its literary merit. In minute portraiture of character; in analysis of those slight circumstances which are yet so powerful when they act on the feelings; in occasional observations, often as neatly turned as they are shrewd—our author is among the happiest of his brethren: in the conduct of his story he is less so—it wants what an artist would call foreshortening. The first, Vandeleur, is by far the best. Perhaps the following love-tale will be as acceptable to our readers, and shew the writer's style as well, as any specimen we could choose from the lighter parts:—

"When O'Mahon arrived in France, and had been placed by the interest of Lord Lucan in the body-guard of the king, the sudden change from the solitude of Corramahon, and the society of serfs or barbarians, to the brilliant and seductive court of Versailles, could not but have its natural effect upon one so young. The scene seemed unreal, so bright was it, so happy, so gay! The metamorphosis seemed a dream; and not the more permanent, but the fantastic realisation of some of the most gorgeous pictures of the Arabian Nights, would scarcely have produced a more bewitching and intoxicating illusion. When the imagination is thus heated, the heart is most susceptible, and less guarded from the attack of wild and ambitious passion by the sober whisper of reason. The young *garde*, or page,—for he was no more,—too, shone in all the beauty and health of Irish high birth and rustic breeding. His race and caste had not then sunk, as since, into vulgarity and self-neglect. It was yet the companion of monarchs, and of a monarch's followers; and in the still-upheld balance of parties, the old Irish Catholic families had not so utterly sunk into insignificance and servitude as they had since been driven. At least, the effect of this had not time to shew itself upon themselves and their children. No marvel, then, that bright eyes were attracted to bestow a passing glance upon young O'Mahon; less marvel that he should return them, and that glances so meeting and so exchanged betwixt the lovely and the young, should call forth mutual blushing, which should serve as little mementos; and thence, recurring to the thought, should be laid hold upon as stuff wherewith fancy might form a hero or a mistress, or whereon she might build a fair fabric in the air. It was after this manner that the image of Lady Susan Talbot had been impressed upon the vision of young O'Mahon, and had continued the object of his reveries. A year had elapsed and advanced him in growth and services, ere circumstances allowed him to approach the mistress of his thoughts, to address to her the words of politeness and of gallantry, then and there anonymous. This forced silence and brooding

served to stamp deeper the precocious passion of the youth. The lady was either a grand-niece or grand-daughter of Lord Tyrconnel, who had been James's favourite, his lord-lieutenant in Ireland, and his companion in exile. In rank, in short, and state,* she was a star far above the cadet of a fallen Irish family, a mere body-guard in the service of the French king, who himself had often honoured Lady Susan with his attentions and smiles. She was lovely, indeed, as the imagination of youth, for once truth-telling, depicted her to young O'Mahon. In addition to these many and obvious causes of impediment and hopelessness was, that the lady was his elder; not very many years certainly; but still as we ascend the hill of life, whereon all look forward, at most on each side of them, but never revert their gaze, a few steps in advance is a greater separation than treble the interval upon life's summit or decline. Nevertheless, with the ardour and defiance of either probability or consequence that distinguishes an Irishman's daring, whether in love or in ambition, the stripling O'Mahon hoped, and dared, and even spoke. The latter probably he would not have ventured, but upon some provocation, some sparkling smile, which, though it might have been half excited by his audacity, appeared to him, naturally enough, a flattering though not unjust appreciation of his sincerity and warmth. The youth was eloquent—he was impassioned; and his earnestness and feeling spoke for him beyond his years. The lady listened, and listened, as she could alone listen to such a suitor, in secret. She was at the moment heart-free and suitor-free, and she replied to the youth's passion with a warmth that satisfied him, and with words that raised him to the paradise of his age. To both the hour was sweet—with him it was a lasting sweet. The intoxicating thought of being loved, brought, every hour he pondered longer upon it, still deeper, still more rapturous enthusiasm. With the lovely and mature Lady Susan it was otherwise. She was of that age when, indeed, prudence, mere worldly prudence, that of vanity or ambition, is often sacrificed at the shrine of passion; but she was also of the rational age and time when passion and all else is sacrificed to a fear of ridicule; and loving a boy was ridiculous. She therefore, having elevated poor Roger O'Mahon to the fool's paradise, and having rocked him there a given time to the most luscious of dreams and slumbers, roused him rather abruptly and cruelly from it, by espousing, one bright morning, in the chapel of St. Germain, Lord Auchinleck, a young Jacobite noble, who had preserved a considerable portion of the wreck of his fortunes, and who was prepared to devote both them and his zeal to the cause of the Stuarts. This was a dreadful blow to young O'Mahon, who fell senseless on the news; was taken with a fever in consequence; was long confined and in danger; interested the whole court when the story became known; and started from his illness with such notoriety, and such a character for sensibility, that could he have mustered up heart and courage for gallantry afresh, he might certainly have succeeded with the proudest and the fairest of Versailles. Roger O'Mahon, however, was vastly ashamed of his thus acquired celebrity. He regretted it, though it advanced him; for he was instantly appointed to a favoured regiment. Less honourable causes of promotion have been attended to; but at the same time

he felt that it communicated to him an air of burlesque that he could not shake off. He was too chivalrous to hate the sex; he, however, all but hated it. He dreaded it, and kept his heart, for a long time after, mailed against all its fascinations. He did not indeed fly society; the officer of an active corps has neither leisure nor opportunity for misanthropy. He mingled as before, was as gay, as gallant, and was not the less agreeable or the less sentimental for the little ordeal he had passed. On the contrary, it made him free of many secrets, and gave him a talisman to make his way into the good graces of many; himself secure, it taught him to extract the sweet, and defy the poison."

The lady's consolation after long absence is characteristic, and we pick it out as one of the best bits.

"A boyish passion, in which the disappointment that was natural and unavoidable must have awakened in you a world of sad and tender melancholy pleasures, that else you had not known. Without that cross, my friend, you had scarcely known what love was; for want of the bitters, you had never prized its sweets. Success would have ruined thee, sealed up the fountains of your heart, and made you one of those pert and idle coxcombs whose heads have been addled, and their hearts hollowed, by facile and early conquest."

One or two chance observations, and we have done.

"It is by no means, as wise moralists have said, in sorrow that we need friend or consolation. Grief may be indeed diverted by the expressing of it; the telling of it; but this is an unworthy trick; and the true feeling of sorrow would never allow of such alleviation. It is rather in the first moments of recovery from sadness that we need a friend,—that the ideas take the road to the tongue,—that we demand society or can enjoy it."

"There is for me little to admire in the over-ornamented environs of a wealthy or capital town. The crowded villas, the trim enclosures, the spruce knots of ever-greens and exotics—every object too fine and orderly for Nature—the very grass too green, its over-luxuriance suggesting not its beauty, but its filthy and artificial cause—all these, whatever be the natural beauties of the thickly planted and tenanted circle, fail utterly in inspiring one idea of the rural picturesque. The view of wealth thus overflowing, thus assuming shape, and manifesting itself in pride, is doubtless not without its charm; it may gratify patriotic, or even philanthropic feelings; and the beholder may gladden at these tokens of human happiness and comfort. To me, however, the stamp of selfishness is on all this display. The current of wealth seems collected in tanks, and rivulets, and ornamental ponds, instead of being poured forth abroad to spread general fertility. Ideas of pettiness, and inutility, and narrowness, and of that meanest part of urbanity, called cockneyism, are connected with it;—and, in short, neither the poet, nor the novelist, nor even the simple sentimentalist, can make use of it."

"The free and easy manners of that day, still savouring of the times of the merry Charles, rendered a coffee-house, or other place of public entertainment, a kind of free or neutral port, where strangers laid aside at once the hostility of etiquette, and met on terms of friendship and good will—a state of society very different from that which exists in our days, when not to know a man seems tantamount to despising him, and when persons look upon the honour

of their acquaintance in some such light as maidens do that of their chastity, guarding it with a prudery all as scrupulous and strict. The better bred, nay, even the butterfly fops of those days, such as we find depicted in Wycherley and Farquhar, did not esteem their gentility so perishable as, like the hues of an insect's wing, to be brushed away by the slightest contact. The town, a term synonymous with society, was open to all, whether men of fashion or intruders; and the former felt no fear of being confounded in the vulgar crowd, secure of distinction in the inimitability of their lounge, dress, air, and oaths. In our days, if fashionable writers are to be believed, there exists a 'similar free-masonry of fashion, and the secrets of the 'gentle craft' are, it is vaunted, 'a marvel and a mystery' to the uninitiated. Perhaps so: but certes, those invisible fences must be found sadly inefficient, since they impart no more ease to external and mixed life, and since, even with their aids, we stand in need of the closer protection of our grim looks of mutual defiance."

We believe Mr. Crowe, the author of the English in Italy and France, is also author of the one we now dismiss in the belief that it will be almost as successful as its predecessors; and we have only further to remark, that in book titles, as in some other things, Ireland seems to be retrograding. Who but an Irish author would ever have published *Yesterday in Ireland*, after, and as a sequel to, *To-day in Ireland*? No one; but it belongs to the manufactory-school of publication. *To-day* was rather popular; therefore the trade is tried on, and *Yesterday* is spun out—only a rather inferior fabric; because it is impossible to continue a product of equal value from the refuse of the raw material which was wrought out in the first instance. Now, if *Yesterday* can be sold with a profit, the next tissues would be *Tomorrow in Ireland*, or *A Fortnight since*, or *A Month hence*, till patience was exhausted, and Time no more.

The Poets of Russia.

WE are indebted to M. Pletueff, a native writer, for a disquisition on the Russian poets, whose merits are briefly touched upon in the subsequent sketch.

"The frigid barriers and debasing suberviency to the false refinement of the upper ranks of society, by which the Gallic Parnassus is shackled, could not long comport with the independent spirit of the Russian muse. Love of country awakened and attuned the lyre of Lomonosoff; and the muse withdrew from the haunts of refined life to the still scenes of domestic bliss. It is her misfortune that her wooers should be their own critics, and sit as judges and plaintiffs and defendants in their own cause; she must continue to suffer under this evil ed. ng as Russia remains destitute of the means by which the critical mind can be reared and cultivated. The prevailing use of the French language among the higher ranks has confined the efforts of the dramatic muse; tragedy has been stricken with bombast, and comedy with vulgarity. Yet Osteroff takes an eagle's flight when his pinions are unloosed; then his tragedy becomes admirable: but lyrics are his forte—genuine feeling, depth of thought, an animation full of nerve and nature, and an imagination replete with power and energy, characterise his muse, whenever he bursts the trammels of conventional refinement. Der-schawin's lofty enthusiasm, independence of feeling, and strength of expression, fit him to

* This is pretty phraseology, and emblematic of the rapidity of the steam system.

had the van among Russian poets; it is he who has called the modern dialect of Russia into existence, and shed a halo of literary glory on the age of Catherine the Second. Kapnist, inferior to the last-named in imagination, but superior to him in elegance and facility of expression, trends in the steps of Horace, whom he idealised among his fellow-countrymen. Osteroff occupies a distinguished rank in tragedy, though this is the most barren and least original of any branch of our native literature. Lafontaine is the modeller who has imparted a facile and playful expression to the pens of Bogdanowitch and Chenizer: the Russian idiom, indeed, has a peculiar susceptibility for the light and lively. Dmitrieff, by his easy flow and purity of his style, and Kriloff, by his originality, depth, and nationality, have acquired great celebrity, and eminently raised the character of the apologue, epistle, satire, and lyric. In the novelist's department, Kriloff's *Gerasak* will always remain a living model. Nedelinkij is an enthusiast, and captivates the reader by depth of thought and melody of style. Shukoffskij, the creator of the modern school of poetry in Russia, is full of profound poetical feeling, as well as distinguished by the purity of his taste; and possesses a perfect mastery of the most recondite lore of his native tongue. His whole soul is wrapped in romance, and his chiller and Byron are his household gods. Benschhoff is equally great, though in another field: susceptible as Tibullus, there is a pathetic and a sweetness and tenderness of expression about his poetry, which soothe and harmonise the feelings. One of the most eminent and original of Russian lyrists is Puschkin: his *Lednitsa*, Russia, the Imprisoned, and Baktchisarai, would excite admiration in the most refined societies of Europe. Gneditch, who has translated the *Iliad*, ranks high as a pastoral poet; his Fishermen can never sink into oblivion; he is the 'knight militant' of classical literature among his countrymen. Davidoff and Prince Wassenskoi stand at the head of Russian humorists: the war-songs of the former are as brilliant as the offspring of Anacreon's muse; the latter has signally chastened and refined the vulgar tongue, and shines as the wittiest of Russian rhymers. Glinka is distinguished by the tenderness of his allegories; Rylejeff is sought after for his ballads; Hermann Delwig has acquired a name as a dramatic poet; and Alex. Kriloff, who is replete with manliness and feeling, sweeps the lyric line in the full fervour of his own imaginings. Samarskij is an elegiac poet: deep, clear, and animated, he forms himself on the model of the ancients. Jessikoff is an enthusiast, lofty in his conceptions, and fervent in his patriotism: his competitor, Michael Dmitrieff, is sweeter and more correct. Pissariëff shines as a painter of nature, and delights by the easy structure of his metre. Wassilj Tumenakij seizes more upon the heart; and Rosloff, who is both lame and blind, drinks at the fountain of classical lore, and reigns sublime in lyrical compositions." Few of these poets have collected their pieces together; they lie scattered in the columns of newspapers and periodicals; and for this plain reason, there are more poets than readers in Russia, and the book-trade has scarcely crawled out of its cradle.

Dr. Hall's New System of Geology: concluded. As we observed in our last, it is impossible for us to convey a full idea of the value of this valuable work, and especially of that most interesting division of it to which our previous remarks have brought us: We can only

afford imperfect examples, and the following passages seem as capable of insulation as any other under this head.

"In the early epochas of the antediluvian world, soon after the granitic atlas had uplifted the primitive mountains, and before the extensive series of mineral beds, which occupy our second book, were deposited beneath the ocean, its waters resting on the nearly concentric, or slightly broken zones of gneiss and mica slate, necessarily lay in closer proximity with the interior fires than at any subsequent period. Hence two important consequences:—1. From the thinness of the solid crust, the smallest chink or fissure in it would be an immediate focus of submarine explosion, accompanied and followed by a commensurate comminution and dispersion of the solid rocks and organic deposits through the agitated waters. 2. The ocean would then attain its maximum temperature; a pitch certainly far higher than at present, yet not incompatible with the vital functions of fish, many of which, according to Humboldt, can live in water almost boiling hot. Desfontaines found the *sparus* thriving in tepid fountains of 100° Fahr. near the town of Cassa, in the kingdom of Tunis. From the extreme mobility of its molecules, water is the most expeditious conveyer of heat from below upwards; while, from its non-conducting quality it is a most faithful carrier, losing none of it during its ascent. Hence any degree of warmth, however gentle, imparted to the bottom of the oceanic mass, will be transmitted unimpaired to the surface. And again, as water possesses a very high specific heat, one four times greater than air by weight, so that five gallons of water in cooling only one degree F., can warm by the same quantity 2050 cubic feet of air, being the contents of a chamber about 16 feet square and 104 feet high,—we see what a genial climate would be created over the earth, from pole to pole, under such an order of things. Then the intrinsic source of terrestrial heat, having its diffusive energy but slightly obstructed, would be paramount over the solar; so that the position of the sun, relative to the equator, would act a very subordinate part in modifying climate, instead of being its sovereign arbiter, as at the present day. Plants which love a warm but humid atmosphere, like the *equisetums*, ferns, &c. would multiply and flourish under such circumstances with nearly equal vigour in the Arctic Regions, as under the Line. Hence also the difference of equatorial and polar temperatures would be at first comparatively small, so that a considerable uniformity of vegetation would pervade the most distant zones. We need not, therefore, be surprised at finding the same *calamites*, or gigantic *equisetums* buried among the coal-measures of New Holland (near Port Jackson), and of England; though now-a-days, that plants are subjugated to the undivided empire of the sun, they differ in species with very moderate variations of latitude, and with every change of hemisphere.

"The first age of the world, then, extending probably through several centuries, fully realised the universal and unfading spring of the poets. Under such fostering powers of vegetation, the coal-measure plants were matured, in countless myriads, with a rapidity to which modern experience can furnish no parallel. But the tremendous catastrophes of the crust of the earth, that took place soon after this period, of which the dislocations and disruptions of the coal-strata themselves exhibit magnificent memorials, generated a vast quantity of detritus from the older rocks, which, at first diffused through a turbid ocean, progressively

subsided on its bottom in the chemical order of deposition; constituting beds of conglomerate limestone, red marl, and *lias*; in variable proportions of thickness and extent, according to the nature of the exploded and comminuted rocks. In the secondary formations of geology, in fact, we see nothing but a repetition of mineral *triads*; shells more or less fractured, covered with a twofold coat, the undermost of sand or sandstone, the uppermost of clay more or less indurated. The tepid ocean-bed vied in fecundity with the glowing soil round its shores, and thus was covered with a thick deposit of shell-fish and their exuvie. At each rencounter of the water and subjacent explosive metals, these shells would be more or less scattered and broken down, and when tranquillity returned, covered with their silicious and argillaceous mantles.

"In considering the causes of these mighty revolutions, which have subverted the outer frame-work of the ancient world, and which seem to have occasioned many unrecorded inundations, before the universal deluge, we must be careful to distinguish between the effect of a moderate expansive force acting within the crust of the earth, and that of a very great one; the former, like the late earthquakes in Chili to be presently described, sufficing merely to raise in an unbroken plain a large tract of land, while the latter would shatter the shell into fragments, and lay them prostrate under the equilibrating powers of gravitation in a revolving sphere. Thus to compare great things with small, a moderate blast of gunpowder, under a stratum of freestone, in a cliff, will be adequate merely to lift it along with its superjacent soil; but a greater explosion will break it into pieces, and strew the detritus over the surrounding planes and hollows. A few masses may, no doubt, be tossed up to great heights; but the general effect will be a levelling one; as is simply illustrated in the mining operations of a siege, where the massive ramparts of masonry are scattered along the bottom of the fosse. We have therefore every physical reason to conclude that each great antediluvian convulsion of the earth extended the empire of the sea, and abridged the boundaries of the land by a permanent submersion of some of its regions; mechanical effects involving commensurate physical changes of climate; 1. by the thickening deposits of the ocean; 2. by the increase of the cooling or aqueous surface of the globe; and 3. by the decrease of the heating or terrene, as will be fully developed in treating of the deluge in the fifth chapter."

Chapter 4, entitled *elevation of submarine strata*; Chapter 5, *phenomena of the deluge*; and Chapter 6, *animal remains or ruins of the deluge*,—are replete with much geological information, in so condensed a form as to be hardly susceptible of further abridgment. We shall, therefore, conclude our analysis of this entertaining volume by the following extract from the seventh chapter, on the *present earth, and era of its emergence*, to show our readers the author's manner of reconciling physical research to sacred history.

"The ancient world possessed a middle constitution between these two extremes. Its superficial temperature was not very unequable from pole to pole, and its expanse of humid surface was less relative to that of its dry land. Thus the causes of atmospheric commotion were fewer and feebler; and the phenomenon of rain must have been very rare, except on some insular circumpolar coasts. The exhalations from the tepid seas would diffuse abundance of aqueous nourishment to the cactuses, palms, and

cyanoesides of its glowing plains. Immediately after the flood, however, the sea-soaked lands would send up universal exhalations round the chilly globe; whence showers and rainbows would become, for some time at least, almost daily appearances. This conclusion of physical research coincides well with our ancient history of the new-drained earth. 'And God said, This is the token of the covenant which I make between me and you, and every living creature, that is with you for perpetual generations: I do set my bow in the cloud, and it shall be for a token of a covenant between me and the earth. And it shall come to pass, when I bring a cloud over the earth, that the bow shall be seen in the cloud. And the waters shall no more become a flood to destroy all flesh.'—*Genesis*, ix. The ark preserved eight intelligent witnesses, come to mature age, of antediluvian skies and seasons. Had a shower of rain been as common before the flood as it was after it, then the rainbow being a necessary result of the refraction and reflection of the sunbeams by the sheet of falling drops, must have been often seen by the family of Noah in the land of their birth, and could not, therefore, be now hailed by them as an infallible seal of a peculiar covenant, graciously bestowed by their reconciled Ruler. He had just appeared in an awful light—as the inexorable judge of their guilty sympathies. Anxiously might they lift their eyes to heaven for some new token to inspire confidence in the stability of the new order of nature; to encourage them to diligence in their enjoined task of replenishing the earth. It is therefore evident, both from the emphatic words in which the meteoric ensign of heaven's favour is announced, as well as from the holy purpose which it was ordained to serve, that it must have been equally strange as it was glorious in their sight; for antediluvians occupying possibly on their devoted lands a portion of its great continent, now covered by the Pacific, might never have witnessed a sunshine shower. A canopy of clouds, indeed, might often be stretched in the cooler upper regions of their skies; but the aqueous vesicles, in descending through the warmer aerial strata below, would return again to invisible vapour, a process fully described in Book I. chap. 3. In such clouds, no bow could be set. Heavy dews deposited during the night and early dawn, from the well-known influence of a ground chilled by calorific radiation, would supply the place of rain for vegetable sustenance; as now happens in Lima and many other regions of our present globe. I had deduced these corollaries from the hygrometric laws laid down in treating of the atmosphere, before my attention was directed to the following curious historical notice of primeval meteorology. It affords a very beautiful, and to me quite unexpected accordance, between the results of Science and the records of Faith. 'For the Lord God had not caused it to rain upon the earth, and there was not a man to till the ground. But there went up a mist from the whole earth, and watered the whole face of the ground.'—*Genesis*, ii. 5, 6. This document, at which a scientist might possibly sneer, is in reality a powerful testimony to the truth of Moses. The rainbow thus becomes a most significant emblem of God's providential regard to man. It is a phenomenon which results from, and declares the remodelled constitution of the terraqueous sphere. It is a type of sin and suffering, of expiation and peace; a vision where the heaven-ward soul may discern the sublimest truths of Revelation and Science."

Five copper-plates represent seventy fossil-

shells, characteristic of the successive strata: the first plate exhibiting those of the carboniferous limestone; the second, those of the lias; and so of the others. There is a beautiful lithograph of a petrified plant in sand-stone, which abounds in a certain coal formation in Argyleshire. It resembles the *Cactus cylindricus*, as described by Von Martius. The woodcuts interspersed through the letter-press afford accurate representations of some of the most interesting objects in mineral structure and organic remains. Several characteristic teeth of the more important fossil animals are portrayed.

To conclude, we can honestly recommend this work to every class of readers. It communicates, in perspicuous and pleasing language, a vast variety of knowledge concerning the structure and revolutions of our planet and its ancient kingdoms of life; and, at the same time, demonstrates, in a very satisfactory manner, the harmony which subsists in every essential point between the conclusions of science and the Mosaic narrative of the Creation and the Deluge. Indeed, we have no hesitation in saying, that it is a most, if not the most, valuable contribution which Physics has made to the evidences of Revelation.

Journal of a Naturalist: continued.

We had too much pleasure in this volume to quit it abruptly: *ergo* we go on with it.

Speaking of the singular habits of the snapdragon, and other insect-imprisoning or destroying plants, the author says—

"It is a perplexing matter to reconcile our feelings to the rigour, and our reason to the necessity, of some plants being made the instruments of destruction to the insect world. Of British plants we have only a few so constructed, which, having clammy joints and calyxes, entangle them to death. The sun-dew (*drosera*) destroys in a different manner, yet kills them without torture. But we have one plant in our gardens, a native of North America, than which none can be more cruelly destructive of animal life, the dogbane (*apocynum androsa-mifolium*), which is generally conducive to the death of every fly that settles upon it. Allured by the honey on the nectary of the expanded blossom, the instant the trunk is protruded to feed on it, the filaments close, and, catching the fly by the extremity of its proboscis, detain the poor prisoner writhing in protracted struggles, till released by death,—a death apparently occasioned by exhaustion alone; the filaments then relax, and the body falls to the ground. The plant will at times be dusky from the numbers of imprisoned wretches. This elastic action of the filaments may be conducive to the fertilising of the seed, by scattering the pollen from the anthers, as is the case with the berry; but we are not sensible that the destruction of the creatures which excite the action is in any way essential to the wants or perfection of the plant; and our ignorance favours the idea of a wanton cruelty in the herb; but how little of the causes and motives of action of created things do we know! and it must be unlimitable arrogance alone, that could question the wisdom of the mechanism of Him 'that judgeth rightly;' the operations of a simple plant confound and humble us, and, like the hand-writing on the wall, though seen by many, can be explained but by ONE.

"All the varieties of this snapdragon have the power of maintaining a state of vegetation in great droughts, when most other plants yield to the influence of the weather; and it

is the more remarkable in these plants, as the places in which they chiefly delight to vegetate are particularly exposed to the influence of the sun. In that hot dry summer of 1825, when vegetation was in general burned up and withered away, yet did this plant continue to exist on parched walls, and draw nutriment from sources apparently unable to afford it; not in full vigour certainly, but in a state of verdure beyond any of its associates. The common burnet (*poterium sanguisorba*) of our pastures, in a remarkable degree likewise possesses this faculty of preserving its verdure, and flourishing amid surrounding aridity and exhaustion. It is probable that these plants, and some others, have the power of imbibing that insensible moisture which arises from the earth even in the driest weather, or from the air which passes over them. The immense evaporation proceeding from the earth even in the hottest season, supplies the air constantly with moisture; and as every square foot of this element can sustain eleven grains of water, an abundant provision is made for every demand. We can do little more than note these facts: to attempt to reason upon the causes why particular plants are endowed with peculiar faculties, would be mere idleness; yet in remarking this, we cannot pass over the conviction, that the continual escape of moisture from one body, and its imbibition by another, this unremitting motion and circulation of matter, are parts of that wonderful ordination, whereby the beneficence and wisdom of Providence are manifested; without the agency of evaporation, not dwelling on the infinitude of effects and results, no vegetation could exist, no animal life continue. The ivy (*hedera helix*), the dark-looking ivy, almost covers with its thick foliage the pollards in our hedges; and, creeping up the sides of the old barn, and chimney of the cottage, nearly hides them from our sight; affording a sheltered roosting-place to many poor birds, and is almost their only refuge in the cold season of the year. But the ivy can boast of much more extensive service to the poor wayfaring beings of creation, than the merely affording them a covering from the winds of winter. Those two extreme quarters of our year, autumn and spring, yield to most animals but a very slender and precarious supply of food; but the ivy in those periods saves many from want and death; and the peculiar situations in which it prefers to flourish, are essential to the preservation of this supply, as in less sheltered ones it would be destroyed. In the month of October the ivy blooms in profusion, and spreading over the warm side of some neglected wall, or the sunny bark of the broad-ash on the bank, its flowers become a universal banquet to the insect race. The great black fly (*musca grossa*), and its numerous tribe, with multitudes of small winged creatures, resort to them; and there we see those beautiful animals, the latest birth of the year, the admiral (*vanessa atalanta*) and peacock (*vanessa io*) butterflies, hanging with expanded wings like open flowers themselves enjoying the sunny gleam, and feeding on the sweet liquor that distils from the nectary of this plant. As this honey is produced in succession, by the early or later expansion of the bud, it yields a constant supply of food, till the frosts of November destroy the insects, or drive them to their winter retreats. Spring arrives and in the bitter months of March, April, and even May at times, when the wild products of the field are nearly consumed, the ivy ripens its berries, and then almost entirely constitutes the food of the miscel-thrush, wood-pigeon

and some other birds; and now these shy and wary birds, that commonly avoid the haunts of man, constrained by hunger will approach our dwellings, to feed upon the ripe berries of the ivy. Now too the blackbird and the thrush resort to its cover, to conceal their nests. These early-building birds find little foliage at this period sufficient to hide their habitations; and did not the ivy lend its aid to preserve them, and no great number are preserved, perhaps few nests would be hidden from the young eyes that seek them. The early expansion of the catkins of the willow (*salix caprea*), and others of the willow tribe, whence the bee extracts its first food, and the late blooming of this ivy, are indispensable provisions for the existence of many of the insect race; the 'young raven does not cry in vain,' nor is any thing abandoned by that Power which called it into being. We all seem to love the ivy,

'The wretched ivy wreath'd in amorous twines,' more than any other uncultured evergreen that we possess."

When treating of the foxglove, now digitalis, the following pertinent remarks occur:—

"Why such a name as 'foxes-gloves' was bestowed upon this plant it is difficult to say, perhaps from the bare resemblance to finger-cases presented by its flowers: but I am not one of those who caviil or jeer at the common, or 'vulgar names,' as we are in the habit of designating the unscientific appellations of plants; for we must remember, that the culling of herbs and simples, and compounding preparations from them, to relieve the sufferings of nature, were the first rudiments of all our knowledge, the most grateful exertion of human talent, and, after food and clothing, the most necessary objects of life. In ages of simplicity, when every man was the usual dispenser of good or bad, benefit or injury, to his household or his cattle—were the veterinary art was known, or the drugs of other regions introduced—necessity looked up to the products of our own climate, and the real or fanciful virtues of them were called to the trial, and manifests the reasonableness of bestowing upon plants and herbs such names as might immediately indicate their several uses or fitness for application; when distinctive characters, had they been given, would have been little attended to; and hence the numbers found favourable to the cure of particular complaints, the ailments of domestic creatures, or deemed injurious to them. Modern science may wrap up the meaning of its epithets in Greek and Latin terms; but in very many cases they are the mere translations of these despised 'old, vulgar names.' What pleasure it must have afforded the poor sufferer in body or in limb,—what confidence he must have felt for relief, when he knew that the good neighbour who came to bathe his wounds, or assuage his inward torments, brought with him such things as 'all-head, break-stone, bruise-wort, gout-wood, fever-few' (figio), and twenty other such comfortable mitigators of his afflictions: why, their very names would almost charm away the sense of pain! The modern recipe contains no such terms of comfortable assurance; its meanings are all dark to the sufferer, its influence unknown. And then the good herbalist of old professed to have plants which were 'all-good:' they could assuage anger by their 'loose-strife;' they had 'honesty, true-love, and heart's-ease. The cayenne, the aye, the catsup, and extra-tropical condiments of these days, were not required, when the next thicket would produce 'poor

man's pepper, sauce-alone, and hedge-mustard;' and the woods and wilds around, when they yielded such delicate viands as 'fat hen, lamb's-quarters, way-bread, butter and eggs, with codlins and cream,' afforded no despicable bill of fare. No one ever yet thought of accusing our old simplers of the vice of avarice or love of lucre; yet their 'thrift' is always to be seen: we have their humble 'pennywort, herb twopence, moneywort, silverweed, and gold.' We may smile, perhaps, at the cognomens, or the commemorations of friendships, or of worth, recorded by the old simplers—at their herbs, 'Bennet, Robert, Christopher, Gerard, or Basil;' but do the names so bestowed by modern science read better, or sound better? it has 'Lightfootia, Lapeyroussia, Hedwigia, Schkuchia, Schuchzeria;' and surely we may admit, in common benevolence, such partialities as 'good King Henry, sweet William, sweet Marjory, sweet Cicely, Lettuce, Mary Gold, and Rose.' There are epithets, however, so very extraordinary, that we must consider them as mere perversions, or at least incapable of explanation at this period. The terms of modern science waver daily; names undergo an annual change, fade with the leaf, and give place to others; but the ancient terms, which some may ridicule, have remained for centuries, and will yet remain till nature is swallowed up by art. No: let our ancient herbalists, 'a grave and whiskered race,' retain the honours due to their labour, which were most needful and important ones at those periods; by them were many of the casualties and sufferings of man and beast relieved; and by aid of perseverance, better constitutions to act upon, and faith to operate, than we possess, they probably effected cures which we moderns should fail to accomplish, if attempted."

On the prevalence of the yellow colour in natural objects, it is stated—

"The bark, the wood, the flower, the leaves of many of our native trees and plants afford a yellow dye;—we have no colour so easily produced as this is; and it is equally remarkable, that, amidst all the varied hues of spring, yellow is the most predominant in our wild and cultured plants. The primrose, cowslip, pilewort, globe-flower, butter-cup, sherlock, crocus, all the cabbage tribe, the dandelions, appear in this dress. The very first butterfly, that will

'aloft repair,

And sport and flutter in the fields of air,'

is the sulphur butterfly (*gonopteryx ramni*), which in the bright sunny mornings of March we so often see under the warm hedge, or by the side of some sheltered copse, undulating and vibrating like the petal of a primrose in the breeze. The blossoms of many of our plants afford for the decoration of the fair a vast variety of colours and intermediate tints; but they are all of them, or nearly so, inconstant or fugitive before the light of the sun, or mutable in the dampness of the air, except those obtained from yellow flowers; circumstances may vary the shade, but yet it is mostly permanent. Yellow is again the livery of autumn, in all the shades of ochre and of orange; the 'sere and yellow leaf' becomes the general cast of the season; the sober brown comes next, and then decay.

"Badgers are said to feed much upon the fruit of the bramble. They are certainly very fat and fleshy about the time that the blackberry is ripe; but it is probable that the acorns and crabs, which it finds at the same season, contribute most to its nourishment."

SIGHTS OF BOOKS.

The Influence of Physical Education in producing and conforming, in Females, Deformity of the Spine. By E. W. Duffin, Surgeon. 8vo. London, 1829. G. Swire.

THE attention of the public has of late years been directed to this class of distortions by several valuable and scientific treatises; amongst which, those of Bamfield, Shaw, and Harrison, hold a conspicuous place. The essay now before us, though of more humble pretensions, is no less adapted, on that account, to produce much good, by pointing out many causes which, from the frequency of their occurrence, or their apparent insignificance, being apt to be overlooked, may tend to deform the beautiful and symmetrical shape originally bestowed by nature on many of the fairest of our kind, who, from want of due attention, at an early period, to what may seem of trivial import, become, finally, in some instances, not only objects of commiseration, but a burden to their friends, and unable to fill that station in society which they would otherwise be calculated to adorn.

Mr. Duffin's work, though designed for general readers, more especially for those engaged in the superintendence of female education, contains many practical and professional observations worthy of attention, and is written in a style at once clear, familiar, and concise. His remarks are principally directed to specifying the different moral and mechanical causes, resulting from the modern system of female education pursued in this country, that tend to induce, by their influence on the general system, deformity of the spine; and to inculcating certain rules to be observed in regard to the period allotted to study, dress, exercise, &c., by which these causes may be in a great measure avoided. Amongst other observations, we would direct the attention of our female acquaintance to the strictures on modern apparel; and that of parents to the influence of a too early cultivation of the minds of children. In conclusion, we may observe, that although the author has not advanced much absolutely new, he has presented a collection of facts not perhaps easily remembered in the perusal of more voluminous works; and, by divesting his remark of all technicalities of language, has well adapted it to the class of readers for whom it is principally designed, and by whom the subject has not hitherto been sufficiently regarded.

Geographical and Biographical Exercises. By the late William Butler. The 16th edition, enlarged by his son, John Olding Butler, with an entirely new set of Coloured Maps. London, 1829. Harris.

THE fact of these Exercises having attained the sixteenth edition supersedes the necessity of any other recommendation; nor should we have departed from our usual rule of passing by literary products which the fostering sunshine of public favour has fully matured, had not our attention been attracted by the new and elegant outline maps which distinguish this little manual. These maps, eleven in number, embrace not only what is most essential for young beginners, but also those more important features in geography which may serve as useful recollections for the advanced scholar. Their utility is therefore twofold. As a correct delineation of the grand outlines of the four quarters of the globe, and of the British Isles, they are entitled to much praise; while their intrinsic merit is enhanced by the obvious colours in which they are arrayed, and which seem to invite the youthful eye to an

investigation of their contents. Much useful information will be found in the Geographical and Biographical Exercises which illustrate the maps; and in the biography some excellent moral truths are conveyed, which, if they do not conduct learners to the temple of fame, will at least lead them to that not less desirable distinction, of being good, and therefore happy, members of society.

Early Impressions; or, Moral and Instructive Entertainment for Children, in Prose and Verse. With twelve Designs by Dighton. 12mo. pp. 215. London, 1829. Hatchard.

It might be supposed, from the beginning of this little volume, that it was simply a child's book, the object of which was merely to amuse the infantine mind, in the usual, and that no very luminous, way: in fact, that many other books did the same thing in much the same manner. On examining, however, somewhat farther, and looking into the spirit of the book, we discover that it is not only calculated to afford amusement to children, but that its object is to bring their minds early to a knowledge of those principles which are indispensably necessary to them in future life, and by a study of which their minds are led to a right use of ideas, and taught to appreciate the beauties and advantages of good conduct, and the disadvantages and shame attending on bad. These are the main features of the work. As to the language, it is as it should be for children—plain and unsophisticated; the arrangement well managed, and such as might be expected from the pen of a barrister, who, as he professes in his preface, would really seem, by thus going out of the usual track of the profession, to have had in view the benefit of the youthful portion of mankind.

Longhollow: a Country Tale. By Mrs. Bryan Bedingfield. 3 vols. London, 1829. Whittaker, Treacher, and Arnot.

A NOVEL, quite of the old school: to criticise it severely would be an unnatural act; and we would not be harsh on our grandmamma's tastes.

Modern Precedents in Conveyancing, arranged on a new and simple Plan. By John Hall, Gent. Part I. 8vo. pp. 304. London, 1829. J. and W. T. Clarke.

WE have no doubt of the value of this collection of precedents to the conveyancer and to the lawyer; but we must confess, as mere lay persons, we look with rather a jaundiced eye upon a profession which can by possibility require the farrago of words, the immense tautology, the continual amplifications, which are to be found in these Precedents. The "uses, trusts, provisoes, conditions, restrictions, limitations, covenants, and agreements, herein contained," are absolutely enough.

To fright the laie from its propriety.

We recommend the work strongly to the legal profession, not for its intrinsic value—of which we are not very good judges—but as an eminent and obvious example of the necessity for amendment in our legal (or conveyancing) code.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

Friday evening, Feb. 27.

THE subject for this evening's consideration was, "on Brard's test of the action of weather on building-stone and materials;" by Mr. Faraday.

The lecturer observed, that so long ago as

1823, Mr. Brard was urged by his friends to examine into the manner in which stones were disintegrated by the action of water and frost; and, if possible, to discover some means of ascertaining in a short period of time what would be the effect of "weathering" in many years: this he succeeded in accomplishing; and the object of this evening's meeting was to give an account of the test and the confirmation of its value, from experiments made some years since by Mr. Faraday, and more recently also in France.

The general action of the atmosphere, and the substances occurring in it, were first remarked upon, a division being made into chemical and mechanical agencies: with the exception of the deterioration of certain granite rocks and some others similarly constructed, chemical action was considered as doing more good than harm; and when exerted through the agencies of carbonate of lime or oxide of iron, tending to harden and bind the building-stone, rather than to loosen it: all effects relative to the mutual action of cement and stone were purposely kept out of view.

Mr. Faraday then described the mechanical effects of the atmosphere and those most important ones of water and frost: the way in which water acted when frozen in the pores of stones, was also illustrated, and the general disintegration of building-stones elucidated by a reference to the bridges and other structures in London, and likewise to specimens received from the Asiatic Society, which, after exposure for centuries to the atmosphere in the East, had the effects produced upon them contrasted with what had taken place on the same stones by a few years exposure in England.

Mr. Faraday next described the test as consisting in the crystallisation of certain saline solutions, to which pieces of stones have been submitted in the following manner:—sawn cubes, about two inches in the side, are to be numbered, then boiled for half an hour in a solution of sulphate of soda saturated at common temperatures, and then exposed to air, that evaporation may proceed; the salt crystallises, and produces the effect of freezing; the specimens are then to be dipped in a portion of the same solution, cold, until the acicular crystals fall; they are again exposed to the air; this process repeated, five days equals the effect of frost upon stones in our climate in many years: if the angles of the stone be much injured, it will suffer to a corresponding degree by air. The process was illustrated by specimens in progress, which shewed the different states. The lecturer, in taking leave of his subject, observed that the test had been tried upon English slates some years ago, immediately after Mr. Brard's publication, and gave results agreeing with the received values of the slates in the market: it had also been tried and acknowledged in France. He then gave minute directions for its use, and referred those who wished to pursue the subject farther, to the *Bibliothèque Universelle*, vol. xxiv. page 224, and other works.

As is the case when Mr. Faraday lectures, there was a very great attendance of members and their friends: his Grace the Duke of Somerset, the president of the Institution, was in the chair; many architects were also present, and appeared to be highly interested in the subject.

In the library were various specimens of Hindu sculpture, some of them very graceful: they had been used in external decoration, and the principal object of their exhibition was to shew to what extent disintegration had gone

in that country. Amongst the presents was Mr. Provis's magnificent account of the *Mesut* chain bridge.

LINNEAN SOCIETY.

MAR. 3.—A. B. Lambert, Esq. V.P. in the chair. An interesting collection of dried plants from the deserts of Sinai and Akkaba, in Arabia, and a cone of the *Arancaria imbricata*, or Chili pine, from the mountains of Chili, were laid before the meeting.

Mr. Hay, Under-Secretary of State for the Colonies, and Mr. Schenley, his Majesty's Consul at Puerto Cabello, were elected fellows of the Society.

The continuation of Mr. Don's paper on the new genera and species of the class Composite, belonging to the Floras of Peru, Chili, and Mexico, was read.

SOCIETY OF ARTS.

FEB. 24.—A paper was read by the Secretary, on printing in stereotype. It was introduced by a general summary of the invention of printing. The near approach to printing made by the ancients in their signet-rings, stamps, brands, &c. was first noticed; then the stamping of playing-cards, &c. by the Venetians, about the end of the 14th century: to this succeeded a description of early wood-engravings, on single blocks, of saints and Scripture subjects, containing a few words of explanation, often in the form of labels proceeding from the mouth of the principal figure. The gradual transition of these single wood-engravings to the *image-books*, consisting of a number of such engravings in pairs, back to back, and sewed together in a common cover, was then noticed, and illustrated by specimens. A comparison was made between these block-books and the books now printed in China and Japan: the great similarity of the two modes was pointed out; and a set of Chinese printing-blocks, with the tools used in cutting them out, as well as those employed in the process of printing from them, was exhibited, having been procured from the museum of the East India Company.

The improvements made by Guttenberg in the fifteen or twenty years succeeding the year 1436, were next detailed; namely, the decomposition of the single wooden block into movable wooden types; the substitution of metal for wood, as the material in which movable types were cut; and, lastly, the employment of cut metal types only as matrices from which the types actually employed were cast. Some manuscript missals and specimens of early printing were exhibited; and the causes of the high state of perfection attained by this art in the first century after its invention, were discussed.

The Secretary then proceeded to the subject of stereotype. He stated the difference between modern stereotype and that used about the beginning of the eighteenth century by J. Vander Mey, the Dutch printer. He then mentioned the independent invention of proper stereotype by Ged in Scotland, and by Valleyre in France, and its subsequent improvements by Dr. Tilloch and Mr. Foulis, of Glasgow; by Mr. Wilson and Earl Stanhope, by Mr. Cowper, Mr. T. C. Hansard, and others, in London.

The various processes in the manufacture of stereotype plates were then detailed, and elucidated by the exhibition of specimens and of the apparatus employed: the art of bending stereotype plates, in order to adapt them to cylinder machine-printing, was noticed as the

invention of Mr. Cowper. The subject was considered by a description of the French mode of forming stereotype plates *en cliché*, and a statement of the advantages and disadvantages of stereotype printing.

The specimens in illustration of the dissertation were manuscripts and early printed books furnished by Mr. Windus, Mr. Lincoln, and Mr. Howard; samples of stereotype, and of casts in type of medals, of lithography, and of copper-plates, from Messrs. Clowes, Mr. T. C. Hansard, Mr. Kelsall, Mr. Chater, and Mr. Newberry.

There were also exhibited some exceedingly fine specimens of ornamental castings in iron made at Berlin, from the collection of James Yates, Esq.; also a picture by Wilkie; drawings by Danby, Doo, Denning, Martin, Robinson, Turner, Stephanoff, Stothard, and Uwins; an engraving by Vendramini of the fine picture of the Raising of Lazarus, by Sebastian del Piombo; and of the portraits of Miss Croker, the Duke of Wellington, and the late Pope, by Cousins, from paintings by Sir T. Lawrence. A superb Japanese screen was sent by Mr. T. Cooper, of Bond Street. Two models of sounding-boards were sent by the Rev. J. Blackburn, illustrative of his paper on the subject in the last volume of the Philosophical Transactions. A very interesting series of gums, resins, balsams, and gum-resins, was sent by Mr. H. Hensell; and specimens of the gold, silver, and copper coins of the present King were exhibited by Mr. W. Wyon, principal engraver to his Majesty's Mint.

MEDICAL AND CHIRURGICAL SOCIETY OF LONDON.

At the anniversary meeting of this Society, held last Monday, Dr. Roget was elected president; Dr. Billing, Dr. Gordon, C. A. Key, Esq., and F. Tyndal, Esq., vice-presidents; Dr. Roget and H. Knap, Esq., treasurers; Dr. Alderson and J. F. South, Esq., secretaries; Dr. M. Hall and F. C. Skey, Esq., librarians. The other members elected on the Council were—Dr. B. Babington, Dr. Burne, T. W. Chevalier, Esq., Dr. Gairdner, R. D. Grainger, Esq., J. Hammerton, Esq., Dr. F. B. Hawkins, Dr. R. Lee, G. Macdewain, Esq., J. Sweetman, Esq.

INSTITUTION OF CIVIL ENGINEERS.

FEBRUARY 17th.—Mr. Jopling explained the peculiar properties of two newly invented instruments; one, by a simple arrangement, producing the ellipse; the other, already noticed, as describing the Ionic spiral. The time usually devoted to discussions was occupied in a thorough investigation of the advantages ascribed to these inventions, which merited general approbation; and the thanks of the Institution were accordingly voted to Mr. Jopling.

24th.—A paper on "generating ellipses," illustrated by drawings, was presented and read. The author, Mr. Jopling, particularly instanced the ease of setting out large elliptic arches—a tedious and difficult operation—which he has endeavoured to simplify.

A conversation on the subject of roads ensued. The question discussed was, "What materials, durability and cheapness considered, are the best for the roads in clay countries, particularly about London?" Mr. MacNeil presented a specimen of paving which he had lately applied near London, and which forms a substantial foundation for roads over clayey soil. It is composed of gravel stones cemented together, and is used as a substratum before the application of the surface road-metal. Im-

provements are much to be desired on the metropolitan roads, where defects in expenditure, construction, and management, are so eminently conspicuous: and it is in the above-mentioned localities that art must counteract natural disadvantages, to render uniformly perfect our internal communications, now become the test of our civilisation, and the bond of our social and political union.

MEDICO-BOTANICAL SOCIETY.

TUESDAY, Feb. 24.—Earl Stanhope, President, in the chair. His Majesty Francis King of Naples, and the Prince Royal of Prussia, were elected Honorary Fellows; T. R. G. Bourke, Esq. Secretary to the Danish legation, now in London, was admitted a foreign member. His Grace Hugh Duke of Northumberland, K.G., Sir John Webb, M.D. and others, were severally elected Fellows. A letter from Count Ludolf was read, which intimated that the King of Naples had ordered a copy of the *Flora Napolitana*, and other botanical works, to be presented in his majesty's name to the Society. A paper touching several medicinal plants, which lay on the table, was read: another paper was also read on the esculent root of *stachys palustris*, in which the author, Mr. Houlton, suggests the specific name of *tuberosa* as more appropriate than that of *palustris*, from the tubers attached to its roots.

Mr. Frost made some observations on a numerous collection of medicinal plants exhibited at the meeting by Mr. Aiton, of the King's Gardens at Kew, amongst which was *brucea antidysenterica*, once supposed to yield the angustura bark.

THE NATIONAL REPOSITORY.

We yesterday took a hurried glance at this praiseworthy institution (now opened for 1829), in which we noticed a number of very ingenious mechanical inventions, some striking improvements in manufactures, and other exhibitions well worthy of the public attention. At present we have not leisure for a particular account of these productions; but we shall not neglect their due notice.

FRENCH SCIENTIFIC EXPEDITION IN EGYPT.

[The following are extracts of a letter from M. Le Normand, dated Thebes, Nov. 25, 1826, relative to the scientific expedition in Egypt.]

"We arrived yesterday at Syout, now the capital of Upper Egypt, where there are many ugly mosques, built in the modern taste, and a great appearance of life and activity. The most remarkable thing is a cemetery, which is as well arranged, and as clean as the city is dirty and black. In the mountains are several large subterranean monuments, which, however, are nearly decayed, and can make no impression after those of Beni-Hassan." M. Lenormand then goes on to state, that the country of Thebes has a much more favourable aspect than is generally supposed, and though in Europe it is looked upon as a frightful desert, the vegetation is rich and varied, and the villages are very populous. The day after his departure from Syout, he reached the village of Saoudy, and, with the other members of the expedition, went to visit the owner of the principal house in the place. He gives the following account of his visit:—

"We were rather astonished at the number of servants, and with the appearance of luxury which the house exhibited: but the worthy Turk was so drunk on our arrival, that we did not think it worth while to use much ceremony with him. He certainly took our behaviour in

good part, and made himself still more drunk; he would not let us go away till two o'clock in the morning, after we had partaken of an excellent supper. The next day we went to the little town of Akmin, where there are a few antiquities."

On the 14th the expedition reached Girgeh, but did not visit the ruins of Abydos. M. Le N. proceeds:—"The magnificent portico at Denderah, before which we arrived on the 10th, is not the most beautiful monument in Egypt, but still it may vie with the Pharaonic wonders, constructed nearly 2000 years previously; and we were enabled to distinguish the parts which shew that it was connected with the decline of the arts in Egypt. An edifice, however, constructed in the most colossal proportions of Roman edifices, at the period when Egypt had passed from the dominion of the Persians to that of the Macedonians, and was about to submit to the yoke of the Romans, and then to perish entirely, is an object worthy of admiration.

"The ruins of Coptos and Apollinopolis Parva occupy a space of about six leagues in circumference, circumscribed by two chains of mountains, which divide into two unequal parts a majestic river, and in the distance are seen masses of columns and gigantic ruins. In the midst of the plain are two columns, the highest of which has acquired celebrity under the name of the Colossus of Memnon. There are several subterranean monuments; and in one of the valleys are the tombs of the kings, known by the name of Biban-el-Malouk. To the left, two miserable villages partially cover the imposing remains of Loqsor (Luxor) and Karnak. A last heap of ruins, nearer the mountain, indicates the extreme point of the ancient city, the circuit of which could not have been less than that of Paris. The wrecks of this city caused us much surprise and interest. Every where else the ancient Egyptians appear to have been a mild, peace-loving, and, above all, theological people; here, however, they have the aspect of warlike giants, and seem to have been of giant strength. The large monuments of Thebes seem almost all to belong to one series of time, that which followed the expulsion of the pastoral inhabitants, about 2,000 years B.C. Such of the monuments as we are inclined to think approach the nearest to this event by their date, look rather like restorations than original erections. This first pacific epoch has for spougeum the reign of Mœris, so celebrated for his numerous works of public utility, and whose mild and expressive physiognomy, delineated with such grace upon the monuments, corresponds exactly with the idea which history has given to us.

"The epoch of Mœris is certainly not one in which the most astonishing conceptions of art were developed; but it was one remarkable for the most perfect works. Every thing achieved during this reign was executed in the most graceful and beautiful manner; and the same character of simple perfection was maintained until the reign of Mandouée, inclusive. This king appears to have been the first victorious monarch of Egypt after its restoration.

"The *chef-d'œuvre* of the historical bas-reliefs of Thebes is the return of Mandouée after his conquests, sculptured upon the outside of the palace of Karnak. The king is in his car, drawn by two beautiful horses, and followed by the principal chiefs of his army, who are preceded by the chiefs of the vanquished, in chains. He advances towards Egypt, which is indicated by a transversal representation of the Nile, just as the Greeks would probably have

done in their best days on a similar occasion. On the other side of the river the priests and the military chiefs are advancing in two lines; the former bowing to the king, and presenting nosegays of lotus, and the others with their arms raised, as a sign of joy. If a cast of this bas-relief were to be sent to France, a great alteration would take place in the ideas which have been formed there relative to Egyptian art: for never were dignity of representation, correctness of movements, or the monumental disposition of the masses, executed with finer effect. It is biblical sculpture, which has all the majesty of the prophecies, and almost the truth of Homer.

"It was in the reign of one of the predecessors of Mandouée that those immense monuments were constructed which made our soldiers clap their hands on their approach to the eternal city. Art lost somewhat of the elegance which characterised it during the reign of Mœris; but it maintained itself to a remarkable degree until the time of Aménophis II. The monuments of this period have been much worse treated than the others by time. There now only exist the irregular ruins of a large palace, which he built on the western bank, and the most ancient part of the palace of Louqsor, with some colossal pillars. Enough, however, remains to enable us to fix the reign of this prince as the intermediate point between the finished and graceful style of Mœris and the colossal conceptions of Sesostris.

"The appearance of the pyramids has something really frightful, and one cannot help experiencing a painful sensation on seeing them. We seem for a time to labour under a painful dream,—to exceed, in spite of ourselves, the bounds of human imagination, and to succumb to an overwhelming power, such as the sun of these climates. These gigantic creations of the last of the Egyptian conquerors, up to Medinet-Abou alone prove a most gratifying fact,—that Egyptian art was carried to the greatest degree of splendour by pacific princes, liberators of territory, and that these monuments were destroyed by the conquerors."

LITERARY AND LEARNED.

Oxford, February 28.—On Thursday the following degrees were conferred:—

Masters of Arts.—W. Ricketts, Fellow, Merton College; H. H. Dodgson, Student, Hon. H. T. L. Coory, Rev. J. A. Wright, Christ Church; Rev. G. M. Drummond, Balliol College; Rev. R. Buller, Oriel College.
Bachelors of Arts.—E. Holden, Corpus Christi College, Grand Compendium; W. Perfect, Magdalen Hall; G. Hill, Trinity College; C. Wells, Fellow, New College.

ROYAL SOCIETY.

MARCH 5th.—The most numerously attended meeting of the season took place on Thursday; the President in the chair. A paper was read, entitled "Anatomical description of the foot of a Chinese female," by Bransby B. Cooper, Esq. communicated by Dr. Roget. A model of this foot, and the skeleton, were exhibited: it is the first ever brought to England, and, undoubtedly, one of the greatest (great because it is so small) anatomical curiosities we have seen. In a subsequent No. a detailed description of it will be given.

The ballot for Captain Phillips, which has excited considerable interest in the scientific world lately, came on.* At its close the gallant captain was declared elected by a great majority. Amongst the fellows present, we noticed Captain Parry, Captain Franklin,

* Some persons charged the gallant captain with having been guilty of plagiarism in certain nautical inventions,—a rudder, capstan, &c.; the credit of which, we presume, must now be allowed to him.—Ed.

Sir Edward Codrington, Dr. Richardson, and many other eminent individuals.

Dec. 11th.—A paper was read, entitled, "on a method of comparing the light of the sun with that of the fixed stars." By William Hyde Wollaston, M.D., V.P., F.R.S., &c.

In the Philosophical Transactions for the year 1767 a suggestion is thrown out by Mr. Michell, that a comparison between the light received from the sun and any of the fixed stars might furnish data for estimating their relative distances; but no such direct comparison had been attempted. Dr. Wollaston was led to infer, from some observations which he made in the year 1799, that the direct light of the sun is about one million times more intense than that of the full moon, and therefore very many million times greater than that of all the fixed stars taken collectively. In order to compare the light of the sun with that of a star, he took as an intermediate object of comparison the light of a candle reflected from a small bulb about a quarter of an inch in diameter, filled with quicksilver, and seen by one eye through a lens of two inches focus, at the same time that the star or the sun's image, placed at a proper distance, was viewed by the other eye through a telescope. The mean of various trials seemed to shew that the light of Sirius is equal to that of the sun seen in a glass bulb one-tenth of an inch in diameter, at the distance of 210 feet; or that they are in the proportion of one to ten thousand millions: but as nearly one-half of the light is lost by reflection, the real proportion between the light from Sirius and the sun is not greater than that of one to twenty thousand millions. If the annual parallax of Sirius be half a second, corresponding to a distance of 625,481 times that of the sun from the earth, its diameter would be 3.7 times that of the sun, and its light 13.8 times as great. The distance at which the sun would require to be viewed so that its brightness might be only equal to that of Sirius, would be 141,421 times its present distance; and, if still in the ecliptic, its annual parallax in longitude would be nearly 3"; but if situated at the same angular distance from the ecliptic as Sirius is, it would have an annual parallax in latitude of 1.8".

Another paper was read, entitled "Experiments to determine the difference in the length of the second's pendulum in the Royal Observatory at Greenwich and in Mr. Browne's house in London, in which Capt. Kater's experiments were made." By Captain Edward Sabine, of the Royal Artillery, Secretary R.S.

The experiments of which an account is given in this paper were made in compliance with a request of the Council of the Royal Society, in December 1827, that Capt. Sabine would ascertain the difference in the number of vibrations of a pendulum at Mr. Browne's house and at the Greenwich Observatory. The author gives a description of the instruments used in the observations, the first series of which were made in Mr. Browne's house, from the 17th to the 20th of March inclusive, and gave as the mean result 859738.38 vibrations in a mean solar day. A reduction is here introduced, derived from some experiments made on the difference which takes place in the times of vibration in vacuo and in air; the number of vibrations in the former case being, under the same circumstances as in the observations, 9.62 per diem less than in the latter. A corresponding series, made at Greenwich in May, gave as the mean 859739.93 vibrations; thus indicating an acceleration of 0.55 vibrations per diem. But the difference of latitude and of height between the two stations would have

led us, from theory, to expect a total retardation of 0.88 vibrations in the same time. From a second set of observations at Greenwich, the diurnal acceleration appeared to be 0.52 vibrations. Taking the mean of this and the former result, it appears that the total amount of the discordance between theory and experiment is 0.91 vibrations per diem. The stations are conveniently situated for verifying the existence of this anomaly; and its magnitude is such as to preclude all uncertainty as to its existence. With regard to its cause, the author is confirmed in the opinions he formerly entertained on this subject.

SOCIETY OF ANTIQUARIES.

MARCH 5th. Henry Hallam, Esq., V.P., in the chair.—Dr. Meyrick exhibited two ancient British shields of bronze, from the collection at Goodrich Court, Herefordshire. One was the *tarsen* or clasher, sometimes termed *aeo*, from being flat, and of the kind used by the inhabitants of this island prior to the Roman invasion: it was held at arm's-length in the hand; the umbro, forming the cavity for that purpose, is ornamented with nineteen concentric circles, interspersed with little knobs: this was dug up from a turf bog in the vicinity of Aberystwyth, Cardiganshire. The other was an imitation of the Roman *scutum*, and thence called *yegwid*; of an oblong form, and having an ornament resembling its whole length, affording the same convenience for holding it as the former. The artistic work, if such it may be called, is highly corroborative of the derivation of its name, as it was evidently the work of an uncivilized people, desirous of rivaling the polished elegancies of their conquerors. This was found in the river Witham, Lincolnshire. These very curious specimens of antiquity were accompanied by a letter, in which Dr. Meyrick shewed how much confirmatory evidence to the testimony of the Greek and Latin authors might be gleaned from the language of the ancient Britons, while extravagant fancies are avoided, and etymology confined within prudent limits.

The reading of a paper on the remains of St. Mary's Abbey, York, by the Rev. Charles Wellbeloved, was commenced.

A copy of the new volume of the Transactions of the Royal Irish Academy was presented by that body, and thanks were ordered to be returned for the same.

ROYAL DUBLIN SOCIETY.

FEBRUARY 12.—John Beatty, M.D. in the chair.—It was stated that Mr. Lynch would commence his lectures before the Society on Tuesday, the 3d of March. Amongst other proceedings it was

Resolved.—That a committee be appointed to take into consideration, and to report upon the practicability of establishing, under the auspices of the Society, an annual exhibition of specimens of the manufactures and productions of Ireland, conformable to the plan which has long been adopted in Paris and in other capital cities of the Continent; and to suggest such measures as might facilitate the arrangement, together with the estimate of the probable expenses attendant thereon.

Resolved.—That the following members do constitute the above committee, together with the vice-presidents and secretaries:—Edward Houghton, William Wilans, John Patten, Hugh Hamill, Richard Griffith, Robert Hutton, R. B. Bryan, Esqrs., Dr. O'Meara, and Dr. Wall, with power to add to their number.

A letter from Mr. Hamilton Rowan was read, resigning his situation as a member of the Committee of Natural Philosophy.

The following letter was read from Ambrose O'Kelly, Esq. of Tycooly House, Castle Blakeney, on the subject of a human body found about seven years since near his residence; for which communication and the gift accompanying it, the thanks of the Society were ordered.

to be returned, and preparations to be made for receiving it in their museum.

Tydney House, February 10, 1829.

Sir,—I trust that the curious nature of the intelligence which I have to communicate, will be a sufficient excuse for my troubling you with this letter. A tenant of my father's about seven years ago discovered in a bog immediately near this, a human body, which, from the circumstances I shall just relate, I take to be of an extraordinary antiquity, and which affords a remarkable instance of the preserving qualities of peat,—as it is as entire and perfect as I believe any Egyptian mummy can possibly be. The poor man cutting turf one day on a bog near his house, found the implement he worked with impeded by some hard substance, which on examination he found to be a human limb. Conceiving it must be the remains of some person recently murdered, he immediately ran to acquaint the family; but on the first view it was evident it must have lain there considerably upwards of a century, perhaps many, many centuries. The bog in which it was found is a small detached spot, surrounded by pasture land, and which the oldest men residing near the place say they have always heard had been time immemorial thoroughly drained and used for cutting turf on. I mention this as, coupled with the fact which I myself witnessed, of its being nine or ten feet from the surface, I think it puts its antiquity beyond all possibility of doubt. Though I believe bog grows or swells, it must under any circumstances be at a very slow rate: this bog could not have grown for upwards of a century, as it is, and in the memory of the oldest men in this neighbourhood, always has been, completely intersected with drains. Yet it must have grown many feet since this body was interred; for two oak posts or poles, somewhat thicker than a man's arm, about six feet long, pointed apparently with a hatchet, and placed, standing obliquely, one at each foot, by way of monument, were overgrown by the bog four feet at least. It was plain that the place must have been formerly a wood, as we could discern the nuts and cups quite perfect in the turf, but of course completely rotten; one of the posts was also rotten, but the other perfectly sound. But the most extraordinary thing of all was his dress, which could not have been in use but in the most savage times of Ireland: it consisted of a cow-hide (I think dressed) formed in the shape of a tunic, with the hair towards the skin, and tied by a band of twisted sally rods round his neck. This hide I have yet; but though when first taken up it was perfect, from the dampness of the grave in which he was placed a second time, and where he has been now seven years, it is almost in shreds; however, I think it might be sewed together. He appeared when stretched at full length to be of gigantic size; but on being measured, proved about six feet. He is of a robust make, and apparently about thirty years of age; his teeth are all perfect, as are his hair (which is of a dark red colour), his lips, tongue, ears, fingers, &c.: his skin and flesh are perfectly hard and dry, like tanned leather; his beard is quite observable, and seems about a fortnight's growth. It is only a fortnight or three weeks since I had him taken up last: from the damp and mouldiness of the place about him, his skin has become dingy and discoloured; the hair, too, is lopped from his head, and the features somewhat defaced; but in every other respect he is as before; and even the most fleshy parts, and those which would be expected soonest to waste, are perfectly sound and firm.

Should the members of the Dublin Society, who take an interest in these matters, and to whom I beg you will mention these particulars, be of opinion that he is worthy a place in their museum, I shall feel happy in giving him for that purpose.

The Society adjourned to Thursday, the 10th February.

KING'S COLLEGE.

THE site of this building is finally determined: the edifice will stand on the eastern wing of Somerset House, with entrances from the Quadrangle and from the Strand. To acquire the latter, the committee have already purchased the three houses in that street adjoining to Strand Lane; and Mr. Smirke is diligently occupied in completing the designs for the accommodation of both the collegians and scholars.

FINE ARTS.

ROYAL ACADEMY.

On Monday evening, Mr. Westmacott delivered his third lecture: it was on the Elgin Marbles.

Mr. Westmacott introduced his subject by remarking, that the nice regard paid to proportion, and the more elegant in nature, by the school of Polyoleus, acted as a salutary check to the unbounded genius of Phidias. Speaking of the Temple of Minerva and its embellishments, constructed by Phidias and his associates, Alcámenes, Agoracritus, and others, the lecturer observed, with much truth and elegance of expression, that in contemplating these extraordinary examples, there is an irresistible admission of their excellence: of all human productions they approach nearest to perfection, with the least appearance of art. Mr. Westmacott was next led to a description of the statues—Theseus, Ceres, Proserpine, and the Fates. Touching upon the draperies of the groups, he stated that they were so conducted, that in whatever situation the sun was, their effect must have been decided; the flute of the concave to the boundary of the masses being carried beyond the square of the surface, whilst in the divisions which played within the masses, where subordinate shadow or half-tint and variety were required, free access was allowed to the light. The lecturer's description of the statue of Iliuss was very spirited. In the whole range of Grecian art, no example displays so powerful an instance of knowledge of the human figure, more judgment in the choice of position, for the development of its physical elements, or more skill in execution—surpassing all contemporaneous or posterior productions—than this statue. In its contemplation, art is forgotten in the power and truth of the imitation. No statue in the antique offers stronger motives for reflection: the man of experience, observation, and study, on a calm consideration of this statue, will find in each limb and muscle the most consummate practical skill, subservient to the influence of mind; whilst he that delights in execution will see a laborious material treated with the ductility of the most plastic substance. Some remarks on proportion in general then followed: in developing the standard, the lecturer observed, that it would be found the general result only of the proportions discovered in nature, and not a fixed measure for particular observance; beauty and character, which depend upon action or circumstance, not being reducible to rule: thus are to be found statues of wholly different characters which vary scarcely a minute in their lengths, whilst no rule whatever can possibly be deduced from their girths; as in the Apollino at Florence—the Apollo Sauroctonus—the Apollo Belvidere—the Mercury of the Vatican—the Diacobolus, &c. &c. After a minute description of the Panathenæic Frieze, the lecturer concluded by requesting the students to make these marbles the subject of their study and reflection, as eminently deserving of both.

The chair on this evening was taken by Mr. Hilton, the keeper, as matter of course; Sir Thomas Lawrence being confined through indisposition. The auditory was numerous.

ARTISTS' CONVERSAZIONE.

THERE are many pleasant and useful associations in our vast London, which, though of a public nature, have yet so much of the privacies of society allied to them, that even the newspaper press (that universal and omnipotent Paul Fry) does not notice their meetings or divulge

their doings. Among these has long existed a *Conversazione*, including the principal artists and amateurs of the day and the President of the Royal Academy, which holds, during the season of the year when the inhabitants of town confess to seeing one another, monthly association at the Freemason's Tavern, "to talk of this, and then of that," hear what is going on, criticise what has been, and tell what is about to be, done in the fine arts. This body is limited to seventy in number; and it may readily be imagined, that the immense increase of our school of arts—the multitude whom encouragement has added to the previous ranks of professors, must have made that which was sufficient before, insufficient for the reception of all the candidates deserving of election. The result has been the establishment of a second *Conversazione Club*, on similar principles to the first, and also to consist of seventy members. This junior body has, in a short period, at once struck root and shot up, not only into the vigour of very interesting monthly meetings, but into the full growth of an anniversary dinner, which was observed at *Series' Hotel* on Saturday, 21st ult. The company, about fifty, enjoyed a cheerful and convivial day.—Mr. Clint being in the chair, and warming into its duties like a clever artist, who takes a quiet and deliberate view of his subject before he handles it thoroughly, and works it up to its full effects. Good humour and harmony prevailed throughout the evening; appropriate toasts were given, and acknowledgments returned. Among the artists present we observed Mr. Cooper, Mr. Beanes, Mr. Stanfield, Mr. Holland, Mr. Burnet, and others of younger fame, but whose delightful enthusiasm, combined with ability and conduct on this occasion, impressed us strongly with the idea that in many of them we had met for the first time with the future ornaments of our national arts.

BRITISH GALLERY.

No. 398. *Morning*. G. Barret.—A beautiful and Claude-like effect both in composition and in character.

No. 364. *The Interior of a Kitchen*. W. A. Netcher.—Perfectly Flemish in its conception and finish. An admirable specimen in its way.

No. 356. *Scene near the Falls of the Conwy*. F. Danby, A.R.A.—Mr. Danby has imparted a solemn dignity to this interesting scene by the simplicity of his colouring, and the depth of his tones.

No. 199. *A Study*. T. S. Good.—Excellent.

No. 168. *Italian Boy*. R. Edmonstone.—We like every part of this very characteristic work but the hat; and it is not this hat in particular with which we quarrel, but with every hat upon canvass that has not previously been kicked and beaten into any shape but its original one. Even the dignity of portraiture (if it have any) will be lost by placing a modern hat on the head; and every expedient ought to be resorted to, to get rid of this unpicturesque appendage.

No. 146. *Shipping by Moonlight*. J. B. Crome.—This, and No. 159, by the same artist, are very clever examples of variety in moonlight effects. They partake in no small degree of the style and character which distinguished the works of Vanderneer.

No. 147. *The Black Knight, and the Clerk of Copmanhurst*. H. Fradelle.—The fellow-ship of this scene is very successfully represented. Perhaps the colour is a little too monotonous.

No. 151. *Rue de la Grosse Horloge, Rouen*.

C. R. Stanley.—If the gaiety of the *Boulevards* by this artist attracted our attention by its locality and sunlight, the present performance is rendered no less worthy of regard by its combination of some of the most picturesque forms in buildings and groups that we have ever seen in works of this class.

No. 187. *The Angels announcing the birth of Christ*. John St. John Long.—This picture is placed in so elevated a situation, that we can judge only of its general character. The subject appears to be treated with an originality and effect highly creditable to the talents of the artist.

No. 211. *Landscape; Moonlight*. T. C. Hofland.—With an effect and a character all his own, there wants only a figure or two in the foreground to make this performance one of the best samples of Mr. Hofland's pencil.

No. 79. *Thalia*. Mrs. Pearson.—Exceedingly creditable to the talents of the fair artist; and we think possessing much of the style of Rosalba.

No. 132. *The Conflict*. H. Singleton.—If, in addition to the other excellent qualities of this highly respectable artist, he had but, in early life, avoided the fatal error of substituting, for a constant reference to nature, an ideal style, which, however fluent and elegant, falls upon frequent repetition, we have no doubt that he would have been one of the most distinguished painters that the English or any other school ever produced. "The Conflict" is a fine specimen of his powers.

No. 139. *The False Parcel*. W. Kidd.—Full of character and expression, and executed with great facility and skill. We would, however, suggest to our painters of familiar life not to take so frequently for their subject the mischievous tricks of children. Example is a powerful teacher; and these pictorial lessons may be pernicious.

No. 354. *The Portrait of John Soane, Esq. R.A.*, painted by order of the Directors of the British Institution, as one of its most liberal benefactors. J. Jackson, R.A.—Although the general introduction of portraits into the exhibition of an institution expressly founded for the encouragement of an English school of design, would defeat the purpose of its establishment, we are so far from thinking that, under the circumstances of the case, this fine portrait of Mr. Soane is out of its place, that we wish a portion of the Gallery were appropriated to the reception of the portraits of the other liberal benefactors, whose domestic collections afford the best proof of the zeal with which, by their yearly purchases, they foster native talent, and contribute to the successful cultivation of the fine arts in this country. The arts are the offspring of the public; but we hope that the lines of the fable will never be justly applicable to them:

"The child whom many fathers share,
Will seldom know a father's care."

The sculpture in the present exhibition at the British Gallery offers little that is striking or novel; with the exception of No. 542, *Cupid and Psyche*, E. Physick, which is full of the tender blandishment belonging to the subject. No. 541, *The Dying Warrior*, P. Tatham, may be a good study; but appears to us to have the Michael-Angelo twist, or to be placed in one of those impossible postures in which that great man sometimes represented his figures. No. 540, *A Persian*, W. Sievier, is striking and imposing, both in attitude and in costume.

NEW PUBLICATIONS.

Plates to illustrate Bishop Heber's Journal of Travels in India. Murray.

IN the notices of this most estimable and deeply-lamented person's interesting Journal, which appeared in the 578th and 579th Nos. of the *Literary Gazette*, (pages 97 and 118 of our last volume) we expressed our admiration of the beautiful plates (engraved by Mr. Finden, principally from the bishop's drawings, but a few from those of Mrs. Heber,) with which that Journal was adorned. The plates are now published in a distinct and separate form; and upon looking at them again, we not only do not see any thing to induce us to retract our former judgment, but, on the contrary, we are still more strongly impressed with the taste and feeling which they display. Besides a large map of India, there are ten plates, viz.: "Ghat between Calcutta and Barrackpore," "Janghera," "Travelling Dak," "Travellers and Peasantry in the Kingdom of Oude," "Nandedivi," "Umcer," "Entrance to the Cave of Elephanta," "Gorabunder," "View from the Cliff above Kennerly," and "View in the Deccan."

The Destruction of Pharaoh and his Host. Painted by Danby; engraved by Phillips.

IN the sublime and terrific, this performance is a wonderful example of Mr. Danby's talents at a former period; and our remarks upon the painting may be found in the *Gazette* of that time. As a print it exhibits a scarcely less grand and imposing character than when aided by the power of colour; and the supernatural light which was introduced in the painting, appears to us either to have been removed, toned down, or otherwise modified; so as not to look like accident, as we remember it did at the time of its exhibition. The character of the subject has so much of the Deluge, that we think a first glance of the picture will convey the idea of its being a representation of that mighty event: there is so much of distress and horror in the fore-ground figures, and such a wild swell of the waters, that we do not receive the impression of "the horse and his rider," or rather of Pharaoh and his host, being doomed to destruction, and imagine that the pursued multitude must also come in for a share of the pursuers' fate. This remark may be only a matter of opinion, and cannot be meant as an objection to a work of art like this, which is only inferior to Mr. Danby's extraordinary painting from the book of Revelations. The engraver, Mr. Phillips, has ably followed up the prototype in all its characteristics of detail and effect.

SKETCHES OF SOCIETY.

LA PÉROUSE: CAPTAIN P. DILLON.

OUR readers will not be displeased to hear what has been the effect of our publications respecting the discovery of the wreck of La Pérouse, and our very recent appeal to the French government on behalf of Captain Peter Dillon. From the *Moniteur* we learn that the King of France has graciously received the articles which Captain Dillon brought to Europe, and which proved too clearly that the unfortunate Pérouse had been wrecked, and perished on one of the Vanicolo Islands. The East India Company having liberally relinquished all claim to the expense of fitting-out Captain D. for his second voyage, his Majesty has farther pronounced him to be entitled to the reward of his discovery, offered so long ago as February 1791, and conferred on him the dignity of Knight of the Legion of

Honour. The pecuniary reward consists of an indemnity of 10,000 francs for personal costs during the voyage, and of a pension of 4000 francs per annum for the discovery. M. Chaigneau, a Frenchman who accompanied Captain Dillon on the expedition, has also received the insignia of the Legion of Honour. It is very pleasing to record such distinctions for meritorious exertions; and we are the more satisfied, because we are assured that our researches into the arms (through the kindness of Sir W. Betham), and their being engraved in the *Literary Gazette*, were the original causes which led to this just and gratifying result.

MUSIC.

ANCIENT AND MODERN MUSIC.

THE Lent performances, under the able direction of Mr. Hawes (whose spirited conduct has driven the licenser from his extraordinary claims for fees), commenced last night at Covent Garden Theatre, and are to be continued at both houses, alternately, on the Wednesday and Friday evenings. Of the first of them we can take no cognizance, as our sheet must go to press before its earliest bar has been played; and our press must remain hard at work for hours after the last note has been sung. But we might anticipate from the bill of fare a high musical treat: Mehul's oratorio of Joseph and his Brethren, for the first time; a selection from Handel's ever fresh and delightful *Acis and Galatea*; and a fine miscellaneous act;—the whole embodying the talents of Braham, Phillips, Knyvett, Horncastle, Atkins, Madame Schutz, Mrs. W. Knyvett, Miss Love, Miss Goward, and other eminent performers, both vocal and instrumental.

NEW PUBLICATIONS.

The Memory of Past Recollections: a Song. The Words by James O'Connell, Esq. Composed by H. Schwies. London, Schwies. We have to notice this as a very striking composition. The first part is extremely sweet and touching, and the second bold and spirited. The theme is renewed with the words, "him his country deploras," in the most beautiful style. In short, we have not lately heard a piece of song music more delightful to our taste.

If the Heart but truly love. Words by T. H. Stirling, Esq.; the Music by C. Walther. London, Lee and Lee.

THIS light and pleasing air has been sung by Braham, and was also given with much beauty at the last Melodists' Club meeting by Stanbury. It belongs to that class which must always be listened to with very agreeable emotion, and which seeks not to excite stronger feelings. The composer's name is new to us; but if he goes on as he has begun, he will soon be popular at our firesides.

DRAMA.

KING'S THEATRE.

ON Saturday, as we announced, *Il Conte Orti* was represented at this theatre, or, we should rather say, after seeing it, misrepresented; for it was a sad concatenation of accident and incapacities. We give the manager credit for his wish to produce a novelty; but we cannot help impeaching his judgment for producing any thing in so crude, so imperfect, so wretched a shape as this unfortunate opera. Monticelli, to whom the principal part was assigned, was indisposed; and an apology, by no means unnecessary, preceded her appearance. Indeed, it is to be regretted that there are no doubles at a house like this, for performers so apt to

He had as these foreigners, unaccustomed to so cold, thick, and foggy atmosphere, are; the stoutest native lungs have been tried by its low vicissitudes of weather; and it is not surprising that individuals from a warmer, drier, and softer climate (especially possessing the organization of vocalists),* should suffer great inconvenience from the sudden changes in the weather—from bad to worse. There is, therefore, more reason to provide against public disappointments from this cause, instead of there being to provision whatever. M. Laporte, we believe, will plant his exertions in procuring several first-rate singers (Pianini, Bonatti, Malibran,) which do not leave him the means of engaging an efficient company in the lower scale, to supply the places of heavier basses, independent soprano, and pettiish alto; but still we must consider this to be a defect in management, and one which almost nightly leads to the utter spoiling of the opera. Under the circumstances of the performance of *Rotaryday*, we offer an opinion upon the demerits of the composition or execution. Suffice it to say, that the whole dramatic persons were consistently successful in murdering every thing that was good in the music, and marring the bits we could discover that was dramatic in the plot. A Signora Speerli made her debut. She sings a very pretty lull, but a very bad *trio*. Her voice is a mezzo soprano of a weak quality; but she appears to have more science than some other singers. For want of preparation, in spite of the bluster and bellow of Bushy, the concerted piece, and especially the choruses, in which the strength, such as it is, of *Conte Ori* associates, were poorly done; and, altogether, we never passed a more flat and dreary night even at the King's Theatre. To add to the annoyance, many very shabbily dressed persons were in the pit: we are no snobs for very strict fashion in dressing for the opera; but a shirt clean within the last brought ought to be insisted upon as a *condition sine qua non* to admission.

Mlle. Maillié is announced to be engaged, but as consequence of her indisposition and that of Galli, the *Divna di Lago*, advertised to Tuesday and Thursday, could not be produced, and the house was shut.

PTVY LANE

Measure for Measure has been revived at Drury Lane, with Miss Phillips as *Isabella*, and Mr. Young as *Angelo*; and on the same night, a Mr. Pemberton made his first appearance in London at the rival house, a *Fop*. As we were bound by gallantry to give the preference to the lady, we did not so the gentleman, and shall, therefore, take the opportunity of his enacting *Shylock* next week, to deliver our opinion concerning him. *Othello* is the temptation. Should he succumb to *Shylock*, we shall not care about his talent as *Fop*, for, if, indeed, it be a failure, is none of our contemporaries' secret. With regard to Miss Phillips we will only say, that we think either she or the management has been singularly unfortunate in the choice of part. The youth and delivery of Miss Phillips under her totally unfit for the personation of such characters as *Mrs. Haller*, *Mrs. Bonaparte*, and *Isabella*, and we think it no small wrong to her talent that she has been even named as them. The gentle *Desdemona*, the amiable *Fopaine*, the *Cleopatra*, that she to make her own—such are the portraits to which her form and her features can give life.

* The stress, anger, judgment, and hostility, are due to the common cause of slavery.

there are the feelings which she can understand and express. At present, she is as useful for Isabella as she is for Lady Marbeth or Queen Katherine.

FRENCH PLAYS

MADAME J. COLON LAFONT has departed, and Purlet has come. On Monday night he made his *début* for this season, and throughout the entertainments of the evening gave the audience ample cause to enjoy his re-appearance on the scene.

MR. MORTON.—As we are ever most anxious to avoid any erroneous statement, we are equally desirous, when we have been betrayed into any error, to make the earliest and best reparation in our power. We are, therefore, prompt to say, that on a more close investigation of the question at issue between the rival theatres, relative to the *Battle of Pulaski*, than we could give it last week, we are completely convinced that no charge or allegation of the slightest kind could with truth be made against the conduct of Mr. Morton. The whole circumstances of the transaction have been fully explained to us, and while we bear this willing testimony to that gentleman's perfect integrity throughout the affair, we beg at the same time to express our regret that any thing unjust towards him or painful to his feelings should have found its way into our columns.

VARIETIES

Silk Manufactures of France.—The French minister of commerce has ordered a large quantity of silk ribbons, and other silk goods, of British manufacture to be purchased and laid before a committee, who are to report upon the quality and prices of them, with a view to ascertain the comparative rates of the production in the two countries.

Anatomy.—It is said that ministers will allow Mr. Warburton to bring a bill into Parliament to put our anatomical schools upon a similar footing with those of France in regard to facilities in procuring subjects. It is full time that something were done.

Raphael.—It is asserted that the celebrated Raphael of the Louvre, (Christ and his Disciples, or, according to others, the Artist himself and his Fencing-Master (a strange discrepancy of opinion), has been, at some unknown time, abstracted from its frame, and a modern copy substituted. The picture has been valued at 20,000*l.*; and it is surmised that it has found a hiding-place somewhere in England.

The Keadle Family.—We hear that this admired work of poor Harlowe is also missing at the present moment; whether it has *been*, nobody can tell; but it is not among the treasures left behind by Rowland Stevenson; and Mr. Walsh declares that he is incommunicable about it.

Request.—The newspaper states that the worthy and grateful composer Mr. Shield bequeathed a violin to the King, which his Majesty graciously accepted, but made a liberal present to the widow of the donor.

Thames Tunnel.—An application has been made to the Duke of Wellington for an aid of 250,000*l.* from government to complete this great undertaking: his Grace has asked for estimates of the whole expense and probable profits, before he can entertain the petition.

(Cold in Rome.—The cold in Rome during part of the last month was more intense than has been known for a long period at the same

season of the year. On the 12th ult., the thermometer (Réaumur) fell to four degrees below zero; which was equal to the greatest cold in the depth of the winter of 1823.

Mr. Abbott, formerly of Covent Garden Theatre, and lately of the English Theatre in Paris, is getting up an entertainment in that capital, in which, *à la Mathews*, he is to sustain all the characters.

Divorces in the Netherlands.—From 1815 to 1825, out of 430,000 marriages in the Netherlands, there were 605 divorces. The proportion of divorces to the number of marriages was in the northern provinces as 1 to 327; and in the southern, 1 to 3.317.

Mount Vésuvius.—Letters from Naples of the 10th ult. state, that Vésuvius is much agitated. Large volumes of smoke are seen, and stones are thrown up to a height of 500 or 600 feet; but there is very little lava.

LITERARY NOVELTIES.

A second edition of the *Youth and Manhood* of Cyril Thornton is in our last package from Edinburgh; and we have again dipped into that spirited and characteristic novel with fresh pleasure. Some of its scenes are certainly as near those of the great northern master as any with which we are acquainted—not even excepting the graphic and national sketches of Galt.

The author of the Village Pastor has in the press a volume of serious tales, entitled, Clouds and Sunshine, which, we understand, will very shortly appear.

The Parisian Press, however, according to a very recent official return, with a sum of which we have been favoured, there are now published in Paris eleven daily newspapers, of which upwards of 60,000 copies are printed. One of these, the *Mondeur*, is official; another, the *Journal des Maires*, has, we believe, little to do with political discussion; a third, the *Messenger des Chantiers*, is semi-official; and five are decidedly liberal; only two, the *Gazette de France* and the *Quotidien*, are anti-constitutional. The literary and scientific papers published daily are eleven in number; and there are daily six papers in which only advertisements are given; so that the total number of daily papers in Paris is twenty-eight. Besides these, there are thirty-two periodical papers which appear at different periods, or from twice a-week to once a-month.

Mr. Vignoles, Civil Engineer, is preparing for publication *Observations on Railroads and Railway Carriages. In the Press.*—A third edition of Montgomery's *Universal Prayer, &c.*

TO COLLEAGUES,

(2) The press is almost every line of business which the public are the least bit concerned, affects the publishing of books or well in other matters. We are, in consequence, this work of their approval with caution, that we find ourselves able to present, without injurious to any subject - no intention of giving an extra half cent. The management of Thompson's Commission is the only line we are not to be in doubt

REMARKS - In our report on Revolutionary Literature (Communist, p. 144, col. 2, the names of 14 Russian authors of the 19th and 20th centuries and other works of literature are mentioned. In our report of 1931, 1932, 1933, 1934, 1935, 1936, 1937, 1938, 1939, 1940, 1941, 1942, 1943, 1944, 1945, 1946, 1947, 1948, 1949, 1950, 1951, 1952, 1953, 1954, 1955, 1956, 1957, 1958, 1959, 1960, 1961, 1962, 1963, 1964, 1965, 1966, 1967, 1968, 1969, 1970, 1971, 1972, 1973, 1974, 1975, 1976, 1977, 1978, 1979, 1980, 1981, 1982, 1983, 1984, 1985, 1986, 1987, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1997, 1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2

Harcourt, Chancery, and Co. 49, South Churchyard, London; and N. Whitley, Halifax.

Just published by Harcourt, Chancery, and Co. 49, St. Paul's Churchyard, price 1s. the 3d edition of
THE PRESENT STATE OF CHRISTIANITY and of MISSIONARY ESTABLISHMENTS in all PARTS of the WORLD.

By F. SHOBEL.
"The good sense and judgment of Mr. S. have been evinced in so many useful publications which we have been called on to notice in the course of our labours, that we take up any work bearing his name with the certain conviction that it will add to the mass of instructive and valuable reading for which the public are already indebted to him. The several accounts of the instruction and early progress of Christianity are very curious, especially as they are combined with references to the scriptures which were superadded."—*History Gazette.*

Catholic Question.—Price 8s. 6d.
THE SPIRIT of the BIBLE SOCIETY FAVOURABLE to CATHOLIC RECONCILIATION, an Address to the Members of that Institution, stating and enforcing its Constitutional Principle, which is Religious Charity; a Principle that ever seeks the Glory of God, by promoting Peace and Good-will among Men.

In 1 vol. duodecimo, price 5s.
FRIENDLY and SEASONABLE ADVICE to the ROMAN CATHOLICS of ENGLAND.

The 4th edition, with additions, and Notes.
Edited by the Rev. WALTER FARQUHAR HOOK, M.A.
Chaplain in Ordinary to the King, and Vicar of the Holy Trinity Church, Coventry.

London: C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place; and H. C. Langbridge, Birmingham.

"We most cordially commend the perusal of this little volume to all who are anxious to form a sound opinion on its subject. Brief as it is, its arguments are complete and cogent, its facts beyond doubt or question. It may remove much misapprehension and misrepresentation. It is a decided refutation of the Roman monopoly of Christianity, and a clear vindication of the primitive and Catholic foundation of the Church of England. Mr. Hook has our thanks for the republication, and he will, we doubt not, receive those of every friend to truth and sound Catholic Christianity."—*Christian Remembrancer*, February.

Dr. Graham on Chemistry.
In 1 large vol. 8vo. price 18s. boards, with Engravings.

A CHEMICAL CATECHISM, in which the Elements of Chemistry, with the Atomic Theory, and the other recent Discoveries in the Science, are very clearly and fully explained, and its Application to the Arts, Domestic and Commercial, is illustrated by copious Notes, numerous Engravings, and Tables; and containing an Appendix of Select Chemical Experiments, and a Vocabulary of Chemical Terms.

By T. J. GRAHAM, M.D. &c.
"We hold it in estimation, that it is to the attention of our readers. The author has collected together, under a strictly popular form, and expressed in language the best calculated to convey useful knowledge to the dull mind, every subject of interest connected with this delightful science. The Philosophy of Chemistry, also, has found in this simple and successful expositor."—*London Weekly Review*, Feb. 21st, 1830.

"Every thing is here written up to the latest date, and the work cannot fail, we think, of being found eminently useful. The more important facts are exhibited with remarkable clearness."—*Monthly Repository*, 1st March, 1830.

"This work is systematic and comprehensive; perspicuous in its plan, and extensive in its compass. It is eminently calculated to afford agreeable relaxation to the uninitiated, and to improve the knowledge of the student."—*Athenæum*, 1st March, 1830.

London: Published by W. J. G. Bohn, St. Paul's Churchyard; and Simpkin and Marshall. Sold by all Booksellers.

In 1 vol. 8vo. price 12s. boards.

SATURDAY, MARCH 14, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

Flora and FFLM. Flora. By R. G. L. B.
Paris, 1838. (Not published.)

It has been a question debated in every variety of form. Why one age should abound in the greatest genius of which its predecessors and successors are alike barren? and it is one, however, which is likely to be debated again and again, as all questions are, whose solution is left to human imagination, so fertile in creating systems whose theories only want great numbers. For ourselves, we confess ourselves that genius is as inscrutable and infinite as the mysterious Mind of which it is a sometimes part; and that the maxim, post mortem, a. like many other such, not less so to being some centuries old. That circumstances do not produce it, we need only say is the generally unfavorable ones under which it has appeared; circumstances affect to diminish less than they are alleged to do. It is clear that no one circumstance affects to produce eminence, we must admit that there is some tendency toiling which makes the distinction, and if we admit this feeling in a manner, we must (to say it) perhaps no mind could come so profitably adapted to give us that of the Frenchman: It was the up of cold climates, of romantic passions; these circumstances especially, king and knight; a fine of volume was alike in camp and at sea that age produced no great poet. — circumstances modify the mind, why did not Elizabethan age produce two Shakespeares? why did not the convulsed energies of the middle of the time, embody more than a few papers more than one Milton? In the 18th, we are now only, like other times, building up our palace of snow. We can tell why one voice swells in an address whilst denied to another; — we can tell why one child's temper is gay and gross, while another's is severe and sensitive. — then, and then only, may we see the supposed fire should rest on the lips of the poet, and not on the lips of his fellow-men. In these are two instances we remember that others we would find contrasted: to be now a backed by high authority; but

BECAUSE we have never passed

"they take of" — made, inglorious Mil-
 "and they have Mahana, they would
 "be under more or inglorious. This
 "is that, understanding personal feeling
 "of great genius: the man who feels his
 "of life with the gloomy energy of By-
 "ranged in love and benevolence when
 "with the grand philosophy of Words-
 "which the gods on the sun going over
 "of nature sometimes like a conqueror — or
 "of the human mind tell almost as
 "as a man played right, — that man is
 "as a poet — a poet — but if a poet,
 "single will find words — By, over

though they made a language for themselves. Our second stand of opposition is against the rant of disappointed poets who have turned critics, *faute de mieux*—who finding cold greeting from the public, and their pages "unswept, ununsoured," wish them "unsung," and say that the age for poetry is past—that our palates have been surfeited, and that the taste is gone. We might answer this by only adverting to the success which has crowned every effort that boasted any pretension to originality; but we object to it for the fulsome-ness of the premise. Before we can speak of satiety, we must suppose the great body of readers to have remained the same, while their poets changed; they seem to have forgotten, that every year brings with it a host of young and eager listeners, to whom the language of poetry is as much that of novelty as it is of truth. So long as there are sorrows which memory softens, pleasure the delights to recall; so long as there are ardent hopes and unimpaired feelings—elevated thoughts which glow unclouded as they turn away from the actual world; so long as there is happiness of which we dream but cannot grasp; so long as there is ideal excellence and beauty; so long as there is tenderness—the silent, but no sleeping, melancholy which comes over us like a summer's cloud; so long as there poets in the human heart,—so long will it gush forth, fountain-like, at the touch of the true poet. That we have now few poets there we had, the fact we readily admit; but we hold that the fault lies rather with the suppliers than the supplied; that your measures of Byron, Scott, &c., find no welcome, we grant; but let any one open a new vein—and the stores of the human mind are infinite,—and he will find as many to greet and laud as him as ever.

The volume which has led us into this train of observation is one which attracts attention both from its own merits and those of its author: we shall discuss the latter first, as they make our excuse for trespassing on a work limited to private circulation. Written by the Author of *Problems and the Idealism*, it must be matter of interest to every philosophical as well as to every practical reader to mark the first display of thought, and trace the bias and feelings of a very powerful and original mind. And we must say, when we consider the youth of the writer, those slight pages are an extraordinary production: not extraordinary with reference to the poetry—for, beautiful as much of it is, youth and inexperience have been united ere now—but extraordinary for the depth of thought, the reflection, exhibited by one so young. We shall pass over the first portion, only saying, that it well deserved its University honours; and proceed to the second one of any length,—"Milton,"—scenes from the youth, manhood, and old age, of our native poet. We take from the first, a sketch of the young Italian wanderer, whose numerous story of her visit to him while asleep is its last act.

[illegible]

Long years have flown— and where have I arrived now?
 How many such days, I should count, as he is
 I thought of him, the many days I
 Burnt in his cell, and of the death the very
 Death? The death of a man who was
 Fate is his body from, and I will think
 Have surely there those hours when we were wrought,
 And as he looks to, to his last, the day
 Wring from the very spirit within those
 Of the calm grief? I say he lived to regret
 And ever as he wrote that very last
 Passed his last writing on his dying night.
 Also no more by golden pains,
 Still I found, and dried-burnt tears,
 He will wait her votary's willing soul,
 But he journeyed through a rugged plain,
 by the glory of the distant goal,
 that midnight solitude, though years
 or worse his heart, and he could find
 did give the full, darkly strong
 he struck out—though the night
 And I— from friends—though the night might feel,
 lone night his and consolation
 the very soul, the years in silence
 in a legend and the story

Not to our taste the following and last picture is the most touching:-

[illegible]

By getting the right kind of food, and fresh air and exercise.

[illegible]

The old man for the first time is crying.
Weeping, he looks at his old and pale
M. for a while, and then he says
And bowed his white head to his old
And wept. The gentle voice which he
Had heard for years of his wife
He heard again, and he wept and wept
Till he was weary and his eyes were closed.
Then he was taken to his room and laid
In the little bed which he had made
High over the door of his room.
He lay as though he were a stone,
His hands clasped in his arms, his face
Looking his agonies in the face of death.

Larcher's Notes on Herodotus.
Thick vols. 8vo. price 25s.

HISTORICAL AND CRITICAL REMARKS ON THE NINE BOOKS OF THE HISTORY OF HERODOTUS; with a Chronological Table. Translated from the French of P. H. LARCHER, Member of the Institute, and of the Legion of Honour; Honorary Member of the Academy of Sciences of Dijon; and Professor of Greek Literature in the Literary Department of the Academy of Paris.
"Petrus Herodoti Larcheri, Disquisitiones, viri summi et diffusum eruditissimi, tum ob singularem ejus humanitatem et candorem, omni laude dignissimas, presertim vero egregia Herodoti editione meritis per Europam celebratim nactus."—*Bishop Blomfield*.
London: John R. Priestley, Great Russell Street, Covent Garden.

In 2 vols. 12mo.

An Introduction to Entomology; or, Elements of the Natural History of Insects. By William Kirby, M.A. F.R.S. and L.S. and William Spence, Esq. F.L.S. In 4 thick closely printed vols. 8vo. with Plates and Portraits of the Authors, 8th edition, price 4l.

The Book of Nature. By J. Mason Good, M.D. F.R.S. F.R.S.L. 3d edition, in 3 vols. 8vo. 11s. 10s. hds.

The English Flora, by Sir James E. Smith, F.R.S. Pres. Lin. Soc. &c. A new edition, in 4 vols. 8vo. 3l. 3s. The Reigns of Edward VI., Mary, and Elizabeth; being the Second Part of the Modern History of England. By Sharon Turner, F.A.S. R.A. S.L. In 1 vol. 4to. price 2l. 8s. boards.

The Annual Biography and Obituary for the Year 1829, containing Memoirs of celebrated Persons who died in 1827-28. In 8vo. 15s. boards.

Contents: The Queen Dowager of Wirtemberg—Archbishop Sutton—Lord Liverpool—Bugalid Stewart, Esq.—Sir J. E. Smith—Bishop Tomline—Sir T. B. Thompson—Sir R. Strahan—Dean Hook—Capt. Clapperton—Archdeacon Coke—Sir H. Torrens—Sir Neil Campbell—Dr. Mason Good—Admiral Nowell, &c. &c.

Also may be had,
The preceding Twelve Volumes, 15s. each.

A System of Universal Geography, by M. Malte Brun, Editor of the "Annales des Voyages," &c. Vol. VII. Part I. price 7s. 6d.

A New General Atlas, with the Divisions and Boundaries carefully coloured; constructed entirely from New Drawings, and engraved by Sidney Hall. Part XII. printed on elephant paper, price 10s. 6d. To be completed in seventeen monthly Parts.

Contents: Africa, (General Map)—Egypt—Chili—La Plata, Bolivia or Upper Peru.

Also may be had,
Parts I. to XI. price 10s. 6d. each.

Part XIII. will be published on the 1st of April.

The Magazine of Natural History, and Journal of Zoology, Botany, Mineralogy, Geology, and Meteorology. Conducted by J. C. Loudon, F.L.S. G.S. &c. Member of the Zoological Society of London, and Corresponding Member of the Natural History Societies of Berlin and Moscow. No. VI. (to be continued every two months, alternately with the "Gardener's Magazine"), 3s. 6d.

Vol. I. containing the First Five Numbers, may be had, 18s. boards.

The Edinburgh Review; or, Critical Journal, No. XCVI. price 6s.

Contents: Burns—India: Bishop Heber's Journal, Freedom of Trade and of Settlement in India—Recovery of the Literary Papiri, Ancient Tachygraphy, Palimpsests—American Tariffs—Police of the Metropolis: Causes and Prevention of Crimes—North-west Passage: Expeditions to the Polar Sea—Importation of Foreign Wool: State of the Woollen Manufacture—Bentham's Rationale of Evidence—Dr. Shuttleworth's Sermon: Religious and Temporal Knowledge, &c. &c.

Price 1s. 6d.
A N ADDRESS to the PUBLIC, drawn from Nature and Religion, against the unlimited Dissection of Human Bodies.

"Curst be he who moves my bones."—*Shakespeare.*

Sold by Cawthorne, Cockspur Street.

In 8vo. price 3s. 6d. boards,
PRACTICAL SERMONS on the LORD'S PRAYER, the BEATITUDES, and the SACRAMENT of the LORD'S SUPPER. Adapted to Family Reading.

By SAMUEL WIX, M.A. F.R. & A.S.
Vicar of St. Bartholomew the Less, London.

Printed for C. J. G. and F. M. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall; and Henry Wix, 41, New Bridge Street, Blackfriars.

Of whom may be had, by the same Author,

Scriptural Illustrations of the Thirty-Nine Articles of the Church of England, with a Practical Comment upon each Article; affectionately intended to promote Religious Peace and Unity, 8vo. 8s.

Dr. Whately's Logic.
Third edition, in 8vo. price 12s.

ELEMENTS of LOGIC; comprising the Substance of the Article in the Encyclopaedia Metropolitana, with Additions.

By RICHARD WHATELY, D.D.

Principal of St. Alban's Hall, Oxford, and late Fellow of Oriel College.

Printed for B. Fellows, Ludgate Street.

Of whom also may be had, by the same Author,

Essays on some of the Difficulties in the Writings of St. Paul, and in other Parts of the New Testament, 8vo. price 9s.

In 1 vol. 4to. price 2l. 3s. boards,
BURNET'S PRACTICAL HINTS on PAINTING. Or in separate Parts.

I. On Composition, 3d edition, 15s.
II. On Light and Shade, 3d edition, 18s.
III. On Colour, 2d edition, 11s. 6d.

Illustrated by nearly 100 Engravings from celebrated Pictures of the Italian, Flemish, and English Schools.

A few Copies remain unsold of the royal paper, with proof impressions of the Plates on India paper; and a Portrait of the Author, in French boards and lettered, price 6s. 6d.

Printed for James Carpenter and Son, Old Bond Street.

In 1 vol. 8vo. with a Map and other Engravings, 10s. 6d. boards,
DESCENT of the DANUBE, from Ratisbon to Vienna, during the Autumn of 1827; with Anecdotes and Recollections, Historical and Legendary, of the Towns, Castles, Monasteries, &c. on the Banks of the River; and their Inhabitants and Proprietors, Ancient and Modern.

Author of "Lays and Legends on the Rhine," "Oberon," an Opera, &c.

"His 'Descent of the Danube from Ratisbon to Vienna,' is a volume of such varied merit and interest, as to ensure its popular reception."—*Literary Gazette*, July 5.

"Mr. Planche's recent publication of his journey from Ratisbon to Vienna, over the Danube, contains much useful information, as well as elaborate historical notices of the most remarkable places situated on the banks of that river."—*Times Review*, paper, July 19.

Printed for James Duncan, 37, Paternoster Row.

BOOKS IN THE PRESS.

On Wednesday next, price 6s.
THE VILLAGE PATRIARCH; a Poem, in Ten Books.

2. **Schiller's William Tell,** closely translated from the German, with Illustrative Notes. 8vo.

Nearly ready for publication,
3. **The Life of Francis the First, King of France,** 2 vols. 8vo. with Portrait.

4. **The Adventures of a King's Page,** 3 vols. Printed for Edmund Hall, New Public Subscription Library, 25, Holles Street, Cavendish Square.

On Saturday next, in 3 vols. post 8vo.

THE NAVAL OFFICER; or, Scenes and Adventures in the Life of Frank Milbrey.

"My muse by no means deals in fiction; She gathers a repository of facts, On some with some reserve and slight restriction, But mostly truths of human things and acts."

Love was a temptation—surely there's variety; Also a tempting sight of licentiousness— A bird's eye view too of that wild society— A slight glance thrown on men of every station."

Also, just published,
2. **Tales of Military Life.** Containing Vandeleur and Gombalsh. Gray. By the Author of the "Military Sketch Book." In 3 vols. post 8vo.

3. **Sailors and Saints.** By the Authors of the "Naval Sketch Book." 3 vols. post 8vo.

"While reading 'Sailors and Saints' the floor of our room has seemed to rise; we have imagined we have felt the salt spray of the sea on our faces—so completely have we been absorbed in the graphic descriptions and living personifications before us."—*United Service Journal*.

Printed for Henry Colburn, 5, New Burlington Street.

Also, just published,
2. **Tales of Military Life.** Containing Vandeleur and Gombalsh. Gray. By the Author of the "Military Sketch Book." In 3 vols. post 8vo.

3. **Sailors and Saints.** By the Authors of the "Naval Sketch Book." 3 vols. post 8vo.

"While reading 'Sailors and Saints' the floor of our room has seemed to rise; we have imagined we have felt the salt spray of the sea on our faces—so completely have we been absorbed in the graphic descriptions and living personifications before us."—*United Service Journal*.

Printed for Henry Colburn, 5, New Burlington Street.

Nearly ready, in 3 vols. post 8vo.
THE SECTARIAN; or, the Church and the Meeting House.

"An insouciant spirit, volubility, imposture, false prophecies, blind guides, that, out of pride, singularity, vain glory, blind zeal, cause much more madness yet, are all in an upward by their new doctrines, paradoxes, figments, cretobots; make no divisions, subdivisions, new sects; oppose one superstition to another, and seduce to another; commit crimes and villainies, brother against brother, father against son; to the ruin and destruction of a commonwealth, to the disturbance of peace, and to make a general confusion of all orders."—*Burton's Anatomy of Melancholy*.

Printed for Henry Colburn, 5, New Burlington Street.

The following Works will be published in a few days, by Mr. Murray:

A CHRONICLE of the CONQUEST of GRANADA.

By the Author of the "Sketch Book." 3 vols. 8vo.

2. **Colloquies on the Progress and Prospects of Society.** By Robert Southey. 3 vols. 8vo. With Engravings.

3. **All for Love; and the Pilgrim of Composition; and other Poems.** By Robert Southey. Foolscap 8vo.

4. **The Life and Services of Capt. Philip Beaver, late of H. M. Ship Nestor.** By Capt. Smyth, R.N. 8vo.

5. **The Journal of a Naturalist,** post 8vo. with Plates.

6. **Bertha's Visit to her Uncle in England,** comprising a Variety of interesting Information for Young Persons. 3 vols. foolscap 8vo.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 1, Wellington Street, Waterloo Bridge, Strand, and 7, South Molton Street, Oxford Street; sold also by J. Chappell, 31, Regent Exchange; G. Marlborough, Ave Maria Lane, Ludgate Hill; A. Black, Edinburgh; Smith and Son, and Robertson and Atkinson, Glasgow; and J. Cunningham, Dublin.

J. MOYES, Teet's Court, Chancery Lane.

AND

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire an immediate transmission, by post, we recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

PRICE 2d.

Life's dreaming morning and its toiling day
Had saddened into evening, and the deep
And all august repose, which broods on high
What time the wearied storms have died away
Mighty in silence, like a giant's sleep,
Sat on the lifted grandeur of his brow.

Our life is as a chime, and our age
Turns to the thoughts and feelings which engage
In our young morn the vision and the vow;
For manhood's years are restless, and we learn
A bitter lesson—bitterer for the truth—
Which suits not with the golden dreams of youth,
And warbles us in age; and so we yearn,
Sated and palled, for boyhood's bliss once more.
But ere the world forsakes us, on we flow
Passive and reckless with its mingling tide,
Till night comes on, and passions which betrayed
Our reason quit the ruins they have made;
The winds are lulled, the hurrying waves subside,
And leave upon the lone and sterile shore
The baffled bark their wrath had wrecked before."

We must select one or two favourites from
among the shorter pieces.

Knowledge.

" 'Tis midnight—round the lamp which o'er
The chamber sheds its lonely beam,
Is widely spread the varied lore
Which feeds in youth our feverish dream—
The dream, the thirst, the wild desire,
Defiance, yet divine—*to know!*—
Around to roam, above to soar,
And drink the breath of heaven below!—
From ocean, earth, the stars, the sky,
To lift mysterious Nature's pall,
And bare before the kindling eye
In man the darkest mist of all!—
Alas! what boots the midnight oil?
The madness of the struggling mind?
Oh, vague the hope and vain the toil
Which only leave us doubly blind!
What learn we from the Past—the same
Dull course of glory, guilt, and gloom!
I asked the Future—and there came
No voice from its unfathomed womb.
The sun was silent, and the wave;
The air replied but with a breath;
But earth was kind, and from the grave
Arose the eternal answer—*Death!*
And this was all; we need no sage
To teach us Nature's only truth:
O fools! o'er wisdom's idle page
To waste the hours of golden youth!
In science wildly do we seek
What only withering years should bring—
The languid pulse, the feverish cheek,
The titis trooping on their wing.
Even now my wandering eyes survey
The glass to youthful glance so dear;
What desponding tracks of slow decay
Exhausting thought has graven here!
To think, is but to learn to groan,
To scorn what all beside adore,
To feel amid the world alone,
An alien on a desert shore,
To lose the only ties which seem
To kinder gaze in mercy given!
To find love, faith, and hope a dream,
And turn to dark despair from heaven!"

We conclude with a few extracts from the
poem called "Almacks"—light shafts from the
bow of satire, which has since been so keenly
strung.

"I know not why it is that one
Licks me, who rhyme and love to shew it,
Should strive throughout the crowd to shun
Above all else 'a charming poet'!
But place me rather, O ye Fates,
Beside some genius fresh from college—
The Cicero of his club, who prates
On Brougham's reply and general knowledge;
Or by some matron who has got
Nine dowdless daughters for her lot;
Or by the eldest of that nine—
Blue, reasoning, chemist, astrologist,
Who talks of 'carbo' and 'combies'
With gentle whispers of 'caloric';
Or by some beau, fresh, clean, and neat,
The Delphic voice of Baker Street,
With whitest vest, and bluest coat,
And cloth con-vised into a riddle,
Two angles based upon a knot,
And golden pin just in the middle—
Who thrills one's ears with phrase and speech
Which Cheltenham dunes perchance would teach,
As 'quite the ton,' or 'met at table,'
Or 'company most fashionable';
Calls some 'gentle,' of others talks
Who 'move among the highest walks,'
Or bursts at once with bolder flow,
To 'pon my honour all the go!'—
Place me, ye Fates, where'er you choose,
By Bloomsbury belles or country codgers;
But save, oh, save me from the name,
And most of all from Samuel B—rs!
I hate the birds who stain their name
By struggling for a meaneer fame,

The night retailers of the rags
Of wit their morning toil has spun,
Who sink from wonders into wags,
And strive with Spencer for a pun.
Oh! Genius, thou shouldst only dwell
By lonely mount or secret cell,
Or if amid the world awhile
Thy strange and wandering steps are found,
Not thine the voice and vacant smile
Which suit the meaneer race around:
In truth thou wert not made to slip
At Lydia White's thy wanted lip,
With boaried jest and laughing lip.
The Touchstone of the coterie.
But worse if to the pantalon
Disboured age transforms the clown,
To play to blues the hoar buffoon,
And reign the R—rs of the town!

• • • • •
Away I turn, and towards the space
Where tea and cakes the senses invite,
Lo! meet me, meaneer the vagrant race,
The swallows of a single night.
Young men whose looks and feet contrive
To win one voucher to Almacks,
While humbler ma' and sisters drive
To Mistress Cr—s or C—s;
New bankers struggling into ton,
Old wilters great with town and Murray,
And ladies whose papa is known
To have some votes in Kent or Surrey,
Stiff, staring, starched, about a score
Are met and mingled round the door.
Alas! what anxious toil has won
Perchance their fleeting triumph here,
What bitter joy when all was done,
And entrance granted with a sneer!
But pride its food from pain shall borrow,
And those to-night's neglect shall gail
Will fly o'er half the town to-morrow,
To boast of Almacks' charming bail.

If Lady F—q—r could contrive
Like ladies of her class to be,
Carve tender joints at half-past five,
And cram hot muffins with her tea;
If Lady F—q—r would invite
Her husband's trading friends to dinner,
Play half-crown points on Wednesday night,
And bet five shillings on the winner;
If Lady F—q—r went to see
The play, and shake her sides at Munden,
Then Lady F—q—r would not be
The veriest laughing-stock of London.
She would not weep her hapless lot
In vouchers lost, and cards forgot,
Nor hear patrician dames, *accuse*
As polished aristocrats, sneer
At vulgar wealth, but hope that poor
Dear Lady F—q—r did not hear.
Then add, in tone distinctly low,
One would not wish to hurt, you know;
And after all, those people may
Be better in their different way.
Then quote 'the bliss of middle life,'
And wish they were the banker's wife.
Alas! that things like these should melt
The olden pride of England down.
Oh! when and where is Freedom felt,
If turned to meanness by a frown?
I am not one who love to praise
The glories of the good old days,
But better with our rustic sires
To live and die as country squires—
Oh! better in our fathers' halls,
Amid the love of those we bless,
Than creeping into weekly balls,
And cringing to a patroness.
And ye, ye littler, meaneer race,
Without the same excuse of birth,
Ye Lady F—q—rs who disgrace
An English merchant's boasted worth,
'Tis half through you and all your weak
Vulgarity of ostentation,
That merchants fail, and bankers break,
And swindling spendthrifts cheat the nation.

• • • • •
'Tis morn, and I must quit the scene
Where many a happier hour has been,
When youth was fresh, and hope was bright,
And sweet the harp, and dear the dance,
That glittering galliard which to-night
Perchance has lured my latest glance.
Away—far the grief to fly
Which memory ever must recall,
And bear beneath an alien sky
The thoughts the world has steeped in gall.
Alas! that bitter world has made
Strange havoc, when our earlier spring
Is darkened with the deadly shade
Which only winter ought to bring;
When from the bright and joyous hues
Which well might light the gaze of youth,
We coldly turn, and sadly muse
Upon the darker tints of truth;
When Fancy's bold lyre is mute
Which once was vocal with our vow,
And Sadness only strings the lute
To satire's harsher notes *as now!*"

We have no parting remarks to make. Had
we not thought most highly of both the promise
and performance of these pages, we had not
chosen them for review; but this we must say,
that the rank their writer might take among
English poets would be one to gratify his
highest literary ambition.

*Military Memoirs of Four Brothers (natives of
Staffordshire) engaged in the Service of their
Country, as well in the New World and
Africa as on the Continent of Europe. By
the Survivor. 8vo. pp. 275. London, 1829.*
Sams.

LIEUTENANT F. (William, we believe) has
been induced to give this family history to the
world, by, we doubt not, very kind and amiable
feelings; but as far as any general interest can
be taken in it, it had far better have been con-
fined to the circle of private friends. What
can the public care for the bundles of letters
which passed to and from the Horse-Guards or
Admiralty when a young man got an ensigncy
in the militia, or a lieutenancy in the marines?
Or what, for the common-place journals of a
sub, in a voyage to the West Indies or else-
where? It is an absurdity to print such things.
Our account of a work of these materials need
not be ponderous.

The author, William, got into the militia in
1797, into the 60th regiment in 1800, went
to Barbadoes, and returned home again.

Henry, another of the brothers, was in the
marines, met with an accident, was carried to
Haslar Hospital, and died at the age of twenty-
one.

John, a third brother, was also a marine
officer, and sailed about a good deal—of all
which cruises he kept a journal, noticing things
of no possible importance to any readers but
his own relations; and was drowned off the
coast of Spain, while gallantly and humanely
endeavouring to save some Spaniards from a
watery grave, after the glorious battle of Tra-
falgar.

Robert, the fourth brother, was first a ma-
rine and then a regular soldier in the 95th
rifle brigade; and his adventures (of which he
too kept a journal) are the only matters worthy
of even a slight record, as he was in the expe-
ditions to the Cape and to Buenos Ayres, and
among the prisoners whom the faithless Liniers
marched up the country after the surrender of
the British force at the latter place. He took,
besides, an active share in the Peninsular war,
where his constitution was sapped, and he died
in Ireland, at the age of forty-four, twelve
months ago.

Of the insanity of John's journal we shall
exhibit but one specimen: at Tetuan—

"The trade of this place is monopolised by
the Jews, who are much oppressed by the
Moors. The flocks and herds are numerous,
and generally in good condition. The fleet
received upwards of 200 of them, which proved
a seasonable supply, after experiencing so many
privations."

From Robert's papers the following selection
may perhaps afford our readers some ten mi-
nutes' interesting occupation; and we copy
them as being almost the only portions of the
book respecting which the supposition may be
entertained. We have the subjoined anecdote
on the loss of the Britannia East Indiaman in
1806.

"Some of the convoy saw her firing guns of
distress just before she sunk, and boats were
immediately hoisted out, in time to save all the
crew except three, one of which was Brigadier-
general York, who, in attempting to save him-

self by swimming, was thrown with such violence against the side of the ship, that he sunk, and was seen no more. Another was a private artillery-man, who jumped overboard, with the intention of rendering assistance to the general; but the poor fellow, unhappily, shared the same fate. The third was a seaman, who refused to quit the ship, saying, he had lived poor, and he would be damned if he would not die rich. He went below, where the dollars were stowed, filled his shirt-bosom, and came upon deck, shouting huzza! till the ship was nearly under water. He then took off his hat, gave three cheers, and went down with her."

When carried up the country from Buenos Ayres, the writer relates: "We had a letter of recommendation to Don Felipe Otorrala, en su Estancia, rivero Araco; who lived upon his estate, five leagues from St. Antonio de Araco, where we proceeded on the 16th of October. He received us with great hospitality, and informed us that every thing in his house was perfectly at our service, and his horses, whenever we wished to ride out. It is incredible the number of cattle he possessed; I do not exactly recollect, but I know it was some thousands. He sold annually (upon a moderate computation) 1,500 mules, which he sent to Lima. We remained here very comfortably for some time; our amusements consisted chiefly in fishing, shooting, and hunting ostriches, deer, and wild dogs. We destroyed upwards of 500 of the latter in four days, they were so numerous. These animals are so ravenous, that they will sometimes attack a man on horseback, and frequently devour cattle. I saw about 100 of them attack a wild bull by surrounding him, and they soon destroyed him. They live in burrows; and it is very remarkable, that no less than five different animals occupy the same habitation; viz. toads, rats, owls, hogs in armour (a small animal resembling a pig), and bisaches, which resemble a rabbit, but are three times as large. Hunting the ostrich afforded us good sport: we sometimes chased them for hours, but seldom or ever could come up with them, although mounted on swift horses, as they always run before the wind, spreading their wings, which act as sails on a ship; and the only method of taking them was, to entangle their legs by throwing the balls, which the Spaniards did with great dexterity, at the distance of eighty or one hundred yards, when in full speed. * * * The river Parana was within an hour's ride of our residence. We frequently went, partly to fish and partly to enjoy the agreeable prospect, which is very striking. * * *

This river rises in the Andes, about 500 leagues in the interior, and falls into the Rio de la Plata. Tigers are not uncommon here; they annoy the inhabitants by destroying numbers of their cattle. I was fishing one day in this river, and caught a cat-fish; it was armed with two bony substances not unlike a saw, except that each horn had notches or teeth contrary ways. In order to kill it, I gave it a kick, when it struck one of these weapons through my boot into my foot. I forced it out, and the excruciating pain it gave me caused me to faint. One of my brother officers was wounded in the hand, and suffered much in consequence of it. Near 3,000 Pampas (Indians) passed down the river, about the middle of December, on their way to Buenos Ayres, to offer their services against the English. They were armed with spears, bows and arrows, balls, and slings, from which they throw stones with great exactness. Towards the lat-

ter end of January 1807 we were informed of the murder of Major Ogilvie of the royal artillery, who was one of the party left at Luxan. He was riding one evening with Colonel Pack of the 71st, when they were overtaken by a Spaniard on horseback, a short distance from the village, who said he had letters from Buenos Ayres for them at his house, which was not very distant, and that he would deliver them if they would accompany him thither. To this they consented; but as night was approaching, Colonel Pack thought it prudent that they should return, beginning to suspect the man had some design, as he saw no appearance of a house. They had scarcely turned their horses' heads, when the assassin discharged a pistol at the major, who immediately cried out, 'Colonel, I am wounded.' The ball had passed below the shoulder, and had lodged in his body. The colonel ran to support his friend, when the Spaniard ran up with a lasso, threw it, and caught the colonel by the arm, from which he soon disentangled himself, but unfortunately had no other weapon in his hand than a small riding-stick. With this he made towards the villain, who drew a sword from under his cloak, and made several cuts at him, which the colonel received on his arm: however, he kept the murderer at bay till two men were observed approaching, when the Spaniard rode off. The poor major had by this time fainted from loss of blood. He was carried to the village, where he afterwards expired. A short time after this affair, a servant, belonging to one of the officers of the 71st, was murdered at Capilla del Señor, as he was crossing from his master's lodgings to his own. A Spaniard caught him round the neck with a lasso, dragged him out of the village, and cut his throat from ear to ear. There were many attempts made that evening with the lasso, to insnare several of the officers; indeed, so many ill-disposed persons were lurking about, that it became dangerous for us to move out without being well on our guard."

Being marched still farther into the interior, 700 miles from Buenos Ayres, amidst horrid privations and dangers, the journal notes—

"May 5th.—We arrived at a place called St. Ignacio, in the valley of Calimuchita, after a fatiguing journey of sixty days, living in carts all the time, and during the nights sleeping under the canopy of heaven, exposed to all weathers. Such is the consequence of captivity, and such is the fortune of war. There was only one building in this place, which appeared to have been a college, belonging to the Jesuits, dedicated to St. Ignacio. Thirty officers were put into this building, and the remainder distributed in different places about the valley. We understood this place was to be our residence till further orders. The valley is very extensive, and surrounded by high mountains, which contain mines of gold and copper, and is watered by a branch of the Tercero. We had not been here long before two of our people were murdered in a barbarous manner. A man and a woman belonging to the seventy-first regiment were attacked by assassins; their cries were heard by three of my brother officers and myself, and we ran to the spot, but arrived too late. We found them weltering in their blood; the poor man had about twenty wounds, inflicted by a knife; he died in a quarter of an hour: nearly the whole of his fingers were cut off the right hand, and appeared to be done by a sharp instrument, in defending himself. The poor woman was mangled in a cruel manner, and died in a few days. We learned afterwards, that they were at-

tacked by five or six fellows with knives; the man defended himself and wife as long as he could, but at last fell through loss of blood. Upon hearing our approach, the murderers fled. This circumstance confirmed a report we had heard, that this part of South America was infested by robbers and assassins, who for the value of a quarter of a dollar would take away the life of any person. We mutually agreed never to go out unless two or three were together, and with caution."

On being released from this miserable captivity, and returning to Europe, Robert visited Naples, &c., where his journal records only insignificant transactions; nor is it of much higher interest when it relates to the Peninsular war, the battle of Salamanca, the retreat from Burgos, and other events. The sketch of his personal sufferings in Spain is too true a picture of what many of our gallant countrymen endured and sunk under in that momentous conflict. In August 1813 he writes:

"I was taken ill in the beginning of August last, but continued with my regiment for some days, in the hope of getting better, until we arrived near Madrid. I was then very ill, and had become so weak, that I frequently fainted when endeavouring to mount my horse. The surgeon at last ordered me into the rear, and with much difficulty I reached Salamanca in a cart, almost breathing my last; here I lay and grew worse, till I was reduced to a mere skeleton, and had been given over more than once, when our army arrived, with the French at their heels, in November, and every preparation was made to evacuate Salamanca and to remove the sick further to the rear. Unfortunately, I was too ill to be removed, and the surgeon who attended me recommended me by all means to make up my mind to be taken prisoner; for he observed (very humanely, I thought), that I had no other alternative left than to be taken by the enemy, or run the risk of losing my life by being removed; for, he added, without ceremony, that I should surely die before they got me over the bridge on the outside of the town. I might have died inside the town for him—for I saw him no more: the cannonading had already commenced, the French cavalry had forded the river and got round our flanks, and I, the only officer in the place, was left to get away how I could. I now thought it was time to make up my mind to the miserable alternative which my friend, the surgeon, had proposed; for the place was given up to plunder. I was lying, unable to stir, in the most dreadful state of suspense, expecting every moment to see a Frenchman pounce upon me, when, to my great astonishment, an officer of my own regiment (Lieutenant Vickers), who had heard of my being so shamefully deserted by the hospital-surgeon, rushed into the room, determined to rescue me. He hurried me away, wrapped in a blanket, upon the back of a rifleman, got me put on a cart, and conveyed over the bridge. However, I did not die, as my friend had prognosticated; but if I could have foreseen the misery I afterwards suffered, I should have sooner wished his words had been made good. We travelled the whole of that night, our army in full retreat, and the French in close pursuit; the weather miserably wet and cold, and the roads so drenched, that it was up to the middle in mud; the animals were knocked up, and I unfortunately fell into the hands of the enemy, a French hussar regiment, who treated me vilely. They knocked the cart from under me, sabred the men, and dragged me into the middle of the road; stripped me,

tearing my clothes into shreds, and, turning me over with their sabres, plundered me of what little I had remaining, tore a gold ring from my finger, and then left me naked, to perish with cold and hunger. I lay in this miserable state two days and nights, with no mortals near me, except dead ones; one of which lay with his head upon my legs, having died in that position during the night preceding, and I was too weak to remove his body; I could not raise myself, I was so reduced. In this suffering state I continued to exist, which I attribute to some rum, of which I drank a considerable quantity from a Frenchman's canteen, who was humane enough to let me do so when I explained to him that I was a British officer. The rum soon laid me to sleep. The Frenchman was a hussar, and appeared to belong to the regiment who had treated me so vilely in the morning (this happened about dusk). I begged of him to take me up behind him; he shook his head, but humanely took an old blanket from under his saddle, covered me with it, and then rode off. The whole of the next day I saw no living soul; still lying on the road, half famished. The day following an escort of French dragoons came up, with a number of prisoners, both English and Portuguese; among them was a soldier of the ninety-fifth, belonging to the same company as myself: he recognised me, and begged of the Frenchmen to allow him and three others to remove me to a village about a league and a half distant from where I lay. After some entreaty they consented, as the rifleman declared that he would not leave his officer, notwithstanding the threats of the French soldiers, who menaced him with their sabres; but he persisted, saying that he would sooner die than leave me to perish. I was conveyed on their shoulders in a blanket, almost in a state of insensibility, except when roused by the inhumanity of the three soldiers, who several times tumbled me into the mud in the most unfeeling manner, swearing I was dead, and that they would carry me no farther; but my rifle comrade threatened them if they dared to leave me. During these altercations I was roused from my stupor, and, opening my eyes, assured them that life had not yet ebbed. They carried me to a village which had been plundered, and deserted by the inhabitants. Starvation still stared me in the face; for the escort having laid me inside a hut, proceeded with their prisoners to Salamanca, where I begged in vain they would take me, to save my life, which was then hardly worth preservation; but the idea of being famished to death was dreadful enough, and I could very easily at that time have reconciled myself to any other mode of quitting the world. However, it appears I was to overcome all my disasters. I felt a strong presentiment that I should emerge from this state of suffering, although these men refused to allow any of their prisoners to stay with me, or even to carry me farther, as I was a mere skeleton: they left me in this deserted village, destitute of food and covering. I still survived, but suffered more from hunger than I can describe, having nothing to subsist upon but horse-flesh and acorns (and both sparingly), for three weeks or a month, in the depth of winter, part of November and December; during which time I lay in an old, half-unroofed barn, where the Spaniards carried me on their return to the village, without giving me a morsel of bread or food of any sort, but telling me I might lie there and rot; which certainly must have been my fate, had

not an English soldier found me, who had, like myself, fallen into the hands of the enemy, but made his escape from them, and accidentally took shelter in my quarters, as I kept open house. The poor fellow found me in a state of starvation, and took me upon his back (for I was quite helpless) to the village, and craved food for me from door to door; but the inhuman Spaniards shut their doors in our faces, refusing me both shelter and food, at the same time they were baking bread for the French. However, my fellow-sufferer, by good chance, found a dead horse, and he supplied me with this food and acorns, which at the time I thought very dainty, believe me, and devoured when first given to me in no small quantity, which nearly put an end to my sufferings. I mention the following occurrence in justice to the Spanish women:—two girls, daughters of the principal person of the village (a baker), notwithstanding the threat of punishment to those who should relieve me, absolutely did two or three times bring me a little food saved from their own meals. In this miserable state I lay, when Colonel Gordon, one of Lord Wellington's aides-de-camp, found me, on his return to Rodrigo, from the French head-quarters, where he had been with a flag of truce respecting General Sir Edward Paget, who had been made prisoner during the retreat. He gave me a gold piece (three dollars) to buy bread with, and assisted my escape to Rodrigo, from whence I was conveyed to the light division in a cart, a mere skeleton, and covered with all kinds of filth and vermin."

With this, the most interesting extract which the work supplies, we should conclude, but for a curious and melancholy relation of a case of hydrophobia, in 1816, at Dublin; which our next Number shall contain.

Memoirs of the War in Spain, from 1808 to 1814. By Marshal Suchet, Duke d'Albafra. 8vo. 2 vols. Vol. I. pp. 377. London, 1829. H. Colburn.

MARSHAL SUCHET having acquired for himself, by his military career in the east of Spain, the distinguishing name of *the Butcher*, we were rather curious to see what sort of an account he gave of his actions during the sanguinary campaigns in which he was engaged. And were it not for the rapid succession of facts, all reeking with human blood, which his narrative discloses, we could never have surmised that he was at all inclined to cruelty. To be sure, it so happened that it was necessary, nay indispensable, every now and then, to "make an example" of the population of a city, by administering a little extermination to it:—"to punish" the people of a province for daring to resist their invaders and defend their homes and altars, just by hanging up a few hundreds of the rebels here and there about the country, and burning their houses and villages;—in short, to enlighten the public mind, by shewing that *Right* ought to be spelt with an *M* instead of an *R*, and disposing of all those who pertinaciously refused to be instructed.

Having to carry these amiable purposes into effect in Arragon, Andalusia, Castille, Valencia, Catalonia, &c. it is clearly shewn by Marshal Suchet that he did the business in the most satisfactory manner, so as to relieve vast multitudes of the inhabitants from every feeling of slavery and misery, to lighten any surplus that might exist of demand beyond produce, and to ameliorate the condition of the happy few who submitted to his mild and paternal

rule. But with all these recommendations, this is a marvellously tiresome and useless book—tiresome to the general, and useless to the military reader. For the former it wants all the charms of individuality; for the latter all the information of military details, elucidated (as they must be to be understood) by plans and practical illustrations. Indeed, the editor, whoever he is, seems to have been perfectly aware of this truth, for he tells us in his Introduction that the "narrative was principally written for military men," meaning, as the context shews, the military men who served with Suchet, and were so well acquainted with the affairs described, that they needed no further particulars to refresh their memories. "His narrative (the editor proceeds) teems throughout with an earnest anxiety to do justice to every one acting under his orders. This may have occasioned a certain prolixity, of which the reader may perhaps complain when he finds the series of events interrupted by the detail of partial engagements."

Nothing more certain could be anticipated. It is broil after broil, fight after fight, massacre after massacre, without distinctness, without relief, and without interest. But different men take different views of things. While we see barbarity, murder, oppression, and desolation, stalking through every page of this hero's history, his editor most naively remarks that his battles and sieges will be stamped to posterity with "a peculiar lustre," endearing them "in the eyes of—(we almost doubt our reading of the words)—*philosophy and humanity*," because, however, he "exerted his endeavours to mitigate the horrors of war."

Suchet rose rapidly in his profession during the Italian campaigns, and was, it is agreed, a brave soldier and a clever man. As one of the modern French *Péladans*, therefore, his memoirs may have some attractions for the French reader; for the English they have literally none. One or two brief extracts will do all that can be required of us to exhibit this work in its own light to the public. Saragossa was taken, and the marshal says—

"It would be impossible correctly to describe the spectacle which was then presented by the unfortunate city of Saragossa. The hospitals could no longer admit any more sick or wounded. The burying-grounds were too small for the number of dead carried thither; the corpses sewed up in cloth bags were lying by hundreds at the doors of the several churches. A contagious fever had created the most frightful ravages. The number of deaths in the interior of the city during the siege, including those who were killed by the enemy, has been estimated at upwards of forty thousand human beings. With a view to take advantage of the terror and dejection to which the country was a prey in consequence of the fall of Saragossa, the adjutant-commandant Fabre, chief of the staff of Suchet's division, was sent to Jaca," &c. &c.

The following is at least an honest statement, though its conclusions are not worth a farthing:—"It has been asserted, that the art of conquering is of no avail, unless combined with the art of procuring means of subsistence for the troops. This is a truth which cannot be denied, when we consider of what those mighty assemblages of men denominated armies consist; what consumptions of all kinds are called for by a state of war; how advantageous it is for the inhabitants of a country, that the soldiers should be furnished with what they might otherwise forcibly seize upon; and

how it behoves a general to preserve them in health, strength, and courage, on which, in the day of battle, may possibly depend the success of an engagement which might decide the fate of a campaign. We trust that we shall be able to furnish a fresh proof of this, and to establish the fact, that the regular administration of an army, and the proper application of the resources of the country which it retains under its sway, should be considered as its most powerful auxiliaries. The administration of the English armies during the war in the Peninsula has been quoted as a model worthy of imitation. It is, indeed, an undoubted truth, that they penetrated into Portugal and Spain without being burdensome to the inhabitants; they distributed a profusion of money on their way: provisions, means of transport, every thing was paid for. But their position did not bear the slightest analogy to ours; they acted in the character of allies, and had the advantage over us of possessing a fleet which held undisputed possession of the ocean and of the coasts. By this means, they received from England every kind of assistance which a wealthy and powerful government could supply; or else they felt no difficulty in procuring, at an exorbitant rate, whatever they stood in need of. At the same time, their administration, whilst it paid for every thing that was consumed by the troops, had the power of introducing, through every harbour of the Peninsula, the produce of English industry or commerce; the supply of arms, clothing, and equipments for the Portuguese and Spanish armies, enabled it to receive and export more money than it had occasion to expend, or at least to make its allies debtors for very considerable sums. As France possessed no such means of drawing from the Peninsula the treasures which it laid out in the country for the maintenance of its armies, French coins were seen every where in circulation, whereas English money was seldom to be met with. The British government, by this wise mode of proceeding, has obtained an important result; its land forces, after many signal defeats, have succeeded of late years in almost rivalling the glory acquired by its fleets, and claim a distinguished rank among European armies.

"In the spring of 1800, the calamities of the war pressed heavily upon Arragon, which had been groaning under them for nearly a twelvemonth; the destructive siege of Saragossa had diminished the population, ruined commerce and industry, deprived agriculture of its crops and of its cattle."

It was in this helpless and hopeless condition that Buonaparte ordered "the war to support the war," and Suchet to "impose extraordinary contributions" on the wasted province!! We have not patience to go through the measures by which it is pretended that Arragon was made quiet and happy. We leave them and the rest of the work to such readers as would be entertained with an old volume of Gazettes (not Literary, but Government), or bulletins affording ample misinformation of operations and victories long after they had ceased to interest a living being except the parties who had figured in them.

The Shepherd's Calendar. By James Hogg, Author of the "Queen's Wake," &c. 2 vols. 12mo. Edinburgh, 1829, W. Blackwood; London, T. Cadell.

A RACE with more marked characteristics than the Scotch peasantry does not exist: strangely blending worldly prudence and wild imagination,

extreme superstition with fervent devotion, their histories abound in material both for the philosopher and the poet. Poor, but independent, with a certain degree of education generally diffused, accustomed to hardships, elevated by dangers—for dangers do elevate, both by exciting our own powers, and by giving them a reliance on a higher power—passing much of their time in a solitude which is doubly impressive in a mountainous country, where earth and sky seem to meet,—their annals are interesting, as those of the human character must ever be, when neither debased by brutalising poverty, nor frittered away in inactive luxury. But let our Shepherd speak for himself.

"The daily feeling naturally impressed on the shepherd's mind, that all his comforts are so entirely in the hand of Him that rules the elements, contributes not a little to that firm spirit of devotion for which the Scottish shepherd is so distinguished. I know of no scene so impressive, as that of a family sequestered in a lone glen during the time of a winter storm;—and where is the glen in the kingdom that wants such a habitation? There they are left to the protection of Heaven; and they know and feel it. Throughout all the wild vicissitudes of nature, they have no hope of assistance from man, but expect to receive it from the Almighty alone. Before retiring to rest, the shepherd uniformly goes out to examine the state of the weather, and make his report to the little dependent group within—nothing is to be seen but the conflict of the elements, nor heard but the raving of the storm; then they all kneel around him, while he recommends them to the protection of Heaven; and though their little hymn of praise can scarcely be heard even by themselves, as it mixes with the roar of the tempest, they never fail to rise from their devotions with their spirits cheered and their confidence renewed, and go to sleep with an exaltation of mind of which kings and conquerors have no share. Often have I been a sharer in such scenes; and never, even in my youngest years, without having my heart deeply impressed by the circumstances. There is a sublimity in the very idea. There we lived, as it were, inmates of the cloud and the storm; but we stood in a relationship to the Ruler of these, that neither time nor eternity could ever cancel."

Most of the tales having appeared in *Blackwood's Magazine*, they have already been pretty generally circulated: they bring the welcome of old familiar friends, who for the first time we have an opportunity of collecting together. We shall select among the circle at hazard. The following story of trusting to Providence is very characteristic.

"Another time, in harvest, it came a rainy day, and the Ettrick began to look very big in the evening. Willie Candlem, perceiving his crop in danger, yoked the white mare in the sledge, and was proceeding to lead his corn out of watermark; but out came Meggie, and began expostulating with him on the sinfulness of the act,—'Put in your beast again, like a good Christian man, Willie,' said she, 'and dinna be setting an ill example to a' the parish. Ye ken, that this vera day the minister bade us lippen to Providence in our straits, and we wad never rue't. He'll take it very ill off your hand, the setting of sic an example on the Lord's day; therefore, Willie, my man, take his advice and mine, and lippen to Providence this time.' Willie Candlem was obliged to comply; for who can withstand the artillery of a woman's tongue? So he put up

his white mare, and went to bed with a heavy heart; and the next morning, by break of day, when he arose and looked out, behold the greater part of his crop was gone. 'Ye may take up your Providence now, Meggie! Where's your Providence now? A'down the water wi' my corn! Ah! I wad trust mair to my gude white mare than to you and Providence baith!' Meggie answered him meekly, as her duty and custom was—'O Willie! dinna rail at Providence, but down to the meadow-head and claim first.' Willie Candlem took the hint, galloped on his white mare down to the Ettrick meadows, over which the river spread, and they were covered with floating sheaves; so Willie began and hauled out, and carried out, till he had at least six times as much corn as he had lost. At length one man came, and another, but Willie refused all partition of the spoil. 'Ay, ye may take up your corn now where you can find it, lads,' said Willie; 'I keppit nane but my ain. Yours is gane farther down. Had ye come when I came, ye might have keppit it a'.' So Willie drove and drove, till the stackyard was full. 'I think the crop has turn'd no that ill out after a'; said Meggie: 'you've been nae the waur o' trusting to Providence,' 'Na,' rejoined Willie, 'nor o' taking your advice, Meggie, and ganging down to kep and claim at the meadow-head.'"

Some most extraordinary facts are stated of the sagacity of the dog: we choose one, though at the risk of encouraging a thief.

"One young man, in particular, who was, I believe, overtaken by justice for his first offence, stated, that after he had folded the sheep by moonlight, and selected his number from the flock of a former master, he took them out, and set away with them towards Edinburgh. But before he had got them quite off the farm, his conscience smote him, as he said (but more likely a dread of that which soon followed), and he quitted the sheep, letting them go again to the hill. He called his dog off them; and mounting his pony, rode away. At that time he said his dog was capering and playing around him, as if glad of having got free of a troublesome business; and he regarded him no more, till, after having rode about three miles, he thought again and again that he heard something coming up behind him. Halting, at length, to ascertain what it was, in a few minutes his dog came up with the stolen drove, driving them at a furious rate to keep pace with his master. The sheep were all smoking, and hanging out their tongues, and their driver was fully as warm as they. The young man was now exceedingly troubled; for the sheep having been brought so far from home, he dreaded there would be a pursuit, and he could not get them home again before day. Resolving, at all events, to keep his hands clear of them, he corrected his dog in great wrath, left the sheep once more, and taking his dog with him, rode off a second time. He had not ridden above a mile, till he perceived that his dog had again given him the slip; and suspecting for what purpose, he was terribly alarmed as well as chagrined; for the day-light approached, and he durst not make a noise calling on his dog, for fear of alarming the neighbourhood, in a place where both he and his dog were known. He resolved therefore to abandon the animal to himself, and take a road across the country which he was sure his dog did not know, and could not follow. He took that road; but being on horseback, he could not get across

the enclosed fields. He at length came to a gate, which he closed behind him, and went about half a mile farther, by a zigzag course, to a farm-house where both his sister and sweetheart lived; and at that place he remained until after breakfast-time. The people of this house were all examined on the trial, and no one had either seen sheep, or heard them mentioned, save one man, who came up to the young man as he was standing at the stable-door, and told him that his dog had the sheep safe enough down at the Crooked Yett, and he needed not hurry himself. He answered, that the sheep were not his—they were young Mr. Thomson's, who had left them to his charge; and he was in search of a man to drive them, which made him come off his road. After this discovery, it was impossible for the poor fellow to get quit of them; so he went down and took possession of the stolen property once more, carried them on, and disposed of them; and, finally, the transaction cost him his life. The dog, for the last four or five miles that he had brought the sheep, could have no other guide to the road his master had gone, but the smell of his pony's feet."

There are stories of ghosts, dreams, &c. enough to last out a six weeks' snow; and altogether, these very amusing volumes are most striking, as well as most interesting, sketches of national character; and we dismiss the Ettrick Shepherd with cordial commendations.

Tales of Military Life. By the Author of the "Military Sketch-Book." 3 vols. 12mo. London, 1839. Colburn.

"*Thus Fashion holds her universal sway*"—from the peddling with which the courtiers of Henry VIII. emulated their monarch's corpulency, down to the present dynasty of Parisian cut and curl, the mode has ever held, "whatever is, is right." Now, so long as Fashion will but keep to her legitimate empire of silk—will be arbitrary on the colour of a vest, and the size of a sleeve,—we have no remonstrance to offer against her most orthodox ascendancy; but when her tyranny extends even over types—when she puts printers into requisition, and comes out with two and three volumes in her train,—we must beg to have an opinion of our own. It has arrived at such a pitch, that a novel in three volumes is as much a production of "because it is the fashion," as ever were cape or collar. An honest citizen goes down to Margate; one of his family is literary; and three volumes soon appear,—in which a love affair, the colour of the captain's coat and breeches, and the number of windows of their house, are most accurately set forth:—or, a convict is sent to Botany Bay, he brings home notes, he throws a few adventures in, and out comes another three volumes:—or, living in a street at the West-end where you can see into some opposite neighbour's drawing-room, watching a few carriages pass, with the help of a Court-guide, will furnish a tale of fashionable life fit to appear any circulating spring, in three, if not four, seemingly volumes.

The work before us is a production of this species: the author has, no doubt, seen a good deal of service, and has that literary taste which is so often mistaken for talent by its possessors. Every body about him is writing; he is on half-pay; and, what with the moving accidents he has encountered, and those he has read, his three volumes are concocted with all the rapidity with which hand-writings are

amended, and languages are learnt, in our present ten-mile-an-hour and intellectual-steam-engine age. The first tale is very much like a great many others; there is a beautiful heroine—a hero, of whom we know nothing till he turns out to be a baronet—in short, a kind of Guy Mannering story, where an Irish Croppy is a masculine Meg Merrilies—Colonel Raven, a military edition of Glossin, &c. Sir Walter Scott has much to answer for!

What but the most inveterate book-making could produce such passages as the ensuing ones?

"The captains and subalterns stood at the head of their respective companies—the surgeons, pay-master, and quarter-master, on the extreme left, next the light company—the band, drummers, and pioneers, occupied the rear. The sight delighted the proud Sir Edward, as he rode along the line, accompanied by Major Pommel and the adjutant, mounted also, to inspect the men; which having done, he gave the word, in loud and martial voice—'The battalion will wheel backwards into open column.' Sir Edward now galloped to the left flank, the musicians, drummers, and pioneers, took their station on the right, and the captains of companies moved out, placing themselves a few paces in front of their right subdivision. The major then continued—'By subdivisions on the left backward wheel.' At this word of command the captains of companies moved out quickly to the front of their right subdivisions, while the pivot-man of each company faced to the right. This done, Sir Edward proceeded—'Quick march!' And the movement closed by—'Halt! dress!' from the captains of companies."

Sir Edward continued—'Let the movement be done again. Left wheel into line—March!—Now, Mr. Allan, attend, sir.' He then gave the word, as before, and the battalion formed into subdivisions so perfectly as to defy reproof. This done, the commanding officer, in a few minutes, gave the word—'Quick march!' The band struck out a quick step, and the regiment commenced to move off—the colonel riding in front of the grenadiers—before him, the drummers, musicians, and pioneers."

Being entertained by such interesting descriptions as this, the following equally interesting conversation may serve as a further specimen how these pages are eked out.

"Stubbs and his friend were enjoying themselves, seated on a bank, the remainder of the regiment resting themselves, but under arms; and, as usual with these two professors, discussing agreeably a given topic; the present was an analysis of a particular part of a drum-major's duty. 'I cannot help thinking it very hard, corporal,' observed Stubbs, 'that I, as a drum-major—an officer of the musical department, I may say—should be obliged to go into action: not that I am in the least afraid of falling, for I flatter myself that I can do a little as well as any man in the regiment.' 'O faith! you can do a bit o' business in your present occupation, major,' dryly observed Miles, at the same time glancing at the large limb-bone which Stubbs was actively picking. 'You see what a clane drumstick you've made o' the leg o' the goose.' 'That's a joke, Miles—it is too serious a matter for a joke, I assure you. I argue on principle—I am a musician: you are a fighting man—I'll do my duty—you do your's—let me beat my drums, you may beat the enemy.' 'Why, that's a joke too, major,' observed Magoverin. 'Hand me the brandy,' returned Stubbs, with a consequential smile at finding his wit was duly appreciated.

'You hav'n't given us any lingo to-day,' continued he, 'so make a beginning, and let us have *Latin for geese*.' 'I'll tell you what, Misther Stubbs,' said Miles, as he helped himself to a horn of the liquor, and handed the canteen to his companion; 'I'll tell you what it is: your talents are suffocated, as I may say, under a bushel; you ought to hold a different place in the army.' 'Very likely,' observed Stubbs; 'but what should that be?' 'Why, in the *victualling* department, to be sure.' 'Your health, corporal!—I believe you are right,' returned Stubbs with a grin. 'No great enterprise can be consummated an' undertaken in the field without a good commissariat,' said Miles. 'With that opinion I perfectly agree; and I don't think we have had much of a commissariat on this retreat, or we should not have left so many poor fellows dying behind us all along the road. For my part, I have been my own commissary: look at this goose—absolutely stuffed with turnips! I tried hard for sage and onions; but, sir, the country is exhausted. You may talk of generals and heroes; but I say that whoever provides the eatables is the real conqueror. Cut me off the pope's nose, corporal.' 'Is there two popes' noses in a goose?' inquired Miles, with apparent simplicity. 'Two!—no.' 'Then I can't send you the nose at all, major; for I saw you bite it off yourself this mornin'. However, here's a bit o' the breast for you.' Ha! so I did, so I did,' cried Stubbs; 'now I remember: I was certainly very hungry.'"

Then come very pithy oddities in phraseology—quite original, no doubt. What can we say for such expressions as, "tears relieving the cramp of his feelings;" or love-making such as, "My dear, angelic Mrs. Grey, I love you—a *captain* of dragons loves you!"

We are sorry to be thus severe in a literary point of view; for we do think the writer's intentions, and his remarks on flogging and some other points of military discipline, are excellent: only we would recommend not so completely exhausting all the *matériel*; but, to use a homely proverb, "cutting your coat according to your cloth." The author is said to be a gentleman of the name of Maginn, and late a surgeon in the army: we need not add, not the Maginn whose formidable pen so affrights his political opponents, and whose general talents, learning, and wit, form a union of which we believe there are few living examples among our literary men.

SIGHTS OF BOOKS.

The Carbonaro; a Piedmontese Tale. By the Duke de Levis. 2 vols. London, 1829. H. Colburn.

We scarcely know under what head to class the production now before us; there is no mention made of its being a translation, yet a translation it evidently is, and that a very bad one, done by the aid of a dictionary and a few lucky and unlucky guesses: for example, an impassioned look, *un regard passionné*, is rendered by the very un-English phrase, a passionate regard; the cart, *char*, is grandiloquently into car. But without entering into the details of verbal criticism, we must say that the doing of the *Carbonaro* into English, is one of those literary jobs which bring this branch of literature into such discredit: a species of smuggling utterly destructive to free commerce, and which can give no idea of the mutual advantages of intellectual intercourse. For a man to make a good translator, he must have talents of his own to begin with; he must have thoroughly studied the literature of the language,

and imbued his mind with the spirit of his original: it is by so doing that such men as Lockhart, Gillies, and Carlyle, have made such valuable acquisitions from the store of other nations, have given us real knowledge, and cultivated a correct and just taste for works that, in many instances, were, till they came, neglected by ignorance, or scorned through unjust prejudice. We will only now mention one memorable instance which ought to have given a lesson to the publisher: what was the fate of the curious Auto-biography of Göthe?—worse than lost to our literature, an ill name set upon it, entirely by being made a business done at so much a sheet. Surely there ought to be some sort of Ellenborough act passed for the protection of authors, to prevent their being thus cut and maimed with impunity.

Under such disadvantageous circumstances, strict criticism is rather harsh than just towards an author; but, in truth, no translation, however well executed, could save this work from being a mass of improbable events, connected by a still more improbable story: characters, or rather personages, are introduced on the scene to utter a few fine phrases about liberty—and exeunt; as for *dénouement* there is none. It is one of those works that just breathe the tone of a party, but whose literary merits are at a very low ebb.

Conversations on Intellectual Philosophy; or, a familiar Explanation of the Nature and Operations of the Human Mind. 2 vols. London, 1829. Edward Bull.

WE know not when we have been more pleased than with the two volumes which we now introduce to our readers in terms of unqualified approval. Though professedly written for the use of young persons, they contain much excellent matter for every age; and to the former class they are invaluable. In these days of intellect and accomplishment, we educate hands, feet, face, while the mind is too much neglected; we are taught to walk, dance, speak, look,—but to think, the most important of all, is often forgotten. The more a young mind is accustomed to reflect on its own thoughts, and to analyse its own impressions, the better calculated will its powers be to form clear and correct observations; and the lessons of experience will only add force to the already accurate judgment,—accurate because accustomed to examine. Simple, clear, and concise, founded principally on Brown's system, these Conversations truly deserve their name—Intellectual; and we recommend them to every juvenile library, in which they have long been a desideratum.

The Portraits of a Christian Gentleman. By a Barrister. 12mo. pp. 231. London, 1829. Hensley.

WHEN we state that this volume is from the pen of Mr. Roberts, the late editor of the *British Review*, and author of *The Looker-on*, &c. we say enough to recommend it to the notice of every person acquainted with that gentleman's writings, abilities, and sound principles. It is a very excellent, moral, and Christian production.

Picture of London. Re-edited by J. Britton. 18mo. pp. 498. London. Longman and Co.

THIS is the true way to make valuable books,—every year improving them, as changes and novelties require, and as more correct information can be obtained. This, the 26th edition, is at once extremely neat, careful, and copious.

Le Furet de Londres. 1828.

THIS is a weekly French newspaper, collected into the form of a convenient volume, the last year being the third of its existence. It is a pleasant, light, and agreeable miscellany of dramatic criticism and news; amusing papers, principally on topics of the day; and other varieties. It is well deserving of a place in the boudoir of our fair friends, and even on the tables of public places and libraries.

Howell and Co.'s Catalogue of Books exclusively relating to the Church of Rome, &c. London, 1829.

THIS Catalogue of 3,347 works relating to the church of Rome, her doctrines, worship, discipline, controversies, and annals, is peculiarly deserving of attention at the present period. The collection is, indeed, most ample and curious; and the list of publications possesses much interest in the form of notes and remarks.

ORIGINAL CORRESPONDENCE.

YESTERDAY being *le Dimanche gras*, pleasure, or rather what is termed such, was the order of the day. At two o'clock the *gendarmes* took their posts to keep the multitude in awe, and prevent *Messrs. les Cochers* from overturning the unfortunate *pictons*. Notwithstanding the piercing cold of the morning, and a threatening sky, the *Boulevards* were so thickly thronged from one extremity to the other, that it was impossible to move except in minuet step. There were not so many masks as last year; and as for the costumes, they were almost all the same—Greeks, Turks, and Indians, galloped to and fro: the principal personage was an apothecary decorated with the ensigns of his art: one or two elegants and elegantes were also tolerably ridiculous, and excited much hilarity; but in general the characters were badly supported; and the lower classes are so gross in their choice of subjects, that the eye turns away in disgust, instead of experiencing any amusement from the sight.

The Duchesse de Berri and the little Duc de Bordeaux honoured the scene of gaiety with their presence. The moment the latter appeared, all hats were taken off, and cries of *Vivent les Bourbons!* and *Vive le Duc de Bordeaux!* were vociferated. But few accidents occurred, considering the pushing, squeezing, and confusion: one gentleman lost his wooden leg; two ladies of no tender age were robbed of both hats and wigs; an officer had his epaulettes stolen, and the tail of his coat cut off:—but these are merely trifling circumstances.

Theatrical composition is now at so low an ebb, that authors are obliged to have recourse to asses to ensure the success of their pieces! An animal of this species was three times introduced on the stage in a late performance. I trust that the *salons* also will be honoured by the presence of the braying quadruped; for no doubt society would find long-eared donkeys much more supportable and amusing than long-headed gentlemen.

Amongst the bad *bon-mots* of the day is one which is cited as a *chef-d'œuvre d'esprit*, viz. *Si Château-Briand parvient à faire choisir un pape libéral, il possèdera le vrai génie du Christianisme.*

ARTS AND SCIENCES.

NEW ARCTIC EXPEDITION.

ANOTHER expedition to the Arctic seas, prepared under circumstances of peculiar public

interest, is shortly to leave our shores; and it affords us much satisfaction to present our readers with the earliest account of a design which promises to lead to such important results, as well as to attract popular curiosity and feeling in no ordinary degree. This expedition is projected by Captain Ross, whose former voyage to the Polar seas is well known to the world, and will be entirely under the command and control of that able and gallant officer. We say entirely under his command and control; for, though countenanced by the Admiralty, the undertaking is at the private expense of Captain R. and his friends: the whole plan is his own, and consequently the outfit, the mode of proceeding, the length of time employed, the remaining or returning, will be decided on his own knowledge and responsibility, and without being cramped by reference to superior orders at head quarters—a point which has probably interfered with the successful prosecution of any similar attempt heretofore, and certainly caused Captain R. himself to be made rather a sort of scape-goat for failure on the previous occasion.

But the great novelty in the new voyage, and one which excites such sanguine hopes respecting it, is, that the powerful aid of steam is to be employed for the first time. Captain R. goes out in the *Victory*, a steam vessel of 200 tons burden; and accompanied by the *John*, a ship of 320 tons, laden with fuel, provisions, and stores.

Our scientific readers are well acquainted with Captain Ross's excellent *Treatise on Navigation by Steam*;* but to others it may be proper to state, that this very practical and well-informed officer has for six or eight years been ardently engaged in experiments upon the application of this wonderful force in vessels of every kind. What his perseverance and talents have effected, it is unnecessary for us to particularise; but we merely repeat the opinion of the best sailors we know, when we state that they consider Captain Ross's improvements to be of the highest character. To demonstrate this, we understand the *Victory* will repeat the experiments (already proved in the north) in the Thames, where she now lies; so as to shew to great official personages the nature of the services that may be expected from a ship so constructed. At present, all that we can say is from report (we shall acquire ocular testimony as soon as we can); and we are told that the *Victory* is fortified upon principles which must render her impervious to ice. The paddles are upon quite a new construction; the build is such, that a severe pressure of ices would raise the vessel, instead of crushing it; and finally, if she failed as a steamer, the paddles can readily be taken off, and she is immediately rigged and navigated as a sailing vessel!

In addition, we understand that the engine works without a funnel, and is of the high-pressure kind, which Captain Ross's experiments teach him to prefer far beyond the low-pressure. Another extraordinary advantage, when we look to the navigation of these seas and to the coasts which are to be surveyed, is, that any species of fuel may be consumed, and thus the motion of the explorers be kept alive by means furnished from the objects by which they are surrounded, whether the wood of the northern shores of America, or the oil of seals,

* Quarto, recently published by Longman and Co. in London, and Blackwood in Edinburgh,—a work, whether viewed in a civil or military light, of the utmost national importance.

bears, walruses, and whales, to be found in every quarter of ice and water.

It is probable that Captain Ross will, in the first instance, proceed to Lancaster's Sound, and examine Prince Regent's Inlet, which, if it will be remembered, afforded the fairest prospect of an approach to the northern land. In this direction, by the help of steam and boats, we confidently anticipate that interesting discoveries will be made. Having ultimately, either by this channel or any other, reached the American coast, it will be the object of the expedition to complete its examination, and especially to inspect that portion which was left unexplored between the efforts of Captains Franklin and Beechey. This alone would be a great triumph to geography, and reflect high honour on British perseverance and enterprise—the laurel for which has been and is now so nobly contested, both by the government of Russia and by the individual exertions of the late patriotic Romanoff. That the example of that illustrious person is about to be followed by one of our own countrymen in a private station, is in itself a great gratification to us; and we most heartily wish Captain Ross all the good fortune which he so eminently deserves. Perhaps we ought to notice that there is now no pecuniary reward to tempt to the exploit, and that therefore it is free from every taint of interested motives. All that Captain Ross can look for, is the assistance of instruments from the Admiralty, the Royal Society, and other public bodies; and these, we believe, are liberally offered. In conclusion, we again wish him every success; and trust that at no distant period we shall have the pleasure of recording it, and directing the gratitude of his country to his happy and triumphant return.

It strikes us that such contrivances must be eminently calculated to ensure success; and it will be curious to see individual enterprise and ability achieve that which government, with all its means and liberality, has failed to accomplish.

The *Victory* and *John* are to be manned with a crew of 60,—20 in one, and 40 in the other vessel; and when we mention that Capt. Ross (the nephew of the commander, and the companion of Parry, &c.) is to accompany his uncle, we give an assurance that every thing which science,—astronomy, botany, natural history,—may look for, will be amply fulfilled; for the British navy does not boast of a better educated or more intelligent officer.

Provisions for three years are to be taken out; and the expedition will be ready to start by the middle of next month.

ROYAL INSTITUTION.

MARCH 6.—At an early hour this evening the library of the Institution was crowded. Mr. Brande, at the usual time, delivered some interesting observations on the "theory of etherification." The object of the lecturer was to trace the history of this part of chemical science, and then particularly to point out some modifications of the received theory, founded upon the recent discoveries and views promulgated by Mr. Hennel.

Mr. Brande observed, that ether is formed by the action of sulphuric acid and alcohol: when formed and analysed, it may be considered as a compound of a certain quantity of hydro-carbon and water: alcohol, from which it is formed, consists of the same quantity of hydro-carbon, with just twice as much water; and the theory adopted of late years has been, that the sulphuric acid, by its strong attraction

for water, took half of that in the alcohol away, and left ether, which then distilled over.

Mr. Hennel, in two papers published some time ago in the *Philosophical Transactions*, first shewed the correct nature of a peculiar acid formed when the alcohol and sulphuric acid were mixed to make ether, and then shewed that it was never formed except when this peculiar acid was present, and that when present, ether could be obtained from it without the use of alcohol; from which it follows, almost to a certainty, that the elements of alcohol acquire this intermediate state of combination with sulphuric acid before they become arranged as ether. Mr. Brande then brought forward a variety of other interesting and collateral points in the chemical history of these substances.

On the library-table lay another series of Chinese productions in the fine arts, from the collection of Mr. Copeland; also specimens of fine castings in iron from Berlin.

SOCIETY OF ARTS.

MARCH 10.—The subject of this evening's illustration was gypsum, or sulphate of lime, and its principal uses. The Secretary began by stating the chemical composition of this substance, and the difference between the anhydrous sulphate of lime (of which the bardiglio marble of Bergamo is the most remarkable variety) and gypsum. He then proceeded to the solubility of gypsum in water, its presence in almost all hard natural waters, and the qualities which are thus communicated to them in relation to the uses of such water for washing, for the solvents of dyes, and for the various purposes of the calico-printer. The hard waters of the neighbourhood of London were next treated of, and were shewn to derive their gypseous impregnation chiefly from the blue London clay.

Those strata in the English series that contain gypsum were next enumerated, and their position pointed out on Mr. Greenough's geological map, namely, the weald clay of Kent, Surry, and Sussex, the brown Purbeck clay, the blue Oxford clay, and the red marl. This latter being the chief repository of gypsum, was described more in detail,—the connexion of rock salt with gypsum was pointed out, and the quarries of this latter in Cumberland, Derbyshire, Yorkshire, and Nottinghamshire, were enumerated. A short view was then taken of the principal localities of gypsum on the continent of Europe.

The knowledge possessed by the ancients of this substance was then stated at some length; their application of the large transparent crystallised varieties of it to the purposes of window glass, of covering conservatories, and of making bee-hives; their practice of calcining gypsum for cements and plasters; the use made of it by Lysistratus of Sicily, in taking casts from the living subject, and the way in which he availed himself of these casts in making his statues portraits of those whom they represented.

The modern uses of gypsum, as far as they relate to the arts, were then treated of. First, the different modes of burning or calcining it, according to the purposes for which it is intended; and the reduction of it to fine powder: next, the characters by which the goodness of the powder is ascertained; the cautions necessary to be observed in mixing the powder with water, and forming it into plaster, and the means of expediting or retarding the setting of the plaster.

The method of making plaster casts of medals

and other flat surfaces, was then detailed; and afterwards the Secretary proceeded to describe the art of casting solid substances. The difference between waste moulds and safe moulds was illustrated by specimens; and the subject was concluded by a description of the method of forming elastic moulds of great simplicity, and capable of delivering casts, containing undercoat and tubercular parts.

Casts of busts, and of figures from statues and from the life, as well as of dissected subjects, to shew the position of the muscles, were furnished by Mr. Sass: casts of architectural ornaments were sent by Mr. Cottingham; casts representing cases of malconformation, in order to shew the use of this art to the surgeon, were exhibited; and some fine casts of medals were furnished by Mr. Brockedon and Mr. Kelsall. Vases, figures, and other sculptured ornamental works in gypsum, were sent by Mr. Solly and by Mr. Mawe.

Mr. Deville gave his personal assistance to the Secretary, shewing the method of mixing the plaster, and illustrating this part of the subject with various interesting practical remarks.

The great room was crowded with members and with visitors; and the whole went off with great satisfaction to those present.

In the model-room were exhibited various specimens of elaborate carving in ivory and tortoise-shell by Chinese artists, contributed by Mr. Barnes; and an extraordinarily fine model in coloured wax, representing the muscles, nerves, and blood-vessels, of the face, neck, and clavicular portion of the trunk, executed by Mr. Towne, of Guy's Hospital.

COLLEGE OF PHYSICIANS.

MONDAY, March 9.—Sir Henry Hallford, Bart., President of the College, in the chair. The first paper read was on the late prevalence of ague in the metropolis. In this memoir, Dr. MacMichael, the author, mentioned many proofs of the former epidemic nature of this disease in London; but which, till within the last year or two, seemed to have been almost extinct. Its great frequency, however, in 1827, was a fact well known to every medical man. Dr. MacMichael seemed to lean to the opinion that the extreme heat of the preceding two seasons was the cause, and quoted two or three instances of former aguish epidemics which had been ushered in by seasons of unusual increase of temperature: it also appeared, that in ordinary seasons the inhabitants of London are free from intermittent fever; but whenever our climate becomes of a tropical character, when the exhalations of the soil, in consequence of the greater intensity of atmospheric heat, are more copious and malignant, and the human frame becomes, by the operation of the same cause, enervated, it readily yields to this peculiar form of disease. Besides the medical contents of this paper, some other topics remotely connected with the subject were touched upon. The account of the ravages of malaria in the plains at the foot of the Himalaya mountains was peculiarly interesting. Amongst the auditors we observed many non-medical but distinguished individuals, who appeared highly gratified.

The second paper was a short memoir upon the manners, customs, and diseases of the natives of Van Diemen's Land. Its details, though curious and entertaining, were distinguished by nearly the same characteristics which belong to other savages, with whose manners and customs Europeans are now tolerably well acquainted. The *conversazione*

closed with the reading of the hitherto unpublished report of the Vaccine Establishment for the present year: its contents were merely corroborative of our former notice.

MEDICO-BOTANICAL SOCIETY.

TUESDAY, March 10.—Mr. Frost, in the absence of the Earl of Stanhope, who could not attend, in consequence of a domestic calamity, took the chair. A paper by Dr. Whiting, on the *cineca mocanera*, used in cases of internal hæmorrhage, was read; another on the medicinal plants indigenous to Guiana, by Dr. Hancock, was also read. Their Imperial and Royal Highnesses the Archdukes Charles and Louis of Austria were elected honorary fellows: their Excellencies Count Munster, the Hanoverian minister; Count Molke, the Danish minister; and Mr. Barbour, the American minister, were introduced and admitted foreign members.

Mr. Barbour, in expressing his thanks, said that he would exert his utmost endeavours to place the Society in correspondence with the learned bodies of the United States. That extensive country, he was satisfied, abounded in substances of a medicinal nature, and which required only the finger of science to point them to the attention of a Society of this description—a Society established for the purpose of assisting mankind, by making those plants subservient to the purposes for which they were created.

Mr. Steghall, who had been *black-balled* at a former meeting, was now unanimously elected. Mr. Frost made some observations upon the plants placed on the table.

LITERARY AND LEARNED.

OXFORD, March 7.—Yesterday the following degrees were conferred:—

Bachelor in Civil Laws.—J. Campbell, M.A. Balliol College.
Doctors of Arts.—Rev. J. St. John's, Grand Chancellor, Rev. A. Maister, Balliol College; Rev. T. Horn, Rev. J. Hamilton, St. Edmund Hall; Rev. C. Fawcett, University College; Rev. D. White, St. Mary Hall; Rev. S. Brown, Pembroke College.
Bachelor of Arts.—E. Wanklyn, Brasenose College.

CAMBRIDGE, March 7.—At the congregation on Wednesday last the following students were admitted:
Bachelors of Arts.—R. Cosens, R. Ralph, R. W. Matcote, St. John's College; J. F. Ames, St. Peter's College; G. Cooke, Clare Hall; B. Lodge, Corpus Christi College; R. H. Webb, Christ College; R. Pullen, Emmanuel College; R. Hornby, W. P. Hulton, Downing College.

At a congregation on Friday the following degrees were conferred:—

Honorary Master of Arts.—W. Cavendish, Esq., B.A. Trinity College.
Licentiate in Physic.—G. Burrows, Fellow, Caius College.
Bachelors in Civil Law.—Rev. H. R. Maude, E. Jackson, Trinity Hall; A. Hamilton, Trinity College.
Bachelor of Arts.—J. Lyons, Trinity College.
At the same congregation the Rev. W. S. H. Braham, M.A. of Lincoln College, Oxford, was admitted *ad eundem* of this University.

ROYAL SOCIETY.

MARCH 12. The President in the chair.—A paper was read, entitled, "On the reduction to a vacuum of the vibrations of a pendulum in air." By Captain Sabine, R.A. Sec. R.S.

Among the presents to the Society, we noticed the first Number of MM. Saigey and Raspail's *Annales des Sciences d'Observation*; Prof. Quetelet's description of the Observatories of England; and the Chevalier Aldini's account of experiments made with a dress intended to be worn by firemen, and to resist the action of flame.

Mr. Bransby B. Cooper was proposed; and Dr. Wallich and Mr. Henry Hennel were elected Fellows of the Society.

February 26th.—The reading of a paper

was resumed and concluded, entitled "On the reflection and decomposition of light at the refracting surfaces of media of the same and of different refractive powers." By David Brewster, LL.D. F.R.S. Lond. and Ed.

When white light is incident upon a surface which separates two different media, the portion that is reflected should, according to the Newtonian theory of light, preserve its whiteness, provided the thickness of either of the media exceeds the 80,000,000th of an inch. But, since the dispersive powers of bodies are different, it must follow, as a necessary consequence, that reflected light can never, under any circumstances, retain perfect whiteness, although the modification it experiences is not of sufficient amount to become sensible in ordinary experiments. The author, during his investigations of the laws of polarization for light reflected at the separating surface of different media, had occasion to enclose oil of cassia between two prisms of flint glass; and was surprised to find that the light reflected was of a blue colour. The fact was new, but might be readily explained upon the principle that, although the refractive density of oil of cassia greatly exceeds that of flint glass for the mean rays, yet the action of these two bodies is nearly the same on the less refrangible rays; hence it may happen that a larger proportion of the former than of the latter are transmitted, and the pencil formed by reflection will then appear blue. The partial decomposition thus effected in the incident rays will be the same in kind, though it may vary in degree, at different angles of incidence, and cannot, therefore, give rise to any variation of colour in the reflected rays, although they may differ in intensity according to the obliquity of the incidence. By using different kinds of glass and of interposed fluids, the author obtained various analogous results, different rays of the spectrum being separated according to the prevalence in each particular case of one or other of the opposite actions exerted upon them by the solid and the fluid medium. The author directed his attention more particularly to those conditions in which the nearest approach could be made to a perfect equilibrium of all the forces which affect the incident rays. The solids which he employed in his experiments were two prisms of plate glass, of which the sections were right-angled isosceles triangles, and differing but very slightly in their refractive indices. The fluids were castor oil and balsam of copivi, the former having a less, and the latter a greater refractive power than the glass prisms; a thin film of either fluid being interposed between them. With castor oil, and within the limit of total reflection, the reflected light is yellow; on gradually diminishing the angle of incidence, it passes in succession through all the tints of three orders of colours, of which the details are presented in a table, exhibiting those which correspond to different angles of incidence. When the incident light is homogeneous, no colours are seen, but the reflected pencils have their maxima and minima of intensity, like the rays of thin plates, or the fringes of inflected light formed by homogeneous rays. When copivi balsam is employed as the fluid medium, the same orders of colours are obtained by reflection, but at smaller angles of incidence than with castor oil.

Having ascertained that, at a temperature of about 94 degrees, the mean refractive index of the balsam became equal to that of the glass prisms, the author examined the influence of a gradual elevation of temperature upon the colours of the inflected pencils, and found that

no particular change marked the instant when the refractive density of the two media became equal, although, when the temperature was increased considerably, the tints entirely disappeared. Analogous results were obtained by employing prisms of obsidian instead of glass.

The author next engaged in more extensive series of experiments with various fluids interposed between glass prisms, and states their results in the form of a table, shewing more especially the periods of colours produced at the separating surfaces by the different kinds of oils. He considers the facts which are there detailed as establishing the existence of reflecting forces at the confines of media of the same refracting power, and as proving, 1st, that the reflective and refracting forces in these media do not follow the same law; and, 2dly, that the force which produces reflection varies according to a different law in different bodies. The reflective forces of the solid and the fluid may be conceived to decrease in various ways: 1st, they may respectively extend to different distances from the reflecting surface, and decrease according to the same law; 2dly, they may extend to different distances, and vary according to a different law; and, lastly, they may extend to the same distance, and vary according to different laws. Whether the refracting forces follow the same law in solids and in fluids, it is extremely difficult to determine by direct experiment; but if we assume the mutual dependence of the refracting and reflecting forces, then the experiments recorded in this paper will establish a variation in the law of the refracting forces of different media. The facts may be explained on the undulatory theory of light, by supposing that the density or elasticity of the ether varies near the surface of different bodies,—an hypothesis which has already afforded an explanation of the loss of part of an undulation in several of the phenomena of interference; the part lost being, according to Dr. Young, a variable fraction depending on the nature of the contiguous media.

The phenomena of periodical colours at the confines of media of the same or of different refractive powers, are evidently dependent on the law of interference; although it may be difficult to point out the precise mode in which they are produced. In combinations where there is much uncompensated refraction, their production is influenced by certain changes, such as the formation of a thin and invisible film on the surface of the solid, the nature and origin of which the author endeavours to investigate, but which he acknowledges he has hitherto been unable to discover. That some unrecognised physical principle is the cause of all these phenomena, will, he thinks, appear still more probable from a paper which he intends to present to the Society, on the production of the very same periods of colour at similar angles of incidence by the surfaces of metals and transparent solids when acting singly upon light.

SOCIETY OF ANTIQUARIES.

MARCH 12. Henry Hallam, Esq. V.P. in the chair.—The conclusion of the Rev. Mr. Wellbeloved's paper, descriptive of St. Mary's, York, was read.

A ballot took place for the Rev. John Lindsay, who was declared duly elected a fellow of the Society: and a certificate, recommending the Rev. Charles Drury for election as a fellow, was read, and ordered to be suspended.

Mr. Britton presented the following books:—*Memorable Events in Paris*, 8vo; *Union of Architecture, Sculpture, and Painting*, 4to.

ROYAL ASIATIC SOCIETY.

MARCH 7.—The Right Hon. C. W. W. Wynn, M.P. the president, in the chair. Dr. Meyrick having lent a specimen of the instrument called a nag-nak, or "tiger's claw," for exhibition at this meeting, Col. Briggs read a short paper illustrative of its use. The instrument consists of a slender bar of steel, from which spring four sharp curved blades, resembling in shape the claws of the animal from which it derives its name; a ring is fixed at each end of the bar, perpendicular to the claws; the instrument is held in the left hand, the fore-finger and little finger each going through one of the rings; these rings may be of gold, studded with gems, and pass as the usual ornament of the hand. The instrument is used in the moment of embrace.

Extracts from Capt. Lowe's Digest of the Siamese Laws were also read.

There was presented to the Society, by Mr. Ackermann, through Sir Alexander Johnstone, a copy of Upham's recent publication on the Buddhist Religion, illustrated by forty-three lithographic prints from original Singhalese drawings; the originals were at the same time given by Sir Alexander himself.

The Right Hon. Sir Gore Ouseley presented a copy of the travels of his brother, Sir W. Ouseley, 3 vols. The British and Foreign Bible Society presented copies of the Old and New Testament, in various languages, 16 vols. A number of other literary donations were made to the Society.

Their Excellencies the Prussian, Brazilian, and American Ambassadors were elected foreign members. Amongst the visitors we noticed the Marquess Riario Sforza.

To-day is the annual election of officers, &c.; and the leading members afterwards dine together at the Thatched House Tavern.

ROYAL IRISH ACADEMY.

THE Conyngham gold medal and £80 have been adjudged to John D'Alton, Esq., M.R.I.A. for the best essay on the Ancient Inhabitants of Ireland, according to the advertisement issued by the Academy in 1826.

Mr. D'Alton divided his essay into four periods, viz. the first from the birth of Christ to the arrival of St. Patrick—the second from that period to the first incursion of the Danes—the third to their expulsion—and the fourth to the English invasion. These were again divided into six sections:—first, of the civil and political history, and geography of the ancient Irish;—second, of their government, institutions, and legislature;—third, of their religion and morality—sun and fire worship—the doctrine of the first Irish Christians, and their zealous exertions to spread the knowledge of the Gospel by missions;—fourth, of their sciences, literature, knowledge, and early use of letters—of their schools for the cultivation of poetry, music, astronomy, medicine, &c.;—fifth, of the arts known among the Irish, especially the architecture of their round towers, and construction of their baths, tumuli, caves, &c.;—sixth, of the commerce, customs, and general manners of the people.

The introduction to Mr. D'Alton's essay was intended to prove the early colonisation of Ireland from the East—an intercourse with the Phœnicians—and to illustrate the effects resulting from their commerce with that people.

This paper was well and judiciously arranged, and exhibited great industry and learned research; but much still remains to be done in this intricate and interesting inquiry.

A second premium of £40 was adjudged to a Cork gentleman for an essay on the same subject; and another essay from a third candidate for the prize was submitted to the Academy. These papers, which were of considerable length, were read before several meetings.

At the last sitting, it was announced that General Vallancey's interleaved copy of the *Collectanea de Rebus Hibernicis*, with numerous manuscript notes, and all his unpublished essays, had been purchased for the Academy.

In closing this sketch of the proceedings of the Royal Irish Academy, we must not neglect mentioning that the 15th volume of their Transactions has just been published,—a short notice of which, we hope to be able to lay before our readers next week.

FINE ARTS.

ROYAL ACADEMY.

MARCH 9.—The President in the chair.—The subject of Mr. Westmacott's lecture for this evening was the Praxitelian age. After some introductory remarks on the character of the works of the Phidian and Praxitelian periods, the lecturer drew the following distinction: grandeur and sublimity, approaching to sternness of dignity, were the characteristics of the Phidian period; beauty and expression distinguished the Praxitelian age. The exactitude, approaching in some degree to austerity, though not so favourable to the passions, but which conveyed a stronger idea of the repose of divine nature, controlled the first; whilst the second, established equally on the imitation of truth in the employment of forms united with tenderness into each other, introduced a grace which seduced the beholder, and wrought that secret charm of uniting, even in the terrors of death, beauty the most sublime. The lecturer then cited a number of fine examples of accordance of action with expression, minutely and energetically described expression, and again quoted instances illustrative of the distinct feeling of expression produced by hope, joy, sorrow, &c.; as in the group of Niobe, consisting of no less than fourteen different objects, each under the influence of fear and grief. In remarking upon this group, Mr. Westmacott observed, that in each of these statues there is, equally with expression, an adaptation in the actions to their degrees, admirably suited not only to the force of the passion, but to the age and sex of each; and being thus diversified, the interest is increased without affecting the unity: it is remarkable that in so great a number, all designed to represent nearly the same passions, how ably the sculptor has embodied his idea from nature, in his expression of innocence, purity, and modesty. Mr. Westmacott next made some copious and glowing remarks on beauty; and closed his subject by enumerating the characteristics of the art under Lysippus, Pythagoras the Leontine, Polyclethus, and Phidias, with the former of whom the golden age of sculpture expired. The lecture was illustrated by casts and choice fragments, embracing Niobe, Apollo of Florence, Venus de Medici, a Greek Torso from Mr. Otley, the Capuan Venus, and an exquisite piece from the collection of the Duke of Bedford at Woburn Abbey, supposed to be a work anterior to the Medicean Venus, but in beauty of form is unsurpassed. Mr. Westmacott, in directing the attention of his auditory to this fragment, observed, that in the shoulders, and union of the arms with the body, it may be considered even superior to the Venus de Medici.

BRITISH GALLERY.

WE have always considered it to be useful and advantageous to the arts to make a public record of the pictures sold by our national school at the British Gallery. The list shews what artists have met with encouragement, and the nature of their works; and while we have often to regret that it is not more copious, it is a consolation to us to think that such publicity as we give is likely to make it so, by reminding other friends and lovers of the fine arts to follow the example before them.

Subjects.	Artists.	Purchasers.
<i>A Foraging Party</i>	T. Webster	His Majesty.
<i>The Prisoner</i>	Ditto	Ditto.
<i>The Battle of Saint Vincent</i>	G. Jones, R.A. {	Directors of the British Institution.
<i>His late Majesty presenting the Sword to Earl Howe after the Victory of June 1, 1794</i>	H. P. Briggs, A.R.A. }	Ditto.
<i>Fruit</i>	G. Lance	Duke of Bedford.
<i>Ditto</i>	Ditto	Ditto.
<i>The Society of Antiquaries</i>	T. Webster	Marquess Conyngham.
<i>Engraving in the Air</i>	H. Howard, R.A. }	Lord Farnborough.
<i>A Sportsman</i>	Alex. Fraser.....	Earl Brownlow.
<i>A Sketch from Nature</i>	F. R. Lee	Sir A. Hume.
<i>The Pump Well</i>	A. Fraser	Sir G. Warrender.
<i>The Disputed Title</i>	T. Webster	Ditto.
<i>The Letter</i>	G. S. Newton	Earl of Chesterfield.
<i>The Connoisseur</i>	W. Shiele	R. Holford, esq.
<i>Italian Boy and Dog</i>	A. Morton	W. Wells, esq.
<i>Highlanders returning from Deer-stalking</i>	E. Landseer	Ditto.
<i>A Dutch Girl</i>	G. S. Newton	Ditto.
<i>The Poor Dog</i>	E. Landseer	Ditto.
<i>A Peasant Boy</i>	T. S. Good	Ditto.
<i>Deer just shot</i>	E. Landseer	U. Heathcote, esq.
<i>The Mole Head, &c. at Genoa</i>	T. Cartwright	Captain Haywood.
<i>A Village near a River</i>	J. Linnell	Turner, esq.
<i>Coast Scene</i>	W. Shayer	Ditto.
<i>Entrance of Floating Harbour</i>	John Wilson	Ditto.
<i>Italian Boy and Monkey</i>	A. Morton	R. Vernon, esq.
<i>Jan Swan's Proposal</i>	P. Krüner	R. W. Winstanley, esq.

<i>Painting of the Evening</i>	E. T. Parriss	W. Jordan, esq.
<i>Painting of the Evening</i>	W. Collins, R.A.	W. Wells, esq.

Notwithstanding the all-engrossing character of the politics of the hour, which must be severely felt in the arts, as in every other pursuit, we thus find that above seventy of the pictures in this exhibition have been disposed of, and the sum of (above) £4000 (including £1000 for the two Institution pictures) disbursed towards the cultivation of painting. It is true this is not a sufficient proportion; but we confidently look to its great increase; and under the circumstances of the times it cannot be deemed very unfavourable.

NEW PUBLICATIONS.

The Interior of the Cathedral Church of St. Peter, York. Painted by John Harwood; engraved by William Woolnoth. M. Colnaghi.

Nothing could be better timed than the publication of this fine print. It shows in an admirable point of view, and exactly as it stood until recently, the whole of that portion of the magnificent and venerable Minster of York, which, to the profound regret of the country at large, a vulgar but terrible fanaticism has unhappily laid in ruins. The print does both Mr. Harwood and Mr. Woolnoth, the highest credit. We understand that a Companion View, from drawings taken from the opposite end of this sacred and sublime edifice, is at present in the hands of the engraver.

A Family saved from Shipwreck. Painted and engraved by John Burnet. Moon, Boys, and Graves.

It is seldom that an individual unites in himself the perfectly distinct, although intimately related, arts of painting and engraving. In this noble print, as in former productions, Mr. Burnet has shewn that he possesses ample powers for each of these departments of the fine arts; powers—to imitate phraseology used on another occasion—"rare in their separate excellence, admirable in their combination. Hitherto, the original subjects chosen by Mr. Burnet for the display of his talents have been chiefly of a light and playful character; the present is a work of deeper interest. Of the various qualities which distinguish our brave men, there is no one contemplated by the benevolent mind with more unmixed pleasure than the undaunted alacrity with which, wholly reckless of their own safety, they rush to the aid of those whom the boisterous elements are threatening to overwhelm with instant destruction. On the shores of our sea-girt isle but too frequent opportunities arise for the exercise of their generous self-devotion; and Mr. Burnet has selected one in which success has crowned their efforts. The scene of his picture is a fisherman's cottage. It comprehends two principal groups. In the one, the father of the rescued family is rewarding the gallant fellows who have just been risking their lives in his

service; in the other, the mother, to whom a graceful young girl is affectionately clinging, is eagerly preparing to embrace an infant, rendered doubly dear by the recollection of the perils which they have mutually escaped. At a window are another female with a child, and a boy who is anxiously directing his telescope towards the vessel, which is seen stranded in the distance. Mr. Burnet's arrangement of forms is exceedingly picturesque, and that of chiaroscuro broad and forcible; as was, indeed, to be expected from one whose able treatises on composition prove his familiarity with its rules. As an engraving, the plate is also entitled to high praise. The tooling is loose and free; the various surfaces have their appropriate texture; and the effect of the whole is striking and forcible. We have no doubt that it will become a very popular print.

Twelve Views, in Lithography, of Bolton Abbey, Wharfedale, Yorkshire. By J. Scarlett Davis. Cock, Fleet Street.

THIS interesting publication will give an excellent notion of Bolton Abbey, and its charming and picturesque neighbourhood, to those who have not seen them, and will prove a most pleasing remembrance to those who have. Mr. Davis has been highly successful in his Views. They are drawn with great spirit, feeling, and taste; and are worthy of the scene of which Byron sings—

"The haughtiest breast its wish might bound
Through life to dwell delighted here;
Nor could on earth a spot be found
To Nature and to me so dear."

The Hon. Mrs. Charles Lindsay. Engraved by T. Wright, from a miniature by Mrs. James Robertson. M. Colnaghi.

MRS. LINDSAY is at present with her husband (brother of Lord Balcarras) in India, where she is generally called "the Calcutta Venus;" a cognomen to which, if we may judge from the grace and beauty displayed in this highly finished little print, she is justly entitled. It is the fifty-first of the series of the portraits of the female nobility, published in *La Belle Assemblée*.

The Dead Pheasant. Painted by G. Lance; engraved by J. Romney.

A PLEASING little specimen of Mr. Lance's skill in the composition of subjects of this description; and very cleverly engraved by Mr. Romney.

MR. MARTIN'S ENGRAVINGS.

WE have much pleasure in recording a mark of honour conferred upon one of our most distinguished artists by the King of France. The engravings of Belshazzar's Feast, Joshua, and the Deluge, having been presented to his Majesty by the secretary of the Academy des Beaux Arts, he was graciously pleased to send a fine medal of gold, bearing the royal effigies, to Mr. Martin, as a testimony of the high gratification he had received from his productions.

ORIGINAL POETRY.

TO THE EAST WIND.

LORD of the throbbing brow, the dread design,
Whose incense is the sigh of human pain!
The dagger and the poison-cup are thine—
Fever and pestilence are in thy train;
A wreath of nightshade does thy temples deck,
Thine empire is a blight—thy throne is on a wreck:
Thou whisper'st riches in thy lands afar,
Thy gems' deep lustre rivalling the day:—

Hence! desolation is thy ruling star;
Fiend of an upper hell!—away, away!
Back to thy howling wastes, thy parching
sands,
Thy mirage mock'ries, and thy leper lands:
So may we feel, delivered from thy sway,
A passing space in Heaven:—away, away!
W. L.*

SKETCHES OF SOCIETY.

A CANONISED HERETIC!

WHEN the correspondence of Baron Grimm with several of the sovereigns of Germany was published some years ago, it was previously examined by the imperial censorship, and a whole volume of what was considered dangerous matter was rejected. That volume has recently appeared. The following anecdote, extracted from it, may give some notion of the character of its contents.

St. Vincent de Paule is a saint of new date; the chief and the institutor of the order of the Lazarists. He died in the odour of sanctity, about a hundred years ago. This saint, while he was alive, performed several miracles, declared and recognised as such by the infallible church. He had passed for a zealous Molinist; and the hate which he had evinced towards the Jansenists not a little contributed to his obtaining the honours of canonisation. When the Lazarists solicited this distinction for their patron from Cardinal Fleury, that minister, whose application to the pope was necessary on the occasion, asked them if their brother Vincent had performed any miracles? They answered in the affirmative. The cardinal inquired, of what description—if, for example, he had brought a corpse to life? They replied that they neither could nor would impose on his excellency; that he had done so only in one instance. Upon this, the canonisation was obtained. What follows is public report. There was, it is said, in the family of Argenson a sealed packet, deposited by one of the ancestors of that family in 1650, with an order that it should not be opened for a hundred years. That term having expired, M. de Paulmy proceeded to open the packet, in the presence of the king and Madame Pompadour. Within it was found a declaration of St. Vincent (who had been intimately attached to the family of Argenson), that he had always lived and that he died in the opinions of Socinianism; and that he was so persuaded that that was the only truly divine doctrine, and that, having destroyed all other erroneous doctrines, it would be universally spread a hundred years after his death, that he was desirous his declaration of faith should remain unknown until the period when truth should have thus triumphed over falsehood. It happened otherwise; and Socinianism had not made the progress which the worthy saint expected: but it may easily be understood how embarrassed the Romish church must have been with the miracles of a heretic; miracles the authenticity of which it had acknowledged, and in virtue of which, Vincent had obtained the honours of canonisation!!

MUSIC.

PHILHARMONIC CONCERTS.

THE second Philharmonic Concert took place on Monday last, and began with Beethoven's Sinfonia Eroica, which invariably lasts above three quarters of an hour. Considering, in

* Our friend is very wroth with the east wind; and really the late cold weather induces us to take part with him against it. We hope this publication will have its due effect.

* By Mr. Canning, in his Epitaph on Mr. Pitt.

addition to this length, the energy and power of the composition, performed by a band of between sixty and seventy players, it is clearly not the piece with which the concert ought to commence, if any regard is to be paid to the succeeding minor pieces. The foreign mode of opening the acts of a concert with overtures, and closing them with symphonies, seems to be the more rational one. A very meagre duetto out of Rossini's *Zelmira*, "A che quei tronchi accenti?" by Madame Caradori and Begrez, went off poorly enough; and a pause of equal length might have done as well. The third piece was a fine composition of Onslow's—a Sextuor for piano-forte, flute, clarinet, horn, bassoon, and double bass, by Mrs. Anderson, Messrs. Nicholson, Willman, Platt, Mackintosh, and Dragonetti; and this, with Haydn's violin Quartett, by Messrs. Mori, Watts, Moralt, and Lindley, in the second act, were undoubtedly the two finest performances of the concert. Mrs. Anderson exhibited on this occasion, more than on any former, the distinguishing qualities of first-rate playing—the most brilliant execution, with the utmost clearness and precision. The judgment and taste with which she expressed the spirit of this difficult piece obtained for her the loudest and most general applause we have heard for a long time. Onslow's style is not like that of Hummel's—uniform, connected, and flowing; but it is irregular, and often fanciful. This Sextuor particularly abounds in short phrases and detached ideas. After a very well-executed scena of Spohr's, "Tu m'abbandoni, ingrato," by Madame Caradori Allan, Weber's overture, "the Ruler of the Spirits," a companion to that of the Freischütz, concluded the first act. Of Mozart's Symphony in D, if not the profoundest, at least the liveliest of all, the andante was rapturously encored. The whole symphony was done extremely well, and even better than the first. If we may impute a fault to such an orchestra as the Philharmonic, it consists in the want of nice observance in the "piano" and "forte." Mozart's symphony was, from beginning to end, almost nothing but a continued "forte"—even in the trio of the minuet, which cannot be played too gently. Still greater deficiency is observable in the "crescendo" and "decrescendo," the *ne plus ultra* of orchestral skill; in which, however, the bands of Munich and Berlin, owing probably to their playing almost daily together, and first practising in quartett whatever is written for the full band, so wonderfully excel. The beautiful music of Paisiello's duet, "Son io desto," by Begrez and Pellegrini, of Haydn's before-mentioned violin quartett, and of Mozart's terzetto, "cosa sento,"—could not fail to receive the approbation of the audience. At the end of the quartett, particularly, the company expressed themselves in a manner which gratifyingly proved that the taste and relish for *real* music is not yet extinct. Messrs. Mori, Watts, and Lindley, were rewarded with the most flattering applause. The overture, "Des Abencerages," we did not stay to hear.

ORATORIOS.—On Wednesday the Messiah was ably given at Drury Lane; and yesterday, Sampson, a selection from Der Freischütz, and a miscellaneous act, were the announcements of Covent Garden.

NEW PUBLICATIONS.

1. *Sly Cupid! a Ballad.* 2. *O peerless Nymph!* Composed by C. Smith. London, Power. WE like the first of these much better than the last, which is very trite both in words and

music; while "Sly Cupid" has a considerable share of archness and sensibility in his composition.

Can'st thou forget the silent tears? a Ballad. Translated from Camoens by Lord Strangford; composed by Callcott.

SWEET music to sweet words;—we have met with nothing more pathetic and touching for many a day, though we have, during a long period, suffered as much, wherever we have gone, from the infliction of music, as most persons.

1. *Glide, lightly glide.* By C. C. Temple.

2. *O! list to the sound of my lute.* Cramer and Co.; and Callcott.

THE first, without pleasing our taste so much as some others of Mr. Temple's composition, is nevertheless a pretty, light, and lively air: the last is one of those simple melodies which are so well calculated to become popular,—peculiarly soft, and well adapted to the words.

Bright while smiles the sparkling wine, a Glee.

By Walsmley. Callcott.

MR. W. has talent to excel this child of his fancy, and we should like to see its successor.

DRAMA.

KING'S THEATRE.

ON Saturday, *La Donna del Lago* introduced Blais to our stage with distinguished success. She appears to be a tricky, good singer;—by tricky we mean no reproach, but simply that she knows well how to use her advantages, and how to conceal her defects. Altogether she gave great satisfaction, and earned much just applause: pretty and pleasing, she is a valuable acquisition to the Opera. Donzelli sang rather too much at the top of his voice; but he exerted himself throughout the piece. Pisaroni was hoarse;—our unfounded climate has been really too bad for natives to live in for the last months, and quite impracticable for foreigners to live and sing in. Curioni seemed to be indifferent to his part and to his audience, and of course very ineffective; while De Angeli sang in a style not fit to cry "sweep" musically or tolerably in any decent street in the metropolis.

Apocryphos, the inferior ladies belonging to the ballet ought not to destroy the interest of the *Somnambule*, by flirting with the wings during the performance of its best scenes. *Verbum sat.*

COVENT GARDEN AND DRURY LANE.

MR. LACY has produced since our last notice two operas, one at either house: that at Covent Garden entitled, *The Maid of Judah, or, the Knight-Templars*; and that at Drury Lane, *The Casket*. To take them in the order they appeared will also rank them according to their merits, *The Maid of Judah* being incomparably the best of the two. It is, as the bills announce, founded on the story of *Ivanhoe*; and, considering the difficulty of putting the three volumes into three acts, to be played in three hours, it is not badly adapted to the stage. And here we pause one moment to remark, that the *Morning Chronicle* on Monday expressed its astonishment that so dramatic a novel had never been put upon our stage till the French had set us the example. Most true it is, that the present piece would never have made its appearance but for the *Ivanhoe* of the Odéon, to which the music of Rossini was originally adapted from his operas, *Le Voyage à Rhéims* (now twisted into *Il Conte Ory*), *Pietro l'Eremità*, &c. &c. &c. But had "our learned brother" quite forgotten that Mr. Soane produced a drama, called *The Hebrew*, at Drury

Lane—that Mr. Dibdin had an *Ivanhoe* at the Surrey—that Mr. Jones had another at the Adelphi—or the simple circumstance of Mr. Beazely's opera of *Ivanhoe* being played a whole season at Covent Garden, with such a cast as this?

<i>Front de Bouff</i>	Macready.
<i>Ivanhoe</i>	C. Kemble.
<i>Wamba</i>	Liston.
<i>Gurth</i>	Farley.
<i>Isaac of York</i>	Farren.
<i>Friar Tuck</i>	Emery.
<i>Rouvenac</i>	Miss Stephens.
<i>Rebecca</i>	Miss Foote.

It was but last Sunday week we had the *John Bull* contending that Mr. C. Kemble, in a dark blue coat, faced with red, with a red cockade in his hat, and wearing modern Horse Guards boots, had dressed Charles XII. "to a nicety!" Let not our readers think we are making mountains of molehills; we wish merely to remark, that the persons who write theatrical notices are generally supposed to be intimately acquainted with the subjects on which they expatiate; and that so far from this being the case (with a very few exceptions), it is, as Mathews says, "quite the reverse."—But we beg Mr. Lacy's pardon. His *Ivanhoe* is neatly done, admirably sung and acted, as far as Miss Paton, Mr. H. Phillips, and Mr. Keeley, are concerned; and supported in other respects as well as possible, considering the present state of the company. With the exception of a "Greenwood tree" chorus (which we suspect has been tampered with), nothing can be more truly ridiculous than such music as this of Rossini's being sung by Knight-templars, Saxon foresters, and wandering Jews, of the twelfth century: but this is not Mr. Lacy's fault,—for Rossini is in vogue, and Rossini's music is seldom fit for any thing but quadrilles, or expressive of any thing but the volubility and persiflage of an Italian prima donna. Miss Paton seemed to feel this as strongly as ourselves; but still her exquisite talents enabled her to triumph in a cavatina, in which she out-Sontag'd Sontag in her flights and fancies: but wherever a few bars of music in the concerted pieces admitted of it, both she and Mr. H. Phillips evinced the pure taste and deep feeling which entitle them to rank with Braham as the first English singers of the day. Mr. Wood exerted himself laudably; but he laboured under indisposition, and the music allotted to him is quite out of his style. The scenery was very good and effective; the dresses a curious compound of all fashions under the sun. All the Knight-templars wore a red cross on their mantles, except Mr. Warde, who, for variety's sake we suppose, wore a black one, of a different shape to that of his brothers. The opera received great applause throughout, and has been repeated to crowded houses.

Of *The Casket* we cannot give so good an account. It is a very pretty French vaudeville (*les Premiers Amours*); and a very dull melo-drama, shuffled together in a most unartist-like fashion; the music, so secondary in point of importance as to give it no claim to the title of an opera; and its whole reception such as to have warranted its being withdrawn from the bills. The clamour on its announcement for repetition lasted during several minutes; and we do not think it can be long-lived. Miss Betts, who performed last season at the English Opera House, made her first appearance in this piece. Her style does not please us. Braham sang divinely, "Sweet content thy soothing balm," the only song he had worth singing.

We have seen Mr. Pemberton, as we pro-

ment. He is no longer in the Covent Garden belfry, as we should have predicted; being, in our opinion, a very sensible, disagreeable one, and limited by physical defects to a very small circle of characters.

FRANÇOIS FLAVES.—On Thursday the house was very full, to see Perlet in *L'Honnête Gars*, in which he was truly excellent. In *Les Amours pour eux, Pédants*, and the actor who played the mean, created much laughter.

VARIETIES.

The vacancy of foreign associate of the Paris Academy of Sciences, caused by the death of Dr. Wollaston, has not yet been filled up. At the last sitting of the Academy, the President, after a warm eulogium on the merits of the deceased member, ordered that a commission should be formed for the purpose of presenting to the Academy the names of the distinguished persons from amongst whom it is intended to fill up the vacancy.

M. Caillé.—The French government has agreed to allow to M. Caillé, for the years 1829 and 1830, a pension of 3000 francs (125*l.*), in order to give that traveller the means of acquiring the information necessary to him before his intended return to the interior of Africa.

The French Expedition to Egypt.—Within the last few days further letters have been received from M. Champollion and M. Lenoir, and, but their contents have not publicly transpired. We understand, from a private source, that they announce several new discoveries; and that the King of France, before whom they have been laid, has expressed a wish that all the requisite aids, by those governments for pecuniary and other aid in their scientific research may be promptly complied with. Recent arrivals have also been received from the expedition in Greece; but a detailed report has yet been furnished of the progress made in that country.

Pyrenean Researches.—Some discoveries were made about six weeks ago in a field near the base of the amphitheatre at Merida in Spain. In digging a foundation for a house, the workmen came suddenly upon a quantity of bones, some of which were of the hyena, and some of the human species. At no great distance from the spot several coins were found, but so much injured that it was impossible to decipher the inscriptions. Fragments of Roman coins were also discovered in abundance; and there were found two vases of the best of the earth which is seen in the Pyrenean mountains at these days' journey distant. These are now in perfect preservation. The sculptures upon them is stated to be of a superior nature.

Swiss.—The *projet de loi* in the French Chamber of Deputies is likely to meet with opposition, from the rigour with which one of its provisions have been made. The law enacts the following punishments:—to remove husbands, without permission of the judges, hard labour for life. For selling the conjugate with permission and with fault. For women, producing illness or company during more than twenty days, a severe punishment, imprisonment from six months to two years, with from 16 to 200 francs fine. If with permission, imprisonment from two to five years, and from 50 to 100 francs fine.

A meeting of the Cambridge Philosophical Society was held on Monday evening, March 24, the very Rev. the Dean of Ely in the chair.—A memoir by Pierce Morton, Esq., of Trinity College, was read, "on the force of a conic section;" in which the author pointed out the solid construction from which that point is derived. The reading of a paper by Professor Whewell was also begun—"on the application of mathematical reasoning to some of the theories of political economy;" in which the author maintained, that so far as that science is founded on definitions and axioms, the shortest and most certain method of deducing its results is by the assistance of mathematical processes.—After the meeting, Professor Whewell gave an account of some of the contrivances which have been employed in the use of the dipping needle, and exhibited one of a construction in some respects new.—*Cambridge Chronicle.*

Fires.—M. Aldini, of Milan, has invented a dress which enables the wearer to traverse with impunity the flames of a large fire, for the purpose of rescuing those who may be exposed to their fury, or of saving property from destruction. This dress is composed of a tissue of asbestos, which it is well known is not combustible, covered with metallic gauze, through which it is also well known flame will not penetrate. The forms of the parts of which the dress consists, seem to have been suggested to M. Aldini by ancient armour. It is so contrived, however, as to leave the body and limbs at perfect liberty to make whatever efforts necessity may require. M. Aldini, with great liberality, has announced that if any government or academic body is desirous of putting by his invention, and will address a letter to him on the subject (free of postage) to Milan, or to Bologna, he will send in return drawings and models, or even a complete suit constructed according to his directions.

The Steam-Engine.—The last volume of the *Annales du Bureau des Longitudes* contains a paper by M. Arago, in which he enters into the history of the steam-engine, and asserts that its original inventor was not the Marquis of Worcester, as has hitherto been supposed, but a Frenchman of the name of Rezonnet de (ana, who, in a treatise published in 1615, forty-eight years before the appearance of the *Century of Inventions*, and called *Les secrets des forces mouvables, ou des divers machines tant utiles que plaisantes*, gives a detailed description, with plates, of a hydraulic engine worked by steam.

The Weather.—An extensive meteorological correspondence has been established among scientific men on the continent, the object of which is to endeavour to arrive at the means of predicting the weather at any given time or any given part of the earth.

Natural Mistake.—A young gentleman, about half past seven, on coming into the house last Saturday, instead of calling to the butler, as usual, was led by some confusion of ideas to hawl out—"I say here, butler, show me my stall!"

LITERARY NOVELTIES.

A new tragedy is announced by the author of the *Londoner*, entitled, *Johannes*. A novel from the pen of an author in the highest vogue of the French Empire is about to appear, in which, we understand, the exploits of the regiment in peace and in war will be revealed in the reality of the reader.

Mr. Thomson is employed upon a portrait of the late Dr. Wollaston, in the last manner, after a painting by Jackson. The portrait was shown at a recent conversation of Mr. Pettigrew's, and attracted much attention.

It is a powerful likeness, in the artist's best style, and will make a very fine print.

Messrs. Chene and Co. have published the fifteenth volume of the *Transactions of the Royal Academy*, the contents of which are extremely interesting and important, and which are accompanied with notes and commentary by the following eminent and learned characters: the Bishop of Exeter, the Bishop of Down and Connor (Dr. Mait), Dr. Robinson, Professor Hamilton, James Macdonald, Esq., and others. We shall probably notice this able volume next week.

A French translation of Chapman's second Expedition is announced at Paris.

In the Press.—A volume entitled, *Talks of a Physician*, by Mr. Harrison.—A Treatise on the varieties of Dropsy and Diseases of the Kidney, with methods of relieving them, by William Wright, Esq.

LIST OF NEW BOOKS.

Upham's History of Buddhism, 43 plates, Imperial 4to. 2*l.* 2*s.* 6*d.* coloured. 2*l.* 2*s.* 6*d.*—Hogg's Shepherd's Calendar, 2 vols. 12mo. 1*l.* 1*s.*—Hind's Latin Accidence, with Appendix, 12mo. 2*s.* cloth. METEOROLOGICAL JOURNAL, 1830.

Month.	Thermometer.	Barometer.
Thursday	5	29.5
Friday	4	29.5
Saturday	7	29.5
Sunday	8	29.5
Monday	9	29.5
Tuesday	10	29.5
Wednesday	11	29.5

Prevailing wind N. and N.W.
Except the 11th, generally cloudy; raining on the 11th.
Rain fallen, 4 of an inch.

CHARLES H. ADAMS.

Latitude . . . 52° 37' 30" N.
Longitude . . . 0° 53' 30" W. of Greenwich.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the London Meteorological Society. February 1830.

Thermometer—Highest	40° 30'
Lowest	17°
Mean	27° 40'
Barometer—Highest	30.2
Lowest	29.8
Mean	29° 7' 14"

Quantity of rain in inches and decimals, 1.647.
A series of days of rain, 16.
Winds: 1 East, 3 West, 3 North, 1 South-West, 1 North-East, 4 North-West, 4 West, 4 North-East.

General Remarks.—The temperature of the month was below that of the last two years, according to the mean, but the extreme of cold was not so great as in 1827, though two degrees and a quarter below that of last year. The barometer higher than during February 1828—the quantity of rain was the same as in the corresponding last year (the winter generally) dry and bleak, with the wind mostly from the northward and eastward. The evaporation varied of an inch.

TO CORRESPONDENTS.

ED The continued omission of business, which has led to questions in the way of our publications of importance, again enables us to proceed without adding to the extent of our arrears.

To our pleasant little friend Mrs. Penelope Asher (whose correspondence, by the by, we value through the thin mantle of privacy we lay to say, that, not being a co-official, we cannot say her inquiries are questions, we shall take as early an opportunity as we can of showing them our full public attention. We wish they were in verse.) We cannot fail to wish a Regular Reader in P. O. Box, Paris.

Mr. Heyman's handsomely illustrated letter, explained as a character, have not altered our opinion respecting his publications.

ERRATA.—In our notice of 1st January in Ireland we mentioned 1st January, instead of 1st January, as the 6th of the year, and we thank our readers to correct the error. 1st January is the first day in the year of 1st January. But we have the impression made by these words as to the 6th, and it was offered by the paper and the same impression, that when they are long before and eyes, we cannot be mistaken one from another.

ADVERTISEMENTS

Connected with Literature and the Arts.

BRITISH INSTITUTION, PALL MALL.

The Gallery for the Exhibition and Sale of the Works of British Artists, including the Pictures of His late Majesty presenting the Sword to Earl Howe, on board the Queen Charlotte, after the Victory of the First of June, 1794; and Lord Nelson boarding the San Joseph, off Cape St. Vincent, presented by the British Institution to the Royal Hospital of Greenwich, is open daily, from Ten in the Morning till Five in the Evening.

Admission, 1s.—Catalogue, 1s.
WILLIAM BARNARD, Keeper.

DESIGNS for ORNAMENTAL VILLAS.

By P. F. ROBINSON, Architect, F.S.A.

Printed for James Carpenter and Son, Old Bond Street.

Of whom may be had, by the same Author,

1. Rural Architecture, consisting of Designs for Ornamental Cottages, Lodges, Dairies, &c. 3d edition, 3s. 3d.
2. Designs for Ornamental Farm Buildings, Parts I. to VI. price 6s. each. To be completed in Twelve Parts.

Britain's Picture of London.

This day is published, in 18mo. with upwards of 100 Views of Public Buildings, a large Plan of all the Streets, &c. of the Metropolis and Suburbs, a Map of the Country Twenty Miles round London, and a Plan of the Situation of the Squares, Public Buildings, &c. &c., with the Maps only, 6s. neatly bound.

THE ORIGINAL PICTURE of LONDON, corrected to the present time; being a Guide for the Stranger, and for the Inhabitant, to the Metropolis of the British Empire; with a Description of the Environs.

Re-edited, and mostly written, by J. BRITTON, F.S.A. &c.
Printed for Longman, Rees, Orme, Brown, and Green.

In a Portfolio, price 3s. 13s. 6d.

VISIONS of an AMATEUR; being a Collection of 48 Etchings. Inscribed to Sir Walter Scott, Bart.

By Sir JAMES STUART, Bart.

"These etchings are chiefly of a chivalrous and romantic character; several of them are illustrations of Scott and Byron. The story of Macteppe, for instance, is very spiritedly told. They do the highest credit to Sir James's taste and artist-like feeling."
—*Literary Gazette*, June 1828.

Printed for James Carpenter and Son, Old Bond Street.

Green's Numismatic Atlas of Ancient History, dedicated to the Earl of Aberdeen.

Just published, in a Series of 21 Plates, price 2l. 7s.

A NUMISMATIC ATLAS of ANCIENT HISTORY, comprising a Series of 200 Grecian Coins, arranged in the form of an Historical Chart, designed and executed on Stone.

By BENJAMIN RICHARD GREEN.

The Work is accompanied by a descriptive Letter-press. The Atlas may be had mounted, to fold up in a Case, 3l. 10s.; and on a Roller, varnished, 3l. 5s.
Published by Priestley and Weale, High Street, Bloomsbury; and by the Author, 6, South Crescent, Bedford Square.

Of whom may also be had,

A Lecture on the Study of Ancient Coins, as connected with History, illustrated with Plates, price 3s. 6d.

DULAU and CO.'S NEW FOREIGN CIRCULATING LIBRARY, No. 37, Soho Square; Three Quarters of a Million Volumes.

In the Days of my Great Grand-Mamma.
Oh! let not your Passion for Mary, the Maid.
At Home.
Not at Home.

BOOKS PUBLISHED THIS DAY.

In 8vo. with a Portrait, price 6s. 6d. boards, by Hearne, 81, Strand.

THE LIFE and DEATH of BISHOP ANDREWES.

By his Friend, HENRY ISAACSON.

To which is added, a brief View of the Plantation and Increase of the Christian Religion in Great Britain, with the Causes crept into it and the Reformation of them; together with the original Dedication and Dissertation on Chronology, by the same Author. The whole newly arranged.

By the Rev. S. ISAACSON, Rector of St. Paul's, Demerara, &c.

And a 2d edition, price 10s. 6d. boards, of

Bishop Jewell's Apology for the Church of England, being a new and faithful Translation, with copious Notes, Portrait, and a Memoir of his Life and Writings; to which is prefixed, a Preliminary Discourse on the Doctrine and Discipline of the Church of Rome, in reply to some Observations of Charles Butler, Esq. addressed to Dr. Southey, on his Book of the Church.

—Is a grave, substantial, and well-timed publication on the side of Protestantism. There is an able preliminary discourse by Mr. Isaacson. The translation appears in every respect to be faithful, and given in a clear and good style. —*Literary Gazette*.

Price 2s. 6d. sewed, the 6th edition, improved, of

THE PRACTICAL GARDENER'S COMPANION; or, Horticultural Calendar, containing the latest Improvements in Horticultural Practices. The following interesting Works are just published by Smith, Elder, and Co. Cornhill.

In 1 volume, demy 8vo. price 12s. boards.

THE LAST of the PLANTAGENETS; an Historical Romance, illustrating some of the Public Events, and the Ecclesiastical and Domestic Manners of the Fifteenth and Sixteenth Centuries.

"One of the most faithful and delicate narratives that the whole library of English romance can furnish. The plot is new, pure, and simplicity of the diction, and the majestic quietness, the unaffected tenderness, and the repose of the incidents, must render this volume a permanent favourite with all readers of taste and feeling." —*Atlas*.

In demy 18mo. price 6s. boards.

The Home-Book; or, Young Housekeeper's Assistant: forming a complete System of Domestic Economy, for the Guidance of Persons having the Management of a Household of either large or small extent; with valuable Directions for actually checking the many impositions practised upon respectable Families by Servants, &c. &c. The whole deduced from Forty-five Years' practical Experience. By a Lady.

"Let these my counsels be a guide to you, And my experience teach your rule of judgment; So shall your home become a Paradise, Rich in earth's purest bliss, Domestic Comfort."

Just published, to accompany the above, or may be had separate,

The Home Account-Book; or, Housekeeper's Register of Family Expenses: arranged upon the improved System recommended in the "Home-Book," and exhibiting the Weekly, Monthly, Quarterly, and Annual Disbursements for every Article of Domestic Consumption. Post 4to. price 4s. 6d. half-bound.

"These two useful and unpretending little volumes form the most complete system of Domestic Management for the guidance of the young and inexperienced housekeeper, that has ever appeared."

In demy 8vo. price 4s. 6d. each, Parts I., II., and III. of

India; or, Facts submitted to illustrate the Character and Condition of the Native Inhabitants, and the Causes which have for ages obstructed its improvement; with Suggestions for reforming the present System, and the Measures to be adopted for the Government of that Country at the Re-ignation of the present Charter of the East India Company. By Robert Rickards, Esq.

Part III. On the Revenue Systems of India under the East India Company's Government, as tending to perpetuate the degraded Condition of the Natives, will be published early in March.

"It is needless, after what we have already stated, to direct the attention of our readers to Mr. Rickards' work. Interesting and valuable, however, as the Part now before us undoubtedly is, we expect that those parts in which Mr. Rickards proposes to discuss the Revenue System of the East India Company, and the influence of the Company's commercial and political monopoly, will have still higher claims to attention. There are few so well qualified as Mr. Rickards for the discussion of these important questions, or to whose labours we should look forward with higher expectations." —*Edinburgh Review*.

Debrett's Peerage, February 1829.

Just published, in 4 vols. 18mo. price 1l. 8s. boards, corrected to the present time, with the Arms elegantly engraved, the 19th edition of

The Strasbourg Controversy.
A REPLY to FABER'S SUPPLEMENT to his DIFFICULTIES of ROMANISM.

By the Rev. F. C. HUSENBETH.
 "Diligite homines: interitice errora."—St. Aug.
 In 1 vol. 8vo. price 10s.

Published by Hurst, Chance, and Co.; Keating and Brown; and Books, London; and Bacon and Kennelbrook, Norwich.

* In this work the controversial conduct of the Rector of Long Newton is fully exposed; particularly his stratagem of reviling the Bishop of Strasbourg, as if he had charged Mr. Faber with suppressing a passage of St. Cyril, when the Bishop had actually acknowledged the Rector's citation of that passage; also, Mr. Faber's false translation of St. Augustine; false accounts of the Works of Julian; misrepresentation of Theodoret; and unfair quotation from St. Jerome and Origen.

BLACKWOOD'S EDINBURGH MAGAZINE. No. CL. for March 1829.

Contents: I. The Assembling of Parliament—II. Sunset Meditations, by Delta—III. Cuttings—IV. The Duke of Wellington and Mr. Peel—V. First and Last, No. 2; the First and Last Crime, James Morley—VI. The Man-Mountain—VII. Sketches of Italy and the Italians, with Remarks on Antiquities and Fine Arts, (continued.) Arrival in Rome; Roman Festivals in August; the Game of the Pig; Raffaele and the Vatican; the Raffaele Tapestries in 1780—VIII. The Two Emilias—IX. The Supremacy of the Church of Rome not acknowledged by the British Christians till the Ninth Century—X. Tailors—XI. Chapters on Churchyards, Chap. 18; the Grave of the Broken Heart, (continued)—XII. Twelve Years of Military Adventure in Three Quarters of the Globe—XIII. Noctes Ambrosianæ, No. 41.
 Printed for William Blackwood, Edinburgh; and T. Cadell, Strand, London.

REVIEW OF NEW BOOKS.

Lettres on the Climate, Inhabitants, Productions, &c. &c. of the Neighberries, or Blue Mountains of Coimbatore, South India. By James Hough, of Madras. 8vo. pp. 172. London, 1828. Hatchard and Son.

THE great object of this publication (which has already appeared in the form of letters in several East India newspapers) is to recommend the district of the Neighberries as a healthy retreat for the European inhabitants of our various presidencies, whose constitutions may be affected by the Indian climate. As our climate at home migrates, seasonally, to watering and sun-bathing places, so, as the need of change is much more imperative, is it enforced that occasional residence in the salubrious atmosphere of these Blue Mountains would produce the best effects upon Oriental invalids, and especially, in most cases, the exposure and change of voyage to the Mauritius, Van Diemen's Land, the Cape, and Europe. Without entering into the medical question, we may say that the testimonies in favour of the restorative qualities of such a sojourn are certainly very strong; though the country is but little known to the surrounding natives, and has only been visited by our countrymen within the last ten years. Biting thus a sort of love trumpet, it may be as well for our readers on this side of the earth that we tell them something about the locale, ere we go to believe that what we find to be most worthy of attention respecting the people and productions. "These mountains are situated between one and two hundred miles from the opposite coasts of Coromandel and Malabar, in 11 deg. N. lat. They are little more than dry ridges in length, and about fifteen miles in mean breadth. The ascent is very rocky and difficult, inasmuch that our government has been obliged to cut a pass for the convenience of travellers. Tigers, leopards, and wild dogs, are spoken of as among the wild animals, yet the woods are reported to be quite safe, and there are but few attractions for the sportsman, as the game consists of only a few varieties. Buffaloes and cows are the domesticated animals, and there are no sheep, which being the first, the writer makes a doubtful half when he informs that one of the great classes of inhabitants (Huddiggers, Kottars, and Theodours) into which the population is subdivided, "are generally sheep-keepers, and keep considerable flocks of goats."

Among the mineral products, iron and gold are mentioned; and in sugar and botany as yet very slightly explored there seem to be abundant specimens, and the latter some new species. A list of a hundred and sixty genera of plants, including two species of very small wild cherry, one of a good flavour, and

the other not sweet;—*Lychnis*, *Clematis*, *Sonchus* (new);—*Mertensia tomentosa*, or hill gooseberry;—*Melastoma*, "a fine timber tree, with a beautiful white flower resembling that of the *Cassia japonica*;"—*Passiflora Sulianiana* (new); and *Vernonia*, "a yellow flower, resembling the cowslip in form and fragrance." "The Neighberries abound in excellent timber-trees. The following are the names which the natives have given to the largest and the best:—*Almond*, *cinchona*, *santalum*, *velludi*, *baobab*. The last mentioned is the largest and the most numerous. *Dalchia*, or wild cinnamon, is found here. *Laurus cinamomum* grows to a gigantic size, and is excellent wood for all purposes. Many parts of the hills are literally covered with ferns and lichens of every variety. The fern-tree also grows to a good size, with branches of from eight to ten feet long." Varieties of medical plants are also said to be found in great plenty. The equality of temperature, as we have stated, is represented as being very fine, as is proved, indeed, by a meteorological table of thirteen months; and the atmosphere clear and delightful, as the annexed extracts will show.

"The great extent to which the sound of the voice is conveyed may be mentioned. Some persons have thought this a proof of the extreme purity of the atmosphere. A similar observation is made by Captain Parry, in his *Voyage of Discovery to the Polar Regions* in 1819-20 (p. 125), where he states that in the depth of winter the sound of the men's voices was heard at a much greater distance than usual. This phenomenon is constantly observed on the Neighberries. I have heard the natives, especially in the morning and evening, when the air was still, carry on conversations from one hill to another, and that apparently without any extraordinary effort. They do so in the manner that strangers think necessary in order to be heard at so great a distance, but utter every syllable as distinctly as if they were conversing face to face. When listening to them, I have often been reminded of those passages of holy writ where it is recorded that Joshua addressed the multitude of Achan from Mount Gerizim; that David cried from 'the top of a hill afar off' to Abner, and to the people that lay about their master Saul; and that Abner addressed 'Josh' from 'the top of a hill.' In the dense atmosphere of England, and even in the purest air of the plains of India, it is not easy to imagine how a discourse could have been carried on at so great a distance, and from such an enormous; but on the Neighberries the partition of aerial story to which I have referred receives a striking illustration. It is worthy of remark also, in proof of the purity of the at-

mosphere, that the heavenly bodies appear with much greater brilliancy than when viewed from the plain. This is observed by all strangers; and one correctly remarked, that the planet Venus, when full, gave as much light as the moon in her quarters.

"A further idea of the climate, and likewise of the soil, may be formed from the remark of the force of vegetation, and from the nature of the plants that thrive on the hills. Many varieties of tea, fruits, and flowers, from Europe and the Cape of Good Hope, have been tried, and hitherto all have succeeded remarkably well. Those of England, indeed, have grown much larger than in their native climate. I have measured heart-rose upwards of three feet in circumference; a turnip, three feet; a turnip-radish, thirty-four and a half inches; long Spanish radish, twenty-seven and a half inches, and three feet long; also a cabbage—plant eight feet high, whose stalk was ten inches in circumference."

We have already mentioned the three classes of inhabitants; and one of these, the Theodours, are not a little remarkable.

"The Theodours (as the writer) are in appearance a noble race of men, their vigour presenting all the features of the Roman constitution very strongly marked, and their tall athletic figures corresponding with the immensity of the land. None of them stand upwards of six feet high, and differ in every respect from all the tribes of Asiatic with which we are at present acquainted. The countenances of a few are strikingly Jewish, which is remarked by almost every stranger. I found several of them possessed of Jewish names, and began to flatter myself that I had discovered a colony of the scattered tribes of lost and ancient people. But on communicating my supposed discovery to a friend, I hardly thanked him at the moment for dispelling the illusion, by informing me that he had given them those names, as he found it difficult to pronounce the barbarous appellations by which they are called. . . . However, I cannot but think that they may be found to be the remains of an ancient Roman colony. We know that that indefatigable and enterprising people visited the western coast of India as early as the commencement of the Christian era, viz. after their conquest of Egypt, and carried on commercial intercourse with its inhabitants to a considerable extent. There is reason to believe, also, that they settled in many parts of South India; and it is not improbable that one colony was founded on the Neighberries. In that case, it is by no means a fanciful supposition that the Theodours are their descendants. I mean not to assert that we have sufficient data to support such a surmise; but if the reader will bear the idea in mind, while passing he will see my description of their countenances, I think he can hardly fail to discern some striking points of resemblance. I have described their countenances as Roman; a description which I venture to anticipate the countenance of every one acquainted with Roman people."

* The letters are a happy combination, however, as you very slightly explored there seem to be abundant specimens, and the latter some new species. A list of a hundred and sixty genera of plants, including two species of very small wild cherry, one of a good flavour, and

The object of this publication is to recommend the district of the Neighberries as a healthy retreat for the European inhabitants of our various presidencies, whose constitutions may be affected by the Indian climate. As our climate at home migrates, seasonally, to watering and sun-bathing places, so, as the need of change is much more imperative, is it enforced that occasional residence in the salubrious atmosphere of these Blue Mountains would produce the best effects upon Oriental invalids, and especially, in most cases, the exposure and change of voyage to the Mauritius, Van Diemen's Land, the Cape, and Europe.

ings, statues, and castles. They wear no turban, their fine black bushy locks forming a sufficient protection to the head, whether exposed to the vertical sun or a pelting storm. Their bodies are well proportioned, and their limbs remarkably muscular, possessing Herculean strength. I have seen two of them carry a large tree that no six natives of the plains could have borne, and toss it off their shoulders with perfect ease. They are very playful, and often prove their strength with their immense buffaloes. It is one of their diversions for three or four youths to select the largest of the herd, run him down, and then, seizing him by the hind legs, to throw him to the ground, which they do with perfect ease and singular dexterity. It is beautiful to observe the agility with which they bound over the hills, shaking their black locks in the wind, and as conscious of liberty as the mountain deer or any true-born Briton. They are remarkably frank in their deportment; and their entire freedom from Hindoo servility is very engaging to the Englishman, and cannot fail to remind him of the 'bold peasantry' of a still dearer land. When before you, they are constantly smiling, and are addicted to immoderate laughter. If amused with any thing they have heard or seen, they will retire to a short distance, throw themselves on the ground, and laugh till they seem literally convulsed. The women, with the exception of the mouth, which is wide, possess handsome features, and their complexion is fairer than that of the men. Their teeth are beautiful, which is quite an anomaly in India, and great vivacity sparkles in the eye. * * * They have an uncouth dance and song. Of the dance an idea may be formed from the representations we have of dancing satyrs. They merely turn the body half round, with a jump, and back again, grinning all the time, and raising the hands about the height of the head. The theme of their song it is difficult to understand, and its tune owes very little to the science of harmonics. Their gamut consists of five or six gruff tones, which they run through in a breath, beginning with the lowest and ascending to the highest, over and over again, without variation."

Their clothing bears some resemblance to the Roman toga; and the hypothesis of their being of Roman descent is further supported by the account of some circular tumuli, and coins found in them, — but we must say that the evidence on this point is anti-Roman. * Other portions of their manners and ceremonies are very curious.

" Their form of marriage is simple, and unattended with any religious ceremony. The bridegroom presents one or more buffaloes, according to his circumstances, to the parents of the bride, who, after merely touching his head, deliver to him their daughter. This completes the contract, and he takes home his bride. But the practice of polygamy prevails among them, the woman being obliged to receive as her husbands all the brothers of the family into which she marries, while they possess only this wife amongst them. She is allowed also to choose a gallant from any other family, to whom her husbands must on

all occasions give the precedence. Another barbarous practice, that of infanticide, was formerly prevalent here. The boys were always preserved, and divided between the brothers according to seniority, but the girls were put to death; in what way has not yet been accurately ascertained, but there is no reason to believe that they were exposed." (By the interference of the British authorities, there is reason to believe that this barbarity has been stopped.) " I shall," continues our author, " conclude the account of this singular people, with a description of their funerals. Though entertaining but little idea of religion, yet are they superstitious enough to distinguish between fortunate and unfortunate days—Thursday, Saturday, and Sunday, being considered lucky, and the remaining four the contrary. Accordingly, if a person die on an inauspicious day, his funeral is deferred to the next more favourable one. When that arrives, the relatives are assembled, and the ceremony commences with loud lamentations over the dead. The body is then burned, together with all the ornaments of the deceased, and on the following day the ashes are buried, with a few gold or silver coins, according to the circumstances of the survivors, and a large stone is placed over the grave. The skull, and cap of the knee-joint bones, are preserved two or three months, and sometimes even a year, until the relatives shall have collected a sufficient number of buffaloes, and other things necessary for the celebration of the final ceremonies in honour of the deceased. When all things are ready, a great company assembles, and the bones that were preserved are produced, and placed in the centre of the group, as the representatives of their departed friend. They then take their seats on the ground, and feast on rice, or whatever the relatives can afford to give them: The more wealthy distribute clothes also among the visitors. While thus employed, every now and then two or three start from their seats, lead a buffalo by the horns round the bones, and then, with frantic gestures, fall upon the animal, striking him with enormous clubs until he falls to the ground. When these funeral rites are concluded, the skull and knee-bones are burnt in a cloth, and then buried near the other ashes. These ceremonies are so different from all that are performed on such occasions by the natives of the plain, that it is difficult to imagine where they can have learned them, unless we suppose the Thodawurs to have been originally a colony of foreigners, who continued here the customs of their native land."

Neither the Thodawurs nor the other tribes seem to have much sense of religion; — a few ceremonies, and an annual assemblage to perform some imperfect rites, are all the evidences of their knowledge either of a Supreme Being or of a future existence.

Respecting the Buddagurs (another of these tribes, who have apparently been settled some centuries, from the adjacent plains), we may cite a few miscellaneous particulars.

" They are an inferior race to the Thodawurs; being, with a few exceptions, very diminutive. The exceptions are striking, some of them standing above six feet high, and stout in proportion; but they are without the majestic and independent mien of the Thodawurs. Their complexion is fair; and the men have mild and sometimes handsome features; the countenances, especially the nose, being of the Grecian cast. The girls, and very young women also, are not unhandsome; but hard work, and exposure in all weathers, soon

begin to alter their features; and the visages of some of the elder women are frightful.

" The preliminaries of their marriages differ materially from those of the Hindoos, the man being allowed to select his own partner, and the woman left at liberty to accept or decline him. When both parties are agreed, the man, accompanied by five or six friends, waits upon the parents of the damsel, to request their consent to the union; which having obtained, and having also entered into an agreement to pay a sum of money, seldom under ten rupees, or above twenty, the parents deliver their daughter to the bridegroom, with her dowry, which generally consists of a cow and bull, and a metal dish. They provide the *tally* also, the token of the marriage contract. It is made of gold, about the size and in the shape of a uniform waistcoat-button, with the shank at the side, and is suspended from the neck of the woman. This trinket is used for the same purpose by all the Hindoos of southern India. The parents then deliver to the bridegroom some appropriate advice, which he pledges himself to follow; and having concluded the service with feasting and mirth, the newly married couple repair to their home. In the event of a man's neglecting to pay the stipulated sum within a reasonable time, the parents of the bride endeavour to separate her from him, until he has fulfilled his conditions of the marriage. But if she refuse to leave him, another arrangement is made, and the cattle or other property of the husband sold to the amount of his debt. But there is a great drawback on both sides upon this seemingly harmonious arrangement, polygamy being practised by the men, and the women having it in their power to divorce their husbands. The men are allowed to have as many wives as they can afford to maintain; and the wife, from caprice or displeasure, may separate herself from her husband, and marry again. But in this case she is obliged to restore every thing she may have received from him, and he retains all the children she may have borne. Her next husband takes upon himself all the pecuniary responsibility of the first, paying the sum he stipulated to give for her, and all the debts she may have contracted during her former marriage. The women are allowed to repeat this barbarous transaction as often as they choose, but the subject is too disgusting to be more minutely described.

They have a singular mode of salutation, the inferior touching the chest of the superior with the crown of his head, which the superior immediately raises with both hands. Their language is a corrupt dialect of the Canarese, which, however, they understand when correctly spoken.

Their principal object of adoration is named Hettee-du, who, they affirm, was a man of their own cast that lived about a thousand years ago to a very great age. At his death, his wife resolved not to survive him; and having ordered seven small holes to be dug and filled with water, she walked round them, performing some ceremonies at the same time, and then strangled herself. In honour of this aged couple, every old man is called Hettee-pagati, and every old woman Hettee-magati. They build a hut to Hettee-du, in which a light is kept continually burning; but he is represented by no image. They regard him as the god of health, and perform a trifling ceremony to him once a year. A new cloth is then presented to him, and kept in the house till the next anniversary, when it is divided between the men employed in trimming the lamp of the house, and the Koorumbur who performs their ceremonies.

* Among other proofs, however, the author states: " In an extensive vocabulary which I have had taken down from their lips, there are two words which seem to favour the notion of their Roman origin—*homu*, (Lat. *homo*) a man; and *pomu*, (Lat. *poma*) fruit. The other terms which they gave were taken from one of the languages that I have mentioned, (Canarese, Tamil, and Malayalam), nor could they be induced to apply any other appellations to the objects which they were desired to name."

Another cloth is then put in its place, to be disposed of the following year in the same manner. They worship another god, whom they call Herar-du, and imagine that he was the deity who conducted them to the Neilgherries. They have an old mirror and a brass cup, which they brought from their native hills, and preserve with great care, as the representatives of Herar-du. These relics are locked up in a chest, which is kept in a small hut built for the purpose, and are brought out and cleaned once a year. After this ceremony the men sit down and eat, with the mirror and cup placed before them, and then carefully deposit them again in the chest. A person is appointed to take care of them, and the community remunerate him for his trouble with a small quantity of grain from each field. Besides these objects of worship or respect, they reverence indiscriminately Rangawami, the Lingum, Narayanah, Kadatayaw, Madduppun (god of cattle), and, indeed, all the gods of the different tribes incorporated with them. Though they suppose their gods to possess the human form, yet they make no images to represent them. One, on being asked where God resided, replied, that he could not tell, and that if he knew, he would be always with him. 'Why?' 'Because then I should be always happy';—a sentiment worthy of a better creed."

About the Kothurs (the third division), we have only room to quote one statement.

"Like the Chucklers of the low country, they devour the flesh of animals, of whatever distemper they may have died; and it is not uncommon to see them drive away the vultures, crows, and jackals, from a carcass half consumed, and carry the residue away. In 1825 this proved fatal to several men, four or five being poisoned by some peard flesh. But, notwithstanding the unwholesome nature of their food, they are seldom afflicted with disease; and when once reconciled to their unsightly exterior, you begin to discover some stout, healthy-looking figures among them, especially the few who abstain from opium. But the major part of them consume large quantities of this deleterious drug, and bear in their countenances the marks of its soporific effects. The usual quantity which they consume daily is from ninety to one hundred grains, which they eat at two sittings. When unable to procure it, they drink, as a substitute, opium water, which they obtain by steeping the pericarpium of the poppy in cold water, and then squeezing out the liquor with their hands. A quart is usually taken at one time,—a quantity that I have seen a man drink off as a draught."

With this we conclude; only recommending to the consideration of our Indian government the ideas thrown out by the author in the following note:

"These mountains offer a most eligible site for the establishment of a large population of Eurasians* or Indo-Britons. This has hitherto been a desideratum. The Neilgherries are in a great measure an unoccupied country. That class of people would, therefore, form a distinct and independent society. They would not be looked down upon either by Europeans or natives. . . . A very small plot of ground on the Neilgherries, carefully managed, would go a

* "These are the descendants of Europeans by native mothers, many of whom are legitimate, and form a respectable class of society. Numerous attempts have been made to devise a name for them which should be extremely acceptable, but hitherto without success. The last proposed was *Eurasians*,—a contraction, I presume, of *European Asiatics*."

great way towards the support of a family. From the size and excellence of the hides on the Neilgherries, a tannery might be established there with every prospect of advantage. There are very few trades indeed that might not be exercised with success. The easiest way of trying this plan would be for government to establish a branch of the asylum on the hills, say fifty boys, none of whom should be more than ten years of age. A large garden should belong to the establishment, which, under an intelligent superintendent, and with the assistance of a few men, might be cultivated by the boys. The produce would go far towards their own subsistence, and they would gradually acquire those habits which would qualify them for cultivating the soil on their own account."

The History and Doctrines of Buddhism popularly illustrated; with Notices of the Kappoism or Demon Worship, and of the Bali or Planetary Incantations of Ceylon. By Edward Upham, M.R.A.S. With Forty-three Lithographic Prints, from original Singalese Designs. Folio, pp. 136. London, 1829, Ackermann; Bath, Upham; Exeter, Upham; and Paris, Dondey-Dupré.

THIS volume, curious and important as are its investigations of oriental antiquities and religion, is but the precursor of a greater work, of which the prospectus lies before us: we allude to the *Mahā-vansī*, *Rājā-valī*, and *Rājā-ratnācarī*, (the sacred and historical books of Ceylon), from MSS. in the possession of Sir Alexander Johnston.*

The remote periods of Buddhism explored by Mr. Upham, and the multitude of the worshippers of that god, (still represented by the Lama in Tibet), spread over Northern India, China, Tartary, Ceylon, and other islands, render the exposition of its origin and character an inquiry of extreme interest; and we feel infinitely obliged to the author for the pains and labour which he has bestowed. He appears to us to have ransacked the wide range of Indian literature, and dipped deeply into the mysterious and mystical remains of the Palu. From these sources Mr. Upham has adduced an entirely new elucidation of the earth and atmosphere,

* "It is altogether owing to the enlightened views and active measures of Sir Alexander Johnston, that these important literary subjects, so clearly designated as desirable for the best interests of oriental literature, and so useful at this era to our political influence over the new provinces of our eastern empire, have been acquired from the Buddhist priests of Ceylon, and are stamped with the clearest evidence of their genuineness. Translated by Sir Alexander's native Cingalese official interpreters into English, and verified and revised by the ablest Palse scholar in Europe, they are now nearly ready for the press. From the information prefixed in a manuscript note by the translator, *Rājā-pakse*, a well-known intelligent native of Ceylon, the *Mahā-vansī* is one of the most highly esteemed of all their sacred books, and has the character of being among the oldest of their writings, being throughout composed in Palse, the sacred Buddhist language. This work has been so carefully preserved, that but slight differences are observable between the most ancient and more modern copies. It does not appear at what period it was composed, but it has been existing from the period that the books of Ceylon were originally written, and it contains 'the doctrine, race, and lineage of Budhoo,' and is, in fact, the religion and history of Buddhism. The *Rājā-ratnācarī* was written by a priest of the Pansila, called *Abeja-rājā-piriwāna*, of the temple *Wal-gan-pawya-was*; it is extracted out of ancient books, and is of high authority, being scarcely less esteemed than the *Mahā-vansī* itself; and it contains the history of Budhoo, by an abridgment of the *Mahā-vansī*, as well as records the erection of the temples, and the history of the kings, from the first king *Wijaya*, (whose reign is computed at 3269 years ago), to the conquest of Ceylon by the Portuguese. The *Rājā-valī* is the work of many hands, and compiled from the local histories, which are inserted as corollaries and additions to the two more important works already cited. These three works, therefore, comprise all the authentic annals of Buddhism, drawn from their own sources."
